THE CONCEPT OF THE CONGRESS

The Faculty of Architecture, University of Belgrade and the Society for Aesthetics of Architecture and Visual Arts of Serbia (DEAVUS) are proud to be able to organize the 21st ICA Congress on “Possible Worlds of Contemporary Aesthetics: Aesthetics Between History, Geography and Media”.

We are proud to announce that we received over 500 submissions from 56 countries, which makes this Congress the greatest gathering of aestheticians in this region in the last 40 years.

The ICA 2019 Belgrade aims to map out contemporary aesthetics practices in a vivid dialogue of aestheticians, philosophers, art theorists, architecture theorists, culture theorists, media theorists, artists, media entrepreneurs, architects, cultural activists and researchers in the fields of humanities and social sciences. More precisely, the goal is to map the possible worlds of contemporary aesthetics in Europe, Asia, North and South America, Africa and Australia. The idea is to show, interpret and map the unity and diverseness in aesthetic thought, expression, research, and philosophies on our shared planet. Our goal is to promote a dialogue concerning aesthetics in those parts of the world that have not been involved with the work of the International Association for Aesthetics to this day. Global dialogue, understanding and cooperation are what we aim to achieve.

That said, the 21st ICA is the first Congress to highlight the aesthetic issues of marginalised regions that have not been fully involved in the work of the IAA. This will be accomplished, among others, via thematic round tables discussing contemporary aesthetics in East Africa and South America.

Today, aesthetics is recognized as an important philosophical, theoretical and even scientific discipline that aims at interpreting the complexity of phenomena in our contemporary world. People rather talk about possible worlds or possible aesthetic regimes rather than a unique and consistent philosophical, scientific or theoretical discipline.

Miško Šuvaković and 21st ICA Organizing Committee

CONTENTS

KEYNOTE SPEAKERS 	3
BUILDINGS SPEAK TO US Jale N. Erzen	4
CITIES AS WAYS OF WORLD MAKING Curtis L. Carter	10

BUILDINGS SPEAK TO US

4

Abstract | Starting with a critical view of the general architectural and urban structures of today my paper will present buildings comparable to the body, thus their expression and the meanings they invoke will be presented as a language of form that affect the behavior and psychology of urban residents. Referring to the architectural criticisms of George Bataille, it is argued that the physicality of buildings are valuable in so far as they transcend materiality and lead to symbols and spirituality. Buildings are viewed as presenting different characteristics and attitudes depending on their form. Architecture is also viewed as the product of labor and thus a communal creation that has its roots in the origins of human culture. Each different institution has evolved historically from different senses becoming cultural articulations and resulting in architectures that connect people in the enjoyment of common interests. It is further argued that urban and spatial forms that are confusing as to their boundaries and appartenance can cause confusion and negative reactions. Thus it is important that urban forms' language do speak positively and clearly.

Index terms | *Architecture, body, language, form, culture.*

In this address that will be my last to IAA members, I would like to approach the state of architecture and our relation to it within the city. As I dwell on its multiple assets that are constructive of the city atmosphere, I am constantly reminded how all along history each minute form, from a cornice to a balustrade, from the curvature of stairs to the frames of windows, the height of ceilings, the position of doors, and the size of rooms and spaces, etcetera, were studied and calculated endless times before acquiring their final form. What we see mostly today is the sprouting of competitive erections whose most telling feature is a flat silhouette and imposing physicality.

As our essential living means architecture can be seen from many viewpoints: aesthetic, practical, political, economic, etcetera. My aesthetic evaluation of the architectural body in the urban context will deal with its meaning and how it speaks to us; its language. This will be an implicit political criticism as was basically George Bataille's approach. (1)

Architecture conditions our most intimate and at the same time common aesthetic experience (such as the urban), creating vocabularies and languages that can offer openness or isolation and negativity. As with everyday objects, we are often not attentive to its special attributes, but they certainly work on our psyche unawares and as all objects humanly created and used architectural bodies assume human values. They are the basic stimulant of our daily aesthetic judgments and experiences. Architecture is the one art we cannot do without. As the primary imposing materiality of our environment, creating the basic forms of the urban expanse, architecture conditions the atmosphere of our exterior urban spaces, in fact forming the interiority of urban spaces. In the words of Aldo Rossi, "... as a creation inseparable from civilized life and the society in which it is manifested... By nature it is collective." (2) As the shape giver of our shelter, it surrounds us like a second skin within which we can retreat to our own interiority. Thus, architectural bodies, buildings, are the primary constituents of our worldly and individual orientation. Buildings, as well as the cities they construct over history are always experienced with meanings they suggest, because, as a linguistic animal, we always understand objects through the language of their forms. As Gestalt theory has put forth forms have meanings to which we respond psychologically and behaviorally. I will look at architecture and the city as constructed languages. (3)

Architecture creating the city and our personal habitat, offers the basic sensual stimulants that connect us to the world and to ourselves. In the urban environment architectural bodies affect our psychology and sense of social belonging or can be instruments of discord. In our increasingly polarized world, cultural clashes between fundamentalist and populist or secular and left wing fractions of the society are using modernist forms or religious symbols in architecture or urban designs as oppressive, resistant or concordant forces. Yet, if not made a tool for animosity, the diversities possible in urban contexts are the means for opening and understanding. Robert Venturi was already in the 60's able to bring together, through his book 'Learning from Las Vegas' the dialectical forces within the greater urban context and to show that popular forms can also offer both the high and the low at the same time. (4) Both ideologies, the artistic, the critical and the populist try to build their societies through architecture. The building of a mosque does not only concern architecture, it is creating a society through charity, engineering, land speculation, collecting, consecrating and symbolism. Likewise, 'artistic' or 'critical' forms have meanings that aim to bring together not only like-minded people but to create awareness beyond conformities.

The architectural body

Paul Crowther uses the term 'The Body of Architecture' as: '*... the medium's distinctive physicality and ... the human body's engagement with it*'. (5) I use the term 'building as body', in a literal sense, suggesting that architecture is experienced almost as our bodies, and of the inner space of our bodies that we feel, but can only enter mentally. The inside and the outside are two dialectical positions and relate to the inner world and the 'other', the outside and alien world. The building is an archetype of the body, and like all bodies and individuals its appearance has a distinct meaning, a specific language. However, as the human body, it is most valuable when we are not made to feel its presence. As Bataille has said, architecture is what is left after structure; in other words it is the symbolic and spiritual value that makes the essence of architecture. A window is there for us to see outside, to get light and air. We don't need the window, we need the light the air, we don't need the chair we need to sit. If the forms are beautiful and attract us to their physicality, again beauty carries us beyond the material, to a spiritual world. This is how, one of the greatest architects of the twentieth century, Louis Kahn talked about architecture. In this sense I find the relation between the body of architecture and the human body to be very indicative: We do not want to be reminded of our body, when we walk we should not feel our legs but rather the energy and the force against gravity, our spirit wants to forget the body. Likewise it is when we forget the physicality of buildings and are attracted by the aura of their spaces and presence that architecture becomes valuable and unique and transcends its physique. Today architecture asserts its physicality generally in the most brutal way, drawing attention to its material being.

We make contact with buildings in several ways. A personal contact is established when we live or work in it. Even entering a building can create empathy in us through forms that are welcoming, such as a door-knob, or a top light that facilitates our entry, such as the entrance to the main building of the Juveskyla Campus by Aalto. This quality of welcome has been observed all through history; Sullivan's building which are generally of simple forms pay special attention to the entrance articulation both on the outside and in the entrance hall. Each building in a city talks to us according to its shape, its color, its position and its physical relationship with people and place. A building can be frightening, can be chaotic and make us feel insecure, can be mute, cold and without expression, can be intimate and joyful, it can be aggressive, it can have a form that has no coherence and be confusing, it can be too self conscious like someone who tries to please and makes the observer uncomfortable, it can want to be something else than what it could be, like an apartment house trying to become a Swiss chalet, a building can try to reach the sky without succeeding – as someone who wants to be on top but always fails, it can be confusing because we do not know where the entrance or the exit is, it can be terribly defensive with all kinds of walls and railings around it – as many government buildings in Ankara-, a building can be distorted because its function has been changed without appropriate change in its appearance, it can seem awkward because it can look out of place where it is, a building can look terribly old and weak and make us feel uncomfortable not knowing how to act in front of it or in it, and it can have a presence that attracts, it can be proud or simply ordinary. As people and all humanly assumed objects, buildings have their own language besides having diverse meanings for different people.

In an architectural setting all our sensory perceptions are stimulated, as our body is affected by diverse qualities – visual, olfactory, kinesthetic, tactile, auditory – we

translate these into meanings concerning life and into a language of forms. Architecture also refers to social conditions such as class, gender and politics. Unawares, our relationship with the world and with the cosmos is suggested in the meanings that arise. Even merely as shelter, architecture relates to differentiating human existence from the rest of nature. A building has in store more poignant and varied perceptual experiences than a place in nature would have because in all architectural forms, the qualities of nature are brought to light in intensified and humanly conceived ways, and no matter how much a place in nature is emotionally or aesthetically affective, it is always in some ways mute, inexplicable. According to Heidegger what is hidden in nature is revealed in art. **(6)** It is through architecture that we can abstract or isolate sensual qualities as singular values and enjoy their many phases according to how they enter our space creating a silent language.

Architecture tells us what society and its civil condition is. It expresses the soul of society, and is consequently a sign of transcendent reality. But this also means that it is the soul of power that we meet in architecture. I mean power in both its positive and negative sense. Imagine how proud is a man who builds his own house and gathers his family in it. That is why the natural model for architecture is labor. What we take for granted in a finished architectural work is the result of the love and labor of hundreds of people. Even a simple piece of brick undergoes multiple caring interventions from its very beginning as earth and water and fire. Architecture is not only a symbolic art, as Hegel claims in his book on Aesthetics, but it is a tragic art which leaves the language of most of humanity generally unheard or heard without an objective basis. Thus, as Bataille claims *“Architecture is society’s authorized superego”*. *“It speaks to multitudes or silences them”*. **(7)** It is also tragic because it holds on to memories. The show of power through architecture or urban forms, creating ostentatious spectacles, mesmerizes the masses. In Ankara, since the rise to power of the present regime, people of little means have been willing to be put behind showy kitschy screens and consent to live behind spectacles of power.

Goethe said that the sacred is what connects souls. According to him the sacred is when the end and the means to attain it are one and the same thing. **(8)** Good architecture that achieves this retains and radiates the social soul. Ideally this soul is present in the urban reality, as institutions, monuments, memories connect people who are strangers but who assume kinship by being in the same place and by using common institutions. Each institution is the ultimate development and realization of one of our sense capacity and becomes through this articulation a socializing factor. Music is the development of the auditory sense and a music hall brings people together about their intimate sensory pleasure. Thus architectural bodies representing institutions create the discourse continuing in history and of the diverse aspirations and resistances of whole communities that create the city. Any institutional building has its genealogy in the beginning of human communities that have designed forms according to their needs. Therefore, each building is contingent of multiple narratives and myths. It is the use and discourse of the community of strangers who come together in architectural spaces that gives shape to the city and creates silent interactions through shapes and symbols.

The connection to the ‘other’ can be realized most effectively and peacefully in contexts where communal events in social spaces join people in common feelings, such as in being in an awesome architectural space or while experiencing the urban excitement such as at Times Square, or in a park where people can both be alone and with others.

Experiencing works of art that arouse positive responses and feelings, or even that arouse common political outrage is what can erase racial and cultural differences.

Therefore architecture of buildings and architecture of cities, when they cater to the society can create bonding situations. Alienation, despair and animosity begin to happen in many cities where only the separating forces of racism or Capital are at play. As Levy Straus has so succinctly expressed in *Tristes Tropics*: “Once people begin to feel threatened (besieged) in their geographical, social and mental habitats, they fall into the danger of finding the solution in considering a part of the human species as not belonging to humanity.” (10)

8

Authentic art created critically, with knowledge and labor can be the only means to build a sincere human habitat. In architecture and the city, the clarity of spaces, whether public or private, the signs and possibilities for the respectful liberty of use are vital to prevent crisis of identity and exclusionary nationalism or personal political identifications. Is that possible when each ounce of material is considered as an input to Capital? I am hopeful, I am hopeful because as Marx said I am hopeful especially because the situation is so vicious.

CITIES AS WAYS OF WORLD MAKING

Abstract | The theme of “Ways of World Making” appears in the writings of philosophers such as Ernst Cassirer and Nelson Goodman (1906-1998). Cassirer takes up this theme in *Language and Myth* (Tr. by Susan Langer (Harper, 1946), and Goodman addresses “The Ways of World Making” in his book bearing this title (Hackett, 1978, 1981). Both philosophers cite the arts as key ways of world making in their function as various forms of symbols. Following the insights of Cassirer and Goodman, “ways of worldmaking” is explored here first in reference to the imaginative world making roles of works of the arts that relate to cities. Examples including the literary works of JRR Tolkien, a musical composition by Kurt Weill and Berthold Brecht a film Xu Bing, and the recent urban development in New York, Hudson Yards, will be offered as instances of worldmaking in the arts and city development.

Index terms | *Worldmaking, City, Tolkien, Kurt Weill/ Bethhold Brecht, Xu Bing, Hudson Yards, Goodman, Cassirer*

Cities as Ways of World Making

The theme of “Ways of World Making” appears in the writings of philosophers such as Ernst Cassirer and Nelson Goodman (1906-1998). Cassirer takes up this theme in *Language and Myth* (Tr. by Susan Langer, Harper, 1946), and Goodman addresses “The Ways of Worldmaking” in his book bearing this title (Hackett, 1978, 1981). Both philosophers cite the arts as key ways of worldmaking in their function as various forms of symbols. For Cassirer, art as a form of worldmaking originates in imagination and gives us “the intuition of the form of thingsas a true and genuine discovery.” (Cassirer, *Philosophy of Symbolic Forms*) Art offers a perspective that differs from ordinary seeing as well as from the impoverished abstractions of science based on facts or purported natural laws.

In his book *Ways of Worldmaking* Goodman examines the formative functions of symbols. Goodman asks probing questions concerning our uses of language/literature, pictures, and other types of symbols to create worlds of understanding. For example, he asks, “In just what sense are there many worlds? What distinguishes genuine from spurious worlds? How are they made? ...And how is worldmaking related to knowing?”¹ Goodman holds that “the arts must be taken no less seriously than the sciences as modes of discovery, creation, and enlargement of knowledge” in their role of advancement of understanding.²

Following the insights of Cassirer and Goodman, “ways of worldmaking” is explored here first in reference to the imaginative world making roles of works of the arts that relate to cities. Works of art including the literary works of JRR Tolkien, (1937, 1936-1949) the opera “Mahagonny” a musical composition by Kurt Weill and Berthold Brecht, (1930), Xu Bing’s recent film “Dragon Fly Eyes” (2017), and “Hudson Yards” a current city development which opened officially in New York city in 2019, will be offered as instances of worldmaking with respect to the arts and city development.

Hence, the aim of this essay is to explore various manifestations of “world making” in a selection of arts relating to world making of fictive cities in the arts and then in reference to the formation of contemporary cities themselves as ways of world making as this process is revealed in the New York project known as “Hudson Yards.”

I. Tolkien and Ways of World Making

My interest in World Making in reference to Tolkien began with an exhibition at the Haggerty Museum which carried the title “The Invented Worlds of J. R. R. Tolkien”.³ As it happens recent scholarship on Tolkien appears to be notably focused on the theme of world making. Among recent publications on Tolkien’s works is the 2019 publication *Sub-creating Arda: World Building in J. R. R. Tolkien’s Word, its Precursors, and Legacies*, edited by Fimi and Honegger.⁴ The insights in these texts especially relevant to our

1 Nelson Goodman, *Ways of Worldmaking* (Indianapolis: Hackett Publishing Company, 1978), p. 1.

2 Ibid., p. 102.

3 Curtis L. Carter, “Ways of Worldmaking: J. R. R. Tolkien,” *The Invented Worlds of J. R. R. Tolkien: Drawings and Original Manuscripts from the Marquette University Collection*, October 21, 2004-January 2005, pp. 7-16.

4 Dimitri Fimi and Thomas Honegger (editors), *Sub-creating Arda: World-Building in J. R.R. Tolkien’s Works, its Precursors, and Legacies* (Walking Trees Publishers: Zurich and Berne, Switzerland, 2019). According to the Editors Tolkien preferred to address his literary world building as ‘sub creation.’ Current interest in this topic is also reflected in a call for papers focused on Tolkien and the Classical World which notes, “Scholarship on J. R. R. Tolkien has become more and more interested in the topic of worldbuilding...”

topic here include Andrew Higgins' account of Tolkien's literary and graphic means used in building of his world of *Arda* which includes *The Hobbit* and *The Lord of the Rings*. These works employ the use of maps, charts, genealogies, and both lexicons and grammars of invented languages. Such literary and graphic means are used both to construct the worlds and to generate the interaction and transaction between author and reader.⁵ At the core of Tolkien's invented worlds is the assumption that "language creates the reality it describes."⁶ In this respect, he holds similar views to those of Goodman who understands languages as entirely constructed symbol systems. Like Goodman, Tolkien did not limit his sense of languages to written texts.

12 *The Hobbit* which appeared in 1937 and *The Lord of the Rings* first published in three volumes in 1954-55 both suggest immediately the theme of worldmaking. It is not the worldmaking of statesmen that occupies Tolkien. Rather it is worldmaking made possible through the author's imaginative constructions using words. Tolkien's literary texts cannot be fully appreciated apart from a larger, philosophical issue concerning language. His childhood fascination with inventing languages eventually led him to the study of languages. For Tolkien, a language is a wholly invented enterprise constructed by a mind, or set of minds, and has no natural existence apart from its invention and use by a human mind, or a community of such minds.

Fewer people are aware that Tolkien was a talented visual artist not having had the opportunity to view his original drawings and watercolor paintings. These works are known primarily as the illustrations for *The Hobbit* and *The Lord of the Rings* and other of his texts.⁷ His paintings and drawings offer further insight into the imagined cities of Tolkien.⁸

For our purposes here, the central question posed is this: in what sense might Tolkien's literary and visual images contribute to the theme of world making in general and perhaps also to our understanding of city as a world making form? The intent here is not to make a full blown claim or to overstate this possibility, but to use Tolkien's ventures into worldmaking as a start for this discussion in the several media proposed here. Rather, it is to show how the city play a role in his imaginative literary explorations.

II. Tolkien and Cities

Although Tolkien offers no full-blown characterization of a city as it might be defined by urban theorists such as Lewis Mumford in his classic study, *The City in History: Its Origins, its Transformations and its Prospects* (1961), Kevin Lynch's *The Image of The City* (1960), or Edward Glaeser's *Triumph of the City* (2011), recent Tolkien scholarship has focused on the city as an important topic in *The Hobbit and Lord of the Rings*, two of Tolkien's major works.⁹ For example, Dominika Niez's essay, "The Forest and the

5 Andrew Higgins, "More than Narrative: The Role of Paratexts in the World-Building of Austin Tappan Wright, J. R. R. Tolkien, and Ursula K. Le Guin," in Fimi and Honegger (editors), Abstract.

6 Verlyn Flierger, *Splintered Light: Logos and Language in Tolkien's World* (Kent and London: Kent State University Press, 2002), p. xxi.

7 Tolkien created the illustrations for *The Hobbit*, *The Silmarillion*, *The Lord of the Rings*, *Farmer Giles of Ham*, *The Father Christmas Letters*, *Mr. Bliss*, and other texts.

8 Tolkien's original paintings and drawings are located at the Bodleian Library, Oxford University and the Special Collections of the Raynor Library, Marquette University.

9 Lewis Mumford, *The City in History: Its Origins, its Transformations and its Prospects* (USA: Harcourt, Brace and World, 1961). Kevin Lynch, *Image of the City* (Cambridge, Massachusetts, 1960), or Edward Glaeser, *Triumph of the City* (New York: Penguin Press, 2011).

City: the Dichotomy of Tolkien's Istari" considers the author's interest in contrasting city and forest. In this context two wizards, Radagast with connections to the forest life and nature and Saruman identified with the city and the forces of industrialization, offer a context for viewing city life in contrast to life in the forest.

By the early twentieth century Birmingham, England where Tolkien spent a part of his early life, Birmingham would have become a thriving city with a history of architectural and industrial development, also reflecting the growing city problems that industrialization brought. Tolkien himself grew up in the Edgbaston area of the city of Birmingham in the shadow of Perrott's Folly and the Victorian tower of Edgbaston Waterworks, possibly sources for images of the dark towers that appear in his works.¹⁰ Also a part of Tolkien's childhood environment was the Birmingham Museum and art Gallery with a collection which included fine art, natural history archaeology, as well as local history and industrial history. It would be an interesting study to explore whether, or to what extent Tolkien's literary or visual images of city might have been influenced by the architecture and other aspects of his life in Birmingham. As it turns out, in his literary works, Tolkien favours the domain of the forest over city. This theme is developed in Conrad-O'Brian and Hynes (editors) *Tolkien: The Forest and the City (2013)*.¹¹

Let us turn to Tolkien's views on city as expressed in his *The Hobbit* and *The Lord of the Rings*. With respect to population, Hobbits, Elves, and Dwarfs are among those who reside in Tolkien's literary worlds. A Hobbit, the main character, is one of an imaginary peoples who populate the tales of J. R. Tolkien. 'Hobbits,' seemingly the main characters, are people-like characters, who give themselves this name meaning "hole-dweller." They were referred to by others as "halflings," since they were half the height of normal men.¹² *The Hobbit* is populated with diverse occupants also including Dwarfs and Goblins along with Hobbits. These characters, whose interests are not always comfortable with each other, were also not immune to external threats, for example a dreaded dragon named Smaug. Similarly, quarrels leading to wars among the different sectors inaugurated conflicting interests and power struggles the likes of which we are familiar in the world of cities outside of fiction.

The dwelling spaces in *The Hobbit* consist mainly of structures set in imaginary cities and landscapes in the midst of mountains and waterways. Although seemingly smaller in scale when compared to portrayal of cities depicted in *Lord of the Rings*, the cities depicted in *The Hobbit* entertain at least some of the characteristics that demarcate city beyond the literary walls of Tolkien. Within "*The Hobbit*" Tolkien assigns names to geographic locations with characteristics of cities. For example, Lake Town, Dale, Esgaroth, and Aberstore. Like city spaces in the non-fictional world, those in Tolkien's literary discourses include certain trademarks: City Gates and walls which regulate access and security are among the marks of a city in the landscape of *The Hobbit*. Additional features of such sites include Great Halls (the Hall of Feasting and of Council) that serve as gathering spaces symbolizing important community gatherings.

As the community of Esgaroth in *The Hobbit* assesses the damages to the city resulting from a battle with the defeated dragon Smaug, we find a model for addressing urban disaster. There is in Tolkien's narrative an understanding of key factors a city might to

address in a period of reconstruction after a major disruption of city life resulting from war or natural disasters. As we might expect, providing food for the needy and care of the sick and injured are among the first steps in responding to disaster.

Questions about leadership, debates over whether a new regime or the existing one is best suited to undertake the reconstruction, and attention to new plans for the future are among the considerations that the community of Esgaroth addresses. For example should the Master retain his position as leader, or should Bard, ancestral descendant of the king, who had used his ancestral Black Arrow to destroy the Dragon lead the planning for restoration? After looking at the ruins of their city and the resources that could be utilized, including a store of gold previously guarded by the Dragon, the leaders of Esgaroth began planning a new city more fair and larger than before.¹³ Such sentiments seem to echo the planning needs of cities in the modern world outside Tolkien's literary domain. Of course, the question of how to fund changes in the city depend on available resources. And here the citizens benefited from a treasure of gold liberated from the Dragon who had previously controlled this treasure.

Tolkien's fictive world of *the Hobbit* is not immune from the kinds of group discrimination based on difference among its populations which contaminates the world that we inhabit. For example, Beorn, a character in *The Hobbit*, expresses the view that he is not overly fond of Dwarfs. On the other hand this same character Beorn, while cautioning against trusting any one you did not know, warmly extends hospitality and equips his visitors with food and ponies to continue their journey thru Mirkwood forest and homeward.

Tolkien's account of cities continues in *The Lord of the Rings* as the characters journey thru the lands. In *Fellowship of the Ring*, Part I of *Lord of the Rings*, we find an account of the city Minas Tirith as viewed from a distance by the character Frodo in the midst of battle: "Far away it seemed and beautiful: white washed, many-towered, proud and fair upon its mountain-seat; its battlements glittered with steel, and its turrets were bright with many banners."¹⁴ In Part Three, Book 5, the city of Minas Tirith is described thusly: "For the fashion of Minas Tirith was such that it was built on seven levels, each delved into the hill, and about each was a set wall, and in each wall a gate. In a passage from the *Lord of the Rings* "...Pippin gazed in growing wonder at the great stone city, vaster and more splendid than anything that he had dreamed of..."¹⁵

In contrast to the imagined cities in *The Lord of the Rings* is the account of the Old Forest: "...The Forest is queer. Everything in it is very much more alive, more aware of what is going on so to speak And the trees do not like strangers. They are usually content merely to watch you, as long as daylight lasts, and don't do much. ... But at night things can be most alarming....I thought all the trees were whispering to each other, passing news and plots along in an unintelligible language, and the branches swayed and groped without any wind."¹⁶

The city in Tolkien's literary schemes anticipate some of the problems of cities with their focus on the changing character of non-fictional cities and the problems they

must address in the face of changes due to war and natural disaster. His imaginative descriptions point to creative constructions that anticipate the modern cities, but without the interactive technologies that have not yet arrived even in imagination.

Hence works of fiction such as J. R. R. Tolkien's *The Hobbit* and *The Lord of the Rings* command a noteworthy role in worldmaking. They function not as literal description, but as a metaphorical alternative world view that may actually live in the experiences of those who read Tolkien's text or view his visual images, or otherwise participate. As works of literature, Tolkien's constructed worlds are not the world of the physicist, or of the people we meet on the street. But they may nevertheless inform and enrich the worlds of both. His visual art augments the literary scenes found in his books.¹⁷ Given these examples from Tolkien's literary and visual contributions to world making it would seem that his art exemplifies the imaginative world making anticipated in the philosophical theories of Cassirer and Goodman.

III. World Making in The Rise and Fall of the City of Mahagonny

World making can occur in musical theatre as well as in literary and visual arts. At times artists see as their role to challenge or critique the options accessible in city life. The opera, "Rise and Fall of the City of Mahagonny" by Kurt Weill (music) and Berthold Brecht (Lyrics) first presented in the 1930s during the Nazi era in Germany, sets forth in song and drama the conditions of an imagined city life gone awry.

The city of Mahagonny, in which Brecht's tragic play takes place, is a symbolic caricature of freedom: a legendary place, where everyone can live as he pleases.....It is founded and populated by adventurers, wrecked human beings, criminals, procurers, and prostitutes.....The frontiers are set by the rules of supply and demand.¹⁸

Initially, the city of *Mahagonny* was intended as a model city aimed at offering useful services to its residents. But this model city soon degenerates as abuses of power and greed lead an environment where commodification of goods and services leads to the demise of bourgeois civilities. *Mahagonny* thus offers critique both of social conditions and human vulnerabilities that may take place in the process of worldmaking.

*. The fictive city of Mahagonny in Weill/ Brecht's theatrical creation is intended as a parable of city culture gone awry as it fosters an environment where commodification of goods and services leads to the demise of bourgeois civility. The extreme of life in Weill/Brecht's fictive *Mahagonny* shows poverty as a crime warranting punishment. The aim of his music including jazz rhythms in the context of classical musical forms was to "get people involved and thinking."

At the time of its introduction in the 1930s, Weill's musical production posed a challenge to life in the state of Weimar Germany, and especially to the emerging Nazi view of Culture, making necessary the artist's exile to the United States. There he collaborated with Moss Hart, Ira Gershwin, and Langston Hughes in enriching the cultural life of another live city with Broadway musical successes: New York.¹⁹

A moment of reflection on the decadent conditions of life in Weill's city, reminds us that

19 Joshua Barone, "Kurt Weill: How Germany Finally Unearthed a National Treasure," *New York Times*, March 9, 2017.

our current state of city life also faces many challenges, perhaps not yet as extreme as the deteriorated conditions of Mahagonny. To be sure some of our problems such as corruption emerge from deficiencies in human character. But more pertinent to our concerns here are such issues as the increased commodification of city life, poverty, and the de-emphasis on the values (justice, respect, trust) necessary to support attention to such matters. From the perspective of social aesthetics, what then will be the role of the arts in these new social processes? How will art and aesthetics fare in these social changes? What new forms will the arts that emerge in the new forms of city life that are already emerging?

16

Despite its dour lessons referencing city life in disarray, “Mahagonny” continues to enjoy periodic revivals. In addition to US productions in New Haven in 1974 and 1978, and at the Metropolitan Opera in New York, in 1979, Los Angeles in 20017 its productions continue in theatres across the world. There is now (2017) a festival in Dessau, Germany, home of the Avant garde Bauhaus, where Weill is increasingly celebrated including a recent production of “The Rise and Fall of the City of Mahagonny.” The continuation of recurring revivals of Weil’s enigmatic commentary on city life, reminds us that one of the ways in which art has functioned in city life, is by continuously reviving the arts of the past through restaging and reinterpreting past contributions.

Weil and Brecht were not alone in their challenge to the narratives of life in Germany at the time. He was joined by radical artists including the painter Otto Dix and architect Mies Vander Rohe, cabaret performers and other artists deemed degenerate in the eyes of the Third Reich leaders.

IV. XU Bing: Dragon Fly Eyes

Taking the discussion of worldmaking to a contemporary stance where film is the medium, Chinese contemporary artist Xu Bing’s recent film, “Dragon Fly Eyes” released in 2017. Among Xu Bing’s never ending pursuit of new challenges, “Dragon Fly Eyes,” this “cameraless” experimental film making project is based on footage acquired from some 500 surveillance cameras and on line streaming images of city life. The film ostensibly narrates a simple story centering on the lives of two characters, Wing Ting (Dragon fly) and her boyfriend Siao Xiao as they navigate thru a series of identity changes in contemporary Chinese city life. But it also shows the strains of every day urban life of the twenty-first century. “Dragon Fly Eyes” will generate conversations and concerns over the millions of security camera that focus on nearly all aspects of life contemporary city life, whether in Beijing or New York or London, from the maintenance of street traffic and public safety to national security uses and possibly intrusions into the privacy important to everyday life.

No doubt this new venture of Xu Bing will heighten the realization of the role that surveillance devices have assumed in twenty-first century life. it will generate conversations and concerns over the millions of security camera that focus on nearly all aspects of life contemporary urban life, whether in Beijing or New York or London, from the maintenance of street traffic and public safety to national security uses and possibly intrusions into the privacy important to everyday life.

Apart from its creative advances to experimental film making, this work vividly draws our attention to what may well be a grave threat to values based on personal freedom as it is lived out in twentieth century cities and beyond. While the artist in this work is also concerned with unlocking new aspects of creating art film, no doubt this new venture of Xu Bing will heighten the realization of the role that surveillance devices

have assumed in twenty-first century city life.

“Dragonfly Eyes” was shown in the New York Film Festival in 1917 and was included in Xu Bing’s Ullens Center exhibition in 1918.

V. Hudson Yards

Taking the discussion of Ways of World Making into the actual world of city spaces, I will cite briefly the contemporary city as a form of world making by examining the latest city development in New York City called “Hudson Yards,” which opened officially in March of 2019.²⁰ This recent contribution to world making joins other such projects located in New York such as the 92 acre publicly developed “Battery Park City” completed in 2011, and Lincoln Center, created in 1955, which is currently the cultural hub of the city housing major performance spaces of dance, theatre and music in New York. Unlike the publicly developed 92 acre “Battery Park City” embodying the urban ideals of urban theorist and reformer Jane Jacobs, Hudson Yards consists of a privately developed 28 acre section of Manhattan. This development is located along Tenth Avenue over what previously served as a 30 track Hudson Yards rail yard.²¹ “The development has reimagined a neighbourhood once dominated by rundown industrial buildings and auto repair shops as an architectural landmark.”

Unlike previous urban projects in New York such as Battery Park, Hudson Yards has proceeded under coordination by a single development company headed by Stephen Ross. Hudson Yards as it now exists includes a cluster of residential, commercial, retail, and cultural spaces featuring high rise towers containing office spaces, apartments, an extensive mall and green spaces. Taking note of increasing terrorist threats, Hudson Yards developers are mindful of security needs and ability to cope with natural disasters. Its features apply the latest technology in its systems including its own power system, rainwater collection system, and protection against storm systems, and of course elaborate security features.²²

A place for the arts in Hudson Yards is invested in “The Shed,” a \$475 million dollar centre for the arts designed by Diller, Solidi, Renfo, in collaboration with the Rockefeller Group.²³ The aim of the planners for the Shed was to create a highly flexible cultural entity with architecture that would encourage artists to break out of their narrowly construed discipline based offerings and connect with other disciplines: dancers with visual artists, musicians with theatrical performances aimed at reaching a greater degree of the population.²⁴ Not to be missed in this addition to world making is “Vessel” a 154 high vertical sculpture of connected staircases designed by Thomas Heatherwics Studios in London that aspires to rival the “Eiffel Tower” in Paris.²⁵

All of the elements set forth in the Hudson Park project at the moment anticipate a
 20 Hudson Yards is located in New York City between 30th & 4th North & South, and 10th and 12th East and West. Its designers are Kohn, Pederson, Fox and its developer is Stephen Ross. Although funded as a private development, indirect public costs included 1.4 billion for 4 acres of park and open space 2.4 billion to extend No. 7 subway, and 359 million interest on bonds.

21 C. J. Hughes, “Giants Within A City of Giants,” *The New York Times*, April 7, 2-19, p. 10.

22 Peter Grant, “Hudson Yards Design is Like a Fortress,” *The Wallstreet Journal*, March 13, 2019.

23 Nick Mafi, “the Shed Finally Opens in New York City’s Hudson Yards,” April 5, 2019.

24 Michael Cooper, “Can the Shed Redeem Hudson Yards?,” *New York Times*, March 31, 2019.

25 Andrew Russeth, “Stairway to Nowhere: on the Pleasure of Hating Thomas Heatherwics’s vessel in Hudson Yards,” *Art News*, March 3, 2019.

next stage in world making representing a new development in city planning. Such a development generates hope for improvements, enrichments in future city life by including benefits of newest technologies, and a museum of contemporary architecture featuring buildings designed by leading architects Frank Gehry, Santiago Calatrava, Robert A. M Stern.

Looking at this newest manifestation of world making from a more distant perspective, it is interesting to consider the reception of Hudson Yards from the perspective of Jane Jacobs, urban activist and urban planner who challenged the urban planning ideals of the 1950s to 1980s and questioned the value of tall buildings isolated from street life.²⁶ Jacobs would no doubt hold a sceptical view of the volume of high rise buildings in the setting, and the limited connection to adjacent street life.

And such worldmaking enterprises are not without critical responses from their immediate contemporaries. New York Times Architecture Critic Michael Kimmelman finds Hudson Yards lacking in a semblance of human scale. "...Hudson Yards glorifies a kind of surface spectacle—as if the peak ambitions of city life were consuming luxury goods and enjoying a smooth, seductive, mindless materialism."²⁷ In defense of Hudson Yards is the view of Patricia Derrington, Director of the Center of Urban Real Estate, Columbia University "This is how urban folk choose to live: a defined neighbourhood that represents their values and aspirations, set in amongst others of a different identity."²⁸

VI. Conclusion

The examples of world making with respect to cities in three different art forms (literature, music, and film, and city planning each offer insights into the matter of world making. From Tolkien's literary texts we see references to the imagined city constructions and skeletal sketches of issues necessary to city life including glimpses of fictive architecture as contrasted with nature in the forest and of the needs for governance and societal life although basic in character. Weil and Brecht's *Mahagony*, we witness the breakdown of city life exhibiting human both the frailties of the human condition and hope for future reconstruction of a broken city structure.

Xu Bing draws attention to invasive forces into city life by means of a relative new intervention consisting of the surveillance camera in his "Dragon Fly Eyes". The interventions of invasive security devices into almost every aspect of human life poses a threat to world making issues related to personal values such as privacy and given unlimited access to state authorities as well as to predators. Xu Bing's film, while itself relying on exploratory possibilities of inventive surveillance technologies, also points to a growing societal concern with the possible uses of surveillance devices for intervention into areas of personal life. In the surveillance camera, we have a contribution to world making that raises important questions concerning the rights of personal liberty versus the government and other societal forces access to personal life privacy. Not all world making practices and their uses are necessarily serve good human good. And here is a case where the arts can contribute to the discussion of the role of such devices.

26 Jane Jacobs, *The Death and Life of Great American Cities* (New York: Random House, 1961.) Edward Glaeser, *Triumph of the City* (New York: The Penguin Group, 2011), 142-148.

27 Michael Kimmelman, "Hudson Yards is Manhattan's Biggest, Newest, Slickest Gated Community," *The New York Times*, March 14, 2019.

28 Barbara Goldberg, "Hudson Yards Redraws New York Skyline," *Reuters*, March 15, 2019.

Moving our discussion of world making into the “real world” city planning, Hudson Yards offers an instance of city planning that affects directly the material, social, and economic structure of an actual city, New York, one of the great cities of the world where the lives of countless residents and visitors either benefit or suffer from the actions resulting in a major shift in shaping the future life of New York as a city.

In short, the importance of worldmaking with reference to cities is aptly noted in Edward Glaeser’s *Triumph of the City*: “Great cities are not static—they constantly change and take the world along with them.”²⁹

WHAT HAPPENED TO AESTHETICS AND ART OVER THE LAST 100 YEARS? CONTRADICTIONS AND ANTAGONISMS – THEORY WARS!

20

Abstract | The subject of my talk will be the dynamic and transformational relations between aesthetics and art from 1919 to 2019. I will offer a comparative discussion, based on a diagrammatic indexing and mapping of the relations between art and aesthetics. The first problem to be discussed will be the relationship between art and politics at the Bauhaus and art institutes of the Soviet avant-garde (GInHuK, Vkhutemas). Next, I will point to differences in Marxist concepts of socialist realism (György Lukács) and critical theory on modern culture and art (Theodor W. Adorno, Walter Benjamin). I will pay special attention to the polemic between fundamental ontology (Martin Heidegger) and modern art history (Meyer Schapiro). I will analyse the relationship between the concept of the autonomy of art, especially painting (Clement Greenberg, Michael Fried) and minimal art (Donald Judd, Robert Morris, Rosalind E. Krauss). A comparison will be derived between anti-art (Dada, Neo-Dada, John Cage) and anti-philosophy (Friedrich Nietzsche, Ludwig Wittgenstein, Jacques Lacan). I will highlight approaches from analytical meta-aesthetics to the interpretation of Duchamp's ready-made (Morris Weitz, Arthur Danto, George Dickie), deriving a theory of art in conceptual art (Joseph Kosuth, Art & Language, Group 143).

Special attention will be paid to the “theoretical conflicts” between phenomenology (Roman Ingarden, Ivan Focht) and structuralism (Claude Lévi-Strauss, Louis Althusser), as well as poststructuralism (later Roland Barthes, Jacques Derrida, Jean-François Lyotard). I will conclude my discussion by identifying the “aesthetic condition” (Julia Kristeva, Hélène Cixous, Friedrich Kittler, Jacques Rancière, Brian Massumi, Terry Smith, Boris Groys, Aleš Erjavec) in relation to “contemporary art” (feminist, activist, political, ecological, participatory, and appropriative art). In particular, a comparative and critical interpretation will be derived between the relations of “Art, Love, Politics, and Science” (Alain Badiou) and “Philosophy, Love, Politics, Aesthetics (Thomas Hirschhorn).

The aim of my discussion will be to highlight the character of modern and contemporary aesthetics in relation to art theory, by way of diagrammatic reflection on the binaries, differences, and reconstructions of dialectics.

Index terms | *art schools, Marxism, critical theory, analytical aesthetics, art history, phenomenology, structuralism, poststructuralism, contemporary aesthetics and art*

The subject of my talk will be the dynamic and transformational *processings* that have occurred in aesthetics and art between 1919 and 2019. This concerns the relations between aesthetics, art, culture, society, and, to be sure, the world. If the subject is *processings*, then my talk will be about the *politics of aesthetics* in relation to aesthetics as a discipline and in relation to other domains that are referential to it. My talk will be comparative and based on diagrammatic indexing and mapping of the relations between art and aesthetics in the field of sociality. Diagrammatic indexing and mapping of, first and foremost, the relations between art and aesthetics is a matter of the *politics of aesthetics* and a matter of the *politics of art*: “The diagram is no longer an auditory or visual archive but a map, a cartography that is coextensive with the whole social field. It is an abstract machine”.¹

I set out from the claim that the unique concept of aesthetics as a philosophical science began growing in complexity from its very inception and led toward distinguishing between the respective characters of philosophical *knowledge* pertaining to the beautiful (Baumgarten), the sensuous (Kant) and the artistic (Hegel), and the political (Schiller).

The crisis of philosophy began, to be sure, in the *century of philosophy*. It began with Marx’s diagnosis of “the poverty of philosophy” in a world beset by real human poverty amid the industrial society of exploitation. It also began with Friedrich Nietzsche, with his “grandiose”, immanently philosophical failure to derive yet another great totalising philosophical system of thinking about everything and for everything. This was the first time that the notion of a philosophical failure became the cornerstone of a reordering of philosophy, a reordering that would grow significant, above all, in the 20th century. Finally, it also began when Dr Sigmund Freud postulated his theory of the unconscious as a universal discourse about the *un-whole subject* and fragile subjectivity within human life, a humanist discourse that *moved across* the empirical and pseudo-empirical fields of biomedical and socio-cultural hypotheses outside of the professional security of philosophical paradigms and styles. Interpreting this in retrospect, one might say that Marx, Nietzsche, and Freud undermined the certainty of philosophical comprehension and thus destabilised the field of a potential aesthetic theory. This philosophical crisis of aesthetics was manifested in various initiatives, for instance, to abandon philosophical aesthetics in favour of a scientific aesthetics, i.e. to posit aesthetics as the science of form (Konrad Fiedler, Clive Bell), science or naturalised science of the arts (Max Dessoir), science of technology in art (Max Bense), and, finally, as a crisis of metaphysics in general (Martin Heidegger). One of the final attempts to defend philosophical aesthetics was the following dictum of the philosopher Nicolai Hartmann, issued in the introduction to his seminal work *Aesthetics* (1953): “One writes aesthetics neither for the creator nor for the patron of the arts, but exclusively for the thinker, for whom the doings and the attitudes of both have become a puzzle”.²

Roughly speaking, philosophical aesthetics could no longer follow or interpret contemporary art, which, starting from the late 19th and throughout the 20th century, came to be, vanished, or became canonised as modern, postmodern, or contemporary art. In the British and American context, philosophers such as William E. Kennick³, J. A. Passmore,⁴ and Morris Weitz⁵ problematised the status and priorities of *Continental aesthetics* or *general aesthetics*, advocating a Wittgensteinian-oriented conceptual analysis of aesthetics as understanding and explaining the concepts of art and those of aesthetics. By contrast, in the context of German critical philosophy, Theodor W. Adorno, in his *Aesthetic Theory*, posed the most sceptical question, confronting the

dramatic shifts of modern art: “It is self-evident that nothing concerning art is self-evident anymore, neither in it nor in its relation to the whole (zum Ganzen), not even its right to exist”.⁶ In his historicisation of Western aesthetics, the Croatian and Yugoslav theorist of aesthetics Danko Grlić interpreted German 19th-century aesthetics under the heading of the Hegelian “death of the aesthetic”,⁷ and the aesthetic of the incipient 20th century under the heading of “beyond aesthetics”.⁸

Grlić’s analysis of late modernist art confronts us with the fact that modern aesthetics was unable to follow the fundamental changes of 1960s art and accept the necessity of revising aesthetic theory in a changed world, where old concepts (art, artwork, artistic practice) were gaining new meanings or losing their conventional functions. This was not about the “suicide of art”, but a fundamental change in the concept, methodology, and effects of the practice of art in relation to its traditions and bourgeois society. This was the shift that Morris Weitz encapsulated in his description of art as an “open concept”. Roughly speaking, there occurred a shift from the Picassoan poetics (remember his *Guernica* from 1937) to the Duchampian concept of artistic *intervention* by means of objects (remember his readymade *In Advance of the Broken Arm* from 1915). This shift in the “object of study” also entailed a revision of aesthetic thought in relation to contemporary philosophies and turns from philosophy to theory and theorisation within the plural field of the humanities.

A new philosophical or theoretical platform was necessary, that is, new platforms outside philosophical aesthetics, in the field of artistic practices, or, from the other side, new platforms extending across structuralism and poststructuralism, cultural and media studies, as an alternative to philosophical thinking about art. There ensued accelerated modifications in the domain of speaking and writing about art, a movement that replaced the great hierarchical platform of philosophy with different positionings and interpretative approaches.

The resulting multitude of unstable shifts may be roughly described with the following *narrative*, only one among many other narratives that could be told about the arts in the late 19th, 20th, and early 21st century:

Artistic micro- and macro-formations kept replacing one another at a fast pace, abrogating the notion of “great styles” with concepts such as *tendencies*, *phenomena*, *movements*, from realism, impressionism, symbolism, secession, expressionism, to futurism, etc. For instance, the relationship between art and the new techno aesthetics at the Bauhaus and the relationship between art and the new revolutionary aesthetics at the art institutes of the Soviet avant-garde (GinHuK, Vkhutemas) led toward the establishment of an expansive emancipatory modernity. But, running in parallel with this upheaval in the arts, there also occurred differences within philosophy and political theory in relation to aesthetics. I would point to the differences between Marxist concepts of socialist realism (György Lukács) and critical theory of modern culture and art (Theodor W. Adorno, Walter Benjamin). One could also highlight the polemic between fundamental ontology (Martin Heidegger) and modern reflective art history (Meyer Schapiro). There were confrontations between positions pertaining to the concept of the autonomy of art and especially painting (Clement Greenberg, Michael Fried) and minimal art (Donald Judd, Robert Morris, Rosalind E. Krauss). Also, paradoxical comparisons were made between anti-art (Dada, Neo-Dada, Fluxus, John Cage), and anti-philosophy (Friedrich Nietzsche, Ludwig Wittgenstein, Jacques Lacan, Jean-François Lyotard). Attention was also drawn to the approaches of analytic meta-

aesthetics in the interpretation of Duchamp's ready-mades as legitimate works of art (Morris Weitz, Arthur C. Danto, George Dickie). Conceptual art developed its own idea of theory in art (Joseph Kosuth, *Art & Language*, Group 143). The group of French authors gathered around the *Tel Quel* magazine, especially Philippe Sollers, established a materialist theory of theoretical writing. Later interpreters spoke about an *age of theory*. Likewise important were "theoretical conflicts" between phenomenology (Roman Ingarden, Vladimir Jankélévitch, Ivan Focht) and structuralism (Claude Lévi-Strauss, Louis Althusser) as well as poststructuralism (the late Roland Barthes, Jacques Derrida, Jean François-Lyotard). A special interpretative demand emerged concerning the need to identify the multiplicity of different aesthetics or theories alternative to aesthetics (Julia Kristeva, Hélène Cixous, Friedrich Kittler, Jacques Rancière, Brian Massumi, Terry Smith, Boris Groys, Aleš Erjavec) in relation to "contemporary art" (feminist, activist, political, environmental, participatory, and appropriative art). It was especially provocative to take note of the new philosophical fundamentalism encapsulated in Alain Badiou's four concepts – "Art, Love, Politics, and Science" – and its relation with the construction of the "Philosophy, Love, Politics, Aesthetics" graph in the Swiss contemporary artist Thomas Hirschhorn's politicisation of participatory art.

These and many other examples open the field of discussion and my risky theorisation!

One possible diagram such as the one below may serve to highlight the productions of differences, ruptures, and constructions of new potentialities in the re-examining of the relationship between aesthetic and art in relation to philosophy and theory.

philosophical aesthetics

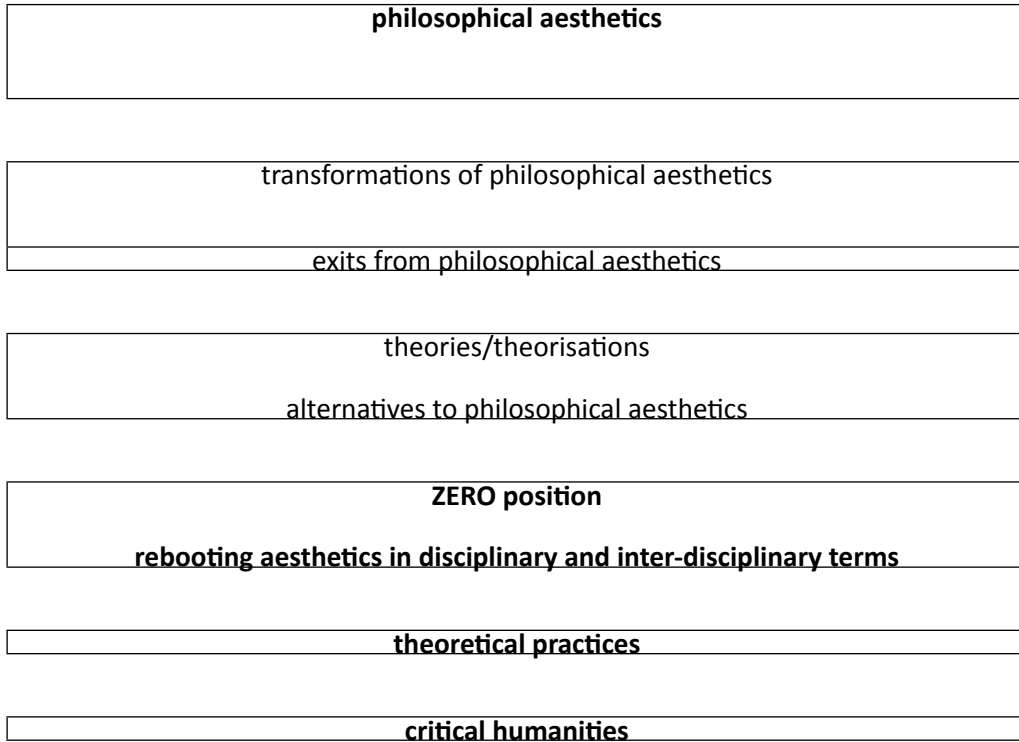

aesthetics (Baumgarten, Kant, neo-Kantianism) aesthetics <i>qua</i> philosophy of art	interpretations of specialised sensualities
aesthetics as the history of the philosophy of art (Hegel, Arthur Danto)	introduction of phenomena and concepts of art into the field of <u>philosophical discussion</u> philosophical interpretations of the <i>nature</i> , functions, and meaning of art history and discourses about art histories
meta-aesthetics ⁹	critique of the <i>language</i> and concepts of aesthetics in disciplinary terms
theory of art ¹⁰	the positioning of <i>art theory</i> in between the philosophy of art and differentiating theories and theorisations in the open field of the humanities, including the critique of <u>philosophy and the humanities itself</u>
theory in art	the incomparable multiplicity of theories, sciences, and philosophies of various origins and functions in the <u>artworld's field of interest</u>
theories beyond aesthetics ¹¹	the domains of various theories pertaining to a specific contextual positioning and approach to the paradoxes, deviations, rambling, replacements, subversions, innovations, catastrophic impacts, and, above all, permanent changes in the <u>nature, functions, and meaning of art</u>
feminist aesthetics and theory gender aesthetics and theory ¹²	women's perspective on understanding aesthetics, that is, theories of art; and gender naturalisation (LGBT, queer) of aesthetic and theoretical discourses <u>about art and culture</u>
the death of aesthetics project (Hegel, Arthur Danto) ¹³	<i>projects intended to complete aesthetics from the domains of philosophy and the humanities, that is, from highly specific theories of art, culture, and media</i>
hybridisation of aesthetics	<i>implementation of the politics of difference i.e. decentering in the field of philosophical aesthetics, the philosophy and theory of art</i>
the decentering of Eurocentric aesthetics ¹⁴	<i>basing an aesthetic discourse on theories from postcolonial and de- colonial studies</i>

rebooting aesthetics ¹⁵	<i>imagining a new beginning or zero position for constructing aesthetics as the multitude of theories and theorisations about the sensuous, art, culture, nature/the world, technology, human as well as post-human and non-human</i>
performing theory ¹⁶ as practice	redefining theory as a set of articulated autonomous bodies knowledge into the processing of theoretical procedures i.e. material practices – theory as an event of accession and retreat in interpretation, not as positing an attained final body of <u>knowledge about anything</u>
politics of aesthetics ¹⁷	approaching aesthetics as a <i>practice</i> within various social dispositives – not the aestheticisation of politics, but discussing politics in aesthetic terms as a social relation in relation to sensuality, corporeality, individual and collective experiences, understandings and beings in the world as the active and interactive dispositive i.e. <u>infrastructure of human forms of life</u>
aesthetic regimes ¹⁸	the demand that the aesthetic (aesthetic event, aesthetic experience, aesthetic understanding, aesthetic affect) be <i>viewed</i> as a moment in a process – in the volatile multiplicity of events pertaining to <i>forms of life</i> , <u>incomparable and yet simultaneous</u>
aesthetic <i>assemblages</i> ¹⁹	unstable and shifting aesthetic complexities amid the continual expansion of the possibility for connecting and restructuring various <i>events</i> from <i>various spheres</i> of human <u>and other forms of life</u>
aesthetic revolutions ²⁰	the end of an order between what may be seen/heard and what may be said, knowledge and action, activity and <u>passivity</u>

theoretical practices
critical humanities

In other words, the diagram above may be viewed in terms of the critical and transformative relationship between “philosophical aesthetics” and “theoretical practices” in relation to the open and flexible field of the humanities i.e. contexts, dispositives, and infrastructures of theorisations about art and discourses about art under various conditions and circumstances. Therefore, the diagram may be simplified as follows:

26

On the other hand, the whole story of the “aesthetic” and the “artistic” was moved from the discourse of aesthetics into the field of discourses developed in and around artistic practices and their positionings in the worlds of art, culture, and society. This concerns identifying the concept of “artistic theoretical practice”. A diagrammatic representation yields the following set of relations:

letters, diaries ²¹	artists' private speaking/writing about art
manifestoes ²²	public programme discourses
theories of form ²³	transforming poetic speech into a theory of procedures in forming practices
presented concepts ²⁴	conceptualising an art practice with examples or a discourse that exemplifies the art practice itself, but without theoretical aspirations
theories of artists – I ²⁵	theorisations and pseudo-theorisations derived from an immediate art practice
theories of artists – II ²⁶	theorisations of artists posited as theoretical platforms independent from a concrete practice
theories of artists – III ²⁷	theorisations of artists derived in relation to the open field of the humanities or by entering the field of the humanities

deconstructing an artist's theory ²⁸	problematizing or ironizing an artist's theorizations by means of hybrid discourses from popular, mass, i.e. media culture
politicisation of reflective art practice ²⁹	theorisation, reflection, self-reflection, interpretation as an apparatus for intervening in the domain of the politics of art or for intervening by means of art in the domain of politics

This brings me to an *image* of the surveyability of the unsurveyable, meaning the permanent complicating of relations in various fields of the production of differences between "understanding" and "non-understanding"; as well as influence, exchange, and domination, that is, deriving alternatives to current configurations of the power and disempowerment of theorising and philosophising in relation to an increasingly fluid art in the midst of antagonisms between reality and fiction. The relationship of art and aesthetics, that is, aesthetics and art, will therefore be presented with the following diagram, which delineates the domain of current research:

philosophical aesthetics	theory	rebooted aesthetics
dialectics:	politics of difference:	dialectics of difference:
thesis-antithesis-synthesis	comparability and incomparability	tactical turns
of the sensuous	of the concept of the sensuous	of the dispositive of the sensuous
of thinking about sensuality	of the discourse of concepts-sensualities	of assemblages of the world

AN ISLAMIC NUMERICAL INTERPRETATION OF HAGIA SOPHIA IN CONSTANTINOPOLE

32

Abstract | Ideas regarding aesthetical thinking on architecture developed through history a number of interpretations addressing its cultural and social importance. These interpretations appear as formations of possible worlds of meanings, structured through human power of imagination and reaching impressive levels of creative comprehension what architectural structure can reflect by its meaningful essence.

The paper explores one of such possible world of meanings, given in a form of numerical interpretation of the architectural structure of Hagia Sophia in Constantinople. Beside its complex and hermeneutic nature, the analyzed document reveals a highly sophisticated level of interactions of various cultural elements. They are composed into a whole which idealistic and poetic nature seems to be based on cosmopolitan approach to philosophy, religion, and human capability to comprehend the divine essence of creativity.

Index terms | *Architecture, Aesthetics, Number, Islamic Philosophy, Cosmic Structure*

| University of Belgrade - Faculty of Architecture, 2019 |

Philosophical and theological interpretations of buildings are not an unusual occurrence in the history of architecture. Such expressions, however, often remain little more than identifying a given architectural object as an important cultural or religious artifact of an epoch, and by certain means their significance can be magnified to the symbolic level of the cosmic order and universal divine creative laws. One such building is without doubt the church of Hagia Sophia in Constantinople. In this article we will analyze a document representing this most important building of the Byzantine epoch. The document comprises drawings of the plan, section, axonometric section, and four details, namely the window, capital, a part of decoration, and the representation of a sphere. It has been found more than ten years ago among old books on architecture from the nineteenth century in Varna, Bulgaria, not as an integral part of any volume but as a separate page. Obviously, being a hand drawing, it has been purchased separately at some time and added to the collection of books (Figure 1).

The drawings were composed to produce a harmonious whole and framed with three rows of lines. A system of numbers corresponds to each image, related to the parts of the building. Two inscriptions can be seen within the composition, one, taking the central part above the drawings and presented on a ribbon, and the second, in the right lower corner. In the margins, on the left part of the document, but outside it, there are three inscriptions in Arabic letters. In the middle section above the lower margin we see a stamped library seal. The representation on the seal shows a central dome, with two minarets and two stars in the foreground.

The date and origin of the document are uncertain, mostly because there are religiously opposed elements in the representation of the building. The drawings present Hagia Sophia as it was built in Byzantine time, without any Islamic alterations. There is a cross placed on the top of the dome, in the section and axonometric presentation. The axonometric presentation of the interior emphasizes a cherub in the pendentive, as the cube placed on the spot where the Byzantine Emperors stood, and from which the Koran has been read in the Islamic era.

However, the Arabic inscriptions in the margins are comments related to the use of verses and terms related to the beginning of readings of Koranic chapters. They read: “regarding the pronouncement of ‘In the name of Allah the Merciful and all-Compassionate’, when two intend to read the Koran... It is allowed, as it is allowed for them to speak ‘Praise be to Allah’;” and “...and he answered that this cannot be pronounced. There is a question: is this a complete ‘ayah’ or not, and is it regulated as a primal obligation from Allah – most Exalted. And because of this perplexity it should not be admitted in reading or handing down. These words also testify, that they speak how ‘tasmiya’ distinguish from ‘ta’awwuza’, considering to be an integral part of the Koranic text.” The nature of these texts refers to the possibility that the pictorial representation of the Hagia Sophia within the margins, and the related numerical system, can be thought as an important theological discussion.

The two inscriptions in the margins contribute to the uncertainty of the document’s origin. They are not written according to the rules of Arabic calligraphy, and they are still not deciphered, although it is certain they are not in Persian, Turkish or Arabic. It is possible that the author of the document deliberately invented a kind of hermeneutic script, hiding its origin. Moreover, the first half of the inscription in the lower right

corner, repeats the characters placed on the ribbon above the pictorial composition. This fact shows the existence of a logical matrix which binds these two inscriptions, probably containing the title and other information related to the document.

The Christian character of the way in which the Hagia Sophia is presented, as the Koranic comments in the margins point out, raise a few important issues, regarding the possible origins of these drawings. If the document originated within a Christian community and from a Christian author, before or after the conquest of Constantinople, certainly the comments on Koranic issues would not have originally been inscribed in the margins. This possibility allowed that even existing Muslim alterations to the building could be neglected in the presentation, which was an ongoing practice in some Christian drawings of Constantinople from the fifteenth century.¹ However, in that case, the hermeneutic inscriptions accompanying the drawings could be explained as a way to protect the author's name. If so, the Koranic comments were possibly added to the drawings at a later time. The second possibility is related to an Islamic author, who would certainly not be averse to presenting the Islamic alterations to the building or Islamic religious symbols, but only if the drawings were made after the Hagia Sophia was transformed into a mosque. As it is, there is a possibility that the document was made before the Turkish conquest, but also represented the divine dignity of the church and respect for the magnificent importance it held for Muslims in the centuries before the conquest, as Necipoglu documented.² That would explain the Koranic comments, in which the structure of the building seems to be equated with the text of theological importance. By this, it is similar to the Islamic presentation named Djawal, which consists on geometric patterns or a plan with numerical alterations, surrounded by the Koranic verses.³ However, we should keep in mind that alteration of Koranic verses to an important discussion, literal or pictorial, is a broad tradition in Islamic culture.

It seems that one detail can help in the possible clarification of some issues here discussed. The representation in the library seal, pressed on the lower horizontal margin, contains an image of a dome built of stone blocks, with minarets on both sides. A star is placed on each side, between the dome and the minarets (Figure 2). There is a strong similarity in character of image, shape of dome, and presented technique of its construction between the representation on the seal and of those found in the medieval Shiite pilgrimage scroll, related to the shrine of imam Husayn at Karbala.⁴ Despite its importance, this similarity cannot indicate the exact origin or the author of the representation, nor the time of its appearance (Figure 3). However, the possibility that this presentation of Hagia Sophia was part of an Islamic library or school indicates its own importance and a likelihood that it is a copy of an older document made by an Islamic author.

The analysis of the numerical system used in the document and its relation to the drawings indicates two kinds of use of numbers. The first one serves to show the number of windows in the dome, presented in the section of the building, the number of arches related to the central section of the church, and the number of flying buttresses placed on the west façade, in the axonometric drawing, as well as the number of vaults over the parvis presented in the plan.

However, the second numerical system seems to be based on a philosophical approach

to the ideal meaning of the interpretation of the church of Hagia Sophia. We are driven to this conclusion not only by the particular character of the numerical system related to the parts of the architectural structure, but also by the position of the plan according to the section. The plan is not positioned to correlate architecturally to the section, which indicates that we are not looking at a professional architectural plan, but a polygon for expressing particular numerical meanings.

There are only five numbers used in this system: 1, 2, 4, 6, and 9. It is interesting that when they compose a compound number, they are not added one to another to give a sum of the used numbers, but are altered to produce a raw, e.g. 41691 or 914612. There is a strong sense that by these means these five numbers express a kind of process, related to a particular meaning of the architecture and its significance as a creation. Further, it is important to emphasize that the possible system of expressing such ideas comes as an interpretation of a building erected long time prior. This fact raises the possibility that the author of this document used the building of Hagia Sophia to interpret universal symbolical values related to the process of creation in general. In this way, he is also magnifying the importance of this architecture to the level of universal harmonic order, which was not unusual in the Islamic cultural and philosophical tradition.⁵

The possibility that this numerical system was used for such a purpose indicates the way in which these five numbers appeared in the document in first place. They are presented as a progression in the upper left corner of the plan. Numbers 1 and 2 are placed together in the circle of the skeuophylakion, following the horizontal line. They are accompanied by 4, 6, and 9, placed within the left upper corner of the square which forms the naos of the church, but following the vertical line. In the same way, these five numbers appear in Nicomachus, when presenting the geometric progression: 1, 2, and 4 in a horizontal raw, and 4, 6, and 9 in the vertical raw, where number 4 belongs to both lines of number progression.⁶ Number 4 relates to 2 as 2 to 1, giving the ratio 1:2; and on the other side, 4 relates to 6 as 6 to 9, giving the ratio 2:3. Although the interest of Islamic philosophers in ancient arithmetic, particularly of Nicomachus and Neo-Pythagorean, is well known and carefully documented,⁷ it is important for our discussion to emphasize the part of the Epistle on Arithmetic written by the Brethren of Purity.⁸ In the chapter 22, they emphasize the use of numbers 2, 4, 6, and 9, and their ratios, forming the geometric progression, where the number 1 is representing the monad, the beginning and the sum of all numbers. By this, the numerical system in our document finds its support in one of the most important Islamic philosophical text on arithmetic.

However, it seems that the use of these five numbers is not only the consequence of their mathematical significance. The compound numbers formed by 1, 2, 4, 6, and 9, indicate the possibility that their symbolical meaning has also been taken into account. No rational mathematical logic can be grasped from the way in which they alter from one to another, rather it seems that they follow a particular connection to the architectural structure, and to the cardinal directions of east and west. Compound numbers seems to follow a particular metaphorical logic, usually emphasized as the essence of aesthetic and spiritual appreciation of the universe, and architecture as its material image. This appreciation is based on the inside capacities of the soul and its ability to comprehend the relationship between immaterial essence of its material

reflection.⁹

36

In the Islamic tradition, number 1 represents the Creator, One, primordial existence of the Monad, the beginning and the sum of all other numbers and principles. Number 2 identifies the Intellect, the active principle of creative power. Number 4 is the matter of artifacts, material order, the square. Number 6 is the first body consisting of six directions, the cube, and ideal form. Number 9 is the 'sphere of spheres', the final number of the cycle and the symbolical end of all numbers, the sum of all beings in existence, their completion and fulfillment.¹⁰ Even in the western Middle Ages we encounter the strong influence of Islamic symbolical appreciation of the number nine. Magister Johannes in his adaptation of the lost Arabic work of Muhammad ibn Musa al-Khwarismi states that "the nine is the first number to contain a perfect number, a cubic number, and a plane number".¹¹

However, the symbolical use of five named numbers in discussion, it seems to correlate also with Islamic philosophical ideas, particularly with the description of five eternal principles of the universe, explained by Muhammed ibn Zakariya al-Razi at the end of the ninth century. In his text we read that the first eternal principle is God and his wisdom which is perfect and pure intelligence; the second is the soul inclining to produce material forms in this world; the third eternal principle is matter; the fourth is the space; and the fifth is time, which is also movement, usually circular according to the ideas of Plato.¹² It seems that the symbolical meanings of the numbers 1, 2, 4, 6, and 9 correlate essentially with this explanation of eternal principles. By this we can reach the broader meaning of the particular relationship which was developed between architectural representation of Hagia Sophia as a model of universal creativity, and the numerical system used to explain its essential meaning.

In the further discussion, we will use these symbolical meanings related to each of the numbers in order to comprehend their compound forms and their relation to the architectural structure of Hagia Sophia.

As a first step in the process of clarification of the possible meaning of the used numerical system and its symbolism, we should pay attention to the representation of the sphere, placed between the axonometric drawing and the section of the building. The drawing shows one half of two concentric ellipses, further differentiated by color, where the larger, external one, is divided into five parts by a vertical and two lateral lines producing acute angles. The point of their intersection with the external ellipse is marked as 1, 2, 3, 4, and 5. The smaller ellipse ends at the lines producing the acute angles. What is important for our analysis is the appearance of compound number 291 in the upper left section of the ellipses and 46 in the upper right section. Inside the angles, on the left side, we read the number 200, and 100 on the right. These numbers, used only in the context of this drawing, also have a symbolic significance. The number 100 signifies the assembly of all things in the plan of the Creator, while the number 200 indicates the return of all things to the One, which is their principle and entelechy.¹³

Following the possible logic of the alteration of symbolic meanings of presented numbers, on the left side we can read that by the potentials of the active creative power (number 2) and by reaching the completion of the creative process (number 9), both merging and finishing in the absolute One (number 1), all created things return to that

One (number 200). On the right side we grasp that this process can be conducted by way of originating from the order of matter (number 4) and by achieving its perfect bodily appearance (number 6), according to the laws by which all the things are assembled in the plan of the Creator (number 100). Inscribed in the shape of an elliptic sphere, the number meanings established this way correspond perfectly to a universal idea of harmony, correlating invisible potentials and visible means of the creative powers of the cosmos. The geometric counterpart to the presented numbers perfectly reflect the ideas expressed in the Islamic philosophical tradition, where the circular or spherical form of the cosmos indicates the return of the created world into the perfect realm of the Creator, while the sphere was the first and perfect manifestation of the created universe.¹⁴ In this context the image of the sphere, which consists of two concentric ellipses (the larger one probably representing the heavenly realm, maybe even air or water, and the smaller the sphere of Earth) can be thought as the geometric pattern of the universal harmony between the elements structuring the world.

In support of this idea, we should mention that in Islamic mystical doctrines, numbers 100 and 200, have additional meanings, related to the name of Allah, and the categories reflecting, among other, the elements of the world structure. In the practice of Da'Wah (call), developed by sheik Abu'b – Muwwayd, we read the number 100 as Qadir, one of the names of Allah, to which belongs the element of water, and the number 200 as Rabb, connected to the element of earth.¹⁵ It seems that this kind of meaning fits into the idea of the sphere representation of the world, consisting on natural elements as earth, air, and water. Reflecting closer to this idea, in the Epistle of music of the Ikhwan Al-Safa, we read not only that the sphere of air can be identified with the number 9, but also that the harmony of the universe rests particularly in the relationship between spheres of earth and air.¹⁶ In this context, we can also reflect on a few literary expressions related to architecture and creative powers which are forming it. When in the preface of Tezkiretu'l – Bunyan, we read of the heavenly metaphors related to architecture, and how it was accomplished through the workshop of water and earth, then the context of our example finds its support in Islamic interpretations of the symbolical meaning of architecture.¹⁷ In other ideas, for instance in the thirteenth century philosopher ibn Taimiyya, the celestial sphere 'arsh, which is the highest of all heavens above the earth, is identified with the shape of dome – qubbba.¹⁸ However, it seems that in the Islamic philosophical tradition an comparison between the heavenly sphere and its architectural representation, can occur even more sophisticated, by gradation of correlated notions: the idea of the heist haven is related to the sphere as its geometric expression, and both of them to the dome as their materialized symbolical form. It reflects on the profound differentiation of the logical, numerical, and visible material existence correlated to the power of intellect.

When applied to the drawing of the building's section, the similarity of the analyzed representation and the spherical shape of the dome and the arches on the wall of the naos come into focus (Figure 4). The lower zone of the wall, colored darker, seems to correspond to the aspects symbolically expressed by the numbers 100 and 200. If we draw over the section, the system of lines represented in the image of the sphere, a vertical axis and two lateral lines producing the same acute angles, will create perfect overlap. The intersecting points of the lateral lines with the section of the building will mark the horizontal line which divides the lower, earthly part, from the upper zone of arches, vaults, and dome, as the representation of the heavenly sphere. For this discussion is important to be emphasized that a similar geometric structuration of the

sphere of dome can be seen in so called Chahar Taq (Figure 5), a particular Islamic architectural practice.¹⁹ It shows that the author of our document probably used, for him recognizable widely circulated construction pattern, to explain the existing dome of Hagia Sophia by the most sophisticated geometric principles of Islamic architecture.

38

Moreover, the compound numbers related to the upper zone: 291, 462, 914, correspond in a developed manner to the basic idea of potentials and means of the creative process exposed in the image of the sphere. The compound number 291, placed on the left side of the dome, can be interpreted as the beginning of the creative activity (number 2) and the condition for the accomplishment of the creation and the return of all things to One (number 91). There can also be an alternate reading that indicates the accomplishing of the half sphere, where number 2 stands in relation to number 4 as half of a geometric image. By the same logic, the number 914, placed on the right side of the dome, indicates that the accomplishment of the creative process leads through the material order (number 4), from which all other aspects of the visible world originate. Actually, it indicates that the complete sphere (number 91) can be shaped through the square, as the perfect image of material order (number 4). It is important to emphasize that in the Islamic cosmology, the highest sphere is the ninth one called *talak-al-aflak*, the sphere of spheres, and in the context of our example it carries an important meaning.²⁰ In the same manner, the number 462 indicates the means by which the creative power builds up the visible world, the material order, and three dimensional body (numbers 4 and 6), initiated by the Intellect (number 2). When after the compound number 46 the numerical suffix is 1, this is an indication that the process of finalizing the cube through the square is completed. It seems that the last number in these examples indicates the nature or the stage of the creative process (its accomplishment by 1, active initiative by 2, or the stage of material ordering by 4 and 6).

In this context, the appearance of numbers 2 and 9, inscribed near the apse, and numbers 4 and 6, marking the position of the main entrance into the building, placed in the lower zone, seems to be related to the idea of pure creative potential, as the beginning and the end of the process (numbers 2 and 9), and to the expression of pure means by which the creative power operates in the visible world, the material order, and the three dimensional body (numbers 4 and 6). There is a possibility that even the position of these numbers has been symbolically related to cardinal directions: 2 and 9 in the east, and 4 and 6 in the west, marking the daily motion of the sun. The idea of the whole process of creation is reflected in the ratio 91/46, inscribed in the lower right part under the section. It is a reminder that the completeness of creation (number 91) is proportionate to the use of creative means (number 46). In that sense, the ratio inscribed in the middle, under the section drawing, 291/461914, refers to the creative process as the whole, where the active Intellect at the beginning and the completeness of the creation at the end (number 291) is proportionate to the idea that through the initiative of the use of the material order (the first number 4), and thereby the final shaping of the three dimensional body (number 61) under the final structuring of the sphere (number 91), presents the material order by itself as condition of the creative power (the last number 4).

This example indicates that the process of deciphering the larger compound numbers is highly complex, because there is a greater possibility of more uncertain interpretations.

However, the number placed in the main dome, presented in the plan of Hagia Sophia, seems to provide an opportunity for an attempt at a more accurate result. The compound number 41691, related to the main dome, in the context of the proposed system of reading of the numerical meaning, can be interpreted as: when the material order has been completed (number 41), through the three dimensional body which is the cube (number 6), the creation of the whole and the return of all beings into One has been completed through the image of the sphere (number 91). The variable of the last interpretation joins 6 and 91, and can be read as: through the accomplishment of the three dimensional body under the sphere as the image of the visible universe, all creation returns to One.

According to the logic of this numerical reading, probably all other compound numbers and their ratios can be deciphered, although the reading of large compound numbers often remains in the domain of an obscure dissertation. However, what is clearly discernible is the intention of the author to express the idea of the completeness of universal creative power through the symbolic numerical system related to the architectural structure. In particular because the pictorial representation of the architectural structure of Hagia Sophia is composed as a complete and perfect whole. The drawings of the decorative parts and the window, harmoniously composed among the main presentation of the building structure, are reflected in this aesthetic position, exposed in the Islamic tradition. We should remind on the Islamic philosophical ideas by which the presence of ornamentation indicates the existence of the absolute order by executing the complete and perfect sensation that an architectural body can offer, equally in its material and symbolical appearance. It also reflects on the perfection of the universe.²¹ And again, through the text of *Risale-I Mi'maryye*, we can read on what consists the idea of wonderful creation through architectural metaphors. It is talking that through vault, lamp ornament, bright window, luminous tapers, beautiful form, lofty arch and the great pavilion, and at the end, the vault of heaven and the surface of the world, we can reach the comprehension of perfect harmony.²² The presented decorative parts correspond to the idea of completeness, with the window as presence of divine light.

After discussed issues reflecting on the numerical representation of Hagia Sophia at Constantinople, there remains a particular question regarding its purpose. Was it a part of a larger, extensive exposition on the importance of the building, or just a scholarly exercise showing and teaching the essential connection between architecture and arithmetic, manifesting their universal importance, or both combined? Whatever the exact purpose of this representation was, the author proves himself as educated in important philosophical issues, particularly in the doctrine of Ikhwan Al-Safa, and in Neo-Platonic aspects of the science of arithmetic and geometry. For instance, it seems that there is a strong similarity between the previously explained disposition of numbers and their meanings in the discussed document, with the part of Ikhwan Al-Safa's doctrine regarding the notion of cosmic creative power and its active appearance in this world. This power appeared in the process of metaphysical transformation of substance into form and matter, reflecting on the Neo-platonic cosmic hierarchy embodied in cosmic positions, not only of the named constituencies, but also on their imagined various stages of inter relationships composing the universal order. As Fackenheim emphasized, the Brethren of Purity "worked out detailed and continuous system of levels as possible, using the Neo-platonic principle of gradually increasing multiplicity emanating from the One. Using numbers and mathematics in a fashion

which in its detailed character appears almost absurd, they relate increasing multiplicity and decreasing perfection to the distance from God".²³

In comparison to other older pictorial representations of Hagia Sophia, the discussed drawings occur to be highly accurate in depicting the structure of the building. It seems that the author of these drawings understood perfectly the logic of architectural representation, despite the fact that the plan and the section of the building do not correspond architectonically. For now, according to our knowledge, there is one representation of Hagia Sophia similar by a few elements to this one. In 2016 it was sold at the Roseberys auction, London, as a page from a Nord Indian illuminated manuscript from the eighteenth century. The drawing shows section and the plan of the building, architecturally correlated and even more accurate in details than in discussed document. However, the representation is surrounded by a text generally describing the structure of the building, with just a few numbers related to the drawings. For instance, number 412 marks the dome, and 419 and 419-1 the half domes. There is also use of numbers 3 and 5, but the whole applied numerical system is not developed systematically as in our document, and it is not representing the exclusive way of interpreting the structure of the building. However, there is a possibility that these two examples are linked, particularly because in the Indian example the structure of Hagia Sophia is also presented without Islamic alterations, although there is the crescent moon placed over the dome in the section. These elements are strengthening the feeling that there was a broader use of such interpretations in pre modern Islamic culture.

However, it is from a crucial importance to emphasize that the nature of representation discussed in this work is, by the logic and essential understanding what makes the magnificent importance of the building of Hagia Sophia, very close to literary texts appreciating its exceptional value. For instance, in the description given by Cefer Celebi, which follows the great Byzantine tradition, the metaphorical reconstruction of the cosmic structure captured in the building was exposed.²⁴ In our document we read almost the same significant aspects but expressed through the symbolical numerical essence of such structure, and the universal creative power behind it. It seems that there is a strong principle connection between the textually exposed metaphorical and numerical meaning. However, the applied numerical system is closer to the idea of the building as the *imago mundi*, and to the notion of creation as the proportional hierarchy of numbers and their meanings. By this, discussed numerical expression of the Hagia Sophia, was translated from its material structure into pure spiritual context of the cosmic structure, reaching the higher level of a perfect cognitive meaning.

INTERNATIONAL AESTHETICS AND ITS CONGRESSES

Abstract | In recent decades the international congresses of aesthetics have been and remain the most visible and influential aesthetics gatherings in the world. At such congresses their participants strengthen their identification with aesthetics and separate themselves from it at the same time: they cover the broad and undefined territory called “theory.” By taking place in different geographical and thereby specific cultural and historical localities, aesthetic congresses not only bring foreign participants to the doorstep of yet another region or continent, but also bring domestic aesthetic audiences into brief contact with global authors, themes, issues and methods. I shall say nothing new if I note that another important ingredient of such congresses is also the chance to meet colleagues from near and far. In such cases a certain chemistry comes to work that can turn a casual acquaintance into a long-term collaborator. But aesthetics can also remain stuck in irrelevance when it avoids or ignores issues and topics of its contemporaneity, be they those of art or philosophy (these two being today two of its main points of reference). Themes, issues and methods mediated through art and philosophy aid in making aesthetics a relevant theoretic activity. This is true as concerns some notable recent events: the rise and the decline of postmodernism; the reintegration of the former East Europe into the fold of global culture; and a similar but also profoundly different transformation of aesthetics in China, where a new revival of aesthetics, often with Chinese colors, is intensively present. These are, I would claim, the three historic events that in the last three decades have emerged in aesthetics. They are still with us today and thus remain crucial for an understanding of our reality. Exceptions exist too, proving that novel philosophical aesthetic theories are rare today but not impossible; such as that of Jacques Rancière, for example. These will be some of the main issues in my talk.

Index terms | *international aesthetics, international congresses for aesthetics, transformation of aesthetics, Jacques Rancière, aesthetic theories*

In recent decades the international congresses for aesthetics have become the most visible and—I would venture to say—the most influential aesthetics gatherings in the world. Themes, issues and methods mediated through art and philosophy, made aesthetics not only a relevant but also a dynamic theoretic activity. It is through mixture and combination of various usages of aesthetics that its recent or past terms and concepts are further gaining their import. By a series of events that took place in the last few decades “theory” has regained ground which it held in the sixties, the seventies and the early eighties. This does not mean that at that early stage theory carried more general impact than it did later or earlier, but that it became a breeding ground for a specific type of theory—one that ceased being erected on philosophy as a particular type of theory. This historical process concerned some notable recent events and developments: the rise and the decline of postmodernism; the reintegration of the former East Europe into the fold of global culture; and a similar but also profoundly different transformation of aesthetics in China.

My first direct encounter with the gathering that was the predecessor of the International Congresses for Aesthetics happened four decades ago when I took part in the IX international Congress for Aesthetics in 1980 in Dubrovnik. It was my first opportunity to meet a series of specialists with whose work I have been familiar. The congress was somewhat hectic so for me its main import was to meet personally a number of aestheticians from around the world, with many of whom I have remained in regular contact over the decades, who took part in that event. Taking recently a fresh look at the proceedings of the Dubrovnik congress I was struck by the number of analytic American philosophers, on the one hand, and by the number of Soviet conservative Marxist participants, on the other.

Since then international congresses for aesthetics have taken place in Montreal, Nottingham, Madrid, Lahti, Ljubljana, Makuhari/Tokyo, Beijing, Ankara and Seoul, with each of them being different, dependent upon the local organizers, their cultural affinities, and the aestheticians and philosophers they viewed as important and relevant for their own aesthetic tradition. The American are still there, and the Russians too, but the latter in a much smaller number than before.

Right from the start it has to be noted that the International Association for Aesthetics certainly wasn't and isn't the only international organization devoted to aesthetics and organizing aesthetics gatherings. There is an International Association for Empirical Aesthetics, the European Society for Aesthetics and, especially, national societies that bring together art historians, psychologists and other professionals interested in research into art and aesthetic phenomena. It is these latter that forms—I would claim—the backbone of the IAA.

As noted above, one cause for the ever-changing aesthetics landscape, when viewed from the vantage point of international congresses, is its strong dependency upon local cultural circumstances. Since art is its predominant subject, in most parts of the world this implies a strong link of aesthetics with local art and culture. This is also the way in which cultural events occur and are chosen. In the former Soviet bloc countries aesthetics long ago commenced to be regarded in a similar vein as under the conditions of western postmodernism. In the past I pointed out some of the art from these countries that emerged in the seventies and eighties and soon formed a specific politicized postmodern art.

Some of those who have in recent years and decades attended the International Congresses for Aesthetics have encountered a paradox: while each new ICA resembles its predecessor it at the same moment also profoundly differs from it, with this difference resting not only upon cultural characteristics but also upon the meaning and import of theory (or certain theory) within a particular congress venue.

But let me return to theory. This is how the term is explained in *Wikipedia*: “a position or a system of ideas intended to explain something, especially one based on general principles independent of the thing to be explained.”

The ICA kind of gatherings differ from most of the others also due to the cultural specifics that are absent from the great majority of them. It is thus fair to claim that in the case of aesthetics such difference arose from the cultural specificity of individual congress venues and of their specific features. If and why theory is present at such venues rather than a combination of various specifics (historical, cultural, political, linguistic, philosophical, artistic, etc.) helps explain the relatively stable entity that we designate as specifically national, regional or international and global aesthetic congresses.

50

The tension between theory and aesthetics arose at a time when theory was still in the shadow of aesthetics interpreted as a philosophical unfolding. It was viewed within philosophy of the phenomenological kind because it was regarded as a branch of philosophy—at that time there was simply nothing else yet there.

The first time in the previous century that theory especially vividly manifested itself was in the French theory of the sixties. Contrary to France where art and aesthetics were tied to the notions of enlightenment and civilization, in the English speaking countries and Germany the accent was put on culture. The first began to relate to rigorous science and the latter to fiction.

French theory then consisted of a variety of authors whose writing existed on different track, and thereof coincided only to a limited extent. Theory signified at the same time Marxism, Freudian psychoanalysis and the emergent structuralism. Perhaps the best-known and the most representative work with that title and content was the collection *Théorie d'ensemble* published in 1968 which brought together under the same book covers writings by Michel Foucault, Roland Barthes and Jacques Derrida. From the present vantage point it is easy to regard these three authors as related, still you will probably agree that these three thinkers also differ enormously. Foucault, Barthes and Derrida—three thinkers, while sharing a certain theory or theories—did not really share a common philosophy (although they were about to make one). Only later, in the seventies, these theories started to be regarded as philosophy—with philosophy now losing its previous characteristics and becoming more a mixture of discourses typical for the last few decades. An insightful observation was made by Michel Foucault in 1978 when he designated this type of intellectuals as “founders of discursivity.”¹ In the eighties and nineties this French theory, combined with the Continental Frankfurt school, acquired a specific name in the English-speaking cultures, namely post-structuralism. Yet another name for this body of ideas was “cultural theory,” which Terry Eagleton in its prime age identified with Jacques Lacan, Julia Kristeva, Louis Althusser

1 See Michel Foucault, “Qu’est-ce qu’un auteur,” *Bulletin, Societe francaise de Philosophie*, lxiv (1969).

and many others—such as Raymond Williams, Jurgen Habermas, and Fredric Jameson.

In the seventies and eighties in France such “theory” opposed philosophy, especially the phenomenological one, such as Sartre’s, Maurice Merleau-Ponty’s, Mikel Dufrenne’s² and partly Martin Heidegger’s—philosophy that found its centers in the academic establishments—the kind that a French critic ironically called “poetry” as opposed to authentic (theoretical) philosophy and science (the latter as opposed to “ideology”).³ In another volume from the same time, namely the collection *Qu’est-ce que le structuralisme?*⁴ Oswald Ducrot also opposed ideology to theory. In that same epoch international aesthetics was firmly in the hands of phenomenology.

It was only with postmodernism in the early eighties that international aesthetics consciously appropriated a theory that was not only more widely accepted but also contemporary. It was since then that international aesthetics could started to be plausibly called “critical aesthetics.” To bring into its fold another contemporary body of theory it had to embrace the Frankfurt School.

In this framework theory often functioned as an empty signifier that was often used but rarely defined or *described*.⁵ by which it means cultural theory. Yet another author focusing on theory is the mentioned Terry Eagleton who in his book *After Theory*⁶ (2003) who sees a new need for theoretical rigor that would replace the previous and present relativism in values. Today theory in conjunction with critical aesthetics could be seen as a dynamic merger between the Frankfurt school tradition of critical theory and the more traditional aesthetics (interpreted as philosophy of art, of culture, and philosophy of sensibility). In spite of many well-founded cases of criticism the broad span of theories and art works that the Frankfurt school authors took into consideration comes as a surprise even today. The other feature of critical theory was its conceptual and methodological variety, something that contemporary aesthetics often lacks. A related observation has to be made: In spite of the aims of the Frankfurt authors who opposed the usage of the term “aesthetics,” such theories are today—although still with certain restrictions or limitations—understood as aesthetics. An example of such position is that of Theodor Adorno who designated his philosophy of art not as “aesthetics” but as an “aesthetic theory.” His reasons for this were clear: in his words, “Aesthetics presents philosophy with the bill for the fact that the academic system degraded it to being a mere specialization.”⁷

The on-going globalization and the transnational character of contemporary culture in the broad sense of the word (aesthetics therein included) and the withering away of the national borders carries certain visible consequences for aesthetics on the international level. The International Association for Aesthetics, for example, may be partly losing some of its previous relevance when it was essentially based on “national” societies for aesthetics, the role of which is, together with the nation-states, slowly diminishing in their national and international import.

The second and equally relevant fact is the geographical and cultural—not to say

2 See for example, Maryvonne Saison, Mikel Dufrenne, *De l'esthétique au politique* (Paris: Editions de la Sorbonne 2018).

3 Vincent Descombes, *Le meme et l'autre* (Paris: Minuit, 1979), p. 100.

4 *Qu’est-ce que le structuralisme?* (Paris: Seuil 1968).

5 Numerous books of this kind exist. In this context I had in mind the book by Mieke Bal and Inge E. Boer, *The point of Theory* (Amsterdam: Amsterdam University Press, 1994).

6 Terry Eagleton, *After Theory* (London: Penguin 2003).

7 Theodor Adorno, *Aesthetic Theory* (Minneapolis: University of Minnesota Press 1997), p. 262.

political—location of aesthetics.

Aesthetics traveled together with other “imperialist” cultural artifacts and influences, reaching continents, countries and cultures that before its arrival did not possess equivalents to the western notion of aesthetics, which mostly praised a detached contemplation of art and beauty. The periods of enlightenment, romanticism, realism and modernism—the epochs of intense awareness of the import of aesthetics (and art)—coincided with the periods of colonization and imperialism. The Kantian interpretation of art hegemonized the globe. Much of the change occurring first in the sixties of the 20th century in Continental Europe and then also on the American West Coast was due to structuralism which started not as a theory or philosophy but as a method and “theory” and was able to “invade” all realms of the humanities and breach the epistemological borders between disciplines. It caused the disintegration of previously firmly divided and separated realms of the humanities and even of philosophy proper, for previously the latter only in some instances—in the critical theory of the Frankfurt school, for example—intentionally and effectively overcame the disciplinary divisions. It was and still remains the main single influence in the realms of aesthetics and theory in that part of the world.

52 What emerged after the great, relatively homogenous philosophical currents of Marxism, existentialism and phenomenology of the first half of the previous century, was theoretic dedifferentiation of the former disciplines and were philosophical and theoretic “schools”: groups of philosophers, who emerged around a referential philosophical figure, a theoretic tradition, etc.⁸—Lacanian psychoanalysis in Ljubljana in the eighties for example, or Merleau-Pontyan existential phenomenology in Northwestern University in the USA. What structuralism accomplished in the 1960s was the transformation of philosophy into theory of art and this one then into a much more empirical realm, wherein vague notions of “art” and “beauty” lost their previous relevance and their essentialist singularity. Barnett Newman’s quip that “Aesthetics is for art what ornithology is for the birds”⁹ may perhaps still be applied, but aesthetics as such—or a part thereof—is being replaced by another kind of aesthetics, one which in the sixties and seventies not yet carried that designation but existed under a variety of terms, these ranging from semiotics, deconstruction and Marxism to psychoanalysis. This emergent theory, which discarded most of its previous connections with traditional notions of art, the artist and the art work no longer existed under such a name, for the term was apparently contaminated by its metaphysical and essentialist foundations, signified a plethora of ways in which “theory” (once again) and philosophical scrutiny—signifying primarily a consequential and self-reflective approach—reached to the arts. As I have pointed out, in this new context aesthetics existed as a notion and not as a term, for the term was considered mostly to be a remnant of the past and something to be discarded. This aesthetics as the notion of aesthetics reached towards the arts, but to be productive in such a reestablished contact it had to be plural to a much greater extent than aesthetics under modernism was. These aesthetics then went into different directions, arising from philosophical traditions and currents or mixing and combining them in what was designated as “theory” (and no longer as “philosophy” or philosophical aesthetics). Aesthetic approaches at one extreme defined art on the basis of borderline cases.

8 On this see Aleš Erjavec, “Philosophy: National and International, Metaphilosophy, vol. 28, no. 4 (October 1997), pp. 329-345.

9 Quoted in Arthur C. Danto, *The Philosophical Disenfranchisement of Art* (New York: Columbia University Press 1986), p. x.

A good example of this were the early writings of Arthur Danto wherein the author developed arguments for including the works of Marcel Duchamp or Andy Warhol within the perimeter called “art.” The borderline cases such as these helped define art of a certain period and type in general. At the other extreme were authors such as Walter Benjamin. Benjamin’s posthumous and other writings met with recognition only in the eighties of the 20th century with the advent of postmodernism. Under such recent circumstances Benjamin’s fragmentary discourse, devoted to Baudelaire and Kafka and from Baudelaire to the *flâneur* and the reproducibility of a work of art, not only met with approval but obviously touched upon issues which may have been irrelevant in the thirties of the previous century but gained strategic value in the eighties. Mechanical reproducibility of art, the aura, the aestheticization of politics, the presumably novel role of cinema as regards its mass audience, photography, the changed mode of human fitted into the mold of traditional “aesthetics.” These themes were all too fragmentary, lacked a homogenous and systematic frame and in all respects opposed the traditional academic discourse, of which aesthetics gave semblance of its integral part. In brief, it sounded very much like a certain kind of theory.

The most recent forms of aesthetics are those that either transcend the realm of art and reach into that of culture. Such discourse (such as for example Terry Eagleton’s mentioned book *After Theory* from 2001) no longer (or not only) speaks of aesthetics as philosophy of art or of theory of culture but of culture in relation to ethics and other implicitly cultural matters.

We need to research what Walter Benjamin has called “the [changed] mode of human sense perception.”¹⁰ If Hegel’s epoch had had as its artistic equivalent and as its “cultural dominant” romantic poetry, if Adorno’s epoch had atonal music and expressionism, if Maurice Merleau-Ponty was the paradigmatic philosopher of modern painting, if Benjamin was a postmodern theorist of art *avant la lettre* and if Arthur Danto’s early theory is the philosophical equivalent of conceptual art and a philosophical reflection thereof, what is it and who is it that is playing or possessing this place today? What I am saying is that since two centuries ago not only art was essentially dependent upon theory, but theory at that time too started to be dependent upon art. It is this incessant dialectical interplay between theoretic reflection and artistic practice that today drives the tandem of art and theory.

To return to aesthetic theory and to reach the conclusion of these few remarks on the last few decades: It seems to me that any contemporary theory today refers partly to the writings and discourse of the sixties and seventies, in other words to the discourse of structuralism and critical theory (or combination thereof). In this respect the ICAs usually offer a highly representative insight into contemporary aesthetics and the related theory.

To designate the increasingly broad aesthetic and other discursive territories we today frequently use a whole set of terms, unusual or as-yet not assimilizable, these ranging from aesthetics and aesthetic theory, to cultural theory, philosophy of art, theory of art, philosophy of culture, and so on. As I pointed out an interesting term was and remains “theory” which lies at the intersection of structural and cultural approaches and at the intersection of various aspects of the aesthetic and the discursive domains

¹⁰ Walter Benjamin, “The Work of Art in the Age of Mechanical Reproduction,” *Illuminations* (New York: Schocken Books 1968), p. 222.

(“writing,” “textual production,” and so on). Such theories emerge today as the designators of what not long ago was named philosophical aesthetics, on the one hand, and “signifying practice” on the other. In other words, to me it seems that today those kinds of philosophical aesthetics and those kinds of theory that are capable of uniting or combing both have the possibility to create new “philosophies of theory and theories of philosophy. Arthur Danto, Jacques Ranciere, Slavoj Žižek and Boris Groys seem to me to belong among such thinkers. The hunger of artistic and cultural practice for such kind of reflection almost the success of other persuasive newcomers to the scene.

In this few words I wanted to shed some light upon the ICAs and the notion of theory as it is today either surviving the criticism of the past or is being resurrected from this very same history. By taking place in different geographical, and specific cultural and historical localities, aesthetic congresses (the ICAs) not only bring foreign participants to the doorstep of their yet another region or continent, but also bring domestic aesthetic audiences into contact with global or international authors, authorities, themes, issues and methods. Moving between philosophy of art and culture and theory and aesthetics these discourses are opening new vistas to 21st century and its aesthetics and theory.

HEGEL'S AESTHETICS AND SOVIET MARXISM: MIKHAIL LIFSHITS'S COMMUNIST IDEAL

Abstract | This paper discusses the materialist reading of Hegel's Aesthetics in Soviet philosopher Mikhail Lifshits's writings of 1930s. Engaged in the development of Soviet Marxian aesthetic theory Lifshits adapted the Hegelian conception of art as a form of truth and actualization of the Idea in sensible form as ideal. However, he rejected Hegel's tragic fatalism in regards to the historical fate of the arts and their sublation in a new supra-sensual stage of the Spirit's development. The only answer to the historical destiny of the arts Lifshits sought in the Marxian dialectic of history. Here, he identified the aesthetic ideal with the realization of communism. It is on this basis that throughout the 1930s Soviet aesthetic theory combines readings of Hegel, Marx, Engels and Lenin in order to develop its own version of art's autonomy, one that was anchored in the concept of the ideal. The ideal in its historical and trans-historical dimension was seen as bridging between sensuousness and truth, and pointing towards the communist ideal. The paper argues that this conception of the ideal pointed towards a dialectical futurity that could not succumb was immune to the official Stalinist formulations of dialectical materialism. Unlike the Stalinist victory of "socialism in one country" as the consummation of the historical dialectic, the question of the historical destiny of the arts pointed at communism as an incomplete and yet historically actualizable ideal.

Index terms | *Hegel, Marx, aesthetics, dialectical materialism, ideal, sensuousness, historical destiny of the arts*

Soviet dialectical materialism's relationship with Hegel is a complex and even a thorny one. While dialectical materialism was being politically implemented in the 1930s as "the world outlook of the Marxist-Leninist party", Hegel was being expelled from Stalinist orthodoxy. Yet, at the very height of Stalinism in 1937, the Soviet Academy of Sciences published Hegel's *Science of Logic* in the fifth volume of Hegel's *Works* followed by the first and second volumes of Hegel's *Aesthetic: Lectures In Fine Art* in 1938 and 1940 respectively.¹ Within the official Diamat that synthesizes Marx, Engels and Lenin, and largely relies on Engels's *Dialectic of Nature*, Hegel is an absent-present ghost, expelled from the pantheon of references and yet silently formative for this very pantheon. Yet, as opposed to orthodox philosophy proper, Soviet Marxian aesthetic theory largely relies on the explicitly Hegelian conception of art as a form of truth and actualization of the Idea in sensible form as ideal. However, as opposed to Hegel, it identifies this ideal with the realization of communism. It is on this basis that throughout the 1930s Soviet aesthetic theory combines readings of Hegel, Marx, Engels and Lenin in order to develop its own version of art's autonomy, one that was anchored in the concept of the ideal. The ideal in its historical and trans-historical dimension was seen as bridging between sensuousness and truth, and pointing towards the communist ideal. It is this conception of the ideal that, I argue, pointed towards a dialectical futurity that could not succumb to the official Stalinist formulations of dialectical materialism. Rather than a broad survey of the reception of Hegel in Soviet aesthetic theory in the 1930s, this paper focuses on the writings of one of the key figures in the development of Soviet Marxist art historical method and aesthetic theory alike, Mikhail Lifshits. After outlining the main tenets of dialectical materialism in its Stalinist formulation in the late 1930s the paper turns to Lifshits's attempts at combining Hegel's aesthetics with Marx's and Engels's dialectic of history to address the central question of the historical destiny of the arts. Unlike the Stalinist victory of "socialism in one country" as the consummation of the historical dialectic, the question of the historical destiny of the arts points at communism as an incomplete and yet historically actualizable ideal.

It is noteworthy that the orthodox Stalinist formulation of dialectical materialism in its most crystalized form appears in a textbook. This is not a regular textbook but one that was to cement the Stalinist version of the history of the Bolshevik party after the physical annihilation of the fellow Bolsheviks. But the party history would be only partial if it were not justified philosophically, on the basis of dialectical materialism. The notorious *The Short Course of the History of the All-Russian Communist Party (Bolsheviks)* [Kratkii kurs istorii VKP(b)] (herein referred to as *The Short Course*) appeared in 1938 with the initial print run of six million copies (more than forty million copies before Stalin's death) and was translated to sixty seven languages within Stalin's lifetime. Allegedly, Stalin would not trust the writing of the chapter on Dialectical Materialism to historians and philosophers, even if those who had gone through a period of "re-education" throughout the 1930s before they were allowed to write the historical chapters. It is widely believed that Stalin himself wrote the part on Dialectical Materialism. The chapter starts with a formulation that would become commonplace up until the collapse of the USSR:

Dialectical Materialism is the world outlook of the Marxist-Leninist party. It is

1 Hegel, *Sochinenie*, V 14-ykh tomakh, vol. 5, Nauka Logiki, trans. B.G. Stolpner, (Gosudarstvenno social'no-ekonomicheskoe izdatel'stvo "Poligrafkniga": Moscow, 1937) and vol. 12-13, *Lekstii po Estetike*, trans. B. G. Stolper, *ibid.* The third volume is published only in 1958 with P.S. Popova's translation as the final and fourteenth volume of Hegel's *Works*.

called dialectical materialism because its approach to the phenomena of nature, its method of studying and apprehending them, is *dialectical*, while its interpretation of the phenomena of nature, its conception of these phenomena, its theory, is *materialistic*. Historical materialism is the extension of the principles of dialectical materialism to the study of social life, an application of the principles of dialectical materialism to the phenomena of the life of society, to the study of society and its history.²

According to this formulation of dialectical materialism grounded in Engels's *Dialectic of Nature* (1883) which itself borrows from Hegel's laws of the dialectic, the latter is based on three fundamental laws that cover both nature and history, matter and consciousness: the law of the transformation of quantity into quality and *vice versa*; the law of the interpenetration of opposites and the law of the negation of negation. Transformation from quantity to quality is the essence of motion and is that which through differentiation brings about history. In Engels's formulation, history in its capitalist stage is still too close to the animal kingdom because the social organization of production amongst man is not consciously planned as to serve all mankind equally. It is with communism that the Dialectic of Nature turned to Dialectic of History achieves its highest qualitative state with the conscious organization of social production. Hence, communism is staged as the highest and most rational organization of social life and one that synthesizes all historical development in the highest form.³

58

Stalin's article follows Engels's formulation, and manifests his customary method of collaging the necessary quotes from Marx, Engels and Lenin to advance an argument. Applied as a schema, Stalin's Diamat is based on the crude and undialectical distinction between matter and consciousness, wherein matter is viewed as primary and the mind and thought as derivative of it. In granting matter ontological primacy over thought, this textbook, as Soviet philosopher and logician B.M. Kedrov commented later in the 1960s, excluded thought from philosophy altogether, and so the Leninist identity of dialectic, logic and theory of knowledge was undone.⁴

Stalin-the-theoretician's biggest "innovation" in the redefinition of Diamat (and this is what allows us to ultimately make a distinction between dialectical materialism and its Stalinist variant - Diamat) is his tacit and sneaky omission of the final law of the dialectic, the negation of negation, which is the precondition for revolutions conceived as ruptural events. In the Stalinist Diamat, history is overdetermined by laws of nature, while revolutions appear as evolutions. "Further, if the passing of slow quantitative changes into rapid and abrupt qualitative changes is a law of development, then it is clear that revolutions made by oppressed classes are a quite natural and inevitable phenomenon."⁵ It is this naturalness and inevitability of historical events, including the revolutions that provide the ultimate justification of the Stalinist Soviet state as a historical-transhistorical formation. Stalinism combines revolutionary and accelerated methods in economy as exemplified in the command-control-coercion logic of the Five-

2 *The Short Course of the History of the All-Russian Communist Party (Bolsheviks)*. (International Publishers, New York: 1939), *ibid.*, p. 105.

3 If in the USSR historical materialism as a scientific method of understanding society historically was conceived as part and parcel of the dialectic of nature, Western Marxism rejected this dialectic of nature by relying on the assumption that Nature cannot be dialectical because it has no negativity within itself, and is indifferent to us, humans and thus extra-historical.

4 B. M. Kedrov, *Edinstvo dialektiki, logiki I teorii poznaniia*, Moscow, 1963, pp. 12, 117, 119. Quoted in James P. Scanlan, *Marxism in the USSR: A Critical Survey of Current Soviet Thought* (Cornell University Press, 1985), p. 160

5 *The Short Course*, *ibid.*, p. 111.

Year Plans (the first one having taken place in 1928-32, during Stalin's so-called Great Break) with "gradualism" in political theory and historical development. Revolutions are not conceived as indeterminate negations of the social order but inevitable events inscribed in the evolutionary logic of historical development, and one could add, orchestrated from above, as in Stalin's second revolution of 1928.

The Stalinist Dialectic as philosophy and science at once, a science materialized as a particular social formation in state socialism declared triumphant in the 1936 Soviet Constitution, reaches its final fulfillment in the Party of the proletariat as a permanent historical-transhistorical formation. The paradox is here: while *rhetorically* insisting on the interpenetration of the opposites and thus, also on contradictions, on the law of unceasing movement and negation, Dialectic as Stalinist orthodoxy freezes all further historical development and territorializes movement within the extant Soviet state. Read dialectically, we could say that in this conception, once History has been fulfilled in Stalin's statist formation it accomplishes a full circle and rejoins Nature. Here History appears as natural history. What is forsaken here is the realization of communism as a historical ideal and as an actual possibility.

It is my argument here that Mikhail Lifshits's aesthetic theory based on Hegel's aesthetics and Marx's materialist conception of history, preserved the historical futurity of the aesthetic ideal in its identification with the communist ideal. But it did so from within dialectical materialism and contra Dialectic. Thus, it formed an opposition to Stalinism within Stalinism itself. The key to the identification of communism and the aesthetic ideal, for Lifshits, was the question of the historical destiny of the arts that could be solved only within a Marxian framework, and hence, his project of reading Hegel materialistically, following Marx and Lenin.

For Lifshits, the translation of Hegel's idealist aesthetics to the language of his contemporary materialism was not only a political imperative but it was also a key for developing a systematic aesthetic theory based on Marx. Rather than abstracting a theory of art and aesthetics from the writings of Marx where the latter didn't develop one systematically, Lifshits would point at the aesthetic dimension of Marx's thought from his early endeavors as editor of *Rheinischer Zeitung* in the early 1840s to his mature works – *A Contribution to Critique of Political Economy* (1859) and *Capital* (1867-1894).⁶ In the 1930s' commonplace battles against so-called vulgar sociology which both Lifshits and György Lukács spearheaded in Marx-Engels Institute in Moscow, not only Marx but also Hegel's aesthetic theory came to provide a ground for arguing for non-synchronicity between the material conditions and the products of the ideal: art and literature. Economy does not condition culture, but it determines it in the last instance. There can be periods, such as in Ancient Greece that the works of the spirit while determined by the level of the material development of Greek society, produce ideals that are actual in our present. And the contradiction between lower stages of economic development and higher forms of artistic production are intrinsic to the very dialectic of history. There are objective material conditions that constrain the development of thought, but there is thought that breaks away from the constraints of those conditions. It is precisely for this very same reason that Hegel could not have come up with the conception of class antagonism as the motor of historical development, and Marx could not occupy himself with purely aesthetic concerns. If Hegel's historical limitations were

6 M. Lifshits, *Karl Marx i vopros ob istoricheskix sudbax iskusstva*, Krasnaya nov', 1933. N. 3, pp. 176-190. *Philosophia iskusstva Karla Marksa*, Moscow, 1933. The latter book is the first translation of Lifshits's work in English. *The Philosophy of Art of Karl Marx*. Ed. by Angel Fores (New York: Critics Group), 1938.

framed by the dominant bourgeois ideals of his time, Marx's preoccupations were with the social totality rather than with its individual spheres. Hence, Marx could not have developed a theory of art and aesthetics. And yet, the Hegelian conception of the ideal as the material actualization of the idea combined with the Marxian materialist understanding of the development of history towards the communist ideal can provide an answer to the historical destiny of the arts. This identification would make it possible to exit the historical cul-de-sac of the Hegelian "end of art" on the one hand, and provide an alternative to the mechanistic and vulgar causality between economic and social determinants and cultural production, on the other.

Lifshits' systematic reading of Hegel's *Aesthetics* throughout the 1930s long precedes its first Russian publication in 1938. In a 1931 article "Hegel's Aesthetics and Dialectical Materialism" Lifshits argues that Hegel could not have taken his dialectical conception of history as a development through contradiction to the end: these contradictions would historically crystalize only in the class contradictions between the bourgeoisie and the proletariat that became visible in the aftermath of the 1830 July revolution.⁷ Lifshits finds the limitations of Hegel's thought not only in Hegel's historical circumstances but also in his historical logic. According to the latter the law of the negation of negation as resulting in a higher logical form of affirmation is not a revolutionary one but is politically translated to the stability of the rule of the bourgeoisie with the state serving as the ultimate ideal. Reconciliation of antagonisms in a higher logical and historical form in Hegel functions as "a magical word for gluing together" the fragmented world torn asunder by revolutionary violence and destruction. If in young Hegel the ideal of Greek democracy as the highest political form is connected to the renaissance of the culture of Greek Antiquity, in later works, confronted with the ongoing tide of capitalist transformations, for Hegel neither history nor the arts can go back to some initial stage. Lifshits states,

And it is not his fault that the extent historically conditioned form of progress had thus far always violently oppressed popular initiative and imagination cutting off, almost without any residue, the rich aesthetic culture springing from popular soil. But he leaves aside the historically transient character of this process.⁸

Lifshits's major quarrel with Hegel is the Hegelian solution to the destiny of the arts as their annihilation through historical progress.⁹ Hegel's historical end of art ultimately takes place through the sublation of sensuous actualization. But for Lifshits, the death of art is a resignation to bourgeois asceticism: the bourgeoisie with its calculative reason, means-to-an-end-rationality first punishes the aristocracy for sensuous enjoyment, and then deprives the masses of it as well. Instead of advocating plebeian denial of aesthetic pleasure or conceptual aloofness from enjoyment he insists on the inherently democratic character of aesthetics grounded in non-sublatable sensuousness. In *Marx and Engels on Art*, Lifshits states:

Art cannot exist without a sensual basis; the idea of the artist demands an objective embodied form. This is the law of the sphere of aesthetics that has an irreplaceable meaning for human society. In its foundation lies the ideal of

7 Originally published in M. Lifshits, "Estetika Gegelya I dialekticheskiy materialism", Proletarskaya literatura, Moskva, 1931, no. 5-6, pp. 76-93. In M. Lifshits, *O Gegelye* (Grundrisse: Moscow, 2012),

8 Ibid., p. 74.

9 Ibid. See also *The Philosophy of Art of Karl Marx*,

life that has developed from the entire history of mankind, one that is purified from crude materiality but is nevertheless real. The inevitable domination of the abstract culture of the spirit cut off from the physical labor of the majority of people in a class society is hostile to it. Historically the world of art and poetry is firmly connected to the popular roots of social life, and its presence in this life is a symbol of true democracy, more or less clearly understood.¹⁰

Art as a form of unsurpassable and non-sublatable sensuousness in its most radically democratic and popular realization is identical with communism as the social formation where the sublation of alienation can be achieved. If, from a materialist perspective, aesthetic sensibility arises from the development of the faculties through the foundational activity of labor, while ideation is an imprint of historically constituted productive activity, the liberation of labor from its enslavement to exchange value and the liberation of aesthetic sensibilities from the partiality of class-belonging can't be disentangled. As the human moves further away from the world of need, his or her occupation with the form and structure of the object becomes autonomous from the utility and function of the object, and thus, the aesthetic sensibility as an autonomous domain from the world of need is constituted. But the autonomy of aesthetics is truly achieved when the human is truly free in production, and when there is no longer a division between freedom and necessity. This is when the historical right of the masses to sensuous self-realization is achieved.

Throughout the 1930s and even thereafter in the 1960s and 1970s when the prospects of communism were becoming more and more distant, Lifshits always spoke from the perspective of the victory of socialism, and upheld what I call tragic optimism, the increasingly difficult belief in the realization of communism as the overcoming of alienation. The artistic appropriation of the objective world is one of the central means of the appropriation of the world through man's sensuous productive activity, according to the laws of beauty and criterion of truth. But as opposed to the crude and direct form of the appropriation of the object, on the basis of artistic activity is a universal measure (which is often, for Lifshits, is identical with the ideal). In the capitalist division of labor the masses are succumbed to the world of need, to crude materiality. There the gap between rote labor and creativity is unsurpassable. In contrast, communism bridges the gap between labor and creative play and thus, provides a historical answer to the problem of alienation. From this perspective, any post-Hegelian declaration of the end of art is inevitably replete with bourgeois resignation and nihilism. For Lifshits, it is only the Marxian conception of history that is capable of providing an answer to the question of the historical fate of the arts.

The specificity of Lifshits's art theory, and of much of Soviet Marxist aesthetics and art theory (including Lukacs as someone who bridges Soviet and Western Marxisms) is that while the historical dialectic of emancipation is future-oriented, the aesthetic ideal is sought in the past. The ideal as the historical-transhistorical objective measure is that which orients consciousness towards truth, goodness, beauty and justice. For Lifshits who is largely responsible for the construction of the field of Soviet Antiquity studies,¹¹ the ideal was conceived as actualized in the art of the past, and specifically in Greek Classical art. Here, to be socialist meant to uphold classicism as the highest aesthetic ideal and conceive of socialist realism as a return to classicism in drastically

10 M. Lifshits, *Philosophia iskusstva Karla Marksa*, in *Sobranie socheneniy v trekh tomakh*, vol. 1 (Izobrazitel'noe iskusstvo: Moscow, 1984) pp. 138-139. In Russian, trans. mine.

11 Vardan Azatyan, *Art History of Idea and its Troubles: Humanism, the Cold War, and a Soviet Periphery*. Unpublished draft manuscript.

transformed and progressive historical conditions. Socialist realism, in short, was seen as the re-enactment of Classical Antiquity on a higher historical plane. Here political avant-gardism was being established through an anti-avant-garde consciousness.

While Lifshits upheld the Hegelian conception of art as a mode of truth, he never opposed truth to sensuousness, and while reading Hegel materialistically, he didn't dilute Hegel's objective idealism into dialectical materialism. In the 1931 article mentioned above, he states:

Hegel's philosophy and dialectical materialism themselves express two opposing historical paths, two types of material and spiritual development. By creating deep roots for the initiative of the masses, realizing free collaboration between nations and destroying civilizational limitations the same way as capitalism destroyed patriarchal limitations, socialist society is heading towards eliminating those causes that prompted the best representatives of thinking mankind to find consolation in the idea of tragic fate.¹²

The Hegelian movement of the spirit as a struggle against itself on the thorny road of development is historically tragic from the point of view of Lifshits's historical optimism. The dialectic in Hegel appears in its idealistic form as a permanent development similar to the permanent and unlimited development of production for production's sake in capitalism in the writings of bourgeois political economists. Lifshits is unwilling to accept the tragic cost that development has to pay in the Hegelian system: all good has to die out, and development comes through negation, violence, wiping out entire nations and people, by crushing individuality and so on. In Hegel, one has to reconcile with this fate brought about by the triumphant march of the spirit. As opposed to this logic of reconciliation, Marx discovered the proletariat as a solution to his philosophical system: here antagonisms cannot be reconciled in the ideal state but they appear in their sharpest contours in the practical revolutionary struggle for communism. And it is here that the historical destiny of the arts can't be disentangled from the historical resolution of class antagonisms in communism.

Lifshits reads Hegel's Aesthetics as closest to Marx's materialism since the former is the meeting point of the concept and the living forms of the concrete world, of freedom and necessity, despite the violence of *Aufhebung*. The historical possibility for the actualization of art as a mode of truth and the universal development of the human senses of beauty and goodness, as I have argued, positions Lifshits's Marxian aesthetic theory of the 1930s informed by Hegel's aesthetics as an internal opposition to the official Stalinist Diamat. The latter establishes the Soviet state as the final historical realization of the material dialectical movement, while relegating communism to an unrealizable utopian horizon. In this context, it is through a dialectically materialist reading of Hegel that Lifshits upholds communism as an actual historical possibility. Here communism is identical with the aesthetic ideal as the ideal of de-alienation. He incessantly upheld this historical optimism up to the very end of his life. In his 1984 response to Eval'd Ilyenkov's *On the Concept of the Ideal* after Ilyenkov's tragic suicide, Lifshits still sees the inevitable historical road of de-alienation as a movement through which the real strives towards identity with its concept, and becomes a condition for truth. For instance, society is made identical with its concept with the arrival of the communist society, and until then the truth that communism embodies the ideal haunts the society that has yet to become identical with its concept. In Lifshits's

12 M. Lifshits, *O Gegele*, *ibid.*, p. 94.

positive dialectic there is a movement toward higher forms of truth, good and beauty embedded in the purposefulness of nature that extends from nature to the social world. And it is this movement of reality towards consciousness that brings about the capacity to pierce through the reign of commodity fetishism. For Lifshits,

The drama of contemporary civilization clearly demonstrates that alienated “representations” and “stereotypes” can crush all ideality – the ideals of reason, of good and beauty, - if reality itself indifferent in its natural or social material being, does not meet halfway the social thought enclosed within these ideals. And it’s a good thing when reality destroys what is ready-made in culture, and when what Engels called the “triumph of realism” is accomplished.¹³

Lifshits’s insistence on the primacy of objective reality and the inevitable historical accomplishment of communism today may sound like an echo from another world, especially since that world has vacated the stage of history. And yet, perhaps his aesthetics with its future-directed historical trajectory is still capable of providing an alternative to the ongoing and manifold “ends of art”, and perhaps the funeral has always been for the wrong corpse.¹⁴

Angela Harutyunyan (PhD) is Associate Professor of Art History at the American University of Beirut and Director of the Art History program. She teaches courses on modern and contemporary art history and theory. She is editor of ARTMargins peer-reviewed journal (MIT Press). She has contributed essays on post-Soviet Armenian art and culture in academic journals, and critical articles related to contemporary art practices and cultural politics in Egypt and Lebanon. Her research interests include post-Socialist art of Eastern Europe and the former Soviet Union, Socialist Realism, contemporary art in the Middle East, methods and theories of exhibitions, amongst others. She is a curator of several exhibitions, most recently *This is the Time. This is the Record of the Time* (with Nat Muller) at SMBA in Amsterdam and the AUB Art Galleries in Beirut (2014 and 2015). Her monograph *The Political Aesthetics of the Armenian Avant-garde: The Journey of the ‘Painterly Real’* was published by Manchester University Press in 2017. Her current research project deals with the historical temporality of Stalinism.

REFLECTIONS ON THE AESTHETICS OF VIOLENCE

Abstract | Violence has long been a factor in human life and has been widely depicted in the arts. This essay explores how the artistic and appreciative responses to violence have been practiced, understood, and valued. It emphasizes the difference between the aesthetics of distant, disinterested appreciation and the engaged appreciative experience of violence in the arts, and insists on the relevance of their behavioral and ethical implications.

Index terms | *aesthetic appreciation; aesthetic engagement; aesthetic experience; disinterestedness; ethics; morality; negative aesthetics; perception; violence*

I
The words 'aesthetic' and 'aesthetics' are often used casually to refer to the arts, to the pleasurable experience we have with them, and to beauty as the distinctive mark of that experience. In its most general import aesthetics concerns sensible experience, experience centering around perceptual events and the elaboration and refinement of sensory awareness. This is reflected in the etymology of the word 'aesthetics,' which derives from the Greek *aisthesis*, perception by the senses. Such experience is not purely sensory but is colored by culture, education, and personal history. Developing a sensitivity to perceptual experiences is one of the gratifications of living: delight in the subtle signs of seasonal change, in the curved volume of a Chinese vase, in the imaginative unfolding of the intricate plot of a Dickens novel, in the spontaneous expression in a child's response. But at the same time as this perceptual capacity is enhanced, it becomes more vulnerable to abuse and to pain.

All these possibilities derive from the philosophical sense of those terms, which identify the aesthetic as the value we recognize in the largely perceptual experience we have in appreciating the arts and natural phenomena. Often those experiences and the value we find in them are called 'beautiful' and 'beauty,' and philosophical aesthetics is the study concerned with identifying and exploring them. However, we must recognize that not only are some experiences of art and nature not beautiful in the positive sense of the word, but they may be disappointing, demeaning, offensive, or even hurtful. Thus the aesthetic value of an object or experience may be negative as well as positive, and this requires us to recognize the range of aesthetic value in its various degrees and modes. We can call an aesthetic experience negative, then, when the aesthetic value in such experiences lies beyond being merely neutral, that is, insipid, bland, or unmoving, but rather is offensive, demeaning, repugnant, or even painful.¹

It is important not to confuse negative aesthetics with aesthetic failure, that is, bad art, bland architecture, formulaic writing. Failure occurs when an artistic attempt does not succeed in creating the direct perceptual participation of aesthetic engagement that is the mark of successful art. Of course, here, too, there are degrees of failure as there are degrees of success, but in all such cases the value we call aesthetic is more or less inadequately realized. Recognizing aesthetic failure is important in extending the range of aesthetic perception. My concern here, however, is not so much with failure as with its unfulfillment.

Aesthetic negativity is widespread in daily life but its presence is often obscure and hidden, in part because it is commonplace and unremarked. I want to explore here one of the manifestations of such negativity: the conjunction of the aesthetic with violence. This critique does not oppose the artistic appropriation of violence. It condemns its social acceptance through turning the presentation of violence into an object of disinterested appreciation. When aesthetic appreciation of violence is engaged, however, it becomes a humanizing force, testifying to the moral influence of aesthetic experience.

Negative aesthetic experience occurs in many guises, from the offensive environmental conditions that shadow daily life to the drama of terrorist attacks, but perhaps the most egregious instances of negative experience are those that inflict physical or emotional pain. A distinctive feature of pain is the difference between the experience of one's own pain and the pain of others. We blindly avoid the first, whereas the pain of others seems to exert a strange fascination. How is such pain experienced? Wherein lies the

fascination with the pain of others? Our understanding of aesthetic experience may help reveal some of the contours of these questions.

Rather than aesthetic failure, the issue here concerns the relation of aesthetics to violence. This discussion, however, is not about the aestheticization of violence, that is, I am not concerned here with the motives, significance, or consequences of efforts to idealize violence by turning it into an object for delectation.² Violence has often been made appealing by prettifying, romanticizing, or sentimentalizing its appearances, that is, by aestheticizing it. The present discussion, however, centers not on how or why violence may be given a positive cast but on ways of understanding the aesthetic experience of violence as it appears in the arts.

II

The practice of joining aesthetic values with violent content is found in most societies, and its frequency in recent times suggests that it has become a dominant theme. Because violence so permeates the media, it is easy to overlook the fact that the fascination with violence has ancient origins. Not only are prehistoric images of hunting scenes found on Paleolithic cave walls; ritual sacrifice was practiced in the early history of many cultures. National art museums feature paintings that depict famous historic battles. Uccello's fifteenth century depiction of *The Battle of San Romano* is a classic example,³ as is J.M.W. Turner's dramatic painting of *The Battle of Trafalgar*.⁴ Many other artists turned to the drama inherent in violent events for their inspiration, and embodied them in graphic scenes of the chaos and horror of massacres and battlegrounds, the most famous modern example of war-borne violence undoubtedly being Picasso's *Guernica*.⁵ Paintings of the crucifixion of Jesus constitute a genre in their own right, and extend from the beautified portrayal of Rubens⁶ to Grünewald's grisly depiction.⁷ It is easily overlooked that the prevalence of the cross in Christian iconology idealizes an instrument of torture, turning the cross into a symbol and an ornament. Nor is literature far behind in its dramatization of violence, from the bloody battles in the *Iliad* and the murders that inform the tragedies of Aeschylus, Sophocles, and Euripides, to the dramatic accounts of Shakespeare and Tolstoy. The violence of battle has been romanticized for English-language schoolchildren, who are taught to admire Tennyson's Crimean War poem, "The Charge of the Light Brigade."⁸ And from war slogans to the titles of laws that by legal strictures and oppression terrorize the lives of refugees, immigrants, and simply poor citizens, rhetoric is regularly put to the purpose of sanitizing legal violence.

All of this is familiar to those who find in the arts distinctively rich occasions of experience and recognize the prevalence of violence in art. Indeed, we can easily trace the fascination with violence in multiple aspects of contemporary popular culture. Ranging from deadly chases to full-fledged battles in space, violence is as vividly depicted today in film, television, and video games as it was in the past in painting and theater. Moreover, this pattern continues in sports and in contemporary ritual and performance art. Here the vision has changed from paintings that recall past violence to enjoying and even participating in violence in the process of actually occurring. What kind of aesthetic pleasure is found here? What kind of aesthetic is at work when the perceptual experience leads not only to the enhancement of awareness that is one of the fruits of aesthetic appreciation but to dismay, pain, and the mortification of moral feeling?

This brings us to the crux of the issue. A concern with the aesthetics of violence is a matter quite separate from the perpetration of violence that, in its many forms, so imbues the world of the present. The ubiquitous association of violence with the arts has special significance, not only as an issue in philosophical aesthetics, but as a problem in its relation to ethics. The larger question, of course, concerns the appeal of violence in human social behavior, an attraction that encourages commercial as well as political exploitation in addition to its artistic appropriation. My discussion here centers on one aspect of this issue: the influence of aesthetic appreciation on the acceptance and promotion of violence. Questions of aesthetic appreciation are not only about the distinctive experience of art and nature *eo ipso*: appreciative practice also carries moral implications and social consequences.

Human violence has changed in form and extent over the course of human history and, as I noted earlier, it is obvious that acts of violence are experienced differently by the perpetrator and the victim. But what of the spectator? Institutionalized exhibitions of violence have long-standing popularity. There was a large Roman audience for gladiatorial combat in the Coliseum, and jousting was a frequent martial entertainment in Europe in the Middle Ages. Many sports are combative, if not as overtly as football and fencing. Violence has proliferated in ways other than by direct physical harm. Many social critics are devoted to exposing the subtle and ingenious forms of institutional violence and structural violence that infuse modern societies and urge peaceful alternatives.⁹

I am concerned here, however, with the aesthetics of violence, violence that assumes various forms as perceptual experience in art and culture. This is far from a purely theoretical philosophical fancy. Not only a subject-matter, the arts are regularly used to contribute to war frenzy and have long played a role in romanticizing violent events. I have noted how the history of painting is replete with renderings of violence, from crucifixions to battles and executions. Think of the many versions of Judith with the head of Holofernes, a favorite subject in Italian Renaissance painting.¹⁰ Where would Elizabethan drama be without murders? Where would film be without chases, fights, and war scenes? Not only is violence widespread in human societies; it has long been reflected as a subject in the arts. The history of the arts displays no evolution toward moderation and benevolence but, on the contrary, shows increasingly imaginative exhibitions of violence. Consider Kovalcik and Rynnänen's account of the contemporary Viennese actionists:

Their Orgies-Mysteries Theater (1970-) at Schloss Prinzdorf have included a large number of performers and spectators who have performed Dionysiac orgies of blood and gore. The activities of this group performance included ritual disembowelment of different animals (bulls, sheep), the act of stuffing entrails back into hacked-open carcasses, pouring blood on actors representing Christ and Oedipus, and night time processions around Prinzdorf with goats, pigs, horses, sheep dogs and cattle, not to mention actors who bore flaming torches. One member of the group, Günter Brus, drank his own urine, and sang the Austrian National Anthem while masturbating in another performance, and Hans Cibulka posed with a sliced open fish covering his groin.¹¹

Vienna is not alone in attracting artistic expressions of violence. Violence in art has become a reflection of the ever-increasing social violence of the present world.

Witness the continuing popularity of the quasi-documentary (mondo) horror film *Faces of Death* and its sequels. Performance art that disfigures the body, temporarily or permanently, is common and self-mutilation is a frequent feature. Marina Abramović is an early and major exponent of such performances, and some of her work involves audience participation in body deformation. Sites of natural as well as human violence have a grisly attraction, and disaster tourism has become a profitable commercial enterprise. The popularity of the American crime drama, *The Sopranos*, in which murder is as casual as eating breakfast, confirms the observation of the rock musician who commented, "Violence is as American as apple pie."¹² Violence takes imaginative forms with different degrees of subtlety in the various genres of art. It is an easy matter to document the prevalence of violence in the arts, not to mention the larger society, and those I have cited are but a small sample. But it is as a philosophical issue that the role of the aesthetic appreciation of violence has evaded critical analysis.

III

The aesthetic enjoyment of violent spectacles may seem sadistic, yet, as we have seen, it has a long history. Violence has had an eager audience, from the throngs that filled the Roman Coliseum to the onlookers at public hangings lynchings. Some people attend boxing and wrestling matches, and football and hockey games from similar motives. These spectacles are ritualized performances, and the dynamics of such displays are not unlike those of theater.

Yet what is their aesthetic? The question calls to be asked, how can witnessing violence be satisfying? How can violence, with its attendant brutality and pain, provide aesthetic pleasure? When art romanticizes, idealizes, or glorifies violence, is art being used to sanitize and justify it? Is this what Henry R. Giroux calls an aesthetics of depravity, "an aesthetics that traffics in images of human suffering that are subordinated to the formal properties of beauty, design and taste—thus serving in the main to 'bleach out a moral response to what is shown'"? Giroux mourns the growth of a "culture of cruelty" in which people find aesthetic satisfaction in images of violence.¹³ These may be ethical concerns more than aesthetic ones, yet they demand attention here since moral issues are embedded in the aesthetic on which the enjoyment of violence rests. As an ethical phenomenon such enjoyment may confound the moralist more than the aesthetician, who has been told to keep aesthetics clear of ethical interests.

Psychological questions are intimately involved, as well. Theodor Adorno put the key issue squarely: "The inability to identify with others was unquestionably the most important psychological condition for the fact that something like Auschwitz could have occurred in the midst of more or less civilized and innocent people."¹⁴ The incapability of empathizing is a crucial question for social psychology but it also has an intimate bearing on the aesthetics of appreciation. But while the enjoyment of violence clearly implicates ethical and psychological issues, the attraction it holds also has social and political dimensions, as Benjamin recognized when he identified violence as central to a fascist aesthetic.¹⁵ However, the question for us here is not psychological or political but aesthetic, and it concerns the aesthetics of appreciation: how is the appreciation of violence possible and what are its implications? There is a philosophical issue lurking behind this question: what kind of aesthetic is at work here? For this is an aesthetic

issue as well as a moral one.

Aesthetic appreciation follows many forms and occurs under many conditions, not only in the arts but in the informal experiences of daily life: the passing delight in the color and texture of a piece of fabric, the momentary illumination of a shaft of light, the play of shadows on winter snow, the panoramic view of a landscape. And the many forms of the popular arts evoke appreciative responses, from boisterous enthusiasm to maudlin emotion.

When aesthetic satisfaction is sought deliberately, different patterns may prevail. One pattern is exemplified by the spectator disinterestedly contemplating a painting in a gallery or witnessing a theatrical performance. This pattern incorporates the “official” aesthetic conventionally employed by critics and scholars and embodied in formal exhibitions in museums and traditional performances. It is grounded on an ontology of objects separated by use, function, and interest. This is the pattern of most inquiry, scientific as well as practical problem-solving: the pattern of an observer regarding a distinct and separate object. It takes a special, distinct form in the disinterested contemplation of art as object or spectacle. And it enables the aesthetic enjoyment of violence.

There is another pattern of aesthetic enjoyment, one that reflects a distinctive sense of the world of human experience. It is found in many places and situations that exhibit a particular sense of involvement, of a connection and participation with an object and the occasion. It can be found in the wild enthusiasm of the audience at a rock concert but also in the imaginative participation of the viewer of a film, the engagement of the reader in the world of a novel, and in the absorption of the listener at a musical performance. We easily experience appreciative engagement with drama in film, theater, and the novel, as well as in dance. Sometimes this perceptual engagement is spoken of as empathy; sometimes the experience is described as being “caught up” or “carried away.” It is important to make clear that this is not just a state of consciousness, a psychological condition, but an act of full bodily engagement. There may be overt physical participation in foot tapping, head nodding, muscular tension, tears, perspiration, an increased heart rate, and other signs of physical involvement. But it may also be restrained, intense, internalized participation, though no less engaged. Vastly different from the distancing of disinterested contemplation, engagement in an aesthetic process is familiar to both the creative artist and the performing artist. Such experience embodies a different world view from the contemplative aesthetic usually assigned to the spectator. Engaged appreciation is more familiar to Eastern cultures that have been deeply influenced by Taoism and Buddhism, world views that emphasize a continuity of humans and nature and that embrace the particularity of perceptual experience.¹⁶ When manifested in the aesthetic appreciation of art and nature, this aesthetic is known as aesthetic engagement.

What kind of aesthetic supports the satisfaction of regarding violence? I suggest that there is indeed an aesthetic that underlies the benign appreciation of violence. It is an aesthetic that turns the focus of aesthetic experience into an object of contemplation, that separates aesthetic satisfaction from personal interests and regards aesthetic pleasure as disinterested. This is the familiar aesthetic of Western cultures, developed by British theorists in the seventeenth century and formulated by Kant in the eighteenth. It identifies aesthetic enjoyment as a contemplative state of consciousness directed toward an external object. It is an aesthetic in which “taste in the beautiful

is alone a disinterested and free satisfaction...The object of such satisfaction is called *beautiful*."¹⁷ Kantian aesthetic pleasure projects a distanced spectator and enables aesthetic gratification without concern for uses or consequences and without incurring moral judgment. It recognizes aesthetic satisfaction but interprets its condition as the disinterested contemplation of a perceptual object. It is an aesthetic that abets the representation of violence.

An aesthetic of disinterested satisfaction tolerates and even encourages the appetite for violence of an uninvolved voyeur. It objectifies the material of aesthetic gratification and insulates the subjective enjoyment from any misgivings or moral qualms.¹⁸ An aesthetic of distance allows violence to be tolerable, acceptable, even pleasurable because it projects appreciative experience as the enjoyment of a disinterested spectator toward an object insulated from any moral or practical interest.¹⁹

An aesthetics of engagement, by contrast, identifies a different kind of aesthetic sensibility, one that rests on an interpenetration of subject and object. Indeed, it transcends that dualism in a continuity of perceptual experience and concern. Moral interests are not foreign to an engaged aesthetics. It recognizes that the inhumanity of violence is germane to aesthetic engagement and is not reluctant to recognize the moral concerns inherent in negative aesthetic experience. Far from the aestheticized paintings of Uccello and Turner, paintings that encourage disinterestedness by muting the violence in their representations through painterly grace and sensory delectation, an aesthetics of engagement leads to a quite different experience. It is the direct encounter with violence that is the aesthetic force in Grünewald's Isenheim altarpiece²⁰ and Pieter Brueghel the Elder's "Triumph of Death."²¹ An aesthetics of engagement encourages empathetic human feeling. It recognizes the inseparability of the moral and the aesthetic in the confrontation with violence in the arts. Moral interest is inescapably present; it is inherent in the encounter with the image. To exclude or ignore the moral content in such depictions of violence is to eviscerate the image, to render it lifeless. By the standard of such experience, the aesthetics of violence is unqualifiedly negative: It is not contemplatively benign or complaisant but appalling. The engaged aesthetic of violent occasions produces experiences that are never pleasant but are genuinely distressing emotionally and repugnant morally. It is a direct encounter with negativity.

IV

In our age of widespread violence, perhaps its most egregious manifestation is the proliferation of acts of terrorism. Terrorism is an especially vicious expression of violence: Acts of terrorism, by their very nature, have dramatic impact; this, indeed, may be their larger purpose. The aesthetic character of terrorism lies in its bizarre drama, its deliberately staged theatricality. Thus we may speak of an aesthetics of terrorism.²² Through their aesthetic impact, acts of terror overpower the boundaries of objectivity. Their audience, the public, is not disinterested; it feels threatened and vulnerable. The perpetrators of terror may themselves be disinterested, their specific effects arbitrary, and their victims impersonal and abstract—an ethnic group, a nationality, a race, a religious community. However, the experience of the onlooker or witness is personal and compelling, an engaged aesthetic.

This critique does not oppose the artistic appropriation of violence; it condemns its benign or tolerant appreciative acceptance. Turning the presentation of violence into

an object of disinterested appreciation encourages acceptance. An aesthetic that promotes the distancing of violent acts and events reinforces acquiescence in the public and private forms of violence that pervade the world of the twenty-first century. By contrast, engaging with violence aesthetically can sensitize and chasten those who encounter it. Disinterested appreciation has the effect of condoning violence, whereas when aesthetic appreciation is engaged, it can become a humanizing force, a testimony to the moral significance of aesthetic experience.²³ The aesthetics of violence is a decisive test for aesthetic theory.

(Endnotes)

1 Negative aesthetics is a substantive domain of aesthetic value that is not identical with aesthetic failures, as in kitsch, insipid art, or thoroughly unsuccessful art. Identifying and recognizing negative aesthetics is a critical dimension of aesthetic appreciation. 15 Cf. Giroux, *op. cit.* p. 263: "Walter Benjamin's claim that in late modernity the mesmerising and seductive language of power underlies captivating spectacles that inextricably fuse aesthetics with a Fascist politics. To his credit Benjamin recognised the affective force of aesthetics and its at times perverse ability to 'privilege cultural forms over ethical norms' while mobilising emotions, desires and pleasures that delight in human suffering and become parasitic upon the pain of others.¹⁴ Benjamin's notion of the aesthetic and its relation to Fascism is important, in spite of appearing deterministic, because it highlights how fascist spectacles use the force of titillating sensations and serve to privilege the emotive and visceral at the expense of thoughtful engagement. In his analysis of Benjamin's notion of the aesthetic, Lutz Koepnick develops this point further by exploring how the fascist aesthetic 'mobilizes people's feelings primarily to neutralize their senses, massaging minds and emotions so that the individual succumbs to the charisma of vitalistic power'."

His work ranges over aesthetics, especially environmental aesthetics, the arts, ethics, and social philosophy. He is the author of eight books and three edited volumes, as well as numerous articles, and his work has been translated into many languages. Berleant has lectured widely, both nationally and internationally, and has been active in many professional organizations, including the International Association of Aesthetics, of which he is a founding member and Past President.

**DOUBLETALKING THE HOMOPHONIC SUBLIME: COMEDY, APPROPRIATION,
AND THE SOUNDS OF ONE HAND CLAPPING**

Abstract | Homophonic translations create poems that foreground the sound of the original more than the lexical meaning. I begin by discussing the concept of “sound writing,” referencing Haroldo de Campos’s concept of “transcraton,” Pound’s “transduction,” and the concept behind calques. I then consider my homophonic translation of Finnish poet Leevi Lehto follows and Ulises Carrión’s isophonic translation. After noting Basil Bunting idea that meaning is carried by sound more than lexical content, I discuss Khlebnikov’s approach to zaum (transense), and sound-alike works based on bird song and animal sounds. The essay then takes up several specific examples: David Melnick’s homophonic translation of Homer, Pierre Joris’s voice recognition translation of Magenetic Fields, and Jean Donneley’s version of Ponge. The essay concludes with a discussion of Caroline Bergvall’s Drift, her version of “The Seafarer” as well as her Chaucer transcreations. A central part of the essay references “homophonic” translation in popular culture, in particular the “doubletalking” of Sid Caesar,” the most popular TV comedian of the early 1950s. A discussion o his work in the context of American Jewish comedy is central to the lecture. But other more recent popular example of the homophonic are discussed with special reference to cultural appropriation.

Who am I? I am not a straight stonemason,
Neither a shipbuilder, nor a roofer,
I am a double-dealer, with a double soul,
A friend of night, and a daymonger.

—Osip Mandelstam

He speaks in six known and six unknown languages.

—Daniil Kharms

1. Sound Writing

Never met a pun I didn't like.

I'm a veritable Will Rogers, with plenty of *roger* but without the will to say *enough's enough already*. All instinct. Like a Brooklyn Ahab stalking a whale in the back yard or a curmudgeonly Odysseus hurtling toward his sirens.

But wait a sec.

This is not the opening of a nightclub act.

Jokes are not arguments.

I am for avant-garde comedy and stand-up poetry.

That is, to my way of seeing it, there are only two kinds of writing: Sound and unsound. Stand-up and stand-down. Wanted and spurned. Risible and bereft. Incomprehensible and desperate. Performed and blank.

What a glorious idea Truman Capote had for typing that wasn't writing, as he said of Jack Kerouac in 1959 on David Susskind's TV show (Capote meant it as an insult).

Can there be verbal sound without meaning? Soul without soullessness? Body without flesh? Listening without hearing? Hope sans history?

But this is going too fast.

Let me start at the beginning.

When Vincent Broqua asked me to come to Paris for a conference on homophonic translation (not *homophobic*, don't even THINK of that here!), he proposed to call it "Sound – Translation – Writing." I suggested "sound/writing": "the sturdy resources of [the] ear," as Robert Creeley once wrote me, echoing Charles Olson's "by ear, he sd."

"Homophonic translation" is a genre of "sound/writing." Sound/writing provides a broader context for the homophonic imaginary and includes modernist European sound and *zaum* poetry and within the larger context of radical translation,

what Haroldo de Campos calls *transcreation* and Ezra Pound calls *traduction* (in the sense of *transduction*).

Pound often avoided using the verb 'to translate,' preferring a calque such as 'to bring over' that recalls the etymology of the conventional term. When his first translation of Cavalcanti's »Donna mi prega« appeared in *The Dial* in 1928, he called it a »traduction,« replacing the usual word with a Latinism derived ultimately from *traductio*, »a leading across.«

—*Calque* is a loan-translation, a word-for-word carrying over from one language to another (as *vers libre* to *free verse*), from the French *calquer*, to trace.

Homophonic translation is a form of sound tracing.

(My term is echopoetics.)

The homophonic sublime is a form of *délire* in Jean-Jacques Lecercle's sense, either phony or toney, depending on how you frame it. At its core, homophonic translation refuses a Cartesian split between sound and sense, seeing sense as never more than an extension of sound. At every moment it refutes the idea that meaning can be displaced from sound or that reference has an arbitrary, rather than motivated, relation to acoustic rhythm, sound patterning, and aural iconicity.

76

From a pragmatic point of view, any individual poem will fall short of the homophonic sublime. In that sense, homophonic translations might be heard as pushing in a direction, correcting a course, re-embodiment of the word. The homophonic is poetry that leads by the ear, foregrounding aurality: poetry that resists cutting the umbilical cords between translated and translation, source and target, original and copy, essence and accident, brain and mass, figure and ground, spirit and materiality, irony and sincerity, singer and song, imaginary and real, semantic and antic. The homophonic sublime is a necessary improbable of poetry, a rebuke to rationality in the name of linguistic animation.

In its archetypal form, homophonic translation creates a perfect mirror of the sound of the source poem into the target poem. It is mimesis by, and as, other means. While homophonic translation is related to sound poetry, the premise is that it extends an original text into a new language using real, not made-up, words of the target language. In a Borgesian pluriverse, the ideal homophonic translation would be heard by the speakers of the source language as if it were the original poem while heard by the speakers of the target language as a strange word concoction but still in their own tongue. I tried this with "Sane as Tugged Vat, Your Love," my 1993 homophonic translation of Leevi Lehto's "Sanat tulevat yöllä" ("Word Arrive by Night:) Finnish speakers hear it as if it is their own language, yet they cannot make out the words:

Olen sanonut tästä jo monta kertaa.

Talon jokaisessa veeseessä on valo.

Sillat virtaavat itään.

Sanat tulevat yöllä koputtamatta.

O when sanity tasted of muffled curtsy.

Talon -- Jokasta's vivisected valor.

Silly virtual item.

Sane as tugged vat, your love, kaput.

I've said about this many times before.

In every toilet of the house there is a light on.

Bridges flow east.

Words arrive by night without knocking.

Tämä tapahtui kaukaisessa maassa tässä lähellä.

Olen sanonut tästä jo monta kertaa.

Talon jokaisessa veeseessä on valo.

Sillat virtaavat itään.

Tamed tapestry's caressed master's tasseled luau.

O when sanity tasted of muffled curtsy.

Talon -- Jokasta's vivisected valor.

Silly virtual item.

This happened in a faraway country nearby.

I've said about this many times before.

In every toilet of the house there is a light on.

Bridges flow east.

Maaseudulla puut eivät vielä olleet lähteneet juoksuun.

Tämä tapahtui kaukaisessa maassa tässä lähellä.

Olen sanonut tästä jo monta kertaa.

Talon jokaisessa veeseessä on valo.

Medusa pouts as vat's veil's oldest lament jokes.
 Tamed tapestry's caressed master's tasseled luau.
 O when sanity tasted of muffled curtsy.
 Talon -- Jokasta's vivisected valor.

In countryside the trees had not broken into run yet.
 This happened in a faraway country nearby.
 I've said about this many times before.
 In every toilet of the house there is a light on.

Presidentti itse oli täysin lamaantunut.

Maaseudulla puut eivät vielä olleet lähteneet juoksuun.

Tämä tapahtui kaukaisessa maassa tässä lähellä.

Olen sanonut tästä jo monta kertaa:

President -- he itsy, oily, tainted, laminated.
 Medusa pouts as vat's veil's oldest lament jokes.
 Tamed tapestry's caressed master's tasseled luau.
 O when sanity tasted of muffled curtsy.

The President himself was utterly paralysed.
 In countryside the trees had not broken into run yet.
 This happened in a faraway country nearby.
 I've said about this many times before:

talon jokaisessa veeseessä on valo,

sillat virtaavat itään ja

sanat tulevat yöllä koputtamatta.

Talon -- Jokasta's vivisected valor.

Silly virtual item, yah!

Sane as tugged vat, your love, kaput.

in every toilet of the house there is a light on,

bridges flow east, and

words arrive by night without knocking.

There is a kind of perverse pleasure in trying to create the same (*homo*) from difference (*hetero*): homophonics is pataque(e)rical. The homophonic sublime is also the dream of a pure poetry, words for their own sake, the cry of their occasion, "COME CI": *only this and nothing more*.

A pure homophonic (or *isophonic* or *synphonic*) translation would be the same words brought into a new language, not at all uncommon for proper names and place names. The Mexican conceptualist Ulises Carrión plays on this possibility with his "The translation of 'Pedro Páramo,'" a reference to the 1955 novel by Juan Rulfo:

to English: Pedro Páramo

to French: Pedro Páramo

to Italian: Pedro Páramo

to German: Pedro Páramo

to Portuguese: Pedro Páramo

to Dutch: Pedro Páramo

Homophonic translation is parasitic: a parasite that may want to live symbiotically with its source or may wish to replace it, at least in becoming a new poem in its own right, autonomous, no longer dependent on the original but an original of its own.

In "The Use of Poetry," Basil Bunting writes about reading Persian, German, Italian, and Welsh poetry to a class that did not know those languages. He genially insists that the students would get as much out of hearing a foreign language poem as hearing one in their own language, since pronouncing a word is more important than knowing his meaning. While Bunting's recitation of foreign language poems incomprehensible to his students was a quite serious endeavor, I see a connection with postwar American comedian Sid Caesar's "doubletalking" — deliriously funny live verbal improvisations that sound like Italian, German, and Japanese speech but are composed on the tongue with made-up strings of words. Where Caesar gets laughs, Bunting gets poetry.

Bunting's insistence on sound over meaning is an extension of his framing of poetry in terms of music. Perhaps the most common experience related to Bunting's modest proposal is listening to an opera sung in a language you do not know and feeling you are missing nothing, indeed, preferring to hear the original to having the libretto sung, in translation, in your own language; and, moreover, preferring to listen without subtitles. It's no coincidence that opera parody is crucial to Caesar's doubletalking.

The *zaum* poems of Russian futurians Velimir Khlebnikov and Aleksei Kruchenykh were composed of synthesized or invented words that, whether intend or not, broke down the barriers of nationalist tongues and evoked species-wide listening, something that might be compared to Esperanto, despite the radical differences. “Incantation by Laughter” (1909) is the best-known *zaum* poem. My transcreation follows the sound:

We laugh with our laughter [O, rassmeites’, smekhachi!]

loke laffer un loafer [O, zasmeytes’, smekhachi]

sloaf laffer int leffer [Chto smeyutsya smekhami]

lopp lapter und loofer [chto smeyanstvuyut smeyal’no]

loopse lapper ung lasler [O, zasmeytes’ usmeyal’no!]

pleap lofer ech lipler [O, rassmeshishch nadsmeyal’nykh]

bloop uffer unk oddurk [smekh usmeynykh smekhachei]

floop flaffer ep flubber [O, issmeisya rassmeyal’no]

fult lickles eng tlickers [smekh nadesmeynykh smeyachei!]

ac laushing ag lauffing uk [Smeievo, smeievo,]

luffing ip luppling uc [Usmei, osmei, smeshiki, smeshiki,]

lippling ga sprickling [Smeyunchiki, smeyunchiki,]

urp laughter oop laughing [O, rassmeites’, smekhachi!]

oop laughing urp laughter [O, zasmeytes’, smekhachi!]

In modernist poetry, *zaum* is the most radical – and perhaps hysterical – extension of the sublime ideal of a poem being *only itself*, a cry of its occasion, “only this,” overthrowing a subservience to representational meaning, or a parasitic relation to an original. Khlebnikov may have desired a deeper ur-Slavic but he also wrote of his desire for “a single human conversation”; in some sense — “beyond sense” — *zaum* echoes international socialism. On the Dada side, there are the sound poetry inventions at the Cabaret Voltaire, one hundred years ago, especially the work of Hugo Ball; and the ur-text of sound poetry, composed from 1922 to 1932, Kurt Schwitters’s “Ursonate.” Within American popular religious culture, there is speaking in tongues (glossolalia) – the spontaneous utterance, as if possessed, of an unintelligible or foreign language, which Jennifer Scappettone contrast with xenoglossia. Within American popular music, consider the scat singing of Ella Fitzgerald and Cab Calloway.

Reuven Tsur argues that you can’t hear verbal utterances as non-verbal, but a poem can surely try to entice you by foregrounding the physical materiality of language, short-circuiting semantic processing. Then again, what’s verbal and what’s not is a matter of framing. We can hear a brook talking to us, can make animal sounds, and even turn the clackity-clacking of a sewing machine into a song.

The transformation of voicing or homophonically mimicking mechanical or machine sounds is its own genre of “sound-alike” poems. In Gertrude Stein’s “If I Told Him: A Completed Portrait of Picasso” (1923), she echoes the sound of a shutter

opening and closing: “Shutters shut and open so do queens. Shutters shut and shutters and so shutters shut and shutters and so and so shutters and so shutters shut and so shutters shut and shutters and so.” Then jump ahead to 2012 and Michael Winslow’s mimicking the sound of 32 different historical typewriters.

In Western poetry, birdsong has been a foundational metaphor for poetry, especially the nightingale’s song. The earliest homophonic poetry would then be mimicry of birdsong in human language. Robert Grenier took this almost literally, writing a series of poems in 1975, *Sentences Toward Birds* that transcribed, into “the American,” the “actual” sounds of birds in his immediate environment. Here are three of the poems, which, like his later *Sentences*, are each printed on individual cards:

why you say you see later

didn’t see go to a

A BIRD / who would call / not for but for you / in the day

More recently, Hanna Tuulikki’s “Air falbh leis na h-eòin – Away with the Birds” (2010 to 2015) has explored the “mimesis” of bird sounds in Gaelic poetry and song.

In *aaaaw to zzzzd: The Word of Birds*, John Bevins not only provides a “lexicon” of birdsongs — “chinga, chinga, chinga” is the homophonic signature of the swamp sparrow— but also a set of “mnemonics,” such as the song sparrow’s lyric refrain, “maids, maids, maids, put on your tea, kettle, kettle, kettle,” which makes me burst into song, as if this is Broadway musical:

Maids, maids, maids
Put on your tea
Kettle, kettle, kettle.

No time to waste

Get out your bass

Fiddle, fiddle, fiddle.

Young lads make haste

Dance to your love’s

Riddle, riddle, riddle.

Bevins also suggests a motto for the homophonic sublime is his adaption of Walter Pater on music – “All art aspires to the condition of birdsong” (p. 15).

But perhaps the ultimate revenge of the long tradition of homophonics belongs to Sparkie Williams, “the talking budgie,” a bird who, in the mid-1950s, was able to parrot a wide range of English words, mimicking human speech.

A decade after Sparkie, Michael McClure’s *Ghost Tantras* (1964) features a partially invented vocabulary that he calls “beast language” (guttural, expressive), which brings to mind a kind of primitive *zaum* (McClure references Vladimir Mayakovsky). McClure wanted to find a level of language that invoked animality:

Grahhr! Grahhr! Ghrahhr! Ghrahhr. Grahhr.
 Grahhr-grahhr! Grahhr. Grahhr Ghrahhr.
 Ghrrrr. Ghrahhr! Ghrrrr. Ghanrr. Ghrahhr.
 Ghrahhr. Ghahr. Grahhr. Grahhr. Grahhr.
 Grahhr. Grahhr. Gahr. Gmhr. Grahhr. Grahhr.
 Ghrahhr. Grahhr. Grahhr. Grathrr! Grahhr.
 Ghrahrr. Ghraaaaaahrr. Grhar. Ghrrrr! Grahrr.
 Ghrahrr. Ghrr! Ghrahhr. Grahrr. Ghrahrr.

The 1964 and 1966 recordings he made reading his poems to lions are powerful poetic documents, notable for how much more expressive and poignant are the roars of the lions than are the homophonic translations of the poet, whose human language echoes wanly against the formidable sounds of the beasts. Wittgenstein famously remarked, “Wenn ein Löwe sprechen könnte, wir könnten ihn nicht verstehen,” a homosyntactical (word-for-word) translation is “If a Lion speak could, we could him not understand.” But when the lion roars, in a duet with McClure’s mimicking, we hear the sound as song, a wail, perhaps a lament. The lion is growling at the human intruder’s appropriation, as if to say I am the king of my own language, do not mock me. And growling at us, the unseen listeners: *beware!*

Listening to a poem or opera in a language foreign to you, but feeling you get it all the same, is a far cry from homophonic translation: it leaves the original just as is, the foreignizing occurring in the listener’s response. If the aim of a poem is to foreground the materiality of sound, then listening to a language you don’t know is a kind of poetic experience. But that only goes so far. Listening to a poem in language you don’t know gets less interesting the longer it goes on; entropy sets in faster than a mosquito dodging a fly swatter. Sid Caesar’s doubletalk is hilarious because it is exaggerated in its stereotyping and because you know he is going on nerve: it’s a high-wire act and the wire is not that long. In contrast, homophonic translation allows for extensions and textual subtlety since it goes beyond imitation into commentary and because it is able to create a new poem in the new language.

2. Wot We Wukkerz Want

Let me to make a brief detour in my account to consider Edgar Allan Poe’s “The Philosophy of Literary Composition,” published in 1846, near the end of the troubled poet’s life. Poe’s delightfully bizarre paean to artifice is, in part, a send-up of spontaneously inspired, frenzied, sincere verse, what Poe calls “ecstatic intuition.” Writing about “The Raven,” Poe claims that the origin of a poem is a set of logically predetermined effects, including sound effects: meaning comes after. In effect, Poe attempts to treat verbal composition as if it were musical composition. Poe’s elaborate and impossible rules for poetic composition bring to mind Sid Caesar’s grifter-like elaboration of impossible rules for a card game in his early 1950s sketch “The Poker Game.” Both Poe and Caesar offer a kind of doubletalk, or talking out of both sides of the mouth, though,

in these cases, not deceptively, since their discourse foregrounds the absurdity, even though performed with straight faces. In the comic pathos of Poe’s insistence on the author’s total control of the poem through the rigidly pre-determined, Poe never breaks character, that of the author whose sole aim is beauty, achieved by maximizing melancholy (not to say pathos). Poe elaborates his doubletalk with absolute conviction. Like Caesar, Poe aimed to please “the popular and the critical taste.”

Both Baudelaire’s and Mallarmé’s translations of “The Raven” (1865 and 1875, respectively) swerve toward the homophonic, often echoing Poe’s exact sound patterns. Even if you don’t know French, you’d recognize “The Raven” if the translations were performed. A performed Yiddish translation by I. Kissen is always already a homophonic translation. “The Raven” is as identifiable as Beethoven’s Fifth, and if you don’t know Yiddish, it can seem as if it is doubletalk.

The modern history of radical translation in American poetry might reasonably with Pound’s Chinese adaptations but I want now to briefly cite his two translations of Guido Cavalcanti (1250-1300), “Donna mi prega,” the first from 1928, the second from 1934. Pound gives the constraints, worthy of Poe’s “Philosophy of Composition” or Caesar’s poker rules: “Each strophe is articulated by 14 terminal and 12 inner rhyme sounds, which means that 52 of every 154 syllables are bound into pattern.”

Because a lady asks me, I would tell
 Of an affect that comes often and is fell
 And is so overweening: Love by name.
 E’en its deniers can now hear the truth. (1928, *Pound’s Cavalcanti*, 171)

•

A lady asks me
 I speak in season
 She seeks reason for an affect, wild often
 That is so proud he hath Love for a name
 Who denies it can hear the truth now (1934, *Pound’s Cavalcanti*, 179)

In 1940, at the beginning of World War II, Louis Zukofsky took the Cavalcanti translations to another dimension. What he produced was not a homophonic translation but rather a sound transcreation that radically accented the poem, making it, in part, an ethnic dialect poem, a sort of Yiddish doubletalking, where doubletalking implies bilingualism and double consciousness. As with his inaugural “Poem Beginning ‘The,’” Zukofsky radically engaged an American vernacular, following the model of Pound and Williams, and he brought it home, to a *mamaloshen* (mother tongue), homey and homely, but with a majestic beauty brought over from the sound structure of the Cavalcanti:

A foin lass boddens me I gotta tell her
 Of a fact surely, so unrurly, often’
 ‘r ‘t comes ‘tcan’t soften its proud neck’s called love mm . . .

Perhaps the closest recent work of this kind – a translation into a marked, comic dialect, with accent *über alles* — is the riotous “The Kommunist Manifesto or Wot We Wukkerz Want” – “Redacted un traduced intuht’ dialect uht’ west riding er Yorkshuh bi Steve McCaffery, eh son of that shire” in 1977.

3. Doubletalk

Discussion of homophonic translation is generally placed in the context of radical poetic innovation. I want to contrast that lineage with two examples from popular culture, one from the postwar American comic Sid Caesar and the other from *Benny Lava*, a recent viral YouTube video.

Doubletalk, as Caesar uses the term, is homophonic translation of a foreign-language movie, opera scenario, or everyday speech into an improvised performance that mimics the sound of the source language with made-up, *zaum*-like invented vocabulary. Consider an uproarious 2015 performance by French poet Joseph Gugliemi, where he performs a made-up language under the guise of reading a poetry text, which at one point he shows to be all blank pages. In contrast, literary homophonic translation begins with a defined foreign-language poem as source text and creates a new work in English that mimics the sound of the original.

The best example of Caesar's "double-talk" is a concert in which he moves through four languages, starting with French and moving to German and Italian, ending with Japanese. The serial movement from language to language also suggests a nomadic display of multi-lingual code-switching. It brings ... home ... the final line of Charles Reznikoff's 1934 poem about diaspora:

and God looked and saw the Hebrews
citizens of the great cities,
talking Hebrew in every language under the sun.

SHOW CLIP

Caesar was the most important and influential comedy star of early American television, a key member of a generation that included Lenny Bruce, Jackie Gleason, and Jerry Lewis. Caesar was born in 1922 and died in 2014. His parents were Jewish immigrants, his father was from Poland and mother from Russia, both coming to New York as children, which means that Yiddish would have been their home language.

Yiddish is a nomadic language, not based in any nation but creating a common tongue for diasporic Jews in Poland, Hungary, Russia, and America, among other places. While sometimes thought to be a dialect of German, Yiddish is its own language, spoken by people who did not know German. As a consequence of the Systematic Extermination of the European Jews, compounded by Israel's turn against Yiddish by selecting Hebrew as its national language, Yiddish came to be a dead language, like Latin, though it persists, with vitality, in pockets.

In *Bridges of Words: Esperanto and the Dream of a Universal Language*, Esther Schor tells the story the invention of Esperanto by L. L. Zamenhof (1859-1917), an Eastern European Jew who grew up speaking Russian at home, Polish and German for business, Yiddish with other Jews, and Hebrew in synagogue. Zamenhof said that the hostility of one group of language speakers to another "made me feel that men did not exist, only Russians, Poles, Germans, Jews, and so on." He conceived Esperanto as

a way to overcome ethnic and national barriers, which echoes, while departing from, Khlebnikov's "single human conversation (and given *zaum's* "magical" derivations from Russian root words).

"Instead of being absorbed by the Christian world, we [Jews] shall absorb them," Zamenhof proclaimed in 1907 (pp. 82, 132). Schor comments that, in this context, Judaize means not to turn into Jews but to make justice and fraternity our foundation.

Sid Caesar was not likely to have known of Zamenhof or Esperanto. eleprompters.

In his autobiography, Caesar tells a story that brings Zamenhof to mind (and ear). At his father's restaurant, where he worked, speakers of different language groups sat at different tables and Caesar would go from table to table mimicking the sounds of the customer's native tongues, much to their delight. The scene recalls lines by Hebrew poet Avot Yeshurun (born 1904) addressed to his mother, in which the poet expresses his sense of the loss of Yiddish, his mother/other) tongue while evoking a primal experience of doubletalk: "You who hear a language in seventy translations / at night in the garden of Dizengoff Square."

Caesar's first cited use of doubletalk called "Conversation between Hitler and Donald Duck" — Caesar did both parts. The bit was likely inspired by the 1943 Walt Disney / RKO propaganda cartoon *Der Fuehrer's Face, Donald Duck in Nutzi Land*, which won the Academy Award for Best Animated Short Film, though it was subsequently suppressed for fifty years. This sidesplitting short features the song Spike Jones made famous in 1942, "Der Fuehrer's Face,"

But before Caesar or Looney Tunes did their German doubletalk, there was Charlie Chaplin's extended homophonic translation of a Hitler speech in *The Great Dictator* from 1940: doubletalk salted with English words. That speech is given by the dictator Adenoid Hynkel, whose double is Schultz, the Jewish barber.

Homophonic works are usually funny, if not outright comic. They succeed because they have a sense of humor about the apparent absurdity of the idea. It's the humor, and the sense of identification with the other, that inflects the homophonics of Zukofsky and Caesar, both of who grew up in a Yiddish-speaking household but for whom English was, if not the mother tongue, than the father tongue, the language they mastered. Ironically, for Caesar, doubletalk was not deceptive or artificial but a honing/homing into the language-spring of *mamaloshen*. Indeed, Caesar notes that some of his first jokes were based on translinguistic puns and mishearing between Yiddish and English, which greatly amused his audience, who were making their way to being American by moving from Yiddish to English. Caesar credits Yiddish dialect performers as precursors. He mentions Willie Howard, who sang Yiddish words to Mexican-themed skits (*Caesar's Hours*, 16). Fanny Brice comes to mind.

Caesar's approach to all his performance art is that it "had to have a basis in reality. It had to be believable". It is this believability – what Zukofsky called "sincerity" — that undercuts parody and irony: it allows language to be reinhabited ("objectification" in Zukofsky's sense) rather than mocked. This, in turn, connects to Zukofsky's "An Foin Lass" – a translation that brings home the Cavalcanti, *makes it home* and a little bit homely. The doubleness in doubletalk is, then, not deception or

evasion but double consciousness in W. E. B. Du Bois's sense – the consciousness of the dominant English but the echo of the *mamaloshen*. It's not about a return to an authentic original language, it's the dialectal relation of the two, the echopoetics, that is the ground. Doubletalk that foregrounds doubletalking as its own kind of poetry or verbal acrobatics. And just to bring this point ever more homeward: Caesar would intersperse Yiddish and English words into his doubletalk routines. As he boasts, a Yiddish word pronounced the right way can sound Japanese.

Caesar's doubletalk uses the full prosodic resources of verbal language, foregrounding intonation, gesture, rhythm, syntax, and sound patterning rather than lexical identification. Doubletalk resembles sound poetry, but it is tied to the specific sounds and rhythms of the language being parodied. It is homophonic translation not of specific text but, rather, of the texture of the source language.

Like doubletalk, homophonic translation, *zaum*, sound poetry, and scat singing are not against expression; they are hyper-communicative. Sound writing makes meaning by other means; other, that is, than lexical. This is meaning for those who feel at home in the world, or want to make the world more homely (*gemütlich*, *haimish*). "At home," according to theologian Ernst Fuchs, "one does not speak so that people will understand but because people understand." Language at home is marked by the temporal, transient, always in-process "presence of a dialect": "Here language is emotional. Its understanding of time ranges between song and shout" (p. 126).

The presence of the word, that is, *verbing the word*, is antinomian: *the performance of language supersedes the law of language*.

Only that which can become present as language is real. "For where meaning is, there also is language. And where language is, there is reality. Language belongs so closely to reality that it sets reality free for the first time: language ex-presses reality. ...The word not merely conveys the concrete situation but creates it."

In 1912, Franz Kafka gave an "Introductory Lecture on Jargon," a talk on Yiddish that he wrote as a prologue to a performance of Yiddish poetry. Yiddish represented for Kafka a "kind of immediacy of expression" in sharp contrast to the "endemic alienation of Western assimilated Jews" like himself. Yiddish, for Kafka, is related to Fuchs's idea of a language of home. At the same time, Kafka saw Yiddish as *mifßachtete*, a disregarded and stigmatized dialect, a language appropriated from other language, and a subculture argot

Caesar's homophonics are all about accent and accent is always a matter of class and ethnicity. In American culture, to have a marked accent is a stigma, a mark of your status as immigrant or ignorant.

Doubletalk is usually considered something bad, deceitful, fraudulent. Saying one thing and meaning another, a means of disguising the true meaning of something. It is connected with viral Jewish stereotypes, all repeatedly invoked in Pound's 1941-1943 Radio Rome speeches: the uprooted, usurpers of a language not rightly one's own, destroyers of the plain sense of the word and authenticity, untrustworthy, "diabolically clever." Doubletalk is associated with gobbledygook, obfuscation, and gibberish — fake or counterfeit language, what George Orwell famously stigmatizes as doublespeak or bullshit, which gives "an appearance of solidity to pure wind." ... Doubletalk begins in

the deliberately unintelligible and fragmented. Modernist poetry has often been tarred with this brush. It's fast talking on theory and chock full of elisions and evasions, obscure references, logical lapses, emotional bankruptcy; in other words, *the kind of poetry I want*. Caesar saw the poetry in these language textures, even if he would not have figured them as "material" not "poetry." In the immediate wake of the extermination of the European Jews, he practiced a kind of shtick alchemy, turning the Jewish stigmas of accent and shyster into song, in the process turning the tools of intolerance and nationalism on their heads. Doubletalk is applied nomadics (to use Pierre Joris's term for non-national language): it pushes back against blood and soil nativism.

Charles Bernstein is the author of *Near/Miss* (University of Chicago, 2018), *Pitch of Poetry* (Chicago, 2016) and *Recalculating* (Chicago, 2013). In 2010, Farrar, Straus & Giroux published *All the Whiskey in Heaven: Selected Poems*. Bernstein is Donald T. Regan Professor of English and Comparative Literature at the University of Pennsylvania, where he is co-director of PennSound. He is a fellow of the American Academy of Arts and Sciences. In 2015 Bernstein was awarded both the Münster Prize for International Poetry and Janus Pannonius Grand Prize for Poetry .

HISTORY AND GEOGRAPHY OF CONTEMPORARY ARCHITECTURE: AESTHETICS OF TODAY'S WORLDS

Abstract | History is the study of the past described in written documents. Prehistory is the history of human culture prior to written documents and post-history is the period in which the end of human development is reached. Contemporary history, a subset of modern history, describes the historical period from approximately 1945 to the present. Although the term 'contemporary history' has been in use since at least the early 19th century, its usage changed in the 20th century. Since the last quarter of the 20th century, global warming has been shifting weather patterns and causing the global sea level to rise. We may see the end of human developments if we cannot stop it and may have to live in a post-historic world.

The continuous subduction process causes frequent earthquakes in Japan. The Japanese Islands are also affected by typhoons and the global warming. Although a country subject to numerous natural disasters, it recovers relatively quickly and considered safe. History of contemporary architecture is not related with natural disasters in the West. In Japan, however, it is related with earthquakes. The history of contemporary architecture in Japan should be written taking into account the phenomenon of earthquakes or at least the way in which contemporary architects have addressed this issue. After the peak of postmodernism and deconstructivism, some Japanese architects started holding to traditional culture and nature in high regard, while discontinuing postmodern classicism. It is meaningful to pay attention to the history and geography of contemporary architecture in Japan from this perspective.

Index terms | *History, Geography, Nature, Man-made, Postmodernism, Deconstructivism, Contemporary Architecture*

INTRODUCTION

The general theme of the 21st International Congress of Aesthetics, 'Possible Worlds of Contemporary Aesthetics: Aesthetics between History, Geography and Media', is very meaningful. Both history and geography have been globalized since the 15th century when the Age of Discovery started and, even more so, since the early 20th century which saw two world wars. However, there are also a variety of histories and geographies all over the world and various attitudes toward history and geography among architects.

Human geography and history are closely linked. Physical geography deals with the study of processes and patterns in natural environment. Although it is not closely linked with history, physical geography is also important to understand architectural history and the contemporary architecture of each country. At some point in the 21st century, the usage of the terms 'contemporary history' as well as 'contemporary architecture' may change again. (1)

HISTORY OF CONTEMPORARY ARCHITECTURE

'History of Contemporary Architecture' may appear to be a rather strange title for a paper in the 20th century. In the 21st century, almost seventy-five years after 1945, it is perhaps more understandable to talk about its outline by using the title 'History of Contemporary Architecture' and the three -isms, 'Modernism, Postmodernism, and Deconstructivism'. Modern architecture emerged at the end of the 19th century because of innovations in technology and building materials, and from a desire to break away from past architectural styles. Before the 19th century, each architectural style continued for at least half a century or, as seen in the Middle Ages, for more than a few centuries. However, the length of time for each style after the Middle Ages became increasingly shorter.

In Europe, Renaissance architecture was designed and constructed between the early 15th and late 16th centuries in different regions. Baroque architecture lasted from the late 16th century to mid-18th century in Europe and Latin America. The next style in the West, Rococo, prominent from the early 18th century to the late 18th century, was much shorter. Neo-classicist architecture lasted much longer from the mid-18th century or even from the early 18th century as a reaction to the Rococo style. It was a forerunner of the revivalist movements of the 19th century.

The 19th century was a century of revivalism or revivalisms in which various styles from the Classical, Middle, and Modern ages were revived. The length of each revivalism was a few decades. The Greek Revival was an architectural movement of the late 18th and early 19th centuries. The Gothic Revival lasted from the mid-18th to the mid-19th century, the Baroque Revival took place in the late 19th century, and the Rococo Revival in England only lasted for a few decades in the early 19th century. The Queen Anne Revival was a historicist architectural style of the late 19th and early 20th centuries in English-speaking countries. It hardly included any elements typical of the actual architecture of Queen Anne's reign in the early 18th century. It was one of the last historical revival styles and a kind of free style, freely using traditional forms of architectural elements. (2)

Modern architecture emerged at the end of these historical styles including 19th-century revivalisms, which had gradually and rapidly sped up their style changes. It developed in the early 20th century and became dominant all over the world after

World War II. Modern architecture is a historical reaction against historical styles up until the 18th century, especially against the revivalisms in the 19th century when almost all historical styles, Greek, Roman, Romanesque, Gothic, Renaissance, Baroque, Rococo were revived one after another.

However, postmodern architecture emerged in the 1960s as a reaction against the austerity, formality and lack of variety of modern architecture, particularly in its International Style. The postmodern architecture movement was mainly started by Robert Venturi (1925-2018) and Denise Scott Brown (1931-). (3) Starting from a few publications by Charles Jencks (1939-) in the 1970s, the terms postmodern architecture and postmodernism started to be widely used all over the world. (4) Postmodernism thrust modernism which split off from historical revivalism into historical styles. Modern architecture, represented by the International Style, became one of the main historical styles in the 1960s-80s. Deconstructivism is a subset of postmodernism in a broad sense, but it was against postmodern classicism. It was a new development from Russian constructivism.

GEOGRAPHY OF CONTEMPORARY ARCHITECTURE

90

There is a world history, as well as the unique history of each region, each country and each area. Although each continent has its continental geography, the geography of each region or country or area is a specific one. Especially in the Eurasian continent, the geography of each of the areas in the north, south, east and west is very different. Human geography and history are closely linked. Physical geography deals with the study of processes and patterns in the natural environment. Although it is not closely linked with history, physical geography is also important to understand the architectural history and contemporary architecture of each country.

Although Japan is considered one of the safest countries in the world, the continuous process of subduction causes frequent earthquakes. The Japanese Islands are also affected by typhoons. Japan is a country subject to numerous natural disasters, but it is a country which recovers relatively quickly and is considered safe. The history of contemporary architecture is not related to natural disasters in the West and in several other parts of the world. In Japan, however, it is impacted by the occurrence of earthquakes.

As this chronological table shows, two major earthquakes occurred in Kansai and Tōhoku in 1995 and 2011, respectively, after the Great Kantō Earthquake, which occurred in Tokyo in 1923. In a sense, Japan had major earthquakes in the beginning of modernism and at the peak of postmodernism or more properly deconstructivism. History of contemporary architecture in Japan should be written, with focus on earthquakes or at least with the related activities of contemporary architects.

Tadao Ando (1941-) is one architect who is still continuing modern architecture in Japan. When we observe his design and completed buildings, we may feel that modern architecture still exists. Although it is not necessary to talk about earthquakes when referring to Ando's work, it is very important to think about it in relation to the work of Toyo Ito (1941-) who is a contemporary of Ando. They made their architectural debuts almost simultaneously in 1976. Ito's 'White-U' built in Tokyo is an exposed concrete house, and so is Ando's 'Sumiyoshi-no-Nagaya' built in Osaka. Between 1982 and 1984, Ito took a different direction with his own house 'Silver Hut' built next to his elder sister's 'White-U'. Since the completion of 'Silver Hut', Ito has been searching for

flexibility, openness and transparency or translucency, in contrast to the solidness of Ando's architecture.

The Sendai Mediatheque designed by Ito and completed in 2001 was conceived as a transparent cube through which thin floor plates float suspended on organic-looking seaweed-like tubes. It is a new reinterpretation or gentle deconstruction of Le Corbusier's Dom-ino house and comparable to the Centre Pompidou designed by Renzo Piano (1937-) and Richard Rogers (1933-), but more harmoniously blended together with or melted into the cityscape by using glass facades which, through their variable reflections and transparency, allow the building to alternately dematerialize itself creating a kind of ephemeral connection with infinite space. Ito explains its inventive tube structure by showing seaweeds in a glass case and the phenomenal ephemerality of its facades and the flexibility of interior partitions by touching upon traditional Japanese architecture. The Great Tōhoku Earthquake occurred in northeastern Japan on March 11, 2011, was also called the Great Sendai Earthquake. However, the Sendai Mediatheque, a building of light image was structurally strong, and did not suffer disaster from the earthquake. It became a relief centre of Sendai City for a while.

More modern elements of Ito's architecture such as slick and clean surfaces made of glass and metals are shared by one of his successors, Kazuyo Sejima (1956-). After apprenticing with Ito, Sejima established Kazuyo Sejima & Associates in 1987 and in 1995, the Tokyo-based firm SANAA (Sejima and Nishizawa and Associates) with Ryue Nishizawa (1966-), who had worked with Sejima at Toyo Ito & Associates and Kazuyo Sejima & Associates afterward.

SANAA uses large windows which allow natural light to enter a space and create a fluid transition between the exterior and the interior. The Kanazawa 21st-Century Museum of Contemporary Art completed in 2004 is comprised of a circular building, 112.5 meters in diameter, with no main façade or main entrance. Designed without a front or back, the central area of the museum hosts temporary exhibitions. The museum also has a number of public spaces which include a library, lecture halls and workshops. (5) Interspersed with the public spaces of the museum are some permanent installations open to the public free of cost. These installations include works such as 'Swimming Pool' by Leandro Erlich, a pool where people appear to be underwater, and 'Blue Planet Sky' by James Turrell, a space exploring blue sky as a medium. 'Blue Planet Sky' is a small sky and 'Swimming Pool' is a small sea. This circular-plan museum building could be a small model of the earth.

Structural design and building construction are also very important in an earthquake-prone country. Advanced structural engineer, Mutsuro Sasaki (1946-) has teamed with Japanese architects Toyo Ito, Arata Isozaki (1931-) and SANAA to help bring to life free-flowing forms of organic architecture, such as the Sendai Mediatheque and the Kanazawa 21st-Century Museum. The steel columns of the Kanazawa 21st-Century Museum are slender, ranging from 95 to 110 mm. By using many steel braces in the walls of galleries for the north-south and east-west directions, the almost transparent building of the museum was achieved in the snowy city of Kanazawa in Japan, a quake-prone country. (6)

The Kanazawa 21st-Century Museum can be compared with another 21st-century museum in Europe. It is the MAXXI National Museum of the XXI Century Arts designed by Zaha Hadid (1950-2016) and completed in Rome in 2010. Being a very striking building, it received the Royal Institute of British Architects Stirling Prize in the same year. It is dynamic and sculptural not only in its exterior but also its interior with large ramps and stairs. The Guggenheim Museum Bilbao, designed by Frank Gehry (1929-) and opened in 1997, is one of the first and most important museums of deconstructivism. It was opened as part of the revitalization efforts for the city of

Bilbao. Immediately after its opening, the Guggenheim Bilbao became a very popular tourist attraction, drawing visitors from around the world. Even now it attracts a great number of visitors. An unexpected aspect of the museum is that most visitors watch and experience the building more enthusiastically than works of art exhibited in its galleries. The Guggenheim Museum Bilbao is a gigantic sculpture and a huge jewel made of titanium shining alongside the Nervión River (figure 1).

Louvre-Lens, designed by SANAA and opened in 2012, is a development from the Kumanokodo Nakahechi Museum, which opened in 1998. Therefore, it is appropriate to compare Louvre-Lens with the Guggenheim Museum Bilbao and two 21st-century museums in Rome and Kanazawa as important museums designed at the turn of the century. The Kumanokodo Nakahechi Museum was the first museum designed by SANAA. It is a small museum built in a mountainous part of Tanabe City, registered as a World Heritage Site. (7)

Louvre-Lens was designed as a string of five low-profile structures. The central one is square with glass walls and the others are rectangular with polished aluminium façades, giving a blurry reflection of the surroundings. Altogether, the museum is 360-meters long and contains three exhibition spaces. The square, central building is the main reception area. It contains several round glass rooms that include an information centre and a museum boutique. The building to the west of the entry hall is a gallery for temporary exhibitions. Its round curtained spaces like round glass rooms in the central building are often used for exhibitions. In traditional museums, there are many rooms, which are used for various sections of a temporary exhibition or permanent ones, where showpieces are put on the walls. In the gallery of temporary exhibitions in the Louvre-Lens, walls are not used. Showpieces are exhibited in these round curtained spaces and the titles and outlines are printed on the translucent curtains. Therefore, visitors can see the whole exhibition and its various sections at the same time or continuously one after another.

To the east of the entry hall is the Galerie du Temps, which houses approximately 200 showpieces from the collection of the Louvre, Paris. The showpieces in the large, open hall are arranged chronologically, from 3,500 BC to the mid-19th century. With more than 380,000 items, in the Louvre Paris, the collection is divided into main buildings which are further subdivided into rooms in each building. Although the number of showpieces is much smaller in the Louvre-Lens, visitors can take a general view of the whole history of Western art, by walking through the Galerie du Temps. In comparison with the Guggenheim Museum Bilbao and the National 21st-Century Museum in Rome, the Louvre-Lens is not sculptural but transparent or translucent. In a sense, SANAA pays much higher regard to the museum and exhibition spaces than the museum building.

Philip Johnson (1906–2005), a late architect and the first curator of the 'Deconstructivist Architecture' exhibition held at the Museum of Modern Art, New York, in 1988, said deconstructivist architecture is not a new style. He also wrote that deconstructivist architecture represents no movement. Associate curator of the exhibition, Mark Wigley (1956-), also wrote that deconstructivist architecture is not an '-ism'. (8) There are scarcely any architects who call themselves deconstructivists. However, deconstructivist architecture is rather positively accepted in the West, particularly in many international competitions. In Japan, postmodernism and deconstructivism are not widely spread. An exceptional architect is Kengo Kuma (1954-). His work should be compared with that of Peter Eisenman (1932-).

Peter Eisenman designed a few buildings in Tokyo in the 1980s. Although deconstructivism does not mean destructivity, works by Frank Gehry and Peter Eisenman include the multi-storeyed buildings in which construction and destruction are superimposed. Eisenman designed the Koizumi Lighting Theatre, which was built in

1988-90. He also designed the Nunotani Building in 1992. In the US East Coast, where there is scarcely any major earthquake, such buildings can exist. In Japan, however, the Nunotani Building was demolished after the Great Hanshin Earthquake of 1995 and before the 2011 Tōhoku Earthquake. The Koizumi Lighting Theatre was renewed after the Tōhoku Earthquake.

Kuma designed M2 (Memolead Tokyo) in 1991. This building included a postmodern huge Ionic column-shaped tower and destructive outside stairs. He is an exceptional architect who tried to design and develop works in which postmodern classicism and deconstructivism were combined. Before M2, Kuma designed the Small Bathhouse in Izu in 1988. It is similar to the Frank Gehry Residence. In the USA, deconstructivism was developed in contrast to postmodern classicism. Kuma, when he was a young architect, was open to both.

Around the time of the Great Hanshin Earthquake in 1995, he completely changed his style. Kuma began developing minimalistic and naturalistic buildings. In 1994, he designed the Kiroosan Observatory. In the same year, he published *Shin Kenchiku Nyumon* (Introduction to New Architecture) in November, and *Kenchikuteki Yokubo no Shuen* (The End of Architectural Desire) in December. In 1996, he published *Kenchiku no Kiki wo Koete* (Beyond the Crisis of Architecture). Kiroosan Observatory is described as follows: 'This project focused on anti-disposition of objects in nature. Kiroosan Observatory appears as a single narrow slit inside the hillside. This has reversed the concept that is embedded in our daily life that any observation platforms typically expose their presence by simply standing amidst the natural environment'. The Kitakami Canal Museum, built in 1999, is also a minimalist, naturalist work.

Kuma started to use louver in large-scale in his architecture in the late 1990s. In 2000, he designed three museums in Nasu, the Stone Museum, the Nasu Historical Museum, and the Batō Hiroshige Museum. In the Stone Museum, horizontal stone louvers were introduced to create a unique lighting effect on the inside. In the other two museums, he used the wood louvers throughout the buildings. Kuma also started concentrating on Japanese wooden timbering.

For the Xinjin Zhi Museum of China, completed in 2011, Kuma used the permeable screen façade, using locally available tile. An airy screen was created by fixing the tile that has a natural rough texture made at local workshops using traditional techniques with stainless steel wire. The Folk-Art (Crafts) Museum of the China Academy of Art in Hangzhou was built in 2015 (figure 2). It is described as follows: 'Roof tiles used to cover old homes in the area were gathered, and these and various other locally available materials with rich textures such as cedar were used inside. The group of small roofs that were made using these tiles give the museum the appearance of a village'. Kuma used these tiles also for airy screens as seen in the Xinjin Zhi Museum. Unlike Sejima and Nishizawa of SANAA, Kuma designs his architecture based on the history and geography of the construction site.

Kuma used the term 'brise-soleil' only when referring to the Fonds régionaux d'art contemporain (FRAC), Marseille, built in 2012: 'Le Corbusier attempted to solve the problem of light with brise-soleil by defecting sunlight, but we attempted to solve this problem by using particles (panels)'. He often uses another term 'louver'. He also wrote about André Malraux: 'Creating an "Art museum without walls" is an idea that was proposed by André Malraux in 1947, and we attempted to add to this concept by using an ambiguous façade'. Kuma is conscious of contemporary history in addition to historical geography.

Unlike Tadao Ando or Toyo Ito, who started from modernism, Kengo Kuma is an architect who started from postmodernism and deconstructivism. As explained above, he made

an extreme example of postmodern classicist and deconstructivist architecture in Tokyo. Around the time of the Great Hanshin Earthquake, Japan's worst earthquake in the 20th century after the Great Kantō earthquake occurred during the period of modernism, he left postmodernism and deconstructivism for a kind of minimalist and naturalist style, and then, started to use louvers in various forms and materials.

However, his louvers gradually became more artistic or decorative rather than functional. Although he is an architect with an extreme character, he is also active and positive person. He was 34 years old when he made a Small Bathhouse in Izu, which was influenced by Frank Gehry, and 37 years old when he made the M2 Memolead Tokyo. In one of his recent works, V&A Dundee, he still used louver or brise-soleil, but in a slightly less decorative way. He was thinking about the beautiful cliffs of the Orkney Islands in the north of Scotland. Kuma may gradually change his style again.

EPILOGUE: HISTORY AND GEOGRAPHY FOR CONTEMPORARY ARCHITECTS

94

Kengo Kuma is very conscious of the history and geography of architecture. Kazuyo Sejima and Ryue Nishizawa of SANAA are not. However, some of their works seem to be related to traditional Japanese architecture. Both the Kumanokodo Nakahechi Museum and the Louvre-Lens can be compared to the Katsura Imperial Villa built in a district of Kyoto in the 17th century. Although most of SANAA's buildings do not have traditional sloping roofs, the simple façade of glass and aluminium looks like those of the Katsura Villa with simple *shoji* screens in a beautiful composition.

The asymmetrical plan of the Louvre-Lens may partly look like that of the Katsura Villa. The Louvre-Lens is surrounded by its site with green grass and concrete, which vaguely looks like a traditional Japanese garden with grass or moss and stones laid also asymmetrically (figure 3). The large windows allow natural light to enter the interior space and create a fluid transition between the interior and the exterior, which is a characteristic of traditional Japanese residences. Unlike Kuma, SANAA does not use large louver or brise-soleil. Instead, they use translucent curtains or thin blinds for large windows, which are similar to *sudare* (reed screen) used in traditional Japanese buildings like the Katsura Villa. The ceiling is relatively low and its height is equal throughout, unlike museums by Frank Gehry or Zaha Hadid. The interiors of SANAA's museums are made with transparent glass and are partly movable like *shoji* or *fusuma* in Japanese houses.

Kengo Kuma is conscious of and positive about the history and geography of his building sites in various countries. Although Kazuyo Sejima and Ryue Nishizawa of SANAA are also doing their research on the history and geography of their building site, they do not insist on it as specifically as Kuma. They are more transparent or translucent about it, in a similar way to the style of their architecture.

While comparing contemporary architecture in the West and Japan, and also among several architects in Japan, I started asking myself when will 'contemporary history' change from its start around 1945 and when will 'contemporary architecture' change from its style in the 20th century. It is almost impossible to find out when, just as nobody discovered when the new 'contemporary history' would start until the world wars. However, sometime in the 21st century, today's 'contemporary history' may end,

ushering in the start of a new 'contemporary history' and 'contemporary architecture'.

Haruhiko Fujita, Professor Emeritus, was Professor of Aesthetics at the Graduate School of Letters, Osaka University, 2002-2017. He is now the President of the Japanese Association for Art Studies which consists of fifteen societies in Japan such as Art History Society, Musicological Society, Society for Aesthetics, Society for Dance Research, Society for Theatre Research, Society of Design, and Society of Image Arts & Sciences. He published mainly on William Morris, the Arts and Crafts Movement, Japanese art and design, American and British architecture, European landscape painting with particular interest in Claude Lorrain and J. M. W. Turner. In his book, *Iconology of the Universe*, he deals with changing human perception, expression, and ideas of the Sun, the Moon, Stars, and the Earth through ancient to modern times. He is seeing the world as a dynamic landscape of nature and man-made. He is General Editor of the *Encyclopedia of East Asian Design* which will be published in 2019.

COLLECTIVE THOUGHT-ACTION: ON LECTURE PERFORMANCES, TRANSMEDIA KNOWLEDGE, AND DESIGNING POSSIBLE WORLDS

The Global Lecture Machine

To give a lecture opening a lecture performance festival puts one in a paradoxical situation, especially before the International Congress of Aesthetics: I am lecturing before and about a genre whose aesthetics seem designed precisely to explore, expand, and in many cases explode the lecture as a form of power and knowledge. We can situate the lecture onto-historically as part of a global lecture machine, a disciplinary apparatus that arises with the modern university as a panoptic institution producing human subjects worldwide. “Lecture” means “to read,” and this immense reading machine you are seated in today stretches back to Plato’s Academy and around the world through colonialism and other waves of globalization. Over centuries, religious pulpits and shamanic circles have made way for secular lecterns dispensing universal reason through ideational thinking. Universal reason demands universal seating, assigning errant individuals and entire nomadic peoples to their seats in schools and lecture halls so they can see and hear ideas presented in logical order — and learn to reason themselves. Compulsory education laws require them to do so. Modernity’s challenge is thus: reason or else! Attend lectures, learn to read and write! From this perspective, experimental lecture performances explore, expand, and sometimes explode this global lecture machine, critiquing and/or reimagining its operation of power-knowledge. It is here that other possible worlds emerge.

If Derrida taught us that logocentrism is the most powerful ethnocentrism the world has ever known, we also know that the lecture machine can become not just a driver of intense nationalisms—one thinks of Heidegger’s Rector Lecture—but also the *target* of such nationalisms. Thus, in India, the Modi government has long targeted JNU or Jawaharlal Nehru University for “anti-nationalism”; in Hungary, the Orban government has driven the Central European University from Budapest to Vienna; in the United States, the Trump Administration seeks to deny federal funds to sanctuary campuses protecting immigrant students, while campus lectures have become sites contested by both the right and the left. And more subtly and perniciously: national intelligence agencies in collaboration with IT corporations have manipulated electoral processes worldwide, using data analytics to localize and microtarget voting behaviors through social media we both love and hate. The dramaturgies of fake news and post-truth produced by Vladislav Surkov and Cambridge Analytica operate not only through texts and images, discursive performatives and embodied performances, they also function at the level of data flows and algorithms, the input/output matrices of micro-performative power and knowledge analyzed by Lyotard and which Lazzarato, following Guattari, analyzes in terms of the diagrammatic.¹

1 See Jean-François Lyotard, *The Postmodern Condition* (Minneapolis: The University of Minnesota Press, 1986), Maurizio Lazzarato, *Signs and Machines: Capitalism and the Production of Subjectivity* (Los Angeles: Semiotext(e), 2014), and Felix Guattari, *Schizoanalytic Cartographies* (London: Bloomsbury Academic).

In the era of global micro- and macro-performativities, lecturers find their texts and images confronting diagrammatic power circuits operating at scales far below and above human consciousness. These circuits are not limited to nationalisms, but include international and multinational powers, as well as the powers of communities, coalitions, social groups, and individuals. Both states and hacktivists agree: power has gone virtual, nano, and networked, mobilized in the streets and raining down from cyberspace in a grand pincer movement joining earth and sky, intimacies and ontologies. The battle over subject positions — whether nationalist or ethnic, capitalist or communist, western or eastern, urban or rural, cis or lgbt, white or rainbow, old or young, human or posthuman—involves a battle over packets and networks, events and assemblages. Performative power and its ubiquitous dataveillance do not preclude the formation of stable identities and hierarchies, and in fact, the new power circuits depend upon these as raw material, as common building blocks of societies of control.

What becomes of knowledge as power becomes diagrammatic and post-disciplinary, when panoptic enclosures give way to open networks? And what becomes of aesthetics—which as embodied experience, philosophical concept, and field of knowledge emerged with the human subject, the Enlightenment, and thus with discipline and its global network of lecture machines? Without these lecterns, there would be no International Congress of Aesthetics, no International Association of Aesthetics, and none of the myriad of national aesthetics associations. What becomes of aesthetics in a post-disciplinary, performative world? And what might be its role in generating other possible worlds?

The future of knowledge, power, and aesthetics—in classical terms, the True, the Good, and the Beautiful—is precisely what is at stake and in play with the lecture performances we will see and hear shortly. Lecture performances mix elements of traditional lectures with practices from art, design, and everyday life, from experimental performance to data visualizations to walking in a field. A genealogy of the lecture performance would stretch back through 20th-century avant-garde performance to 19th-century orators and beyond. Rather than attempt such a genealogy, I will instead situate lecture performances transversally across genres and mediums, connecting them to contemporary forms such as theory rap, science dance, experimental conferences, and other genres of what I call *transmedia knowledge*. Transmedia knowledge is knowledge moving across different genres to engage different stakeholders, including specialists, communities, policy-makers, and the general public. The Scholarly Communication Institute at the University of Virginia calls such forms “emerging genres in scholarly communication.”² But communication does not exhaust the effects these genres produce and invite. By mixing specialized and common knowledge, by resituating *logos* within *graphie*, text within media, transmedia knowledge destabilizes a founding opposition of the Platonic academy: *episteme* (knowledge, science) and *doxa* (opinion, belief). In areas such as community engagement, participatory research, and citizen science, knowledge may flow from the people to the experts. What becomes of aesthetics in a post-Platonic universe, where mastery of knowledge takes a rap?

2 Scholarly Communications Inst., <http://uvasci.org/institutes-2003-2011/SCI-8-Emerging-Genres.pdf>

Discipline, Control, and Masters

In his dissertation “Owning My Masters: The Rhetorics of Rhymes and Revolutions,” A.D. Carson raps critical race theory as a form of knowledge that challenges the legacy of slavery and mastery in America and beyond. He writes: “This hip-hop album is a critical-theoretical reflection on personhood vis-à-vis Black bodies and Black lives. Rather than theorizing about hip-hop, the project ‘does’ this work through the genre of hip-hop.”³ Through rap, music, video, and texts, Carson situates his research using the campus of Clemson University as a critical site of intervention and invention. Clemson is a state institution whose founder, Thomas Green Clemson, was a former slave owner, US Cabinet member, and Confederate officer who bequeathed his plantation to found an agricultural, land grant university. Carson *owns* his masters by rapping critical race theory on Clemson campus grounds, monuments, and buildings such as the Strom Thurmond Institute, thereby expropriating and remixing the US history of slavery and oppression of black lives. In doing so, he also analyzes the relation between mastery, discipline, and knowledge, and the ways that rap and hip hop culture struggle with and within established forms and institutions of knowledge, challenging the role of mastery within disciplinary knowledge. The implications here are profound.

Like millions of others around the world, I hold a Masters degree, one earned at another land grant university in the American South, the University of Florida. I now teach in upstate New York at Cornell University, itself a land grant institution founded on indigenous land and that recently changed its arboretum’s name from the Cornell Plantations to the Cornell Botanical Gardens. Plantations and cultivation, masters and fields, subjects and objects, discipline and punish: Carson’s theory rap exposes the violent colonial history underlying modern knowledge and cultural production at large. Here we can patch in tracks from Alexander Kojève’s famous 1930s lectures on Hegel’s master/slave dialectic, a reading that influenced an entire generation of French intellectuals, who later inspired an entire generation of American intellectuals. Kojève’s reading: the dialectical victory of absolute knowledge over ideology marks the end of History and is achieved through the slaves’ superior practical knowledge, the labor of making things.⁴ In her pathbreaking essay “Hegel and Haiti,” Buck-Morss argues that Hegel may have developed the master/slave dialectic — the model Marx adapted later to theorize the working class as the revolutionary agent of history — from the anti-slavery Haitian Revolution of 1791.⁵ History rhymes through rhetorics and revolutions: through Carson’s transmedia dissertation, the figure of the Master emerges, and it is us: the scholar’s podium resonates with the slave auctioneer’s podium.

The connection between masters of slaves and masters of knowledge was famously made by Audre Lorde, the self-described “black, lesbian, mother, warrior, poet.” Angered by the marginalization of black women at a 1979 NYU conference on the role of difference in feminism, Lorde addresses what counts as acceptable skills for experiencing difference: “survival is not an academic skill. It is learning how to take our differences and make them strengths. *For the master’s tools will never dismantle the master’s house.* They may allow us temporarily to beat him at his own game,

but they will never enable us to bring about genuine change. And this fact is only threatening to those women who still define the master's house as their only source of support."⁶ The master's tools and master's house point to both the plantation and the university. In this light, A.D. Carson's rejection of the traditional dissertation, a monomedium genre with black letters lined up on white paper, is a rejection of the master's tools and the master's house — yet also an embrace. Citing Stephano Harvey and Fred Moten, he describes his work as "Black study, the work of fugitive planning. It is work for and against the university, for and against disciplines, for and against verification and validation. The object of 'Owning My Masters' is the aim of 'Owning My Masters.' The work is underground."⁷ Carson's theory rap performs the critique of the master's thesis and does so precisely through the displacement of the logocentric dissertation into the rhymes and reason of transmedia knowledge. What is specialized knowledge if not mastery of a field of objects and set of methods, in our context, the objects and methods traditionally categorized as aesthetics, as art, art history, and philosophy? Is not mastery what separates *episteme* from *doxa*, knowledge from ideology, method from ritual, experts from amateurs, and academic conferences from mere conversations? Is not shared mastery what motivates the formation of academic societies and international congresses? Lecture performances, theory rap, and other forms of transmedia knowledge challenge the model of mastery by enabling elements of common knowledge to encounter specialized knowledge in new and provocative ways. Carson's rap dissertation in Rhetoric, Communication, and Information Design follows on the graphic theory book *Unflattening*, Nick Sousanis' 2013 Columbia dissertation on visual and verbal thinking written in graphic novel form and published by Harvard University Press. These two transmedia dissertations indicate that tools other than the master's have emerged and that the master's house is being dismantled and reimaged.

Different bodies, different institutions, different worlds are coming into being. The International Congress of Aesthetics hosts a lecture performance festival: this suggests what aesthetics may become in post-disciplinary societies of control: transmediated, remixed, and remastered — and ultimately unmasterable. It comes as no surprise that the question of mastery arises in the shift from disciplinary to performative power-knowledge, for mastery bridges the grand narratives of humanist discipline and the input/output matrices of post-humanist control. To engage with the micro- and macro-performativities of contemporary power-knowledge and invent other possible worlds, mastery of a single medium or discipline no longer suffices, while mastery of many media and disciplines seems both unrealistic and undesirable. What is needed is something different than mastery: the willingness and agility to think and act across different media and fields of knowledge, both specialized and common. Transmedia knowledge entails choreographing different knowledges, different ethics, different aesthetics.

Reconfiguring Thought and Action

Dance Your PhD is an annual contest sponsored by *Science* magazine in which doctoral candidates in biology, chemistry, physics, and the social sciences transmediate their research into dance videos judged by panels of scholars and editors. The quantum

6 Audre Lorde, "The Master's Tools Will Never Dismantle the Master's House" in *Sister Outsider: Essays and Speeches* (Berkeley, CA: Crossing Press, 1984), p. 112. My emphasis.

7 Carson, *ibid.*

physicist and ballerina Merritt Moore won the 2015 Dance Your PhD contest in physics for “Spontaneous Parametric Down-Conversion: Photon Pair Generation,” a Tango dance video shot partly in her lab and partly on a staircase. As with other work in this transmedia genre, the dancing bodies here incarnate not fictional tales or poetic images but rather scientific concepts and methods. The tango, it turns out, resonates with quantum processes of entanglement, the phenomenon of groups of pairs of quantum particles to share physical properties, even across the universe. Einstein called it “spooky action at a distance.” Dancing her PhD, Moore overlays music, dance, video, and text to present her research, juxtaposing images of a lasers, beam-splitter, and other lab equipment with footage of herself dancing the tango with a partner. Using small phrases in large text superimposed over the video images, she describes the process of separating photon pairs. In her description of the video, she writes, “Even when a photon pair leaves the crystal (the lab), they continue down the same path. It is only when they are separated by a polarizing beam-splitter that the two photons are forced in different directions, because of their different polarizations. These photons are generated spontaneously and would otherwise be impossible to measure without destroying them; therefore they are intentionally separated so that one can be detected to herald the existence of the other.”⁸ Moore’s tango of entanglement offers us a performance of quantum alterity: it heralds the existence of an other, beginning with other ways of thinking and acting that are always already entangled with our own. Quantum alterity offers a way to tune in the micro-performativities of post-disciplinary power-knowledge and displace mastery with spooky action at a distance, the telepathy of an other and another and an otter.

The dancer and choreographer Yvonne Rainer famously stated, “The mind is a muscle.” Moore’s “Spontaneous Parametric Down-Conversion” and other Dance Your PhD videos demonstrate how working across different media involves working different parts of the mind-muscle. By bringing together dance and highly conceptual discourse, Dance Your PhD effectively combines elements of orality and literacy, introducing into logocentric science the music, song, and dance that Plato so successfully excluded from true, epistemic knowledge when he banished Homeric poets from the Republic. In *Preface to Plato*, Havelock reframes *The Republic* as a battle over pedagogies: Plato vs Homer, idea vs. image, logic vs myth, monomedia writing vs polymorphic performance. Havelock stresses that the Homeric tradition functioned as the encyclopedia or repertoire of Greek knowledge. The epic is mnemonic: as in other oral cultures, Homeric knowledge is remembered in the body, and epic poetry both records and disseminates this knowledge through tales rhythmically composed and performed in organized action using the stringed lyre. And there are other means beyond music: “These are the legs and feet and their motions organized as dancing. Once more, as with the use of the lyre, we confront here a pattern of organised actions, the function of which is mnemonic. It moves in a rhythm which parallels that of the spoken words, and spaces and punctuates them, so that the choric recitation becomes also a bodily performance which assists in ‘acting out’ the recital.”⁹ It is this precisely this acting out that disappears within the *vita contemplativa*, the life of contemplating ideas. This is why universal reason requires universal seating: Plato interrupts the poetry, song, and dance with prose, logic, and stillness. The separation of knower and known comes down to separating mind and body, ideal Forms (*Eidos*) and visceral Images

(*Imagos*), logic (*logos*) and myth (*mythos*). With theory, the Greeks sat down: the birth of the lecture machine was the death of music, song, and dance as general activities of knowledge production and dissemination.

With respect to the festival before us: the Homeric tradition constitutes an entire world known through lecture performances, except without the ideas, arguments, and theories, all of which arise with Platonic literacy. Dance Your PhD transmediates these literate elements and acts them out. Transmedia knowledge reanimates song, dance, and images to revel in the entanglement of orality and literacy within digitality, understood as an onto-historical apparatus that displaces oral repertoires and literate archives within networked databases. The displacement of discipline by performative power-knowledge channels this displacement of literacy by digitality, and both entail the reinscription of static, Platonic ontology within the dynamic ontologies associated with Heraclitus, Nietzsche, and Whitehead. The genres of transmedia knowledge function as interfaces atop digitality's sociotechnical infrastructures. Through transmediation, knowledge is dynamically acted out, as truth has become not simply a report on the world for specialists but also an event in the world, a world with multiple stakeholders.

We can register this entanglement of thought and action in numerous modern philosophers and schools, beginning with the pragmatism of James, Pierce, and Dewey, for whom the truth of theoretical knowledge is found in its practical application. Similarly, truth in the life forms that Wittgenstein called language games resides in their everyday use, and the stable identity of ideas gives way to shifting family resemblances. Austin distinguished constative reports from performative speech acts, utterances that "do things in the world." Such performatives are thus not judged as true or false but as successful or unsuccessful, happy or unhappy. Along a very different trajectory, Heidegger countered the contemplation of Platonic forms with the event of *Ereignis* where truth unfolds as unconcealment or *aletheia*, a revealing that also conceals Being. For her part, Arendt countered the entire tradition of the *vita contemplativa* with the *vita activa*, an explicit call for an active philosophy. All of these philosophies act out, entangling thought and action, paired activities that have been communing despite the Platonic beam-splitter.

Dance Your PhD heralds the emergence of *thought-action figures*, figures that are to digitality what ideas were to literacy, cognitive forms of an emerging apparatus of power and knowledge. Unlike ideas, thought-action figures are dynamic and mediated rather than static and ideal, but like ideas they are not limited to human figures. Animals, plants, machines, systems, processes, materialities, symbols, concepts, and other abstract entities—all become thought-action figures via transmediation, movement through mediums deemed material, spiritual, cultural, historical, ontological, etc. While ideas are transcendent, unitary, and eternal, figures are immanent, multiple, and transitory: they emerge and dissipate both within and across different media and contexts, from sociotechnical systems and animal rituals to microbiological evolution and chemical interactions. Unlike ideas, thought-action figures are not governed by the three foundational laws of thought: the law of identity ($X=X$), the law of non-contradiction ($X\neq-X$), and the law of the excluded middle (either X is true or $\neg X$ is true). Nor are their movements and relations limited to abodescent logic and its methodical steps of induction and deduction: figures can make these moves but are also rhizomatic, their movements also include abductive leaps across conceptual systems and conductive flashes that arise by overlaying different systems. Thought-action is thus choreographic. Ideas are forms, figures are rhythms, or more precisely,

packet-like waves moving across media and bearing traits of both traditional objects of knowledge as well as a class of strange objects that not only includes quantum particles but also Aristotle's black swan (rare event), the Stoics' *ti* and the Scholastics' *aliquid* (both meaning "something" rather than a thing), Meinong's *Aussersein* (outside being), Klein's partial object, Gödel's undecidables, Baudrillard's simulacra, Deleuze and Guattari's incorporeal acts, and Derrida's *pharmakon* (remedy/poison). Reinscribed within digitality, Platonic ideas become rare forms of thought-action figures, produced at particular moments within critical and creative processes alongside affective, non-discursive, and material, environmental elements.

When Plato expelled the poets from the Republic, he did so not only because for him poetry, music, dance, and myth could at best produce *doxa*, but more important, he believed that they harbor the morally corrupting effects of mimetic enchantment. Philosophy was the *pharmakon*/medicine he prescribed to counter the *pharmakon*/poison of mimesis, just as we prescribe critical theory to counter intoxicating ideologies.¹⁰ Platonic beauty, like Platonic love and dialectics, idealizes away the body and its figurations, using *logos* and *eidos* to drive out myth, images, music, song, and dance. While Aristotle's *Poetics* effectively rescues practices that will later become known as art, this rehabilitation reduces their pedagogic and intellectual function to the training of small children and eccentric adults. Millennia later, art remains trapped in a cage called aesthetics; or perhaps it is the other way around, and it is aesthetic practices that remained trapped in the cage of art. In either case, it helps to approach this cage as a thought-action figure, alongside the lecture machine, the master, and the entangled dancer.

Chance, Constraint, and the Cagean Escape

In 1960, John Cage performed *Water Walk* on the popular American game show *What's My Line?* Cage had premiered *Water Walk* a year earlier on the Italian game show *Lascia o Raddoppia*. The performance of *Water Walk* on television game shows was part of a series of experimental works exploring the borders of music and sound, art and life, high culture and mass media. *Water Walk* uses a specific chance operation technique developed in *Fontana Mix*. Over an existing score, Cage overlaid different transparent sheets, some with random dots, another a line, another a grid: the resulting performance score was determined by the chance patterns produced by overlaying the sheets. For *Water Walk*, the score included a diagram of the space, a 3-minute timeline with notations of events, and thirty-four different materials, including prepared piano, five radios, an audio tape player, and a host of things related to water: ice cubes, pressure cooker, toy duck and fish, water pitchers, vase and flowers, blender, and a tub. As Cage states on air: "I call it *Water Walk* because it contains water, and I walk during this performance." And water walk Cage does, moving about the set to pour water, chip ice, strike radios, water flowers, make seltzer water, strike the piano, drink seltzer water, knock radios to the floor—each event's duration determined by chance operations and then performed by this poised figure named John Cage.

Post-disciplinary, post-Platonic aesthetics gets its chance from a certain Cagean thought-action figure. Cage is sometimes associated with anti-aesthetics or the rejection of art as the expression of Beauty, or if you like, the freeing of aesthetics from the cage

10 See Jacques Derrida, "Plato's Pharmacy" (in *Dissemination*, Chicago: University of Chicago Press, 1981).

of art or vice versa. Cage's displacement of music within the broader space of sound and, more broadly still, the blurring of art's boundaries with everyday life obviously echoes Duchamp's dadaist interventions in, and subsequent withdrawal from, the art world; and Cage's juxtaposition of indeterminacy and intricate planning and execution would inform the neodadaist, Fluxus movements then emerging around the world. Cage also gave "lecture events," reading texts composed by *I Ching* operations, accompanied by music, installation, and/or dance. He was, in short, a prolific maker of lecture performances in which the written text generates the performance, confusing the distinction of thought and action. In her essay "Post-Cagean Aesthetics and the 'Event' Score," Liz Kotz identifies the conceptual ambiguity that directly relates to the reinscription of writing within transmedia and the entanglement of thought and action. "This conceptual ambiguity," she writes, "derives from the use of the *text as score, inseparably both writing/printed object and performance/realization*."¹¹ Kotz shows how Cage's approach to composing texts as scores directly influenced Fluxus artists such as George Brecht, George Maciunas, and La Monte Young. Here texts become performative and diagrammatic: not reporting on past events but generating new ones, functioning she says as "music scores, visual art, poetic texts, performance instructions, or proposals for some kind of action."¹² *Water Walk* has been performed by different artists over the years, and YouTube contains video documentation of many performances. Note, however, that all lectures have this performative dimension and transmedia potential, though typically we reduce the performing body to reading written texts whose contingencies remain hidden behind method and mastery. We don't touch the frame or call attention to the cage.

Cage's particular freeing of aesthetics from the cage of art (and vice versa), as well as the symbiotic play between John Cage and cage as enclosure, informs the 2012 documentary *How to Get Out of the Cage: A Year with John Cage* by filmmaker Frank Scheffer. Assembled from interviews and performance documentation that Scheffer shot between 1982 and 1992, *How to Get Out of the Cage* was created for the 100th anniversary of Cage's birth. Over the course of the film, we learn of several Cagean escape routes, beginning with Cage's citation of Duchamp's call to escape the image, specifically past or projected images that block off the event before us. Contributing to the emergence of thought-action figures, Cage says that ideas outside his head open his mind better than the ideas inside it. At another point, pianist David Tudor describes how working with Cage freed him from all past associations. But sometimes the escape may also be part of the trap. Perhaps the most provocative insight into the Cagean escape from the cage comes late in the film, when Cage states that if "you want to get free of your tastes and memories, likes and dislikes, then you have to discipline yourself."¹³ Cage's freedom, his escape from the cage of traditional art-making and aesthetics, paradoxically lies in discipline, but this Cagean discipline is in turn itself paradoxical as it gives up control to the indeterminacy of chance operations. Discussing the impact of Zen Buddhism on his work, Cage makes it clear that the cage he seeks to escape is Cage himself, the ego or self making choices and judgments about the world. He does so by "shifting responsibility from making choices to asking questions and getting the answers by means of the ancient coin-tossing method of the *I Ching*. Now I have it in the computer."¹⁴

Digital *I Ching*: within post-disciplinary thought-action, mastery here gives way to the paradoxical constraints of chance operations and the chances of subject-less constraints, which entangle the pairs chance-necessity, art-life, though-action. Imagine reading John Cage's name as a performance script generated by chance operations and then using this script to compose a post-disciplinary, post-critical aesthetics, one freed from the cages of both discipline and Platonism. Ulmer attempts such a project in the influential collection *The Anti-Aesthetic: Essays in Postmodern Culture*. Ulmer applies to Cage the signature experiment that Derrida conducts in *Glas*, where Derrida reads Hegel in terms of eagle and *Ekel* (disgust) and Genet in terms of *genêt*, a flower that appears in *Our Lady of the Flowers*, Genet's breakout novel written in a prison cell. Unlike Hegel, Genet signed on to the becoming improper, become common of his name. Artists sign works but only because we first respond to the world's sign or call to respond, to an alterity beyond all mastery. Likewise, Ulmer follows the chances of Cage's signature in order to theorize the object of post-criticism, an entire genre of experimental works that mix theory and practice. "Such texts," Ulmer writes, "represent or mime not by means of signs but by signing—the signature. What remains of 'identity' in a post-critical text is constituted by the new mimesis—the contamination between language and its user, the effects of which may be seen in the fact that the man who composed 'Music of Changes,' who composes all his productions by means of the 'Book of Changes' (*I Ching*) in order, he hopes, to change society, is named *Jo Change* (John Cage)."¹⁵ Thought-action figures thus include both the strange objects of post-criticism and also their eccentric and sometimes cagey subjects. To each subject-object pairing belongs its "own" immanent aesthetics, its own quantum signature event, its own possible world which escapes human mastery. Compositionally: the lecture you are hearing-seeing now was composed by juxtaposing six different works of transmediate knowledge—video essay, theory rap, Dance Your PhD, avant-game show, etc.—and then using their chance associations as constraints to generate six texts roughly 3-pages each that together outline a theory of post-disciplinary aesthetics through different thought-action figures. The experiment seeks to produce abductive leaps and conductive flashes in others. Thus far, I have focused on individual works of transmedia knowledge; however, as I have intimated, experimentation also occurs at larger scales, such as academic conferences and research universities.

Misperforming and Shifting Aesthetics

In 2005, the 15th annual gathering of Performance Studies international (or PSi), introduced an intervention into the dominant form of conferences, the reading of papers. Unlike most conferences, PSi combines scholarly and cultural practices, yet even then these are often siloed, caged off from one another: papers here, performances there. Significantly, PSi 15 took place in Zagreb and was titled *Misperformance: Misfiring, Misfitting, Misreading* for it explored the gaps and misalignments between between and within fields, as well as between ideas and action. Co-organizer Lada Cale Feldman states that the conference addressed the "longstanding issue of how to bridge the gap between theory and practice, between the delivery of papers and actual performances."¹⁶ She and co-organizer Marin Blažević call this intervention *shifts*. Blažević writes: "Shifts are devised as a crossover format that cannot be exclusively reduced

15 Greg Ulmer, "The Object of Post-Criticism" in *The Anti-Aesthetic: Essays in Postmodern Culture* (Port Townsend, WA: Bay Press, 1983), p. 107.

to panels or working group meetings, roundtable discussions, workshops or lectures, work-in-progress presentations, public forums, highly contingent interactive events, actions or installations, theatre, dance or performance art, multimedia performances, exhibitions, seminars or interventions: rather, *shifts may be the combinations of all those formats and genres, shifts are experimenting on their intersections, with their functions and protocols* (my emphasis).¹⁷ In short, shifts are transmedia knowledge operating at scale to intervene in the university lecture machine. Indeed, shifts can help us situate aesthetics in relation to the displacement of discipline by performativity and literacy by digitality: shifting is displacement at the level of disciplinary fields.

The PSi Misperformance conference encouraged proposals by international and regional scholars that shift research toward performance and also proposals by artists that foreground the research dimensions of their creative process. “SHIFTS are hybrid collaborative platforms inviting both artists and scholars to jointly (mis)perform ‘in between’ conventional or at least recognizable modes of doing a conference, doing art, being an artist or an activist, being a scholar or a curator.”¹⁸ The result: a conference that started each day with traditional panels and then moved to shifts in the late afternoon and evening when participants attended lecture performances, parodic panels, postdramatic theater, historical reconstructions of Yugoslavian performance art, and even a participatory School of Sisyphus which misperformed disciplinary knowledge through absurdist lectures, exercises, and examinations. The headmistress and headmaster, Rachel Fensham and Joe Kelleher, describe the School of Sisyphus in Kafkaesque terms, highlighting both its disciplinary cages and its existential transience: “Over the few hours of its existence, in cells dedicated to the purpose, the School’s professors conduct their lessons on a variety of singular skills and topics, ranging across the discursive, the mechanical, the embodied, the disembodied, the ‘practical,’ the arcane and the seemingly remote. [...] Thankfully, the teaching cells adjoin an examination area where the knowledge and capabilities acquired in the lessons can be put to the test (oral, gestural and scriptural) and thus made real. [...] There is evidence that the School actually exists, has existed, may exist again.”¹⁹ Another panel, on the genocides of the Yugoslav Wars, took a simple yet darker form: in a black box theater, the audience sat on risers before an empty table and chairs placed before a black curtain illuminated by a singler search light. Behind the curtain, the panelists read their papers hidden from the audience.

Transmediating knowledge intimately and at scale—just as PSi introduced shifts, ICA is thinking-doing at scale with its performance lecture festival, shifting the lecture machine and field of aesthetics within the context of imaging possible worlds. Such shifts are not limited to aesthetics and performance conferences. In the US, while lecture performances have not yet caught on as they have in Europe, another transmedia genre has: Pecha Kucha, a presentation genre in which speakers present 20 slides, each playing for 20 seconds, that advance automatically for a total of six minutes and forty seconds. Sometimes called the poor man’s TED Talk, Pecha Kucha’s 20x20 format uses constraints to generate creativity, just as Cage used chance operations. Pecha Kucha is a Japanese term meaning “chit chat,” and organizations from the American Folklore Society to the Internet Engineering Task Force have held Pecha Kucha sessions at their meetings. Significantly, Pecha Kucha conference sessions have also been held by the

Association of American Colleges & Universities, whose Essential Learning Outcomes criteria inform the curricula of over 1,300 member colleges and universities.

In the transmedia knowledge workshops I give at Cornell, faculty have repeated embraced Pecha Kucha, along with another genre, information comics. Info comics use graphic narratives to present research to specific communities and the general public. Sousinus's *Unflattening* may be the first graphic dissertation but info comics have been used in public health for decades to combat issues such as the AIDS crisis, teenage pregnancy, and mental health. Brown University recently started a certificate program in Science Cartoons, and in another field, the University of Toronto Press has launched *Ethnographics*, a series of graphic novels produced by ethnographers. And info comics book series such as "For Beginners" and "Graphic Guides" offer hundreds of titles across dozens of fields, including aesthetics.

We may recoil at the very idea of *Introducing Aesthetics: A Graphics Guide*: that's the voice of the expert in us, the specialist, the master, the ego. We are trained to defend our fields and be wary, critical, and sometimes dismissive or hostile to amateurs and outsiders: "what do they know?" But let us recall Joseph Beuys' statement: "everyone is an artist." Could everyone be an aesthetician? What might a generalized aesthetics look like, one that shifts its focus to include not only art and media, art history and philosophy, but potentially any field? I note that the ICA's call for papers does not include the sciences and engineering, domains of knowledge where questions of beauty, form, perception, creativity, and design have emerged with considerable force. Design, in particular, now informs and structures everyday lives worldwide, both personal and social. While artists make art, designers make everything else, from iPhone apps to kitchen appliances to the undergraduate experience, for better and for worse. Yet design has historically been marginalized if not excluded from the humanities. Could we imagine general education requirements in critical design and transmedia aesthetics analogous to critical thinking and first-year writing courses (which in the US are the only required courses for virtually all college students, such is the power of the literate lecture machine)?

While teaching at the University of Wisconsin-Madison (another land grant university situated on formerly indigenous land), I founded and directed DesignLab, a design consultancy for transmedia knowledge. As with the Science Cartoons certificate at Brown, DesignLab scales up transmedia knowledge and makes it sustainable through infrastructure. DesignLab trains graduate students from six different departments to support over twenty transmedia genres, including Pecha Kuchas, science posters, video essays, and info comics. One great challenge has been developing design frames to help students and faculty design, create, and evaluate transmedia knowledge integrated into class projects, theses, and dissertations. While conceptual skills are taught by individual disciplines, and technical skills can be provided by academic technology staff, the aesthetic dimension poses a daunting challenge in large part because of specialization: the aesthetics of writing, visual culture, music, dance, and theater all remain separated not only from the sciences, social sciences, and professions; they are also separated from one another, divided into different fields overseen by different masters. For those committed to social change, to connecting specialized knowledge with common knowledge and merging art with life, siloed aesthetics makes for siloed activism and siloed worlds.

Generalized Aesthetics and Collective Thought-Action

The Art of Transformation project at the University of Maryland at Baltimore County (UMBC) seeks to connect actual and virtual worlds by combining art-based cultural organizing with IT-based collaborative data analytics. Cultural organizing uses storytelling and art-making as forms of community engagement that help social groups to organize and advocate for rights and resources within the larger community. For its part, collaborative data analytics involves information systems that enable sharing and cross-platform integration of information among different groups in order to enhance and potentially transform organizational decision-making from the bottom-up. Developed by UMBC's Imaging Research Lab, the Art of Transformation (AoT) project promises under- and misrepresented communities of Baltimore a way to better represent themselves while contributing to the development of IT systems that support decision- and policy-making. Composed of university researchers and representatives of community organizations, the collaborative team writes that with "AoT we are asking: What media—as a tool for collective thinking—has the capacity we need to create positive social change? What will it actually look like, and how will it work?"²⁰

Connecting collective thinking and social change scales up thought-action into *collective thought-action*, transmedia figurations that scale up thinking and making into shared experiences and collaborative platforms. Collective thought-action moves across disciplinary fields and social institutions and potentially transform them. In the case of the Art of Transformation, collective thought-action connects the collaborative activities of advanced research with those of community organizing. For researchers, this may involve problem-solving and trouble-making far from discipline. As the AoT group writes, "Until recently, the pinnacle of good thinking and smart action was to dissect a problem with thinly sliced disciplinary thinking, seek its narrowest and most precise definition, and look for a single cure. We wanted the best perspective, an efficient and effective solution, and one truth. But now, the story of how we should address complex challenges is changing. We are increasingly more comfortable seeking out diverse perspectives and entertaining all relevant data, information, ideas, and truths at the same time."²¹ What emerges here is not a fixed and coherent conceptual structure but an open, dynamic figure composed of diverse elements, a figure irreducible to any one medium or discipline but emerging through the interactions of different media, stakeholders, and values. In the field of human-centered design, researchers draw on Bruno Latour's "cascades of media" to describe how design projects move from abstract, low-resolution media such as notes and sketches to concrete, high-resolution media such as a manufactured object or public service. For us, figures of collective thought-action cascade through different forms of transmedia knowledge and social practice.²² Just as conference papers often begin with initial notes and outlines, pass through drafts and revisions, and then culminate in a polished paper or PowerPoint presentation, a community engagement project might begin with conversations, move into research and planning, and culminate in a specific event or public policy. At this scale, transmedia knowledge operates as participatory research and civil discourse.

Collective thought-action produced through cultural organizing and collaborative data analytics offers one path for dis/engaging the microperformative circuits of post-disciplinary society. The AoT group cites the values of organizational efficiency and technical effectiveness: these values drive the performance assessment regimes of global performativity, from community organizations to national governments to multinational corporations. By connecting highly qualitative cultural organizing to

highly quantitative data analytics, AoT can help contest knowledge-power relations by injecting values of cultural efficacy, of doing the right thing, into systems dominated by efficiency and effectiveness. The Art of Transformation thus heralds both generalized aesthetics (*everyone an aesthetician*) alongside generalized data analysis (*everyone a data analyst*). To succeed, it is not enough to create data and media. AoT writes that “the software and cultural organizing practices must attend to creating sacred, safe, and brave spaces, clarifying values and principles, and developing practices to support multiple perspectives and deliberation.”²³ A post-disciplinary, post-Platonic aesthetics can help create such sacred, safe, and brave spaces, possible worlds where collective-thought action unfolds across multiple fields, institutions, and lifeworlds. .

A generalized aesthetics entails displacing our mastery, dancing our PhDs, and entering what I call simply *the field*, the space outside the lecture machine which nonetheless haunts its inside. Generalized aesthetics entangles specialized and common knowledge so as to approach the world not as an object to be mastered but as an open field for making knowledge, building platforms, and co-designing worlds. The lecture performances before us, the scheduling of a festival within the conference, an entire International Congress of Aesthetics devoted to possible worlds—all of this itself constitutes a possible world, one composed over days of presentations and discussions, transmedia knowledge and collective thought-action. The challenge will be to connect this event and its collaborative platforms with other events and platforms in order to generate still other worlds that engage and shift the micro-, macro-, and meso-performances of contemporary life. Perhaps there is no off-switch to the lecture machine; nonetheless, lecture performances and generalized aesthetics enable us to imagine other configurations, other cosmographies.

AESTHETICS OF NECROPOLITICS

Abstract | I will be analysing various bio-necropolitical entanglements of neoliberal global capitalism in order to articulate a disconnection with the deeply ideologically constructed, necropolitically tainted ethics and aesthetics. I will offer a systematised reading of these entanglements.

I ruminate on the possibilities of resistance. However, before coming to such a conclusion I will be elaborating on the conditions, practice, consequences, and aftermaths of the aesthetics of necropolitics.

Intro

I wrote extensively from 2008 on about necropolitics, necropower and necrocapitalism. In 2018 I was asked by Dr. Natasha Lushetch to think about the aesthetics of necropolitics for an edited volume she was working on. This proposal triggered my research.¹

Faced with two hegemonic operations—on the one hand, with aesthetics, and on the other, with necropolitics—I will attempt to articulate their present conditions to discuss global neoliberal necrozones where misery, exclusion, and death are manufactured, administered, normalized and, ultimately, aestheticized. This task will necessitate a revisiting of biopolitics, necropolitics and of the many bio-necro entanglements that form part of racialized differentiations, which continue to devalue bodies of color – that are also bodies of knowledge– by relegating them to marginalized and ghettoized positions. As Ebony Rose suggests, race and racism are central to the bio-necro-political project that traps ‘black bodies in a temporal ontological prison of anti-blackness grammar and the structure of suffering’². Like the numerous catastrophes we have witnessed in the past decades – tsunamis, hurricanes, and typhoons– necropolitical events have a cataclysmic dimension. They injure and scar humanity tissue by repeatedly showing the carefully differentiated, racialized ways in which help and government support are selectively administered to different groups of people. Decisions regarding whom to help and how much, and, conversely, whom not to help, follow a distinctly necropolitical logic. Simply put, this logic is political in that it refers to management and administration; it is ‘necro’ in that the object of management are death zones and events, carried out by ‘sovereign entities’, entities that instituted themselves as ‘sovereign’ after 2001—the sovereign war-state, the sovereign-bank, sovereign debt, and the ubiquitous sovereign multinational corporation. Today, it is these ‘sovereign entities’ that decide ‘who may live and who must die’³.

My purpose in analyzing the various bio-necropolitical entanglements here is not to state the obvious but to articulate a *further disconnection* with the deeply ideologically constructed, necropolitically tainted ethics and aesthetics. To present a systematized reading of these entanglements, the following text is divided into four parts: biopolitics; racialization; necropolitics; and necroaesthetics. In the final section, I ruminate on the possibilities of resistance. However, before going any further, I would like to make explicit and visible the authors whose texts have allowed me to systematize my thoughts and come to certain conclusions regarding the conditions, practice, consequences, and aftermaths of the aesthetics of necropolitics. My analysis of racialization as a critical link between biopolitics and necropolitics, is indebted to Hortense J. Spillers’s ‘Mama’s Baby, Papa’s Maybe: An American Grammar Book.’⁴ My elaboration of the aesthetics of necropolitics is further anchored in two texts: Joshua Dunn’s 2017 ‘Cross Roads of the Living and the Dead: Necropolitics and Market Logic in Chris Abani’s *GraceLand*,’⁵ and Ebony Rose’s 2016 ‘Afro-Stasis: Understanding the Necro/Biopolitical Collaboration in the Creation of a Carceralization of Black Life/Death’.⁶ In the last section that focuses on strategies of resistance, I turn to *Katherine McKittrick’s 2014 Sylvia Wynter: On Being Human as Praxis*.⁷

Biopolitics

In ‘*Society Must Be Defended*’ *Lectures at the College de France, 1975-76*,⁸ Michel Foucault lays out his theory of biopolitics and biopower. Foucault states that:

‘one of the greatest transformations political right underwent in the nineteenth century was precisely that sovereignty’s old right—to take life or let live—was [not exactly] replaced, but came to be complemented by a new right which does not erase the old right but which does penetrate it, permeate it. This is the right, or rather precisely the opposite of right. It is the power to ‘make’ live and ‘let die’.⁹ This make live and let die is the definition of Foucault’s biopolitics

Racialization

Racialization is a complex regime of hyperviolent discrimination, dispossession, exploitation, and dehumanization. To understand its central place within the necropolitical order, a structured analysis that frames its material-institutional and discursive logics is necessary. In ‘Mama’s Baby, Papa’s Maybe: An American Grammar Book’¹⁰ Hortense J. Spillers entwines histories of enslavement with family structure to expose the formation of gender-and-race in the U.S. In so doing she clarifies the implications of vocabularies, naming, and, more generally, terminology. For Spillers, names used to describe black women are ‘overdetermined nominative properties’, as terminology and naming are inextricably entwined with ethics, aesthetics, and with religious values. Spillers writes:

‘Embedded in bizarre axiological ground, they [names] demonstrate a sort of telegraphic coding; they are markers so loaded with mythical prepossession that there is no easy way for the agents buried beneath them to come clean. In that regard, the names by which I am called in the public place render an example of signifying property plus’.¹¹ This is the most condensed way of describing racialization.

Necropolitics

In his 2003 ‘Necropolitics’,¹² Achille Mbembe builds upon Foucault’s idea of state racism but relocates the argument to spaces of colonial occupation and the apartheid state. Mbembe adds two key concepts to Foucault’s analysis: ‘the relation to enmity’, which concerns the threat from a (fictional) enemy, and ‘the state of exception’, in which the rule of law is suspended in response precisely to this perceived threat. In a straightforward yet sharp manner, Mbembe defines the necropolitical, as the ‘power and . . . capacity to dictate who may live and who must die’¹³. Such a politic of death management places Mbembe’s notion of necropower not only with the state’s prerogative to wage war, but also, and equally importantly, within the neoliberal market technologies whose purpose and goal is ‘*the generalized instrumentalization of human existence and the material destruction of human bodies and populations*’¹⁴. Mbembe argues: ‘in the economy of biopower, the function of racism is to regulate the distribution of death and to make possible the murderous functions of the state’¹⁵. But, as already mentioned in the section on biopolitics, the function of racism is also to naturalize abandonment via the tacit agreement to, for example, not talk about migrants—the labor force that played a crucial part in the revitalization of the post-Nazi, post-World War II Western Europe. For Mbembe, the colony is the ultimate space of exception; it ‘represents the site where sovereignty consists fundamentally in the exercise of a power outside the law (*ab legibus solutus*) and where ‘peace’ is more likely to take on the face of a ‘war without end’¹⁶. In such settings, necropolitics is a *structure*; the ‘sovereign right to kill is not subject to any rule [...] In the colonies, the

sovereign might kill at any time or in any manner. Colonial warfare is not subject to legal and institutional rules. It is not a legally codified activity'¹⁷. Mbembe develops the necropolitical theme by drawing parallels between early-modern colonial occupation and its late-modern counterparts, and, finally, contemporary warfare in which state actors are increasingly replaced by war machines. What is produced in all these cases, regardless of epoch or technology, is the necropolitical space. Mbembe writes:

'I have put forward the notion of necropolitics and necropower to account for the various ways in which, in our contemporary world, weapons are deployed in the interest of maximum destruction of persons and the creation of *death-worlds*, new and unique forms of social existence in which vast populations are subjected to conditions of life conferring upon them the status of *living dead*'¹⁸.

In 2016 Ebony Rose revisits this relation, and suggests that 'we rupture and deconstruct the theoretical preoccupations of both the material body and architectures to provide a close reading of the black body situated in a place and space as a negative one that's exclusively exposed to the highest form of vulnerability under the guise of Achille Mbembe's 'Necropolitics,' (insecurity/death) and life-optimization and population management under Michel Foucault's 'Biopolitics' (security/life)'¹⁹. Therefore this involves examining the political, material, economic and ideological conditions of the re/production of life but only and solely through processes of racialization in contemporary neo-liberal global capitalist societies. My thesis is that this process of racialization develops a racist basis for practices, structures, and discourses in the field of culture and art, as well as being reproduced in contemporary division of labor and in new forms of exploitation and expropriation.

Necroaesthetics

In neoliberal necrocapitalism, the entire society has been transformed into one *big investment sector* that provides new opportunities for the incessant capitalization of capital in order to make surplus value. Neoliberal necrocapitalism is continually reproduced not only economically and politically, but also institutionally, socially, and culturally. The effect of these destructive processes is disturbing and destabilizing. This, in turn, gives free rein to capital's most urgent task: the de/re/structuring of the working class using intensified precarisation, a gesture that mimics the shift from biopolitics to necropolitics. These de/re/structuring processes are underway in many different realms: in the imposed war on terrorism, in multiple forms of abandonment and immiseration, such as redundancy, rising unemployment, asset liquidation, and forced evictions, while simultaneously being coexistent with the various art, cultural, health, and economic institutions, such as banks and multinational corporations', which too, are disallowed to disobey the imperative of profit maximisation. The situation created here, as Joshua Dunn poignantly notes, is that:

'the [Western] biopolitical state must ultimately step in to install a secondary apparatus of security around the artificial milieu produced through the regulatory power of the market. This is the domain of labor laws, minimum wages, and environmental regulations. (...) It is the very dissolution of this state security apparatus, the unleashing of the market's necropolitical function, which marks the neoliberal turn, in which free-market fundamentalism and an attack on the 'welfare state' come together to form a new biopolitical landscape'.²⁰ Dunn goes on to propose another differentiation, which,

in my opinion, is axiomatic to the relation between aesthetics and necrocapitalism: the relation between the biopolitical aesthetics and the necropolitical social, which is a key characteristic of the ‘financialisation of the biopolitical technologies of power’. Dunn writes:

‘[the] phenomenon of debt-collection and austerity can be understood as financialization of the biopolitical technologies of power. When the aleatory elements of a population are regulated so that the objective is not the preservation and maintenance of life but rather the protection of a return on investment, and when the elements of risk to be secured against are not only those concerning human existence but also the risks which are inherent to financial speculation, and when the latter supersedes the former, the technologies of biopower are converted into a financialized necropower in which a population is sapped of its vitality in order to prioritize debt repayment’²¹.

Let me be even more precise. We have two forms of the esthetics.

One is the financialized biopolitical esthetics. Operating in the Occident, Japan, Australia, Saudi Arabia, etc. Empty, formal, hyper technological and branded. This financialised biopolitical aesthetics forms part of the procedures, mechanisms and structure that also put *into practice* necropolitics.

The other is the esthetics of necropolitics. The most palpable characteristic of the esthetics of necropolitics is uncontrollable violence. It is a ‘pure’ aesthetic intensity that profoundly reorders space and time. In the so-called necropolitical South, in the so-called ‘third worlds’, in the Middle East (Afghanistan, Iraqi, Syria), or at the Mexico—US border, there is nothing but necroaesthetics. The global world is organized around the ordering of bodies—bodies that are expendable; black bodies, transgender bodies, Roma bodies, white trash bodies, migrants; bodies that are collateral ‘damage’, as can be seen from the so-called ‘human rights’ practiced in the EU which left the refugees dispossessed, discriminated against, ghettoised and incarcerated (that is captivated).

Consequently, it is possible to state the following that if the body of the refugee is taken as the ultimate political figure of necrocapitalism, its emergent aesthetic parameters are:

- a) hyperviolence,
- b) the body as a corpse, and
- c) hyper immobilization.

But let’s go through a detailed reading of these elements.

First: Hyperviolence is the central trope here; it ‘behaves’ as the ‘spontaneous violence of the mob’²², however, lurking under its surface is the well-organized repressive violence of the necrocapitalist government. Prior to the numerous terrorist attacks that became Europe’s reality in the second of the twenty-first century, the 2011 London riot, in which the ‘mob’ looted shops, damaged, and burnt property, was characterized in the media as an outburst of greed, vandalism, and meaningless destruction, in other words, as spontaneous violence. But expunged from media reporting and the various opinion pieces was the riot’s protest against conspicuous consumerism reserved for the wealthy yet imposed as a necessity, as a measure of dignity on the working class who could afford it. The riots took place one year into the Conservative and Liberal

Democrat Coalition's government that had implemented many drastic cuts. This situation was exacerbated by the death of Mark Duggan, who was shot by the police several days before the Tottenham riot in an area historically steeped in racial turmoil, and the bloody battles between the police and the local black community that still resonate with the Broadwater Farm riot of 1985.²³

The same interweaving of necropolitics, biopolitics, economy, and aesthetics is present in the violent demolition of the third world slums or of unwanted parts of the Western mega cities, as was the case with the French town of Calais and its 'Calais jungle', a refugee and migrant encampment, in use from January 2015 to October 2016, that was dismantled and demolished.

Western financialization is, of course, inextricably entwined with the necropolitical regions of the global South via the extraction of goods and value, the ruination and dispossession of lands and lives, and the exploitation of the ultra-cheap labor force. Western biopolitical aesthetics is predicated on *factual* death and *factual* death-worlds. Although the Western imaginary may initially be shocked by the images of destruction and death, these images are soon enough 'normalized' through the routine sublimation of 'the biological racial caesura' as formulated by Foucault, further developed by Mbembe, and mentioned above. Amidst this state of affairs, the aesthetics deployed in films and television serials—in the Hollywood industry as such—serves as a link between the necrosapes of devastation and riot sites, and commodified disaster-scapes.

Second: and in reference to the body—the body as a corpse—every relation of violence invariably produces racialized immobilization, although, in the West, there is a proliferation of bodies *as* stories (not histories) suffering from a myriad sexual neuroses, while in the overtly necropolitical context of any given city, in the slums or the ghetto, bodies and entire communities are perceived as a disease, contagion, even when such ghettos are purposefully constructed, as is the case with many Western mega-cities.²⁴ This is why, when Alexander G. Weheliye in *Habeas Viscus: Racializing Assemblages, Biopolitics, and Black Feminist Theories of the Human* discusses the difference between the body and the flesh, he insists on '*habeas viscus*' (flesh), in contradistinction to '*habeas corpus*' (body). Through the category of '*habeas viscus*,' Weheliye asks for a recognition of the distinction between those who are seen as fully human bodies (the white, Western wo/men) and their (less-than-human) 'complements'.

The third and un-circumscribable problem is immobilization. There are vast—and from the point of view of the EU superfluous—populations of refugees, second-class citizens that are immobilised in enclaves and camps, either in the EU, or in the bordering countries, such as Turkey, or in states that have an agreement with the European Union, such as Libya, and that serve as a sanitary cordon to stop the refugees from entering the EU. Significant, in this respect, is Kirstine Nordentoft Mose and Vera Wriedt's analysis of the various seclusion and security measures and systems that resort to a vocabulary of violence encapsulated in abbreviations:

- FRONTEX (European border enforcement agency)
- EUROSUR (European Border Surveillance System)
- NCC (National Coordination Centre in EU countries)
- ENP (European Neighborhood Policy, consisting mainly of bilateral policy agreements)

between the EU and partner countries, outside of the EU).²⁵

Apart from being spatially, physically, and linguistically omnipresent, necroaesthetics is also (paradoxically) absent from sight since one of the goals of necropolitics—as management of death—is to destroy evidence. The necropolitical thus disappears into invisibility. The status of the image is key to this process as it protects the necropolitical project by emptying it of any content. Today, concomitant with the absence of real finance, if one is to go by the images that circulate in the media, and the non-ghettoised part of any Western city, one might conclude that there is also an absence of poverty, suffering, or strife. Naturally, images of poverty, suffering, and strife are present, but they are present as a mirage, as an immense complexity that is incomprehensible and far removed from those living under the reign of necrocapitalism. The empty form of the image is co-existent with the empty balloon of economics, and with financialisation that functions as appearance and abstraction. Such a situation of pseudo-invisibility is necessary to *naturalize* contemporary necro-culture.

The necropolitical regime is ultimately about death, visible or invisible. However, it operates in such a way as to link aesthetics to the devastation of landscapes and bodies to produce the ‘beauty’ of death. Consequently, we have two processes that seem opposed but are, in fact, coextensive, even mutually structuring. The empty form of the image is directly related to the empty ‘subliminal’ form of death, which is a mise-en-scène of capturing death’s ‘beauty’. As Dunn suggests:

‘the necropolitical regime does not make death any less unruly. [...] Instead, death exceeds logic, and transforms in ways which cannot be mastered, contained, or made uniform [...]. The constant exposure to death produces its own distinct logics and subjectivities which resist order and control’.²⁶

It hardly comes as a surprise that inventing new forms of death is one of the central aspects of Hollywood’s blockbuster film productions. These death forms are empty, but meticulously, indeed, forensically, elaborated. A good example is *Blade Runner 2049* (2017) that has no content whatsoever but is an abundant collection of empty forms of death. Here, death is not hidden; it acquires an almost sovereign status through its empty form.

The question that remains is: What might be the consequences of the above-discussed changes that are rapidly taking place? The 1970s saw the imposition of what I term the biopolitical amnesia, not as a racializing process of forgetting, but as a deficit of memory. After the fall of the Berlin Wall, in the 1990s, the suppression of counter-history continues as aphasia. In ‘Colonial Aphasia: Race and Disabled Histories in France’, Ann Laura Stoler presents the case of France that cannot put together the French Republic and the colonial Empire. Stoler’s notion of cultural aphasia points towards a lack of language with which to address the colonial past. This is, of course, yet another form of contemporary colonial violence, used, as Stoler argues, to displace ‘amnesia’ that three key features: ‘an occlusion of knowledge, a difficulty generating a vocabulary that associates appropriate words and concepts with appropriate things, and a difficulty comprehending the enduring relevancy of what has already been spoken’²⁷. In historical terms, processes and procedures for racializing aesthetic assemblages imposed on counter-histories turn from the biopolitical amnesia of the 1970s to the aphasic abandonment of the 1990s. From 2001 onwards, this process transforms into

the sovereign necropolitical seizure, or confiscation, and complete privatization of communal counter-histories. The result of this process is both an aesthetic of erasure, and an aesthetic of seizure, as Mbembe suggests in his definition of necropolitics as a 'concentration of bodies that allows to the sovereign to deploy weapons onto them and to construct death worlds'.²⁸ Seizure is therefore co-substantive with necropolitical racializing assemblages; it is, literally, a confiscation of history that paves the way for the erasure of counter-cultural histories.

Coda: Resisting the Necropolitical

Resisting the necropolitical aestheticization of death and abandonment is a challenge. Suggestions for a possible praxis are drawn from a rereading of Katherine McKittrick's *Sylvia Wynter: On Being Human as Praxis*. In reference to Aimé Césaire, Wynter suggests that what needs doing is 'a rewriting of our present now globally institutionalized order of knowledge'²⁹. The second suggestion comes from the title of the book itself, the first part of which consists of a long, meticulously knitted interview. In a question to Wynter, McKittrick emphasizes the racial line of division that runs through neoliberal necrocapitalism, suggesting that

'the enactment of our present biocentric descriptive statement (and thus its eugenic and dysgenic sociogenic codes of symbolic life and death) is linked to the law-like normalization of the corporeal features of Western Europeans in their now ethno-class bourgeois aesthetic configuration. This normalization is most strikingly evident in the consumer marketing of skin bleaching creams and cosmetic surgery, as well as by the proposed mainline genetic engineering of designer babies'.³⁰

McKittrick also clarifies that the process of 'beautification' in bourgeois- consumer terms, refers 'most markedly, [to] blackness', which is furthest removed from the standard image of the '*homo oeconomicus* (the virtuous breadwinner, the stable job holder, the taxpayer, the savvy investor, the master of natural scarcity)'.³¹ For Wynter, however, such a category reveals the *symbolic death* of the denizens of the 'planet of slums' and of the 'reality of climate change/ instability, to which, inter alia, it gives rise'³². In reference to Frantz Fanon, Wynter suggests that what we need at this moment in time is

'to initiate the exploration of the new reconceptualized form of knowledge that would be called for by Fanon's redefinition of being human as that of skins (phylogeny/ ontogeny) and masks (sociogeny). Therefore *bios* and *mythoi*. And notice! One major implication here: *humanness* is no longer a *noun*. *Being human is a praxis*'.³³

If we understand this suggestion without *naïveté*, we can begin to think a radical transformation of relations of necropower for a different future. For example, as T. L. Cowan, suggests by '*staging living*' in the 'apparently uninhabited/uninhabitable spaces', in borderline necro-zones, or 'spaces marked for death'³⁴. Such an aesthetic depends on a 'decolonial imaginary', characterized by a lingering, dwelling and reflecting on the 'living that happens in the borderland necro-zones, living that happens in spite of being marked for an *unlivable life*'³⁵.

She is Professor at the Academy of Fine Arts in Vienna, Institute of Fine Arts, Post Conceptual Art Practices and researcher at the Institute of Philosophy at ZRC SAZU (Scientific and Research Center of the Slovenian Academy of Science and Art) in Ljubljana. She also works as a freelance media theorist, art critic and curator. Recent publications include: M. Gržinić, ed. *Border Thinking*, Academy of Fine Arts Vienna, Sternberg Press, 2018; M. Gržinić and Šefik Tatlić, *Necropolitics, Racialization, and Global Capitalism. Historicization of Biopolitics and Forensics of Politics, Art, and Life*, US: Lexington books, 2014. In collaboration with Aina Šmid, since 1982, Gržinić has produced more than 40 video art projects, a short film, numerous video and media installations, several websites and an interactive CD-ROM (ZKM, Karlsruhe, Germany). <http://grzinic-smid.si/>

ROUND TABLE 01 | POSSIBLE WORLDS OF CONTEMPORARY AESTHETICS

ARTIVISM AND TRANSITION

Abstract | VIVA ARTE VIVA was a slogan of 57th International Art Exhibition – Venice Biennale of 2017, with Christine Macel as curator. Paolo Baratta, president of the Biennale stated that »... Biennale is inspired by humanism and is a humanism which celebrates mankind's ability to avoid, through art, domination by the powers that govern world affairs...» But the concept of "living art" was criticized as being out-of-date: it may be acceptable ten years ago. However, ten years ago Biennale was curated by Robert Storr who stated that "art is now, as it has always been, the means by which humans are made aware of the whole of their being." In 2007, critical response was much similar: Storr went against the current of artistic political activism and introduced art without cause, to offer the opportunity to toothless mainstream art. If we go another twenty years back, this kind of conflicting issue turned differently. During 1980s, Venice was promotional site for postmodernism which has been criticized, even rejected, by leftist criticism. Documenta 1987 with Manfred Schneckenburger as director attacked postmodernism starting from post-mortem divinisation of Joseph Beuys, and with clearly politically engaged art in front. Kassel exhibition was violently criticised as unnecessary and toothless archaism. Adorno's introductory statement from *Aesthetic Theory* that "Nothing concerning art is self-evident anymore...not even its right to exist," describes a situation of contemporary artworld which has to produce one cause of its existence after another because art's right to exist is not self-evident anymore. Contemporary art, according to Terry Smith, has three currents: re-modernism, transnational art, and purely contemporary art. But why these three currents, or any other division of actual art-streams visions and missions, constantly clash between themselves? The point of my presentation will be that it is not because they oppose each other as "bourgeois" and "proletarian", or "popular – mainstream" and "avant-garde" art, but because each of the sides has intrinsic conceptual problems with its causes which grow from paradoxes of contemporaneity understood as second modernity in transition to post-capitalism. To research these problems, I will introduce contemporary "prophetic history" as transition to post-capitalism, and characterise its paradoxes, including those which produce uncertainty of activism.

Index terms | *artivism, aesthetic humanism, contemporary artworld, art's causes, transition to post-capitalism, Venice Biennales, Documenta 1987*

Modernism invested art with ambivalent mission: it represents a quintessential moment which is to confirm legitimacy of hope. Art may even be the machine which is capable of bringing about civil society and cosmopolitan whole. At the same time, it is bereft of any concept, while its creators seem to be more like obsessed natural beings than rational builders of human future. Postmodernism took art's mission away, but invested it with another set of ambivalent feelings when it claimed that art has finally liberated itself from philosophical disenfranchisement, and got a voice of its own. For what good? Well, art cannot make anything happen. After the end of history this may work. But we are still in history, just left without faith in its progressive movement. The question which, according to postmodernism, should not appear again, is again here: »What can art do? « To at least try to answer, one has to start again from where postmodern negation of modernism started: at the announcement that humanism is over. Contemporary art and contemporary philosophy do not dare to claim that old humanism with human being as master of the universe has to be reinstalled (it is still making history anyway), but move by move they show a tendency to re-invent some kind of tender, weak and cautious neo-humanism as an opposition to humanist monotheism. The moment this tendency gets an image or a formulation, however, it is attacked both from positions of less ambitious artistic mission and from positions of avant-garde belief in the revolutionary power of art. This conflict is going on in the mainstream as well as in marginal movements: the certainty that art can and therefore has to do something about contemporary state of human affairs goes hand in hand with universal uncertainty about how it should approach its re-invented mission.

Here, I will first give an example of the case of criticism which accompanied the Venice Biennale, undoubtedly mainstream event if there is any. Then, I will say a few words about the modern and the postmodern, the avant-garde and the contemporary in relation to artistic activism, engagement or tendency – call it as you like, these relations condition moralization as the growing ideological power in, about and over contemporary art. Finally, I will name some »prophetic histories« (Kant) which all, albeit coming from quite different political and intellectual perspectives, confirm the general tendency of historical movement towards transition to post-capitalism.

1. Canal Grande of humanism

The slogan of the 57th Venice Biennale of 2017 was "VIVA ARTE VIVA". Christine Macel, the curator, stated that "art may not have changed the world, but it remains the field where it can be reinvented."¹ What exhibition aspired to reinvent was humanism, or, "what makes us human"². What makes us human? It is art, stupid! President of the Biennale Paolo Baratta explained that "Biennale is inspired by humanism and is a humanism which celebrates mankind's ability to avoid, through art, domination by the powers that govern world affair."³ To be inspired by humanism in *Anthropocene*, after philosophical obituary announced its death in 1960s, comes as a surprise. To speak about humanism as a program might mean that *Anthropos* and its creation – our planet as *Anthropos'* universal work of art – should be humanized and reinvented. If that is the case, humanism means dissatisfaction with *Anthropocene* and its creator. But first things first, and what came first was criticism of the concept of the Venice Biennale.

Those who praised the exhibition brought forward Macel's ability to invite so many unknown artists, and underlined this Biennale's distancing from overly political Biennale of 2015 by Okwui Enwesor. They liked apolitical Biennale. Those who criticized the concept were all for politics. Louise Buck found out in *The Telegraph* that "Macel's show has come under fire for making scant acknowledgement of the current global climate."⁴ In *New York Times* Holland Cotter developed it further: "Timing isn't everything, but it is a lot. If the bland, soft power 2017 Venice Biennale, called VIVA

ARTE VIVA had arrived two, or four, or six years ago, it might have passed muster, even made sense. But coming post-Brexit and post-Trump, it feels almost perversely out of sync with the political moment and nowhere near strong enough to define a moment on its own.”⁵ One way or another, most of them used juxtaposition of Biennale with Damien Hirst’s exhibition in Palazzo Grassi and Dogana to exemplify where apolitical art finally arrives, namely, in *artertainment*.

That timing is not a problem proves a case of Biennale not two, four or six years ago but ten. Then, under the title “Think with the Senses – Feel with the Mind: Art in the Present Tense” Robert Storr, the first curator of Biennale coming from the U.S.A., presented art “on the conviction that art is now, as it has always been, the means by which humans are made aware of the whole of their being”.⁶ At least for these ten (or now already twelve) years and five curators Biennale is trying to reintroduce aesthetic humanism. In all of its versions, aesthetic humanism needs autonomy of art as a safeguard for the aesthetic against powers of reality. Robert Storr’s Biennale was a festival of “back to art” and “back to teleology of the aesthetic”. Biennale of 2007 was violently attacked as apolitical understanding of art under circumstances which demanded that art embraces a direct political cause. Modernism without final cause brought about art with as many causes as possible, but without teleological perspective. Or, as Arthur Danto explained art after the end of art: “The only respect in which ‘You can do everything’ is true is that of a philosophy of art history of the kind I have tried to develop here. But it is consistent with that that there should be all sorts of causes, political of otherwise, which enter into the explanation of art.”⁷

2. When Whole is no more

Aesthetic modernism depended on sovereign existence of the artwork which contains its independence from beholder⁸, and on the utopian atmosphere of the artworld. Both components broke down. Sovereign existence can survive the death of utopia no more than utopia can survive the death of aesthetic sovereignty. What we got after the break are two inconsistent halves: art without cause trying to stand in shoes of art for art’s sake and art with a cause standing in shoes of the aesthetic education of humanity. The result is no Cinderella for a prince. Boris Groys defends art and its right to be activist and politicized. Comparing contemporary activism with avant-garde art, he still has to stress two red lines of separation. First, “contemporary art activism does not rush to abandon art but, rather, tries to make art itself useful.”⁹ Second, to be useful artist has as anybody else to produce media effect, and as anybody else falls in a media trap: he/she has to produce “the sincerity effect”, and to achieve it, he/she needs design and self-design which is as suspicious as Derridaean *pharmakon*: “while design makes an object look better, it likewise raises the suspicion that this object would look especially ugly and repellent were its designed surface to be removed.”¹⁰ If we use Michael Fried’s words, activism falls under the principle of theatricality, being dependent upon beholder/media public, which is consequently erasing artwork’s sovereignty. If artwork is not sovereign, it cannot make anything happen.

Adorno’s first sentence of *The Aesthetic Theory* could explain the awkward situation of contemporary art: “It is self-evident that nothing concerning art is self-evident anymore, not its inner life, not its relation to the Whole /Verhältnis zum Ganzen, n. L.K./, not even its right to exist.”¹¹ If nothing, not even the Whole, is self-evident, then evidence has to come from the outside of art where perhaps at least some fragment of the Whole needs art to support it in its intention to arrive from actuality to reality. Without the Whole there is no final cause, and without final cause embedded in the aesthetic, art is free from finality and free to choose among multiple causes of which the aesthetic cause is just one of, and does not belong to art’s essence any more than

climate change, revolt against populist politicians, campaign against sexual harassment, decolonial criticism of Eurocentric concepts, Debordian accusation of spectacular consumerism, or any other cause. The question than should be: why contemporary artworld needs perverted division between artentertainment and art with a cause? Perhaps the answer was there in Bürger already: "Art in bourgeois society lives off the tension between the institutional framework (releasing art from the demand that it fulfil a social function) and the possible political content (*Gehalt*) of individual works. This tension, however, is not stable but subject to a historical dynamics that tends towards its abolition, as we will see."¹² The abolition of tension went in unexpected direction. For the last sixty years, the process of class dynamics went in the direction opposite to Marx's and Engels' prophetic history present in the Communist Manifesto. It has been predicted that the middle class of petit-bourgeoisie will dissolve and disappear, mostly into proletariat and partly into the capitalist class. This tendency came to an end with post-industrial society and late capitalism. With the traditional working class and bourgeoisie diminishing, petit-bourgeoisie is the mighty class which, among other things, produce global standards of taste. There is no *a priori* to form the aesthetic appreciation. Petit-bourgeois, traditional or contemporary, always demanded a reason and a cause for the existence of art., and *ars gratia artis* is not enough – there has to be something handy and useful to give a reason for the existence of art.

3. The Whole of Moralization

Moralization is not something around art and about it; it is art itself trying to be useful. It does not present moral troubles of contemporaneity in aesthetic form but in a form of moral cause. There is no confrontation between reality and actuality, they are both conflated into what already is, just creamed with unhappy conscience. This situation corresponds well with contemporary "prophetic histories" which announce that we are in transition from capitalism to post-capitalism: conservative Peter Drucker¹³, Marxist Immanuel Wallerstein¹⁴ and liberal Jeremy Rifkin¹⁵ agree about that. What is agreed as well is that this transition does not open the horizon of ultimate, final cause. To use Aristotle's terms from *Physics*, our prophecy does not involve *tuche* (chance which starts with free will's choice) but *automaton* (pure luck). Human history is becoming natural history: we act in it but cannot know what consequences will come out of it. Contemporary sublime gets from terror to moralization without enthusiasm because there is no safe place from where one could just contemplate terror. Singularity is a derivative of moralization, a derivative which, according to Fredric Jameson, is "not a new beginning, but...a new present of time. It produces no future out of itself, only another and different present."¹⁶ Feeling that this is quite unsatisfactory he concludes that a sense of history can be awakened only "by a Utopian vision lying beyond the horizon of our current globalized system, which appears too complex for representation in thought." One could understand this as a call for aesthetic education of humanity. Utopian (neo)humanism is repeatedly, from Schneckeburger to Macel, offered as remedy for post-modern hangover. But this petit-bourgeois utopia of moralization of the Whole (*das Ganze*) can produce just "a miserable fir of the blues".¹⁷ It sounds better in German: "in einen Katzenjammer verlaufen."¹⁸ On the other side of eternal hangover is another contemporary art's choice: global entertainment with moralization as a proof that we can be engaged and have a good time at the same time. Both (neo)humanist art for art's sake and (post)humanist art engaged for the benefit of cosmopolitan humanity end in contemporary art as a derivative of aesthetic education of humanity, a derivative which does not construct time understood as progressive history. There is no tragedy or comedy, but also no farce. In contemporary activism, time is understood as

a melodrama, a close relative of the mourning drama (*Trauerspiel*). May be that Walter Benjamin can help with his conclusion that mourning drama “represent a decline, even though it may be a decline of a fruitful and preparatory kind”.¹⁹ To prepare what? Under conditions of moralization and singularity, no conflict can be serious, no laughter can mark a hole in the Whole, no *Doppelsatz* can be pronounced. The anxiety of and about contemporary art does not concern its lost contact with reality but its inability to give voice to actuality, and not so because art is in crisis or at its end but because actuality is in crisis and perhaps at its end.

Without will to power and against Nietzschean and Lyotard’s assumption that the subject is nothing but an eschatological subject; and taking into account that human being as an individual is still suppressed exactly in its existence “as the being of hope and fear, love and pain”²⁰; the restoration of humanism without utopian perspective is possible if we take into account long humanist tradition of those without power who continue to fight against subjugation to one or the other will to power.

THE SEARCH OF AESTHETICS

Abstract | In my contribution I aim to investigate the main topic of the Round Table 1 “Possible worlds of contemporary aesthetics” in a broader sense, analysing various ways, spaces, objects and situations of encountering aesthetics and aesthetic experience in the contemporary world. Therefore, as “worlds” of contemporary aesthetics I would like to survey some areas and aspects of aesthetic research, more precisely where to search aesthetics and where aesthetics has something to search. This will include among others the examination of novel forms and locations of exhibiting through the emergence of alternative spaces, the (possible) inclusion of new audiences, the rising power of art market and commerce and its dubious influence on the creation of novel standards and canons, and, on a rather meta-level, also the current role and challenges that aesthetics itself has to face in order to defend its position and role within humanities and other disciplines.

Index terms | *aesthetics, aesthetic experience, contemporary art infrastructure, art market, art fairs, museums*

Imagine an average visitor during her holiday spending some time in a luxurious shopping mall where high-end works of art are also shown.¹ If she still has some time to kill between shopping, dining and movies, she may also enjoy for example Juan Miró's works, just to quote an actual example, as it happened in the Polygone Riviera mall in France.² Besides watching the works, she may perhaps also wonder how come that these works are now available to be observed so easily and for free, as so far she had normally seen famous artists' works in museums with expensive entrance fees. Let's also imagine this was not her last day in the vacation, but has two more, on which she is planning to go to see the recently opened experimental art space, the Muzeum Susch of the Polish collector Grazyna Kulczyk in the relatively close-by Swiss Alps.³ Our imaginary tourist is curious of it also because it is not in a traditional art hub, not in downtown New York and not even in Zurich, but an hour from Basel. Therefore, while driving home she may be wondering why the rich collector decided to show the art pieces in the remote and isolated location, and how the experience of travelling there and back adds to her experiencing the exhibited piece.

In the above imaginary situation we have seen different set of questions that involve various forms of arts and their experiencing, consumption and appreciation. My title can thus be understood in both senses, hence "the search of aesthetics" can mean where to search aesthetics and where aesthetics as a discipline has something to search? Or, we could also say: where to search something aesthetic, and where aesthetics has something to (re)search? There are many areas and aspects where aesthetics as a discipline needs to apply its methods, occasionally also renew its approaches, in certain cases justify its legitimacy and – let's not be afraid of claiming it – also defend its authority. From the myriad of issues here I would only mention one broader area a bit more in detail, also in order to come back to the multiple aesthetic experiences of our imaginary tourist from above: what and how are the new forms, novel modes and innovative ways of encountering aesthetic content, how do they affect art appreciation and what can aesthetics as a discipline search in this?

Long gone are the days of "classical" forms of encountering artworks – if, there were at all, i.e. if we can nominate or consider one particular period's or era's ways, venues, traditions and norms of encountering pieces of art as standard. In fact, art appreciation is continuously changing throughout history. Many art lovers still think and are perhaps nostalgic of the time when museums were simply places of exhibitions and galleries were to sell the works. However, this description is not only idealised in many ways, but also heavily simplified, as the situation had never been so clear and straightforward.

For example practically right from the beginning, museums – both as actual institutions as well as the very concept of the museum itself – can be interpreted as somehow dubious, and their "pure scientific" image can be brought into question. This is especially the case when considering the aspects and instances of rivalry between the newly established institutes of the nation-states of the 18th-19th centuries, also with regard to their impulsive ways of collecting objects from Antiquity, partly motivated by the consideration that the (new) nation hosting and displaying the origins of human culture is not only the legitimate inheritor of the actual objects, but also the culmination of human culture itself.⁴

Looking at the other side, another well-known fact and art historical commonplace is that the commercial art galleries were and are not necessarily only in the service of financial gain, but often helped to promote avantgarde art, well before progressive

contemporary pieces could make their way in large national institutes. In this way commercial galleries often contributed to the “institutionalising” of the progressive pieces, hence, in a curious change of positions sometimes bold commercial galleries may have substituted the function of museums in canonising works.

The situation was thus never really straightforward, however in today’s world it gets even more complex, due to several factors and challenges. One is definitely the radical increase of contemporary – and, in fact, also of classical – artworks’ prices. The higher and higher auction records definitely grab the attention of even those who are not really interested and/or following neither the classical nor the contemporary art worlds’ events, it is enough to think of the hype around the 450-million-USD *Salvator Mundi* by Leonardo in 2017. These spectacular prices, breaking records, breaking news and sometimes even breaking of artworks – just remember Banksy’s half-shred piece... – definitely confuse the non-specialised members of the larger public, and then this confusion contributes, what’s more: nurtures, the ambiguity in the relationship between aesthetic and market value. Adding to this, undeniably certain works have an established although often not clearly understandable fascination – a classical example is the *Mona Lisa* that is currently practically invisible due to the large masses of tourists in front of it, while in the neighbouring rooms there are at least five other very fine Leonardo paintings that remain almost unnoticed compared to the lure of the *Mona Lisa*. Or, as George Goldner, former chairman of the drawings and prints department at the Metropolitan Museum of Art in New York recalled, “A week after the sale of the *Salvator Mundi*, I happened to be at the National Gallery and I wandered into the room with *Ginevra de’ Benci*, which is a much better painting in much better condition than the *Salvator Mundi*. There was not a single other person there.”⁵

Another addition to the complex landscape of contemporary art world, institutions and market is the growing – and, naturally, again greatly ambiguous – role of private collectors. Their connection and (inter)relationship with art institutions are not without tensions and mutual jealousies, mainly regarding financial possibilities and/or state sponsorship. In any case however we can see amazing private collections, and many of them can easily dwarf the possessions of numerous national or state museums. This may at first seem as a pure gain for visitors who thus have more places to choose from, however, again not as simple as that. At least two questions arise that could perhaps have even more attention in aesthetic discourse. One is if these private collections are only for the pure sake of art and were born because of the owner’s passion of art, or, if not, how much of strive for increasing status symbol, legitimacy of wealth or even pretentiousness is behind the collection-building? It is thus not surprising if for many these question – *mutatis mutandis* – are reminders of the debates over the scientific purity of 18th-19th century museums. The other question worth examining from an aesthetic viewpoint and especially with its consequences for aesthetics is how much the art commerce in general and private collections in particular modify the canon of art, especially that of contemporary art that is understandably and necessarily still more flexible than the more established classical canon, even if this latter is never entirely fixed either, see for example the recent re-discovery and re-evaluation of Baroque woman painters.

Adding some further concerns to the above considerations on art, its market and the aesthetic consequences of their relationship, especially with regard to the ever more blurry division of functions between the actors and factors of the art infrastructure, we can also mention some potential issues with the large-scale art events, including

the mushrooming art fairs. During these three-four-day commercial events the participating galleries show their artists, as in most of the fairs it is not directly the artists, but the galleries representing them that exhibit. The fairs, especially the leading ones are very expensive, to the booth rental one also needs to add the shipping costs, customs, insurance, accommodation, travel, per diem etc. For many art collectors the fairs are the primary acquisition events, and they enjoy the opportunity of having a great overview of the contemporary offer plus they also appreciate the publicness of the fair and the transparency of the event. Based on these one might easily think at first that the galleries participate solely for the hope of selling the works to the collectors visiting the fair. However, again we cannot simplify it as much, because, honestly speaking, the well-visited fairs may also serve as a great general publicity for an artist. Despite the few days of opening, the biggest fairs are seen by several dozens of thousands visitors, and obviously not all of them are full-time collectors, but also curators, art critics, advisers, journalists, patrons, politicians, specialised bloggers, influencers or general art-lover intellectuals. Hence it is not surprising that many artists are often happier of participating in a leading art fair, than even in the National Gallery of a smaller country, since the difference in visitor number can be ten-fold. Naturally this also gives a large responsibility to the organisers and selection committees of the fairs too, as the large number of visitors and the diffuse media coverage often disseminates the aesthetic content seen at the fair much more than in the case of a gallery or museum show. Hence again a game changer shaking up the traditional division of functions, especially if we add the issue of entrance fees – although most of the fairs have quite pricy entrance ticket, some fair organisers decide not to charge visitors or at least heavily subsidise the ticket for students, thus strengthening their mass-educative function in the palette of cultural events.

It would however be too easy to explain the popularity of these event with the glittery hype around some forms and manifestations of contemporary art. It is perhaps explainable or partially explainable with the interest of the visitors in another, new places and forms of experience. And naturally this could again be analysed with regard to its aesthetic consequences – can we perhaps simply say that, at least in some ways, visitors are right in desiring novel forms of experiencing art? This may also make us remember Robert Ginsberg’s affirmation: “Experience, not theory, is the creative source for responding, reflecting, and exploring. Philosophers who work on aesthetic matters need to keep their should full of experience – and not only of aesthetic objects.”⁶ We can agree with Ginsberg, and if we enlarge the circle to include not only “philosophers who work on aesthetic matters” but the broader audience in general, then we can say that the wider public’s seeking for novel forms of experience can be considered as natural, and the new approaches of art consumption should not automatically be judged as unprofessional or lowbrow and popular in negative sense of the world. What’s more, the proper and scholarly aesthetic examination of the lure of encountering artworks in new contexts and of the fascination of alternative modes of art consumption could also help finding bold answers for the current challenges that classical museums have to face, since undeniably traditional museums still have not only high relevance but also growing responsibility. Tristram Hunt, director of the Victoria and Albert Museum in London summarised some of these tasks: “In an era of deepening nationalism and parochialism, where accounts of ethnic purity and manifest destiny abound, the ability of museums to tell complicated stories of hybridity and cosmopolitanism is vital. (...) Museums need to be brave in confronting the big issues. (...) Museums need to provide a civic arena for contentious debate. Through our exhibitions and public programme, we can frame and generate discussion with the kind of respectful and inclusive approach

that is so often absent from contemporary political discourse. As politics gets more heated, we shouldn't fear that it is too difficult to entertain all shades of opinion under our roofs. We can show leadership in curating the ethics of disagreement."⁷ Hunt's opinion is also extremely useful for finding novel ways of function and functioning of the museum. The investigation of these tasks may also remind us of Boris Groys' recommendation, who argues for the museum to be converted from a place where we merely contemplate objects to one where things happen (e.g. lectures, presentations, discussions, screenings etc.), hence an institute that keeps an intellectually fertile flow of events and activities.⁸ These more event-like and experiential curatorial projects can ideally attract new audience in the old institutes, without losing the visitors with more classical tastes of and for appreciation.

All this may also convince us that there should be even more cooperation between the various institutions instead of rivalry and mutual jealousy. The bold, experimental and experiential projects, crossover collaboration between actors and factors of the wider art infrastructure can be rewarding for all, and aesthetics as a discipline can only benefit when following and analysing these tendencies and the numerous potential answers offered for these issues.

Coming back to our original questions and also to our imaginary average art-inclined tourist from the beginning of this paper, we shall not necessarily worry if she sees Miró's works in the mall for the first time, or if she ruminates not only on the artworks but also over her own experiencing of these very artworks in the isolated private contemporary art collection in the Alps, because all this may be natural additions in the offers of showing and encountering artworks today. As of our work and duty however, when professionals and practitioners of aesthetics investigate these novel challenges, and manage to contribute significantly with finding adequate and inspiring solutions for current issues in culture, they are not only securing the future necessity for and legitimacy of aesthetics as a discipline but also open up possible new worlds of and for aesthetics, i.e. where to search aesthetics and where also aesthetics has something new to search.

ROUND TABLE 02 | *FEMINISM, GENDER AND RACE POLITICS IN GLOBAL WORLD*

THE DYNAMICS OF THIRD-WAVE FEMINISM, NEOLIBERALISM AND BEYOND

Abstract | In this article I will deal with the paradigm shift of feminism within the temporal framework beginning in the 1990s and onward. I will discuss the notion of third-wave feminism as a polymorphic phenomenon. This is also connected with the idea of intersectional theory, which refers to the inclusiveness and diversity of multiple identities, a term also used by feminist activists. My intention is to point to the differences between third-wave feminism, post-feminism and the fourth wave of feminism. I will also trace the relation of global neoliberalism with the processes of the professionalization and academization of feminism, as well as the function of popular culture in the context of the rise of popular feminism. Neoliberalism will be considered in the light of neoconservatism which encourages anti-feminist sentiments in which the phrase “death of feminism” has reappeared, transforming feminist politics into a feminism of choice. On the other side, I will also emphasize that gender equality has become institutionalized, presuming thus the institutionalization of feminism, which as a consequence had, according to some feminist critics, its normalization within the neoliberal economic paradigm resulting in the depolitization of feminism. It is possible to understand the concept of depolitization as a post-feminist social condition which constructs the new ideal of femininity as a hybrid: aggressive and powerful and at the same time traditionally beautiful and emotional. At the end I will discuss Anthropocene feminism as an important contemporary tendency.

Index terms | *anthropocene, neoliberalism, popular feminism, post-feminism, third wave, feminism*

The narrative which tells the story of feminism usually is constructed as a model of rises and falls, whose analogy are waves. This model is useful but can also be criticized because it speaks of continuity that is realized within the discontinuity of specific feminist *moments* much as the peak of a wave becomes visible and then disappears from sight. But despite the criticism that I generally agree with, I will use the model in a very schematic way in order to describe the main aims of feminism and to point to their shifting in time. According to Pilcher and Whelehan, the political and activist activities of feminists from the first wave (approximately from the mid- or late 19th century to the 1920s) to the second wave (between the 1960s and 1980s) were “transformed from a discourse of rights to that of liberation” (Pilcher and Whelehan, 2004: 171). *First-wave feminism* is considered to be an emancipatory project that appropriated liberal ideology of equality and liberty for all citizens. It is connected to women’s fight for legal and constitutional rights. *Second-wave feminism* is associated with the Women’s Liberation Movement, and it broadened liberal ideologies through radical and socialist ideologies in order to question structures of capitalism and patriarchy. It also stressed that the personal and private spheres are important sites of inequality. Both these waves participated in the grand narrative based in the Enlightenment ideology of universality and rationality, with its consequence of modernist ideology of progress. Since the mid-1980s, the political, economic and media environment has been changing. This was the time of a *backlash against feminism*, which is in media studies labeled as *post-feminism*, and later the synonymous term *popular feminism* was introduced (Gill and Scharff, 2011: 3). The notion of *popular feminism* appeared in 1990, marking the fact that feminist values had started circulating widely in all segments of popular culture (McRobbie, 2008: 13). McRobbie defines post-feminism as “the co-existence of neo-conservative values in relation to gender, sexuality and family life [...] with processes of liberalization in regard to choice and diversity in domestic, sexual and kinship relations” (McRobbie, 2008: 12). This means that post-feminism is defined as a mixture of feminist and anti-feminist ideologies. Post-feminism appeared within the context of the shaping of antidemocratic tendencies as well as the “political empowerment of fundamentalist Christianity and regnant paradigms of commercialized family values” (Negra 2009: 6). The intention of post-feminism as a cultural form is to ‘empower’ women and encourage them to become actors in the neoliberal game of *consumer feminism* (Lazar, 2011: 44) in which women act in accordance to the “right” to be beautiful and sexy (Đurić, 2015: 276). The feminist political ideology of rights and choices, whose function was to enable women to act as equals to men, is now transformed into *consumer feminism* which employs a consumerist discourse of emancipation (Lazar, 2011: 38). Advertising agencies also started ‘rebranding’ feminism within the context of anti-feminist backlash. The effect of this renders feminism as sexy and stylish, i.e. appealing to different women, especially young ones (Evans 2015: 63). In this new narrative, these terms are delivered to female consumerists, erasing the fact that in previous feminist discourses they were firmly tied to revealing structural gender inequalities. But, it also should be stressed that renewed interest in feminist activism is partly a response to the neoliberalism and neo-conservatism that activated the backlash against women. So, it could be said that the appearance of *third wave feminism* (1990-2010) develops within the context of neoliberal politics “as an oppressive set of political, economic, and social policy regimes that promote a sense of atomism and over-reliance on market forces” (Evans, 2015: 1). This was a response to the anti-feminist backlash of the 1980s, at a time of increasing privatizations which especially negatively affected women during the professionalization of feminist organizations and the proliferation of women’s and gender studies departments (Evans 2015: 60). These political and

economic transformations are also discursively produced, and especially operative in this production is the incorporation of feminist discourses and ideas into neoliberal institutions. McRobbie finds this dangerous because this appropriation produces feminist discourse as safe and non-threatening, and feminism itself as something which belongs to the past and is not needed anymore (McRobbie 2008: 18). At the same time, feminism in its third wave has been characterized by its turn toward *intersectionality*.

Third wave feminism places the notion of intersectionality at the center of its discourses. The complex historical moment of third-wave feminism caused it, as a concept, to be multiple and contested and full of contradictions. It is in opposition to contemporary new global neoliberal patriarchy and strong anti-feminist sentiments. Within this context feminists struggle among themselves advocating different, contradictory and competing definitions of what feminism is. Crenshaw explains that *intersectionality* refers to taking into serious consideration “the ways in which multiple forms of oppression overlap” (Evans, 2015: 49), most notably, racism, sexism and classism. This meant that for third wave feminists the idea of identity politics and pointing to the intra-group differences became crucial. The *intersectionality turn* in feminism occurs within the context in which individualism as a value became the most important aspect of neoliberalism as well as individual responsibility, producing and equating ‘citizen’ and/as ‘consumer.’ The context of this transformation is deeply connected with the global triumph of neoliberalism after the fall of the Berlin Wall and its individualistic values, with all its contradictions. It is a time of the mainstreaming of feminist values implemented in official state institutions and popular consciousness. Many feminist theoreticians maintain that mainstreaming imposed a challenge to feminism. According to Budgeon, “gender equality initiatives have become part of governance structures organized through the normalization and institutionalization of a neoliberal economic paradigm, which has ultimately contributed to de-democratization of policy-making” (Budgeon, 2011: 13).

144

Neoliberalism is characterized by state power which is used, according to Saad-Filho and Johnston, in order “to impose financial market imperatives, in a domestic process that is replicated internationally by globalization” (quoted in Evans, 2015: 41). The acting of neoliberalism has its consequences in increasing “inequality, deterioration of public services and a drop in the quality of life for all those most vulnerable members of society” (Evans, 2015: 41). Within this agenda, conservative values are presented as democratic and as ‘common sense.’ By insisting on individualism and the importance of the market within the discourses and ideologies of neoliberalism, questions of gender and group identity are minimalized.

Neoliberalism and intersectionality have in common the emphasis on individualism, which is why they both challenge feminist activism. The difference is, however, that intersectionalist feminism points to the complex interaction of our heterogeneous identities in our everyday conduct, while neoliberal ideologies tightly connect individualism to consumerism. The situation with feminism and its spread is complex because some of the right wing and conservative women consider themselves to be feminists advocating market-based values. This means that neoliberalism has co-opted the feminist intersectional insistence on diversity and difference, which actually coincides with neoliberal ideologies of the gender-free concepts of individualism and consumerism, eroding any sense of collective identity and loyalty.

Tracing the idea of the sovereign individual, Budgeon points out that this idea has

implied modern masculinity, and for a long period of time femininity was not included in this concept. And feminist critique was focused on the denial to grant the women the status of an ‘individual.’ The *post-feminist social condition*, according to Budgeon, which is articulated within the wider neoliberal *culture of the self*, imposes the idea that women look at themselves “as liberated individuals, regardless of their immediate social context. Successful femininity now incorporated character ideals and norms previously associated with masculinity” (Budgeon 2011: 51). The complexity and paradoxes of this resulted from the fact that this state of affairs is the result of several factors that interact: the ideas of second-wave feminism, post-feminism, traditional gendered discourses, and neoliberal self-monitoring and calculating the ideal of individual agency. The important conclusion that derives from the feminist *politics of subjectivity* is the insight, articulated by de Lauretis, “that subjects are situated within the concrete, socio-historical conditions, which structure subjectivity, and that gender is the product of ‘various social technologies [...] institutionalized discourses, epistemologies, and critical practices, as well as practices of daily life’” (Budgeon, 2011: 52). In neoliberal times, *new femininities* come into being, because traditional gender boundaries between masculinity and femininities disappear. But this has happened in a particular way: although traditional gender roles are still strong and unquestionable, some gender norms that were for a long period of time bound to masculinity, now are broadened and applied to femininity as well. Women are in the position now to be an autonomous and demanding subject acting towards self-realization, and at the same time are obliged to fulfill all the traditional expectations regarding ‘proper’ femininity.

The economic crisis (around 2007) imposed the urgent need to oppose neoliberal values, persuading women, especially young ones, to become feminist. In order to do this, many activists started advocating a less radical version of feminism. Online space became important in this effort to reclaim the label ‘feminist’ from anti-feminist media (Evans 2015: 67). There is no agreement when this fourth-wave feminism started: some point to the US’s post-9/11 (2001) responses to global inequality, while in Great Britain it is considered to appear post-2010 (Evans, 2015: 5-6).

The new generation of feminist activists who considered themselves to be fourth wavers belong to the “*selfie*” *generation* and are “tech-savvy and gender-literate” (Kalogeropoulos Householder, 2015: 21). The fourth wave of feminism is characterized by the usage of new technologies within the digital culture and it overlaps with the third wave, using the possibilities of the internet for activism, and which now embraces a global space, using Twitter, Blogs, Facebook, etc. For example, Laura Bates established the Everyday Sexism archive on Twitter and documents everyday misogyny (Chamberlain, 2017: 119). The phenomenon of *celebrity feminism* points to the controversial embrace of feminism by female celebrities in a neoliberal and postfeminist form within the current fourth-wave feminism (Rivers, 2017: 61)

I will now very briefly turn to the notion of *Anthropocene feminism*. Feminist studies, along with other “studies” that appeared from the 1970s onward (gender, queer, race, postcolonial, cultural, media, etc.) questioned Eurocentric universal humanism, establishing anti-humanist approaches. But, the *post-anthropocentric* or *posthuman turn*, according to Rosi Braidotti, “blur categorical distinctions (human/nonhuman, nature/culture, male/female, oedipal/non-oedipal, European/non-European) in attempting to redefine a program of feminist social justice” (Braidotti, 2017: 28). Reconfiguring its knowledge epistemology, feminist theory imagines a new version of subjectivity, rejecting the androcentric and anthropocentric vision. In our rapidly

changing world in advanced capitalism, the shift from biopower to zoe power occurred. The new technologies have made our world of neoliberal capitalism a “postgender system capable of accommodating a high degree of androgyny and significant blurring the categorical divide between sexes” (Braidotti, 2017: 35). All this poses a challenge to the well-established categories and imposes fundamental redefinitions of all the well-established categories of thought that we have used to understand the world in its totality.

IDENTITY POLITICS, DEFAMILIARIZATION, AND EMPATHY

Abstract | Contemporary identity politics, politics based on affiliation with a particular societal group in contradistinction from one or more others, typically becomes galvanized in response to a sense that those so affiliated have been marginalized or harmed. Art and aesthetic gestures utilized in contexts of identity politics serve a number of roles, among them drawing attention to the marginalization or harm to specific groups, consolidating those who share a particular political identity, to and promoting empathy for members of such groups' members.

Art and aesthetic gestures are useful for such roles, all of which are in some sense consciousness-raising, because they are aimed at altering perception.

Groups that advocate on behalf of those who share their political identity, because so often aimed at rectifying arrangements that are perceived as unjust, tend to energized in reaction to circumstances, and there is a danger of their becoming overly simplistic in their own perceptions, dividing the world into friends and enemies. (I will use the "Me Too" movement in the United States as an example of a well-intended campaign that nevertheless can result in excesses, potentially damaging its effectiveness in achieving its own ends.) This is ironic because simplistic binaries are often at work in what causes marginalization or harm to such groups in the first place.

Aesthetics can be utilized to inflame binary oppositions. It can also complicate perspectives in ways that might lead to a lessening of reactive and reactionary political responses and greater rapport across the boundaries separating one group from another. While aesthetic distance has itself been implicated in furthering alienation between groups, it has the potential to assist through processes of defamiliarization (or "making strange"). Aesthetic disorientation can help to enable greater sensitivity toward members of groups one does not consider one's "own," though it needs to be supplemented by appeals to empathy. The story-telling approach of the Zhuangzi will be considered as an illustration of a work that arguably does both.

Index terms | *Identity politics, „#MeToo,“ defamiliarization, empathy, consciousness-raising, Zhuangzi*

I'll begin by stating I take it for granted that art is more effective when it communicates in an understated way, and less effective when it presents a message blatantly and that art that is to serve socially transformative goals, particularly in connection with identity politics, will be more effective if it provokes reflection and suggests its aims obliquely.

An example of a work that does so is Carrie Mae Weems's, *Then what?: photographs and folklore (Open)*. The work involves photos of African Americans in domestic situations and informal gatherings, some with captions that might be considered to be the words of the subjects or words being spoken to them. For example, one image shows a young man at a kitchen table smoking, apparently having a drink, and gazing at a tape recorder. The accompanying text says, "Jim, if you choose to accept, the mission is to land on your own two feet." The intimate contexts of the photographs encourage the observer to feel welcomed into private spaces and to feel empathetic connection with those depicted. The title "Then what?" provokes consideration of outlooks toward the future. Observers are invited to imaginatively envision the future from the points of view of those presented in the photos. For example, what does it mean for Jim to be faced with the decision of whether to accept the mission of landing on his own two feet? "Your mission if you choose to accept it" is a cliché from the television series *Mission Impossible*. The caption suggests that the young man's prospects are dismal, virtually a impossible mission. Given that, what would accepting the mission involve? How does he see his future? As viewers of Weems's photographs, we can linger in the viewpoints we associate with the subjects. If this elicits empathetic connections with members groups beyond those with whom we typically identify, it can further the aims of those working for justice on behalf of African Americans, yet without explicit reference to identity politics.

Many artistic strategies have been used to good effect in supporting contemporary movements based on identity politics. One such strategy is to draw attention to the marginalization or harm to specific groups. Many of Kehinde Wiley's works of portraiture utilize this strategy. Taking African Americans as his subjects in largely heroic formats, Wiley reminds the viewer of the rarity with which African Americans have been presented in traditional art, particularly in starring roles.

A second artistic approach that can serve aims associated with identity politics is to consolidate a sense of connection among those who share a particular political identity. Cases in point are Michael Nicholl Yahgulanaas's "Haida mangas," graphic novels that incorporate stories and images from the Haida tradition in the format of Japanese manga. The primary audience for these works are those with who share Yahgulanaas's Haida background. Yet these mangas can also be enjoyed by those outside this primary audience, functioning in a third way that I think can be beneficial to social justice movements.

This is the category of works that promoting empathy for members of a particular group among those outside it. Cauleen Smith's video *Elsewhere* is another work that falls into both the second and third categories. It shows an African American woman stepping into a flourishing garden, where the sweater she is wearing is unraveled by a lover (who is not seen), stitch by tantalizing stitch. The video is shot in such a way as to encourage the viewer to take on the perspective of the video's protagonist, and thereby encouraging empathy for her, perhaps altering standing perceptions on the part of some non-African American members of the audience.

Another strategy that might serve the aims of movements that champion those who share a particular political identity to amass cases in point. Typically, groups that advocate on behalf of those who share their political identity do so because they are convinced that those sharing the identity in question have suffered under arrangements they take to be unjust, arrangements they seek to help rectify. One way of raising social consciousness is to emphasize the routine character of the injustice being perpetrated. Amassing instances of the same sort in such cases is a useful and necessary strategy. A case in which this strategy was utilized effectively is the Names Quilt Project, in which memorial quilt patches to honor individuals who died of AIDS were contributed by people who knew them and incorporated into a growing quilt. The quilt soon become too large to be exhibited in ordinary viewing spaces. It was exhibited on the National Mall in Washington D.C. in 1987 with a powerful visual impact.

The strategy employed in the Names Quilt Project is a version of practices that utilize what I term “cumulative aesthetics.”¹ By “cumulative aesthetics,” I mean the aesthetic practice of amassing many instances of a particular image, token, or gesture to achieve the impression of a powerful tendency, commitment, or emotion. This practice has many manifestations. The cumulative effect of numerous milagros or other tokens placed at a shrine, for example, amplifies the gesture of each of them, a gesture of prayer. The cumulative effect of the terra cotta attendants in Qin Shi Huangdi’s tomb is to convey the tremendous power of the emperor. The cumulative effect of Felix Gonzalez-Torres’ works of piles of wrapped candies that are carried away by various individuals who come to see them gives a powerful impression of the (on-going) dissipation of the life-force of his lover, whose death these works commemorate. Tracy Ermin’s notorious work *Everyone I have Ever Slept with 1963-1995* (included in Saatchi’s Sensation exhibition at the Royal Academy of London) might also be cited here. The work consisted of a blue tent, with the names of everyone she’s slept with in appliqué, including relatives she shared a bed with as a child, her twin brother, and two fetuses she aborted. The tent might be seen as drawing attention to the vulnerable body, which itself is a site impacted by cumulative experiences of sharing a bed with another person.

150

Cumulative aesthetics here because I think it is a common political strategy that can be utilized in connection with efforts toward social justice toward particular groups. Demonstrations in general, in fact, are practices that utilize cumulative aesthetics, and they are often highly effective in creating the impression of an overwhelming force that will only end when political transformation occurs. Cumulative aesthetics is also a way of considering certain phenomena that enlist social media to political ends.

A recent case in which cumulative gestures have been used in the service of identity politics is the case of the #MeToo movement in the United States. The movement developed in the wake of public accusations of sexual misconduct on the part of powerful Hollywood film director Harvey Weinstein in October 2017. Alyssa Milano, an actress, encouraged other victims of sexual harassment and assault to tweet about it in order to publicize the extent of the problem, following up on the use of “Me Too” as a rallying cry in 2016 by social activist Tarana Burke, who sought to solidarity among victims, particularly those in underprivileged groups. The response on Twitter was tremendous. By the end of the day after Milano posted the initiating tweet, “MeToo” had been tweeted over half a million times. The response and the various efforts to address sexual harassment and assault that followed, many of which were well publicized, are described as the #MeToo movement.

Does the #MeToo movement utilize aesthetic strategies? I would say that it does. In effect, it is a technologically enabled demonstration. It is effectively an instance of performance art that makes its impact through cumulative aesthetics. Using social media, the movement is able to swell its ranks to dramatically large numbers because those joining the effort need not appear simultaneously in a specific location. The #MeToo movement also makes use of aesthetics in asking prospective participants to consider whether they can apprehend any of their previous experiences in terms of a particular plot type. Those who sincerely tweet “Me too” are each identifying some prior experience as fitting the profile of the sexual harassment narrative, and in this they are engaging in the aesthetic activity of emplotment.

Emplotment, defined by Paul Ricoeur as “the operation that draws a configuration out of a simple succession,” situates events into a narrative sequence that suggests an explanation.² Emplotment commonly makes use of standard story types, though it allows for innovation. The #MeToo movement has helped to enshrine a relatively new story type as among the stock scenarios to which society can appeal in emplotting personal experiences. The “#MeToo” movement has capitalized on what social media are good at – enabling large numbers of people to communicate quickly and to coordinate gestures at an impressive scale. The “#MeToo” movement also illustrates, however, certain limitations that afflict certain strategies built on cumulative aesthetic gestures. The very catch phrase “Me Too” is serviceable only to the extent that cases are identified as similar. It is not good at enabling identification of particularities that differentiate cases.

Some have charged that the #MeToo movement has led to the conflation of a whole continuum of objectionable behaviors, ranging from not being sufficiently considerate or fumbled flirtation to outright violence. This is an argument made in the open letter to *Le Monde* signed by Catherine Deneuve and about one hundred other prominent French women. It argues, “In fact, #MeToo has led to a campaign, in the press and on social media, of public accusations and indictments against individuals who, without being given a chance to respond or defend themselves, are put in the exact same category as sex offenders.”³ On the other side of the Atlantic, Katie Roiphe has raised similar concerns.

The danger into which these critics believe the #MeToo movement has fallen is a potential problem whenever a story type becomes a cultural paradigm. Paradigms can be unreflectively applied, and when they are dissimilar cases are all too often taken to be instances of “the same old story.” It is too easy to attribute a stock plot scenario to a given case, without recognition of important variations in circumstances and the complexities of interpersonal communication.

Another problem when a huge number of cases are considered “the same old story” is those involved in these cases tend to be relegated to the status of stock characters. This becomes especially pernicious when these stock characters are then considered in melodramatic categories, with some being entirely sympathetic and some being entirely unsympathetic. This situation is particularly ironic when employed by those who want to empower groups that have been marginalized, such as women in the workplace, for simplistic binaries of this sort often contributed to such marginalization in the first place.

If the aim of social movements is to bring justice to those who have been marginalized, identifying the scope of the problem is an important step, but justice depends on

attending to situations with full attention to specifics and the full personhood of those involved. But for this, cumulative aesthetics is not enough. Other aesthetic strategies can supplement those employing cumulative techniques, and I have mentioned some of these earlier. I will conclude by adding another to the inventory, one exemplified in the writings of the ancient Daoist philosopher Zhuangzi, who lived in the fourth century B.C.E. Zhuangzi draws attention to the Dao, the natural world in its dynamic unfolding, filled with “things” (including human beings) that are temporary configurations of interconnected energies. Although considered a Daoist, Zhuangzi shuns such categorizations as distorting, and the limitations of categories is a consistent theme in the vignettes and stories he presents. His aim is to encourage heightened perception that is not filtered through preconceived ideas. In the service of this effort, he often positions characters who might be socially dismissed or marginalized in roles that resist stereotypes. This is the strategy to which I wish to draw attention.

For example, Zhuangzi describes a king visiting his kitchen and learning life lessons from his butcher and cook. Zhuangzi tells a somewhat similar story of a marquis asking a woodworker how he is able to make such bell stands so amazing that they seem to be the work of spirits. Zhuangzi repeatedly writes of characters who would be socially marginalized having insights that those in high positions typically lack. Even Confucius is depicted seeking insight from a hunchback catching cicadas with a sticky pole and considering making a disabled man his teacher. This latter case appears all the more impressive when we recall that in ancient China, amputations were common punishments for serious crimes. In Zhuangzi’s account, Confucius would seek instruction from a felon!

Zhuangzi’s characters include members of groups frequently treated with condescension, whom he portrays as sages with notable spiritual and practical accomplishments. His goal is not political. Instead he is concerned to undermine adherence to categories, particularly binary ones. Nevertheless, where categorizations of people are concerned, there is some overlap between his aims and those of many concerned with contemporary identity politics. Still, Zhuangzi is not focused on inclusiveness or justice toward members of a particular identity group. Instead, he is drawing attention to irrelevance of social status to discernment of reality and awareness of what living well involves.

Zhuangzi’s apolitical motives notwithstanding, his writings serve to remind us that we all share a common reality and can best learn how to flourish by attending to each other’s perspectives. My suggestion here is that those concerned with aesthetics within identity politics should recognize the value not only of strategies straightforwardly aimed at changing mainstream perceptions of members of socially underprivileged groups, but also strategies that assume parity among persons in exploring the ways we can attune our energies and productively share our experience. Such strategies may not be the most obvious approaches to use. Nevertheless, they can support the goals of movements seeking justice for those within particular identity blocks, for they encourage mutual empathy and help to break down the socially divisive binaries that cause so much harm and make identity politics so necessary.

WHY LANGUAGE OF SEXUAL DIFFERENCE IS STILL IMPORTANT?

Abstract | Relying on philosophical heritage left by Luce Irigaray and trying to connect her thought to the contemporary state of feminist theory and practice, with an emphasis on problems that arise in dealing with totalizing thinking, I will try to explain what language of sexual difference means and why it is important to open, establish and maintain female identity in a language that is not neutral and which does not reduce. By representing thesis about the necessity of creation and use of language that would ultimately respond to the supremacy of philosophical logos and its universalization I will try to consider the way by which it can/must be invited a different text, a new addressing that would indicate the neutralization of sexual difference in history, transformed the question of the other into question of sexed other, and through that gest erased philosophical-ethical injustice, breaking with tradition and traded logocentric language and thinking. Finally, I am considering the necessity of identifying female acting and female speech, their inextricability, especially in context of problems that feminist theory and practice encounter every day, and I am pointing to the traps that patriarchy sets to woman by its assimilating addressing and treatment.

Index terms | *language, sexual difference, feminine, other, parler-femme*

To talk about

A feeling that is expressed for the first time.

A feeling that is announced to other, in silence.

L. Irigaray

During its millennial history, full of questions and answers, on which civilizations were based, disciplines were produced; history that shaped the paths of truth and knowledge, developed knowledge techniques; history in which ethical cosmos was established, and that was place of idea's warfare and mind's polemics, philosophy was not celebrated by discourse of woman, philosophy was not celebrated woman, philosophy is even rarely gave a word to woman. All we have as legacy is some kind of threatening emptiness, a place that does not exist, deprivation, separation from the place, or becoming a place of other. Or a place that (woman) must be without taking it. Space that must be available without (her) disposal of space. And always under the magnifying glass. In the mirrors that blind her, making her an adjective of a sentence whose subject she can never be. And, finally, in front of the mirror in which she sparks like *subjectum*, looking for her cause, but never thought as such. And in front of the question can she see if she is not visible. And can she speak. And how. That is why this paper attempts to consider the possibility of discovering and establishing so-called language of sexual difference, which is emerged from poststructuralist philosophical thought, that is, an attempt to illuminate the answer to the question of whether a woman truly and essentially belongs to philosophical logos that is generally accepted.

“Manifest” of sexual difference language

*The fact that man and woman do not speak to one another -
from the first garden? - is also expressed through suffocation of voice in discourse,
forgetting voice in language.*

*Always an unstable modulation of truth,
which marks the index of sexuality in discourse.*

The truth could not exist or persist without a voice.

L. Irigaray

According to Luce Irigaray, in the history of Western patriarchal culture and philosophy, women were the mirror for men, starting with the *speculum*, the mirror used in gynecological office, thought as instrument of power over women, and supporting resource, an object for his (male) use. This dark, bodily, mystical, invisible, mute “other”, Irigaray makes visible without hesitation, beyond expressions prescribed by androcentric way of thinking. In other words, a woman *still does not exist*, because commonly accepted discourse is capable of presenting her only as negative reflection of man, a *space* with unwanted attributes, losses, defects, worthlessness, etc. Female is dependent opposite to male, woman is non-male, copy of male original, pathologized and castrated man, etc. As long as she is observed by eyes of man, she remains in the domain of unfulfilled possibilities. The exit from this cruel *predestination* consists in passing through the mirror, while woman is at the same time “on both sides of mirror”,

so thus she cannot be left out of consideration. But passing through and being on both sides is not enough to make it easier or to remove the burden of historical and eternal existence in front of, inside and under the mirror. Also, it is not enough just to extract from anonymity women who gave their ideas, stories and experiences to this world, and accost or address them. Also, I doubt that it is sufficient, although it is necessary, to directly discuss with our contemporary philosophers, and to be in “ambush,” criticizing the existing and unquestionable authority of philosophical discourse. Nor can we satisfy ourselves with simplified definitions of feminine/female as a mere opposite to the male.

A woman’s/feminine identity can and must be established in a language, language that is not neutral, a language that does not introduce and does not reduce. A language that in questionable and unmasking way sets itself against the supremacy of philosophical *logos*, its generality and its persistence on reducing all otherness and all others to economy of the same (Irigaray, *This sex which is not one*, 74); a language that, despite of its deconstructive “virtues” that escape from giving distinctions and making decisions, is decisively determined, because it is aware of its own responsibilities and obligations, because it has perceived the perversity of universalization that pretends to swallow any possibility of out-totalizing-thinking. Hence the necessity of re-opening the figures of philosophical discourse, such as idea, substance, subject, transcendental subjectivity, absolute knowledge, in order to extract from them what has to be returned to feminine (Irigaray, *This sex which is not one*, 74). It was precisely the otherness of feminine that was the victim of the most systematic philosophical endeavor of reducing to sameness, that is, the reduction of sexual difference to the “neutral” economy of the same was the worst and most complete crime of Western philosophy, as Luce Irigaray said. That is why the birth, the emergence of a new ethics, ethics of sexual difference, had to happen, by resistance to power by which Western philosophical project wanted to eradicate sexual difference in systems that are the self-represents of male subject. It can be implemented by the invention of different text, new speech, in order to show the neutralizing of sexual difference in history, to transform the question of the other into question of sexed other, and with this gesture, as Irigaray suggests, we could delete and wash away all philosophical-ethical injustice, breaking up with tradition and inherited language and thinking.

Female discourse, speaking as a woman, *parler-femme*, means to criticize, not referring to criticism as an abstract judgment, but rather to life, practice, answer to what is its live relationship with the subject under examination and with the context that surrounds it. Criticism is the place of encounter of two consciousness, two experiences, two passions, two intentions: its consequence is new experience, transmitted by thought, text and image: for example, feminist critique of the universally accepted philosophical language unites interest both for reexamination and affirmation of philosophy itself, as well as for the constant reconstruction and deconstruction of the experience of consciousness. The task that it fulfills in this way is always about freedom, but also about its recognition and realization in the world. At the same time, criticism is the readiness to accept the responsibility of unlimited search for a new language and addressing, while accepting the risk that the language and the world remain unfinished, but open and free for new opportunities and newly created polemic ideas. Bearing in mind the etymology of the word criticism (κριτική τέχνη, κρίσις) and its original meaning associated with resolute changes (crises) in the course of disease, I also consider the criticism as a way of reacting to some phenomenon-change, a way of contributing to

better understanding of this change, expressing decisiveness of subject and observer to confront themselves, and to overcome the supposedly self-explanatory data, surface and first layer. Criticism is benevolent innovation, a kind of new living, but also a new thinking - as an act of the author and a negation of negativity. I prefer to see the critic as a responsibly implemented revolution (or a revolutionary change) rather than a reform or synthesis of events.

In order to speak as woman, *parler-femme*, in order to speak by language of sexual difference, the language cannot be possessed, internalized - this effort requires the transformation of all ethics and thinking, a reinterpretation of everything we know, including relations subject-speech, subject- world, subject-other, subject-cosmos, and also reinterpretation of the subject itself, which is always written in masculine gender, even when it is universal (human), despite the fact that human is not neutral but sexed. If female sexed discourse is missing, the woman is homeless, she is excluded from living in a word that does not conceive her except as material for building, nor does it address to her; and so atopic, she fails to reach *for-herself*. If she speaks by well-known, fortified speech, which deprives her of places from which she cannot come out, the question is whether she speaks like she, whether she comes out of her inhabitable sameness, whether she is paralyzed in her ethical acting, does articulated language discharge her from her mediating roles... Therefore, feminine discourse, language of sexual difference is a kind of exit from existing exchange systems, escape, overwhelming the known linguistic ways and the production of *logos*, adherence to a word that is always in danger and which constantly invents itself.

To address by discourse of sexual difference means shaking the language by re-discovering which not only undermines the existing syntax, but also prevents every form of possession, appropriation, leaves without foundation pre-given and presumed, unchangeable universal word, makes place for different created speech, for the suppressed or censored language of another sex that requires to see daylight. *Parler-femme*, although it is an encouraging gesture of female self-identification, self-confirmation and self-vision necessarily means *dialogos*, call to the other, not break with him and sweep from him, as often (and unfounded) we can hear from critics of feminist theory. It is a political act, that is, a demand for deconstruction of naturalistic idea of woman's nature as passive, of woman as hidden, modest, withdrawn, closed in mystery, of woman as secret that evades comprehension and *whose mode of existence is shame*¹. It is a reaction against philosophies that prevent this dialogue and close the field of true female presence. And the problematic and thematising of female and presence of real, empirical woman are inseparable: symbolic and discursive dimension are inseparable from material, empirical and historical ones. There must be no symmetry between sexes in order to speak and address. On the contrary, sexual difference is guaranty for ending of the alienation, condemnation, the appearance and predestination, for ending of reflecting in the male, the stopping of instrumentalization and exploitation of female for male's intentionality in becoming-subject. Through the word of sexual difference, whose status is related to status of our culture and its language, we respond to abnegation of women's/feminine language, we release ourselves from the qualification of unknown, unrepresentable and unrecognized

1 „The mode of feminine existence is to hide, and this fact of hiding is exactly the shame. It's a runaway from light.“ Emanuel Levinas, *Vrijeme i Drugo*, prev. Spasoje Ćuzulan (Podgorica: Oktoih 1997), 69.

feminine, and we suspend its limitation to gesture and body. So it's understandable why for Luce Irigaray sexual difference is the question of our time that would bring us salvation if we think of it and that is the horizon of world more fertile than any we know.

Keep on talking

*If the whole language already resides in silence of subject and world,
like their ontological tissue,
then I can turn the world towards itself,
and to return to myself after I move to the other side.*

L. Irigaray

The language of sexual difference, as a re-creation, as philosophical critique that, always questioning itself and always seeking to meet the overtness, seeks to approach the truth and reach it, always responsibly carrying the "burden" of critical consideration of truth itself. Truth of language, philosophy, identity, sexuality, world. This creative potential always strives to responsibility, action/acting, discovery/discovering, to responding to object, and by this process we could "get" overtness (of truth). Because everything that is hidden disappears when we go towards vision. And when we get to it. That is why language of sexual difference in the viewing-in, viewing-towards, viewing-with. Watching. Insight. Access. And this gesture is not only critical, but political and ethical. Political because, as stated, it starts *dialogos*, opposes to monologic and monopoly discourse, opposes to ruling binary oppositions, opposes the overall reduction of women, invents new opportunities for women to leave the private domain, always bearing in mind one of essential feminist principles – *personal is political* – and disputes with ordinary repressive references and meanings. Ethical because it accepted the responsibility to extricate a half of humanity from injustice, to abolish homogeneity/monopoly² in order to ultimately prevent unilateral interpretations that deepen female inferiority and ignore or annihilate entire women's experience.³ All this with aim to abolish all (especially philosophical, scientific, linguistic) favoring the male norm, that is, the tendency of masculinity to be perceived and experienced as more progressive. The language of sexual difference provides the possibility for inherited knowledge to be reconstructed in new meaningful perspectives.

A world without language is hard to imagine. Without language, the world cannot be perceived, understood. And one whole language existed and resided in silence. The

2 Feminist postmodernism completely rejects all dualisms that provide the basis of traditional epistemology, because all these dualisms rest on basic dichotomy between male and female, and which as a result have the privilege of 'male' side in each pair of these basic dualisms. It emphasizes that the problem with traditional epistemology consists not only in its dualisms and dichotomous thinking, but also in the fact that these dualisms and those dichotomies, and the whole way of thinking, are gender-based. Feminist postmodernism points out that there is no single (male) true knowledge, or one general truth, but a lot of knowledge and many truths, "none of which is privileged on a gender basis".

3 Here we can make parallel with an important argument of feminist epistemology, which underlines the neglect of women's experiences, perspectives, knowledge and contributions in numerous social and scientific fields. Eva Bahovec says that "We can grasp feminism, as an epistemological project in several of its meanings. It signifies an interruption with misogyny, it contains constant tension and ambivalence in relation to the category of women, also denotes a conflict with the category of self-understanding and immutability." Eva Bahovec, „Feminizam kao epistemologijski projekt“, *Zarez*, IV/80 (2002) : 23.

language of women, mediators of incarnation and world of men, women who, for centuries, were stumbled in attempts to produce their triad: *language-body-world*. A world that has never existed, but which is nevertheless present, as suppressed, concealed and potential. The language of sexual difference as the language of women in all their differences, by which they are excluded from ruling over them, by which they are drawn from constipation, language that goes towards, setting up with acquisition, appropriation and withdrawal. The language of women who must be able to know that, through the effect of difference, is possible to reconsider and criticize reduction to sameness, and whose ethics of resistance is directed to better condition, not only here and now and for us, but overtime and evermore. The language of women who are not fighting as men but as women.

POSTHUMANITY AND TECHNO-HUMANS: STIRRING UP THE COORDINATES

Abstract | The text „Posthumanity and techno-humans: stirring up the coordinates“ deals with a couple of issues: first, the issue of an understanding of cultural, social and technological human existence in contemporary times; second, with the notion of posthumanity and its relation to the humanist and anthropocentric coordinates of time and space, and third, with the possibilities of thinking about different temporalities, different maps and different approaches towards questions of subjectivity, body, histories and geographies within the field of various theoretical discourses. The aim of the text is not to point to a kind of a break within the discourses of theory or cultural realities of living, but to think through, against and next to already present cha(lle)nges of contemporary time, marked by a rather fast development of technology and media, and by a rapid transformation of a context from which we understand subjectivity, society and life itself.

Index terms | *posthumanity, technology, coordinates, temporality, spatiality, anthropos.*

ORIENTATIONAL COORDINATES REVISITED: TECHNO-HUMAN OF A CONTEMPORARY TIME

This is not a text which aims to point at one of the possible theories of an end of an era, nor to the territory of a definite redefining of fundamental coordinates which made the traditional notions of subjectivity, body/materiality limits, temporality or spatiality. Although different theoretical perspectives offered a potential of introducing the notion of the end within theories of humanity, my goal here is to think through, against and next to already present cha(lle)nges of contemporary time, marked by a rather fast development of technology, digital culture, translating Cartesian subject into a carnally structured machine – a wetware,¹ and generally, the contemporaneity marked by what Braidotti would call *transhumanism* and *technotranscendancy*.¹

Living within the technological landscape which contracts space and multiplies notions of time, human subject is not alone anymore,² and more so, its connection to technology and machines doesn't stop at the utilitarian level. Today the interrelation of humans and machines form a specific *intimacy* in technotranscendence,² which brings the *transgression* of limits that once made the core of the ideas of humanity, subjectivity and anthropocentrism which, in turn, produced concepts such as body, history, linearity of language in its performative form, physically measurable space, unquestionable progress, teleological temporality and even death. As Paić would put it, maybe it is the time to pose questions about other histories, or about the possibility of *other history*, which would in a way correspond with collapsing of the human history as biologically-defined and biologically-centered, anthropocentered history.³

Speaking of technology, it seems that the societies continued developing technologically in one or the other way, in spite of certain “anti-technological tendencies in human nature”,⁴ or better to say, in spite of different objections towards the technologically transformed society.³ According to Marshall McLuhan,⁵ as human body is a form of media itself (it receives informational units through organs which are functionally and symbolically located as senses – the receptive openings to the outer stimuli), and as it deciphers the message using the culturally learned code,⁶ in order to enhance the ability to perceive/receive/decipher/communicate, a human subject tends to grasp for technological extensions, which in turn leads to a permanent interest in technology and media development, which is in the same time the bodily development, or, simply, human potential enhanced. This indistinguishable merging of a human and technological element is in contemporary literature described as a *posthuman state*, characterized by a fusion of human and a machine (sources cited). Traces of this theoretical thesis can be found directly in McLuhan: “Physiologically, man in the normal use of technology (or his variously extended body) is perpetually modified by it and in

turn finds ever new ways of modifying his technology”.⁷ It seems, again, that what led to a posthuman state is exactly the culturally nourished and enabled behavioural pattern that was seen as specifically human. This leads to the conclusion that what was considered human/humanity cannot be easily divided from the present issues of posthuman/posthumanity – so it is more of a permanent hybridization than a clear break of an era, which still doesn’t negate the massive shift in numerous paradigms – on the contrary.

POSTHUMAN CONDITION AND THE ISSUE OF NEW REALITIES

What would be a posthuman state, or, from where do we start to think about the posthuman? Rosi Braidotti puts in into a very direct statement: “...my interest in the posthuman is directly proportional to the sense of frustration I feel about the human, all too human, resources and limitations that frame

Our collective and personal levels of intensity and creativity”.⁸ What is important here is that posthumanity, posthumanities or posthuman studies do not exclude humanity or humanities, or even still surviving anthropocentrism. In spite of the strongly expressed attitudes that the anthropocentric times are almost long gone (sources cited), it can even be said that all this proliferation of literature in posthumanities and posthuman studies again revolve around the issue of the *anthropos*, or around the curiosity, fascination, fantasy and/or even fear of what a (post)human could be – in the present and in the future. It is as if we, humans, or already posthumans, are immersed not only in the cultural and linguistic simulacrum but also in the *technological simulacrum*, a kind of a *new reality* fused with what once was a certain limit of the human body, imagination, lifespan and so on.⁴ This new reality is what gives the basis for discussing the posthuman and posthumanity in the vast field of contemporary approaches that stem from philosophy to social theories, science to technology studies, communication studies, media studies, biology studies and so on. It can be said that the appearance of a *posthuman* defines either a certain break⁹ – or a continuum¹⁰ that bridges modern Western culture with its Vitruvian Man, a *measure by itself* well positioned in the center of the World and all its creation, with the cyborg, and, in the end, with the android, the *new humanoid* released of the human incompetencies, imperfections and mortality.⁵ It was in 1985 when Donna Haraway proclaimed: “I would rather be a cyborg than a goddess”,¹¹ thus moving away from the idea of the human-as-omnipotent-creator towards the interest in terms such as fusion, merged categories, states of *becoming*, and so on. This idea seems to be materializing within the contemporary reality of technologically plugged-in biological bodies, technologically hybridized bodies, where technology pertains to media, digital technology and medicine, to everyday and holy,

to thinking robots, thinking machines, thinking humans and all the levels in between.¹² All of this range of possibilities can be implied within the term *posthuman* and *posthumanity*, a reality or a cultural circumstance that is both to come and already is, and, also, in the certain way, already was in all the human striving for the technological enhancement of its body and the environment he/she/it is dwelling in.

POSTHUMANITIES: OTHER TEMPORALITIES, OTHER MAPS, OTHER PERSPECTIVES

The notion of a posthuman condition induced a lot of new theoretical perspectives on all the coordinates that gathered and sustained the humanist cultural concept as a firm presupposition. In the other words, if the firm boundaries of the human body had been cracked up and dissolved either through becoming-machine, becoming-animal or becoming-earth,¹³ so did the conceptual boundaries of time and space that had been measured by the humanistically, antropocentrically conceived Man, “the measure of all things” or the measure-of-itself. Thus we can see posthuman condition as a posthuman predicament,¹⁴ or/and we can understand it as a possible gateway to a differently thought temporality and spatiality, which would also include transfiguration of the linear History (and even linear histories) and measurable geography into new maps and new worlds, opened up to multiplications and non-linearity. Culturally analysed and anthropologically noted, time and space were always culturally conditioned;⁶ or, the understanding of the concepts of time and space was always rooted in culture from where the subject comes from. For example, besides the linear, teleological time or the evolution and progression that is characteristic for Western notion of humanistic, antropocentric culture, there are also examples of differently conceived time dimensions, such as cyclic time, monumental time, monochronous/polychronous time and simultaneous time, and so on.¹⁵ Also when it comes to the notion of space, current researches in technology-based theories in micro-physics and macro-physics prove that we cannot speak exclusively of Geography as it is known from a Eurocentric map or geographies as seen from within different geographical regions or cultural realities, but we can also start to think about space as multiplied and compressed, *simultaned* (first experienced as a virtual space through digital technology, and then also theoretically seen as a multidimensional space or an empty space in cosmology and so on).¹⁶ Or, as Sigfried Giedion says, “The essence of space as it is conceived today is its many-sidedness, the infinite potentiality for relations within it. Exhaustive description of an area from one point of reference is, accordingly, impossible; its character changes with

1 The term *wetware* (also *liveware* or *meatware*) would designate the living organism whose structure can be represented as a complex network of the multiplicity of communicational elements and paths. Speaking in that way, *wetware* would be the living organism defined by its channels of informational flow. This idea is closely connected to how human body system was “translated” into the informational platform of communication flows and portals, which was later used in digital algorithm and artificial intelligence projects, as well as in technologically advanced medicine and science (Brajdoti, *Posthumano*, 2016, 131).

2 Though it is questionable if it was ever alone at all – being immersed into a Symbolic structure of language and being produced and interpellated through it, it seems that a human subject has always functioned through a certain (linguistic/symbolic) algorithm, necessarily producing the Other which enunciates it [the subject] and defines it as being something entirely estranged from itself – almost, a machine, if it wasn’t for a mortal body, which, paradoxically, is the very thing that made the subject *human*. (see Jacques Lacan „The Function and Field of Speech and Language in Psychoanalysis“, *Ecrits – The First Complete Edition in English* (New York: W. W. Norton & Company 2006, 197-268) and Jean-Francois Lyotard, *The Postmodern Condition: A Report on Knowledge* (Minneapolis: University Of Minnesota Press, 1984).

3 The phenomenon of rejecting or criticizing the technological development is not unknown in newer history – some of these tendencies can be noticed especially in times of a huge technological development – with the beginning of modern times, and also today, with the emerging of a *posthuman condition*. Some of the examples of the often noted objections followed with contraarguments can be found in Bostrom, „Why I want to be a Posthuman When I Grow Up“, 2011.

4 But is a virtual reality, as a contemporary technological product, just another, newly invented simulacrum (Jean Baudrillard, *Simulacra and Simulacrum*, (Ann Arbor: University of Michigan Press, 1994), or it is, actually, the *extended* reality, the multiplied space and compressed time system that is more potent, more thick, than the linear/3D map reality that we knew by now?

5 It is especially the issue of technology as a tool for transcending the mortality of a human *wetware* that attracts my intention as a specific knot of a posthuman turn, which would certainly be the path of my further theoretical research. The notion of a death itself, as an ever-present already-happened event (Maurice Blanchot, *The Instant of My Death*. (Stanford, CA: Stanford University Press, 2000) gives an excellent nodal point of weaving the theoretical paths of posthuman studies, temporality studies, memory studies, media studies, body studies, subjectivity studies and technology studies.

6 They are also conditioned by the potential of human memory, which is in its very system a non-linear, network-like, even rhizomatic structure, with the free flow of the elements

that we culturally learned to recognize as past, present and future. It is not unusual, then, for these dimensions to intertwine in the attempt to be lined up in the teleological narrative by the cultural subject (Henri Bergson, *Matter and Memory* (New York: Zone, 1988). Following this, it is not surprising that there has been a raised interest in memory studies within culture studies, media studies and technology studies in the past years (also Brajdoti, *Posthumano*, 205).

Dragana Stojanović holds a PhD degree in Theory of Arts and Media, which she obtained at University of Arts in Belgrade. Her path of professional interest consists of exploring the various intersections of culture studies, art studies and media studies, with the focus on body, gender, feminisms, textuality and poststructuralism, but also on memory studies, where she specifically concentrates on techniques and potentials of media and digital technology usage in the storytelling of past, trauma and history within the educational turn in art and culture. Her latest research concentrates around the concept of posthuman condition, which also brings out new questions about posthumanities, postsubjectivities and postlinearity. Currently she works as an Assistant professor at Faculty of Media and Communications in Belgrade.

AN AESTHETIC CONSIDERATION OF THE ATHENS METRO

Abstract | In this paper, spatialisation, technology, and art in their local configuration are explained as the characteristics of the Athens metro. The emblematic characteristic is the presence of the works of ancient and contemporary Greek art in the area of different stations. The metro area is a space of *techne* in the Greek sense. Technology and art follow different goals. While technology caters to the hasty passenger, the work of art invites him to spend time turn his attention to it.

Index terms | *The Athens metro; spatialisation; technology; art; time*

1. Introduction

The Athens metro is the first intervention for reconstructing the urban space of a Greek city through displacing a part or public transportation from the surface to the subterranean level of city soil. Doubtless, demands of urban planning, socio-economic reasons, and problems of traffic led to the political decision of constructing the Athens metro. Nonetheless, the Athens metro was designed and constructed as a technological and architectural achievement within the context of Greek culture from the very beginning. Nowadays, citizens become involved in this environment as agents and viewers; they develop and realize new forms of practical attitude, of interaction with machines, of aesthetic apprehension, of aesthetic evaluation and appreciation. This acquaintance of the citizens with the subterranean environment of the metro as well as with travelling by metro has been encouraged by a strategy of aestheticization that was implemented by the state authorities and the constructive society and promoted by the media during the construction work until the opening of the metro to citizens. Nowadays, there is a tension between art and technology, which rather indicates the openness of self- understanding of the subject as well as of the subject's understanding of the world.

In the following, I explore these aspects in four parts. The first part sets out the aesthetic characteristics of spatialisation as it regards the Athens metro. The next part deals with the strategy of aestheticization implemented during the construction and until the opening of the metro to citizens. The third part investigates the surplus of meaning emerging through the presence of the works of art in the areas of the metro stations. In the Conclusion, I outline some open problems concerning art, technology, and the subject.

2. The Aesthetic Aspects of Spatialisation

The construction of the Athens metro was first of all the construction of the space of the Athens metro. This relationship describes the frame of the following investigation, since it points to the concrete character of the mentioned space as a subterranean field, although there is interplay between itself and the surface of the soil of the city through points of entrance/exit at the metro stations. Taking into account that this space is not given immediately as natural space, although it is constructed on the basis of nature, we can describe its construction as a spatialisation, namely as the process through which the whole system of the Athens metro -its interior spatialities included- vindicates and occupies its space. Moreover, this process has its origin in human activity, intention, and understanding of values.

Mutatis mutandis, Shields' conception of spatialisation as the nature of place as well as his consideration of spatiality as 'the quality of orders of spacing and placing' (Shields 2013: 1; 12; 21) could be used as the frame for describing the peculiar space of the Athens metro. In this regard, spatialisation indicates that order is given through the relations of objects and things included in it. These orders of spacing and placing as concrete results are also sensuous and perceptual orders for the embodied subjectivity. In fact, the embodied subjectivity has space as medium for accessing the world. Because of its living body and of physical body as well it is engaged in this space through its lived experience (Plessner 1980: III, 91; IV, 242). While the area of the Athens metro is constructed as an interaction environment, it is also a field of

lived experience. Moreover, the complex of the Athens metro should be considered as a work of culture beyond the split between machine / technology and meaning / culture. On the one hand, machines and technology are cultural achievements, while they also shape culture. On the other hand, the differentiation of spatialities not only for operating wagons and other machines but also for the remains of previous local culture, the presence of the works of art, lighting, cleanliness, and noise reduction create a perceptual order corresponding to the cultural value of recognizing the travelers as guests. Thus, citizens may have an emotional self-affirmation in this interaction environment of travelling.

The area of the Athens metro has also architectural qualities. Doubtless, these qualities are not independent of the computer-based engineering design. Nonetheless, architecture fights with the hard materials of the earth, identifies and creates boundaries and thus it creates human space as a space for the human being. In terms of Michelis' conception, the architectural qualities of the area of the Athens metro are the covering of human needs according to 'the measure of art', familiarity, beauty and not only elementary functionality (Michelis 2002: 445; Apostolopoulou 2007). Archaeology has offered an important contribution to the cultural richness of the Athens metro. Since the deeper layers of the subsoil of the city of Athens hides the remains of previous stages of this city, archaeological excavations brought to light a large number of mobile objects, e.g. vases, objects of daily life, etc., as well as immovable objects such as aqueducts, walls, cemeteries etc. (Reboutsika 2016: 191-194). Some of them are exhibited in different stations and point to the geohistory of the urban space of Athens (cf. Soja 2000: 4, 96).

In the Syntagma Station a special place is devoted to archeological findings. (Figure1). On the wall, behind a glass, there is a stratigraphic presentation; below is the riverbed of river Eridanos, while tombs are indicated in the above zone. Vases, pithos, marble loutrophoros and other objects are exhibited in the showcases or on the floor. In their interrelation, they visualize the historicity of the place and the continuity of Greek culture.

It is plain that different discourses can be developed concerning the significance of spatialisation in regard to the Athens metro, as is the case with the plurality of discourses on space. Lefebvre' famous book develops a significant strong theory of the social production of space (Lefebvre 1991). Since the aesthetic consideration of the Athens metro deals only with a peculiar case, it has to remain at a distance from this strong and comprehensive theory.

3. The Presence of Works of Art and its Openness

Because of the exhibition of many works of contemporary Greek culture and archeological findings of ancient Greek culture, the Athens metro has been characterized as a 'museum space' (Reboutsika 2016). Indeed, the works of contemporary Greek art are more than 35 after 2009 (Koskina 2009).

The most significant works of ancient Greek art are presented at the Acropolis station. These are replicas of the Parthenon West frieze (Figure 3) as well as of East pediment (Figure 4). On the one hand, they are samples of the classic in Greek art before the advent of classicisms. On the other hand, they show the intrinsic connection of the beautiful

and the sacred in terms of the political religion of ancient Athens (Cosmopoulos 2004); Connelly 2014).

The works of contemporary Greek art manifest the variety of inspiration and creativity of the artists. They attract sensation and perception. Nonetheless, perception is not simple observation. Doubtless, there are various levels of aesthetic apprehension and appreciation. The viewer affirms the interplay of his/her aesthetic apprehension and the work of art. He/she, however, expects and searches for the meaning of the work of art, and appreciates this connection of perceiving and understanding as well as the indication to a meaning that cannot be exhausted in that which he/she understands towards the work of art. In this regard, the works of contemporary Greek art that are exhibited in the stations of the Athens metro point to different aspects of perception, of lived experience, of understanding. Thus, Takis' 'Bright Shots' at Syngrou station intend to manifest the sudden yet pleasing experience of light. Christos Karas' 'Diptychon' entitled 'poetry of space' presents geometric shapes and deformed tubes as the elements of a new grammar. The hermeneutic aesthetics of the following works of art offers some examples of their peculiar surplus meaning as works of art commissioned for the area of the Athens metro.

Costas Tsoclis' 'Underground Park' (Figure 5) in the Ethniki Amyna station introduces a depiction of nature in the underground realm of technology and points to the critical question of the logic of home (eco-logical) of the human in the scientific-technological era. It is an installation consisting of 12 metallic trees. The neon lamps of the ceiling send strong light on the park, while the mirrors behind the trees enlarge the space and multiply the trees. Thus, the viewer perceives the real and the illusionary space as a unity, and he acquires the impression that this park is an exit to an open space beyond the metro space.

Theodoros' [Papadimitriou]' 'The Clock of Metro' (Figure 6) in the Syntagma station signifies the endless movement of time through the circular elements of its construction. It is an installation consisting of three wheels of stainless steel, 250 cm in diameter, of bronze bots and of 2 clocks. The word 'metro' (from 'metropolitan') and the verb 'metrô' that means 'count' seem to remind movement, time and number, which are characteristics of everyday life, since the metro is integrated in everyday life. The position and the material of the installation create a contrast to the works of ancient Greek art, which are exhibited on the opposite site. These works are detached from their original spatial-temporal frame, or better of their world, and they are not subjected to this condition of modernity represented through 'The Clock of Metro'. Their presence throws a ray of beauty that has its origin in another time and enriches the hasty rhythm of contemporary everyday life.

Christina Sarantopoulou (Figure 7) exposes an installation with the message "The city unifies the diversity of the humans". The installation is exhibited in the Agios Ioannis station and it is a sample of kinetic art. It consists of eight large metal circles that depict fingerprints in yellow, red, or brown. The metal circles move and reveal a metal map of the area of the station. On the one hand, the message is the affirmation of the unity of the people in the city; on the other hand, it addresses an appeal to the citizen or viewer to accept and support this message.

Giannis Psychopedis' monumental work entitled "Peace Station" is exhibited in the Syntagma station. The work is a fourfold 40-meter composition that presents philosophers, poets, composers, politicians, resistance fighters, landscapes, photos,

words. It is a composition of remembrance and history in its double sense, as a reality and as a story about reality. Questions and emotions, riddles and anticipation make up a crossword puzzle. While this work of art is situated opposite the place with the antiquities, it stands in a dialogue with the works of classic art.

4. The Forgotten Strategy of Aestheticization

The construction of the Athens metro came across with a strategy of aestheticization intending to inform citizens about the progress of the work, to attract their attention and to cultivate the acceptance of the new public-transport means. In this case, aestheticization denotes the mediated increasing meaning of appearance or of picture in contrast to the immediate meaning of reality (Welsch 1993; Welsch 1996: 9ff). On the one hand, these secondary bearers of meaning are 'medialised', namely they are integrated in the context of mass media, first of all of television, and, on the other hand, in this way, they 'mediated' the meaning of reality as their meaning (Schneider 1998). Further, this contextualization entailed an interpretation of meaning, which was addressed rather to emotion and imagination about this constructive work than to careful reasoning. Thus, these secondary bearers of meaning had an elementary cognitive value about what was happening, they had a pleasing effect for the expectation of citizens as regards the improvement of everyday life through the metro.

This form of aestheticization was developed in reference to the two Tunnel Boring Machines (MBTs). At first sight, their odd figure and outstanding power -effective and threatening power at once- were viewed with awe and astonishment, as if they had some traces of the sublime. The use of personal names, however, created a distance toward the requirement for knowledge of the complicated technology of the Tunnel Boring Machines (MBTs), and transformed these to cooperative agents. The machines were named 'the metro-big-mice' (*metropontikas*) pointing to the animal mice that dig up tunnels beneath the soil (Figure 9). Further, they were presented in a mythic status, because they received the names 'Jason' and 'Persephone'. This form of aestheticization had various effects. Mass media showed 'Jason' and 'Persephone' during work, they informed about the 'progress' of the work, or about the 'arrival' of 'Jason' and 'Persephone' at planned metro stations. It is plain that this 'information' was an interpretation to a great extent. Since the constructive work took place in a deep level beneath the soil, and only professionals and experts in charge were permitted to enter the construction site, the work was almost 'outside society', an unseen, unknown, and semi-public reality. Yet personification, visualisation, and narrative in mass media attributed to the work a public character, and they mediated to society a commonality of understanding.

Another form of aestheticization was the interpretation of the Athens metro as an important event in view of the preparation of another 'mega-event', namely of the Athens Olympics of 2004 (Leontidou 2010: 49). In this context, the Athens metro was presented as a representative work of governmental policy and as a high-level achievement of Greek society and culture. The analogue of this interpretation was the grand ceremony at the hall in the Syntagma station. The ceremony became almost a festivity for the opening of the Athens metro as well as for its integration in everyday life. Citizens were invited to visit the space of the Athens metro and to travel for free. Thus, thousands of people enthusiastically took this opportunity (Figure 10). After the enthusiasm of the first months, the strategy of aestheticization was forgotten and the

extraordinary character of the Athens metro disappeared. Nonetheless, in reference to Mandoki's view of the prosaic (Mandoki 2007: 80), we may argue that the Athens metro with its perceptual order, with the works of art as well as with its convenient cleanliness enriches the everyday life of citizens and city.

5. Conclusion: Art, Technology, and the Subject

The emblematic characteristic of the Athens metro is the presence of the works of both ancient as well as contemporary Greek art. While the complex of the Athens metro is a work of *techne* in the Greek sense, namely of technical expertise, it provides spatialities for *techne*/art in the poetic-creative sense. Nonetheless, the difference between *techne* and nature presupposes the metaphysical order of reality, in Aristotle's view. Nowadays, this difference tends to become marginalised, since we consider nature in terms of artificiality. Thus, there is the question whether art or technology defines the space of the Athens metro. On the one hand, there is a poetic aspect, and creativity beyond functionality; on the other hand, there are speed, increasing acceleration, functionality. This raises the question about whether technology or art is the top expression of human creativity and of *techne* as well. In the metro area, technology and art follow different goals.

While technology caters to the hasty passenger who wants to reach his/her destination as soon as possible, the work of art invites him/her to procrastinate, to spend some time out of his time and turn his attention to it. This collision between the two targets is condensed into the fleeing eye of the hasty passenger as spectator of the work of art and enriches his/her everyday life. As it seems, art has lost its absolute content (Apostolopoulou 2009). Nonetheless, art has the power to accompany the human even in everyday life. The tension between art and technology maybe indicates that human freedom will depend on whether we can restrict planning and leave room for some important possibilities that are not and should not be planned.

Nonetheless, the increasing acceleration of life rhythm as well as the repeated use of high-speed transport affects the quality of life of the subject. Virilio maintains that this increasing acceleration will alienate the subject from the immediate values of life and of its own life (Virilio 1981: 104; Virilio 2012). This is indeed also possible for the citizens of Athens. Nonetheless, there are corrective strategies, such as the slowing-down of activities or the ties with family and friendship that can protect the subject from alienation.

UNTIMELINESS IN CONTEMPORARY TIMES

Abstract | “Today, we are stuck in the present as it reproduces itself without leading to any future,” Boris Groys remarks. Sharing the concern of Groys and several other thinkers that we have lost the future as a political object this paper discusses the temporal complexity of our current situation – and to which extent it even makes sense to speak of *our* situation. The loss of a futural moment and thus of another temporal horizon is connected to a sense of an ever-expanding present, a present defined by a capacity only for a short-term perspective. The present is no longer a hinge between the past and the future but has rather become omnipresent (cf. François Hartog). Such presentism, the sense that only the present exists, is a crisis of time.

The loss of the future as a political object has – amongst many others – been theorized by Fredric Jameson who famously sees the postmodern as a weakness in our imagination, as it is easier for us today to imagine the deterioration of the earth than the breakdown of capitalism. More recently it has been analyzed by Peter Osborne. Rather than investigating when the present began, Osborne calls for the present to begin again, the present as the time of the production of a qualitatively different future.

On this background the aim of the paper is to provide a critical reading of the notion of “untimeliness”, particularly in Giorgio Agamben’s influential text “What is the Contemporary?” (2008), as a decisive aspect of being contemporary. Untimeliness is about temporal disjunction, but what is *our* own time and *our* epoch? Who in the postcolonial situation do actually take part in the possessive determiner *our*? The paper will argue that it is becoming increasingly difficult to identify a hegemonic time in relation to which one can be untimely; that the current contemporaneity – understood with Osborne as the coming together of different times in the same historical present – makes it practically impossible to be untimely and thus avantgarde in the traditional sense. Claiming that under contemporary conditions of an intensified global interconnection of different times it is no longer useful to employ the Agambenian notion of “untimeliness” the paper will try to indicate how a contemporary kind of untimeliness, characterized by operating in relation to several times at once and thus differentiating the presentist present, may be seen to appear in the artistic practice of Kader Attia.

Index terms | *Contemporaneity; Contemporary art; Historical time; Presentism; Untimeliness*

Sharing the concern of a number of contemporary thinkers that we have lost the future as a political object this paper discusses the temporal complexity of our current situation.¹ The loss of a futural moment and thus of another temporal horizon than the present one is connected to a sense of an ever-expanding present, a present defined by a capacity only for a short-term perspective. The present is no longer a hinge between the past and the future but has rather become omnipresent.² Such presentism, the sense that only the present exists, is a crisis of time.

On this background the aim of this paper is to provide a critical reading of the notion of “untimeliness”, particularly in Giorgio Agamben’s influential text “What is the Contemporary?”,³ as a decisive aspect of being contemporary. Agamben makes the Nietzschean claim that: “Those who are truly contemporary, who truly belong to their time, are those who neither perfectly coincide with it nor adjust themselves to its demands. [...] Contemporariness is, [...] *that relationship with time that adheres to it through a disjunction and an anachronism.*”⁴ Untimeliness is about temporal disjunction and anachronism. Agamben writes of “their time”, “their own time”, “the epoch”, but what is *our* own time and *the* epoch? Who in the post- or decolonial situation do actually take part in the possessive determiner “our”? I will argue that it is becoming increasingly difficult to identify a hegemonic “cultural” time in relation to which one can be untimely; that the current contemporaneity – understood with Peter Osborne as the coming together of different times in the same historical present – makes it practically impossible to be untimely and thus avantgarde in the traditional sense.⁵ Claiming that under contemporary conditions of an intensified global interconnection of different times and social narratives it is no longer useful to employ the Agambenian conception of “untimeliness” when trying to engage with the present in order to reinstall a futural moment – or to install other temporal horizons than the one in which we live – this paper will try to indicate how a contemporary kind of untimeliness, characterized by operating in relation to several times at once and thus differentiating the presentist present, may be seen to appear in the poetics and artistic practice of Kader Attia.

I

Today it seems redundant to criticize the linearly progressive and teleological understanding of history that is often associated with Western modernity. As indicated above, the farewell to this idea of history has, however, also consequences for the ways we may conceive of critical relationships with the times in which we now live and thus for what it might mean to be untimely when (the idea of) linear unified homogeneous history has become obsolete. These consequences seem less clarified and therefore worth pursuing.

Agamben furthermore introduces a supplementary definition of contemporariness, which can be seen as an elaboration of the last part of the first one about being able to see one’s own epoch: “The contemporary is he who firmly holds his gaze on his own time so as to perceive not its light, but rather its darkness.”⁶ Through an analogy to our perception of the dark sky at night where remote galaxies move away from us at a speed that is faster than the speed of the light, which emanates from them, he defines the quality of being contemporary as “being able not only to firmly fix your gaze on the darkness of the epoch, but also to perceive in this darkness a light that, while directed toward us, infinitely distances itself from us.”⁷ Thus, the present that the contemporary perceives cannot reach him or her: “[T]he appointment that is in question

in contemporariness does not simply take place in chronological time: it is something that, working within chronological time, urges, presses, and transforms it. And this urgency is the untimeliness, the anachronism that permits us to grasp our time in the form of a ‘too soon’ that is also a ‘too late’; of an ‘already’ that is also a ‘not yet’.⁸ The untimeliness of contemporariness is an urgency that takes place within chronological time while at the same transforming chronological time. In this way Agamben’s analysis shares some structural similarities with Derridean deconstruction and the insight that there is no outside (of the text), but it also operates with *one* more or less unified epoch, with one identifiable hegemonic temporality and shared chronological time in which contemporariness takes place and which contemporariness transforms. This time in the singular is a very Western – and male – one; its history includes Nietzsche, Barthes, Pericles, Robespierre, Sade, Mandelstam, Paul, Christ, Messiah, Foucault, Benjamin, and takes place in Paris, Athens, New York, etc. It is therefore in a certain sense an undivided or undifferentiated time, which perhaps should be historicized in the light of the present state of globality to which cultures all over the planet have arrived via different historical trajectories.

Interestingly Agamben makes a last qualification of his conception of the contemporary who is not only the one that perceives a light that cannot reach its destination; the contemporary “is also the one who, dividing and interpolating time, is capable of transforming it and putting it in relation with other times.”⁹ I would claim, however, that today these other times should not only relate to the past – and perhaps the future – on the axis of Western chronological time but also to other cultural times formed along other trajectories.¹⁰ Today chronological recomposition and Hartog’s notion of “regimes of historicity” as changing articulations of the structure of past, present and future are too reductive approaches to understand temporal complexity.¹¹ As I will try to show later, such a complex inclusion or entanglement of different cultural times in the constitution of the present may be said to take place in the work of Kader Attia.

II

Nietzsche’s second *Untimely Meditation* should not be read as a critique and rejection of historicism in itself – defined by “the basic thesis that every aspect and expression of human life is unavoidably conditioned by history” – but rather of the teleology and necessity with which it is often associated.¹² Walter Benjamin’s reflections on the concept of history (*Geschichte*) provides an elaborated critique of this notion of historicism. The version of historicism that Benjamin addresses is thus a form of historical time-consciousness, which is characterized not only by an objectivism about knowledge of the past, but also by the idea of history as progress.¹³ According to Benjamin the historicist conception of history as “the subject of a structure whose site is homogeneous empty time” involves a naturalization of chronological, continuous history and an oblivion of the constitutive role of the present in any time-consciousness, as the point from where history is given direction.¹⁴ Benjamin is looking for a “different, *qualitative* experience of the ‘now’ as an *historical* present”.¹⁵ The instantaneity of the now is thus a historical rather than a merely natural or a priori given form of temporality.

In this way, Kant’s analysis of the sublime might be seen as a tacit model for Benjamin’s concept of “Jetztzeit” that describes time at a standstill where the past, in a flash, enters into a constellation with the present, objectively interrupting the mechanical temporal process of historicism.¹⁶ Like the sublime interrupts the

successive apprehension described in the *Critique of Pure Reason*, the dialectics at a standstill interrupts and opens the linear continuum of history.

In Benjamin, the dialectical convergence of past and present therefore holds a political potential. His ambition is to explode “the continuum of history” in order to make it possible to recompose it.¹⁷ His now-time is a constructive form of temporality in which “the slivers of history,” as emphasized by Isabell Lorey, “are newly composed, in which history persistently emerges. The now-time is the creative midpoint, not a transition of the past into the future.”¹⁸ Unlike the presentism described by Hartog, Groys, and others, Benjaminian now-time becomes time filled with emancipatory possibilities (rather than mere probabilities): “History is the subject of a structure whose site is not homogeneous empty time, but time filled by the presence of the now [Jetztzeit],”¹⁹ as Benjamin remarks in the famous passage quoted in part above. Time is not an empty, homogeneous duration unaffected by the events that fill it. Time itself has a history and politics. It is mediated, constructed, and multiple, not a blank a priori, and there are many different co-existing ways of being in time and belonging to it. The experience of contemporaneity is perhaps sublime in the sense that it is an interruption of the unified linearly ordered time, but the contemporary condition does not allow us any distance to that which otherwise would elicit an experience of the sublime – today there is no temporal outside to the sublime spectacle, so to speak.

The difficulty of experiencing the Kantian sublime today not only has to do with the cancellation of our distance to that which triggers the sublime experience, the loss of a secure position from where to experience something as a sublime spectacle. There is also an important *temporal* aspect in that we no longer enjoy the comfort of a secure position in relation to a one-dimensional time, from where to grasp time or to establish a disjunctive relationship with time, thereby becoming untimely as in Agamben’s definition of the contemporary. Contemporaneity may, of course, be seen as synchronization and standardization of all the worlds cultures and time-experiences, in line with a conception of the sublime as “a symptom of the supersensible totality of global capitalism,”²⁰ but, it can also – as an, in principle, shared present, a globally shared experience of co-presence – be seen to hold a potential of interrupting the mechanical progression or rather accumulation and repetition of what is with no alternatives.

To be untimely then – that is, under the modern regime of historicity – was to not coincide with the present time in the singular, to be untimely now is to act on present times in the plural and to counter the time of global capital, which is about standardization, synchronization, and accumulation with no other temporal horizon, with no different future, if even imagined. In Peter Osborne’s analysis a large part of what we call contemporary art works in the service of such synchronizing and standardizing global capital. I do not, however, think that we should only deplore that the institutions of contemporary art have created a new kind of cultural space, “dedicated,” in the words of Osborne, “to the exploration through art of similarities and differences between geo-politically diverse forms of social experience that have only recently begun to be represented within the parameters of a common world.”²¹ Osborne sees the new international biennials as “emblems of capital’s capacity to cross borders, and to accommodate and appropriate cultural differences. Art labour,” he claims, “is variable cultural capital.”²² The idea of contemporaneity, understood as the “projection of the temporal unity of the present across the planet,” is no doubt grounded in the interpenetration of social forms and cultural clusters by capital and

their consequent interconnection and dependency,²³ but the experience and cultural significance of contemporaneity cannot merely be reduced to the workings of global capital. Some of the most interesting contemporary art explores the possibilities for installing a social imagination beyond capitalism on the conditions of contemporaneity, which to a large extent is the consequence of the development of that very capitalism without being reducible to it. Perhaps it is therefore time to pay attention to and allow for cultural difference in the – at a certain level at least – globally shared present, as the access to this present is still highly unevenly distributed. Marc Augé describes a new condition of radical contemporaneity between peoples and cultures as the speed of cultural, economic and migratory circulation has inaugurated *a generalized sharing of time*.²⁴ “The world’s inhabitants have at last become truly contemporaneous,” Augé states.²⁵ Due to this circulation there is now an undeniable co-existence of different temporalities.

The time in relation to which one should be untimely today is the complex temporality of global capital subjecting all social forms to its standardizing logic. Untimeliness today may consist in differentiating the presentist present, in opposing colonizing synchronization by marking or articulating a contemporaneity of difference that allows for another kind of world-making.²⁶

III

Kader Attia is a contemporary artist in the sense that he – unlike modernist artists who produce new work and carry the progressive history of art forward,²⁷ – is occupied with establishing relationships, or what he calls restitutions and reparations, with the past and allow it to take part in the present. The pasts that he actualizes are, however, pasts that come from places and cultures which do not share the Western point of view on history. The different – and from a Modern Western progressivist perspective hitherto “other” and perhaps even developmentally “delayed” or non-coeval,²⁸ – cultural temporalities that are being brought to the fore and become visible and audible in Attia’s reconfiguration of the distribution of the sensible are not necessarily reduced in their difference.²⁹ They are not being made to comply with a neocolonial standard set by a Western dominated notion of art and cultural signification but rather enter into relationships while retaining their prehistories and particularities. In Attia’s work they often in a certain sense incorporate the otherness of the colonizing cultures – which of course also have been the primary motors in the globalization of capitalism – but leave this incorporation or appropriation visible without covering it up and without wanting to return to an original, “non-contaminated” state of self-identity – to a time and history that is exclusively their own.

Central to Attia’s critique of coloniality is the relationship between injury and repair, concretely as well as psychologically and metaphorically. Repair has thus become a very central concept and concern in Attia’s poetics and artistic practice.³⁰ He talks of the ambiguity of the concept of repair or reparation and opposes the way in which it is understood in so-called traditional non-Western civilizations to the way it is understood in modern civilizations. The modern repair tries to erase the traces of the injury and bring the object back to its original shape, which according to Attia involves a denial of time as the removing of the injury is actually a removing of time, of the history of the object. The non-Western repair, in contrast, keeps the trace of the injury and acknowledges what has happened to the object. It therefore adds to the history of

the object.³¹

Achille Mbembe writes of the postcolonial present where a multiplicity of co-existing times and traditions are interconnected and are being broad to bear on the same present as “the *time of entanglement*”: “[T]his time of African existence is neither a linear time nor a simple sequence in which each moment effaces, annuls, and replaces those that preceded it, to the point where a single age exists within society. This time is not a series but an *interlocking* of presents, pasts, and futures that retain their depths of other presents, pasts, and futures, each age bearing, altering, and maintaining the previous ones.”³² Nietzsche’s and Agamben’s contemporary person were a Western person, or man, who is able to establish a disjunctive relationship with his, or her, *own* time, that is, with a singular, unified Western progressivist time and history. Attia’s work of repair complicates this modern untimeliness by introducing other times, other pasts and by allowing hitherto unheard pre-histories to the present to become audible in a shared, entangled contemporary present. The repairing relationships with different pasts that Attia’s artistic practice brings into being somehow interfere with and differentiate an otherwise synchronized present – and thereby imply at least a potential for imagining another, decolonized future where several cultural traditions take part in the constitution of the present.

AESTHETICS OF COLLABORATION IN ARCHITECTURE

Abstract | Not only the aesthetics of painting and sculpture but also that of architecture are mostly predicated upon the concept of an individualized vision or oeuvre. Although there are some famous collaborative works such as the Centre Georges Pompidou in Paris designed by Renzo Piano and Richard Rogers, their aesthetics of collaboration was not discussed enough. These collaborators are usually dissolved after their successful or unsuccessful work. In architecture, the aesthetics of collaboration should be considered in the collaboration of architects and engineers such as civil engineer and environmental engineer, and also in the collaboration of plural architects or architectural designers from various countries.

Index terms | *Aesthetics of Collaboration, Collaboration in Architecture*

INTRODUCTION

Some schools or faculties of architecture are positive about collaborative project in architectural design. In the Faculty of Architecture and Design at the Pontificia Universidad Javeriana - Bogotá, Colombia, the first- and second-year students are grouped in fiftens for their architectural design projects. Each group makes their joint design. The third-year students are grouped less than fifteen. This group education system has a history of twenty years in the Faculty of Architecture and Design at the Universidad Javeriana in Bogotá. (1)

In some other schools or faculties of architecture, the collaboration of architectural students and related engineering students is emphasized. The School of Architecture, Civil and Environmental Engineering (ENAC) at the École polytechnique fédérale de Lausanne (EPFL) has their interdisciplinary teaching program, "Design Together." This program was conceived at the start of the ENAC school in 2004. Each group consists of four students, two from the department of architecture, another from that of civil engineering, and the other from that of environmental engineering. Although this "Design Together" is basically in their undergraduate program, some students in architecture, civil and environmental engineering continue their group works even after graduation. (2)

COLLABORATIVE DESIGN OF SANAA

In the campus of the École polytechnique fédérale de Lausanne (EPFL), there is a well-known joint-design architecture, the Rolex Learning Center. Although once in a while mistakenly identified as a work of Kazuyo Sejima, it is a joint work by SANAA, Sejima and Nishizawa and Associates. Kazuyo Sejima (1956-) and Ryue Nishizawa (1966-) of the Tokyo-based design office SANAA were selected as the architects in EPFL's international competition in December 2004. The construction took place between 2007 and 2009, its building opened in February 2010 (Figures 1 and 2).

The Rolex Learning Center is both a learning laboratory, a library housing 500,000 books and an international cultural center. It is open to both students and the public twenty-four hours. On a continuous surface of 20,000 square meters, it offers libraries, information centers, social spaces, places of study, restaurants, cafés and magnificent exteriors. The building is very innovative, with continuous slopes and terraces waving around interior patios. Thin pillars on a continuous curved-floor support the curved roof. The structure that required unprecedented construction methods was designed by SANAA and Mutsuro Sasaki (1946-), advanced structural engineer.

Sasaki has teamed with important Japanese architects Arata Isozaki (1931-), Toyo Ito (1941-) and SANAA to help bring to life free-flowing forms of organic architecture, such as the Sendai Mediatheque designed by Ito and the Kanazawa 21st-Century Museum designed by SANAA. The steel columns of the Kanazawa 21st-Century Museum are slender, ranging from 95 to 110 mm. The structural design of the Rolex Learning Center is based on the collaboration of SANAA and Sasaki for the construction of the Kanazawa

21st-Century Museum. (3)

Sejima keeps her architecture office, Kazuyo Sejima & Associates along with SANAA. Nishizawa also opened his own design firm, Office of Ryue Nishizawa in 1997, after the foundation of SANAA in 1995. Both Sejima and Nishizawa design various works of architecture in Japan by their own architecture offices. In a sense, they mainly use SANAA as their collaborative office for international competitions. Therefore, it is interesting to compare their individual works built in Japan with their collaborative ones constructed abroad.

Nishizawa also collaborates with some other architects in Japan. In 2012, he designed a housing complex, Treform in Otsuka, Tokyo, with Manabu Chiba (1960-) and Shin-ichi Ogawa (1955-). Treform actually means a housing complex consisting of three different buildings. Chiba designed its E building with larger windows. Ogawa designed the long N building in its northern site. Nishizawa designed the W building with relatively small windows and undressed concrete. Treform was awarded a good-design prize in 2012, perhaps for its simple and interesting combination of three different buildings. Chiba is a professor at the University of Tokyo, and Ogawa is a professor at Kindai University in Osaka. Treform is a housing complex in which three different buildings coexist. Although an excellent work awarded a prize also, it is very different from various collaborative works of Nishizawa with Sejima.

In 2016, the Sumida Hokusai Museum was completed in Tokyo by Kazuyo Sejima & Associates. Although not a collaborative work with Nishizawa, it shares characteristics with SANAA's works abroad. The outside walls of the structure are made from aluminum panels like several parts of the Louvre Lens. The outside walls in Lens and Sumida are slightly mirrored surfaces. Also like the Rolex Learning Center in Lausanne, a sense of having a "front" and a "back" of the building is avoided to enable access from all points in the surrounding area.

194

The Sumida Hokusai Museum by Kazuyo Sejima & Associates is a small museum, but it shares various characteristics with larger works by SANAA abroad such as the Rolex Learning Center or the Louvre Lens. The Sumida Hokusai Museum is even more elaborated in its outside surface. However, its interior spaces are less fascinating. It is too small to use the combination of four blocks, diagonal walls and glasses.

INTERNATIONAL COLLABORATION

SANAA is a collaborative office of female and male architects and designers in Tokyo. There was an interesting collaboration of younger architects from Italy, Lebanon, and Japan. In 2005, soon after the competition for the Rolex Learning Center, the Estonian Ministry of Culture and the Union of Estonian Architects announced together with the museum an international competition for the Estonian National Museum's new building. The international competition for the design and execution of the 34,000 m² building, housing a collection of 140,000 objects including Estonian national costumes, was launched in 2005. The proposal by Paris-based architectural practice DGT (Dorell.

Ghotme.Tane) / Architects was selected as winner among 108 entries.

The project was won by an international collaboration of architects, Dan Dorell (1973-), Lina Ghotmeh (1980-), and Tsuyoshi Tane (1979-). DGT (Dorell. Ghotmeh. Tane.) Architects started with this international competition in 2006 and dissolved in 2017 after the completion of the new Estonian National Museum in Tartu in 2016. Dissolved, but their collaboration beyond different cultures and genders is very important.

Their proposal was very unique. DGT Architects' proposal for this museum challenged the international and, in a sense, historical competition. Instead of locating the building on the proposed site, they chose to build it in a nearby former Soviet military base as the setting for the new museum. They expected that the new national museum becomes a continuation of the airfield. The abandoned airfield in which the museum was built is inevitably connected to the history of the country. Length of the building is 355,8 m. A very long rectangular shape of the building is the ideal continuation of the old runway. The museum's slightly sloped roof is a metaphoric launching pad from which to fly to the sky (Figure 3).

The new building of the museum is very bold but also gently decorative. Estonia's symbol is used for its glass wall. In the underground gallery, there are many national costumes of Estonia. The eight-pointed star is used in various parts of these costumes. The eight-pointed star is printed on the aboveground glass walls. Its color is white. The new building of the Estonian National Museum is covered with the glass walls with the white eight-pointed star. (Figure 4).

The Estonian Ministry of Culture and the Union of Estonian Architects promoted closer collaboration among four architectural and design offices for the new building of the Estonian National Museum. Estonian partners, Hanno Grossschmidt's HG Arhitektuur, Pille Lausmäe Interior Architects, and Kino Landscape Architects also played important roles.

Aesthetics of architecture is mostly studied as an individualized vision. Which is still

important. The aesthetics of collaboration in architecture is also important for

BEAUTY AND BUILDING STEREOTYPE. AESTHETICS OF THE ARCHITECTURE

Abstract | In this paper we examined the stereotype as a resilient model of types of created objects, a repeated and repeatable image of a manufacturing process, and a standardized model of virtuality; in other words, stereotyping gives form to things within a system of objects reproduced serially. The centuries-old synthesis of artisanship and material has been transformed in our times into design. To reconstruct an object means to retrace the techniques that produced it, including traditional ones. In terms of the relationship among technologies, there is a heated debate between those who want to defend the traces of the past as a memory important for the future, as well as a device for harmonizing the masses, and those who favour the absolute novelty of the hybrid style that is now in vogue after the modernist phase. The latter support deregulating the manufacture of architectural objects and the incoherent, improvised organization of the suburban environment. Throughout history there have been important differences of opinion on the value of humankind, quality of life, ways of thinking, and forms of culture and art.

The art of the city is a collective art in that it expresses the culture incorporated in a place in order to create other places that are considered more comfortable; it transforms nature, from which it draws its resources, and entails thought that facilitates building on the earth, using its physical laws. Indeed, architecture shapes immense sections of the environment. Through the sum of its architectural structure and habits, the product of work, perception, and the organization of life, the city unleashes the capacity to produce great works and gives the world an art that, based on history, represents enormous human effort and daring. In his *Pensieri diversi (Thoughts)* (1980, 87), Ludwig Wittgenstein states: "Architecture is a gesture. Not every purposive movement of the human body is a gesture, just as not every functional building is architecture." This image of the gesture of architecture that is created in physical space is relevant and interesting because it establishes a relationship between the individual and urban society. In addition, we have here a practical illustration of the imagination at work. It is precisely to highlight this living and active form that Gilles Deleuze, in explaining the notion of the fold in various parts of his study of Leibniz and the baroque (1992), claims that architecture does not begin with the flesh but with the house, and that it is first among the arts. In fact, the forms of architecture, even the most refined, always construct and join together levels and borders. In addition to suggesting movement, architecture is a "cornice" (or set of interlocking cornices facing in different directions) that imposes itself on the other arts, from painting to cinema.

To provide greater detail on the notion of the art of the city, it is useful to take into account ideas from eighteenth-century France, documented in the *Encyclopédie (Encyclopedia)*. In particular, we can refer to the ideas of Denis Diderot (see the entries for *art* and *artisan*), who, rather than reiterating the discussion on the major or minor guilds, which were in their heyday during his lifetime, introduced a great social idea for the progress and future of human activity. In his definitions, Diderot chooses to swim against the current, defining the artist in terms contrary to the rigid distinction between the liberal and the mechanical arts, and between intellectual work and manual labour. He applies the term to someone who exercises either an art or a science that presupposes a level of intelligence, the difference with respect to the work of an artisan being the hierarchy of the guilds (intellectual work, manual labour) and the different kinds of intellectual work that the guilds perform. Art, therefore, is not so much an expression of the prestige deriving from the aesthetic value of the fine arts, as it is a social and intellectual reassessment of work and technique. This concept is along the lines of the ideas held by Bacon, in which the trades and scientific work were elevated for their psychology of inventiveness and development of production capacity. In this context of activity and industriousness I present my own comments on architecture and the city, which relate to the realms of rules and abstractions, realms that contribute to the greatness of humankind. As Diderot might say, experimental and applied geometry is assisted by pure geometry. The following is his advice:

An individual should leave the academy and go down into the laboratory to see the phenomena of the guilds so he may describe them in a work that induces artists to read, philosophers to think in useful terms, and the powerful to make good use of their authority and their recompense. (Diderot, et al. 1988, 96)

Artists and intellectuals, therefore, making full use of their intelligence and implements, should promote the well-being of society. Diderot encourages them to conduct experiments together, since humanity has always dominated and interpreted nature; the arts, technologies, and sciences should proceed in unison. On the one hand, there are technical rules according to which an object is produced; on the other

hand, observations can be made from various points of view. We engage in both a practice and a theory. As Diderot goes on to say, implements and rules are like muscles, complementing those of the arm, and acting as accessories for the intellect. What the French philosopher says about art (ironically in the eighteenth century, when the metropolises were forming) is especially useful for our reflections on the city, and on its industriousness and idealism in building and imagining. In this sense, real beauty sheds light on the megacities of today. By real beauty, I mean the perception of relationships and combinations in a mesh of images that break through the limits of space and time while avoiding the dangers of the modernist style, which can produce monotony. We must always safeguard the genius of invention. Thus, Diderot anticipates the era of design and applied arts.

There is an entire history of beauty that we need to examine: both that of antiquity and modernity.

The ancient world is revisited in an interesting way in the 1900s. I am referring to Paul Valéry's *Eupalinos, or The Architect*, published around 1920 as a preface to *Album Architectures*. The poet reinvents a Platonic dialogue to show that an idea and the search for the truth tend toward the analysis and construction of form. He reminds us of the rules of Eupalinos of Megara in order to affirm the desire that human creations be eternal. What is the relationship between knowing and building? Is knowledge of ideas related to the search for and creation of forms? The text revolves around a poetics of knowledge. In Valéry's interpretation, architecture is the art that seeks perfection and harmony, which makes it similar to music. Like music, architecture goes beyond imitation, because it is not enough to imitate nature to achieve a perfect creation. The two have numbers and geometric rhythm in common. In this dialogue, we find two precepts: "Il n'y a point de détails dans l'exécution" (In execution, there are no details) and "Il faut que mon temple meuve les hommes comme les meut l'objet aimé" (My temple must move people as a cherished object moves them). In the second precept, we infer enchantment, such as the passion for forms and appearances. Furthermore, we notice that there are silent buildings that speak and sing. Stones evoke the history of a place and its people; they sing as a result of their capacity to rise against the pull of gravity, as Amphion tells it, or they are silent as a result of their mysteriousness.

Natural objects are juxtaposed with man-made objects, which are subdivided into useful and beautiful objects. The point in Valéry's text that pertains to our discussion is that artwork offers itself to our attention like a practical, analytical object, and as a product of calculation, experience, and technical skill. In addition, the form of an artwork, based on a model provided by architecture or music, must always refer to something else by analogy, in accordance with the process typical of these arts. In fact, the arts are recognizable as such because of their capacity for adhering to universal laws that, ironically, they apply to underscore their inner will to affirm their aesthetic value. These ideas are important for our discussion on the composite nature of architecture and the city.

A tour of the world's megacities presents frenzy and destruction as well as the erasure of local cultures, some of which are the victims of a voracious tourism that denatures the environment. We are witnessing a true consumption of the city, that is, its human, historical, and symbolic meaning. Large electrical, telecommunications, and digital companies control vast areas of energy and transportation. The architectural styles are

hybrid and eclectic, and suited to this system of civil aggregation. This is true of almost all places on earth.

We examined the stereotype as a resilient model of types of created objects, a repeated and repeatable image of a manufacturing process, and a standardized model of virtuality; in other words, stereotyping gives form to things within a system of objects reproduced serially. The centuries-old synthesis of artisanship and material has been transformed in our times into design. To reconstruct an object means to retrace the techniques that produced it, including traditional ones. In terms of the relationship among technologies, there is a heated debate between those who want to defend the traces of the past as a memory important for the future, as well as a device for harmonizing the masses, and those who favour the absolute novelty of the hybrid style that is now in vogue after the modernist phase. The latter support deregulating the manufacture of architectural objects and the incoherent, improvised organization of the suburban environment. Throughout history there have been important differences of opinion on the value of humankind, quality of life, ways of thinking, and forms of culture and art. Those that exist between conservatives and postmodernists are the latest of these. We might think that, by returning to the decorative and rejecting the functional, postmodernists are promoting the recurrence of tradition, but this is not the case. In architecture, they seek the ludic element rather than the universal forms of design, which is what conservatives seek.

It all stems from the question of technologies, even though in the final analysis, technologies do not determine the primary value of architecture.

MAKING OBJECTS OF ALTERED AESTHETICS

Abstract | Aesthetic thinking constitutes an integral part of the architectural perception of things. It is equally important for contemporary design which is based on modernistic methodology, as it used to be for a classical skill, so called *art of spatial shaping*. An aesthetic comprehension is inherent in an *ideal* design, but the stratification of aesthetic value is achieved later, through expansion of the design process. Architecture strives to overcome the gap between the ideal values of the form, (internal guarantee of its future balance and external norms) which are contributed to visual facts of its duration as of the moment of its materialization in space and time of the culture. It seems that the aesthetic aspect of the object is thus truly crystalized and able to obtain a sense of objective value only in the atmosphere filled with divergent movements between semi-conscious, conscious and unconscious markers. This is the atmosphere which resolutely signifies *alliteration* of ideally shaped architecture and breaking of its conceptual unity. **(Gillo Dorfles, *Elogio della disarmonia*, 1986)** To be honest, precisely the trust in visual totality of things is one of the icons of modern architecture and is entirely contrary to the feeling that the *petrified ships* are melting on their own on the sunny modernistic horizon. Although in an aesthetic sense the architectural design still relies on the methodology the coordinates of which were established by the modern movement, **(Rafael Moneo on John Soane and building on history, 2018)** in order to overcome the paradox of material reality, the modern narrative constantly examined new figures of speech, thus creating difference within. Such aesthetic procedure turns practice into theory, and theory into practice. Programmatic idealism, which would verify the identity or the role of a modern architect, is now reflected in shifted identity, in non-identical or even anti-identical. This altered status activates the aesthetic capacities of not only (one) architect but the architecture itself, offering the possibility to rematerialize own duration. **(Nicolas Bourriaud, *L'exform*, 2017)**

BETWEEN NON- AND ANTI-

Although always present, based on modern technology, the significance of art in architectural theory of the past century was always understood unilaterally. The tide of scientific definitions overflowed as almost exclusive type of subjective *overstepping of the norm*. Well-known conflicts between aesthetic and moral, and of art and technique masked the real problem to a certain extent, that being the inclusion of a certain function of a special type in the life of the society despite endless changeability of the work. There has always been a need to overcome the idea of justification as an excessive or secondary activity, and to substitute its arbitrariness by confirming the place of *one way of thinking*. Even today, this is a specific activity of the spirit, and the interest in it oscillates in the zones ranging from a total lack of interest to absolute infatuation. But knowledge of *beauty* (and why not mention that as well) is one of the most direct forms of knowledge. **(Pierre Francastel, Art et technique, 1964)** In an ideal design, aesthetic recognition is inherent, but stratification of aesthetic relations is achieved only later, during the period of the extended design process. The intention is to overcome the gap between ideal values of forms per se, which only warrant an internal harmony of the future structure, and external ones attributed to visual facts of newly created architecture as of the moment of its direct materialization in space on all the levels of city life and culture. It seems as though the aesthetic contribution of the object thus really crystalizes and obtains the sense of objective value only in the atmosphere filled with divergent movements between semi-conscious, conscious and uncertain indicators. This new architecture is characterized by that atmosphere which inevitably manifests an erosion of ideally shaped architectural work and the dissolving of its internal conceptual unity.

From the methodological point of view, regarding terminology and appearance, this is an intellectual incentive which always breeds something different, turning analysis into synthesis and vice versa. Such aesthetic procedure turns theory into practice, and programmatic idealism (identity) or the role of an architect into non-identical or anti-identical (anti-aesthetic). This is not the first time that mannerist contours (forms) of *diversity in the equivalent* appear on the parallel track of history of architectural style. **(Giulio Carlo Argan, Classico anticlassico, 1984)**

ALIVE AT ALL COSTS

We live in a time of intensive communication and direct transfer of images and messages, and we have forgotten a once endemic role of the language. In this medium, which has lost its initial resemblance to the spatial figures to which it gives a name, the items still meet indirectly and are connected through their abstract essences. **(Peter Sloterdijk, In the Same Boat, 1994)** Although the world of signs of a modern man shows weakening of its mimetic power, an awareness remains that the words originate from once natural correspondence with objects, and that there was a meaningful link with the character of figures which cannot be traced today, such as, for example, the constellation. **(Walt Whitman, Leaves of Grass, 1855)** The parallels we still notice in the figures are only a small portion of those which unconsciously define us, but the ability to make analogies is entwined in the work of signs where we are still able to see similarities. Such observation is a flash, a moment in time, a movement in which art associations come to life. This cannot really be retained as another observation, and appears as a glimpse, as temporary as position of the stars. **(Walter Benjamin, The Doctrine of the Similar, 1933)**

For example, monuments still have that artistic character – indefinite potential to stimulate the shifting of a viewpoint and of the meaning which points to a deeper identity (of the world) in their reflection, regardless of the direct message that they represent. Luis Kahn was well aware that architecture was also a monument and used his brick structures to reach for the layer buildings usually achieve with time which gradually frees them from representative meanings. **(Nathaniel Kahn, My Architect, movie, 2003)**. What the positions of the stars produced at the moment of the birth of a man or a history (historical event) is woven into a monument through similarity, and primal and simple **(from the Tower of Babel to the House of the Nation)** materials such as brick, which for us may signify an archive of non-sensual correspondence.

Unlike in classical architecture, kinetic structure is the moving figure which describes time through the trajectory of form and confirms the trajectories of stars seen by every poet. He, Walt Whitman, a poet who walked through a modern city shouting out the words, was a contemporary orator of the ‘similar’, whose voicing of the opinion *appears in a flash, in the moment and from one sound*. But that similarity is not new, it echoes in the constant analogy with the cosmic shape of the being which inspired a Renaissance philosopher of the nature to write that the splendor of the grass reflects the very configuration of the sky: “stars are ancient measures of all the grass and every star in the sky is only a spiritual reconfiguration of the grass, as it presents it”. **(Oswald Crolius, Traité des signatures ou vraye viver anatomie du grand et petit monde, 1610)** Such movement subjects an observer to a necessary rhythm, enabling him to take part in the moment in time when the similarities spark from the flow of things only for a second, only to disappear once again.

URBAN AND NATURAL LANDSCAPE

Tokyo: a quest in the rhizome

Abstract | We will highlight suggestions and problems associated with representing Tokyo as the Far East Asia post-metropolis archetype, starting with the fascination of sci-fi and cyberpunk imagery. The two ideas operate differently within both European and Japanese urban space. This will be emphasized from the work of Deleuze and Guattari through their conceptions of tree and rhizome. The research will not limit itself to demonstrating the rhizomatic and fluid nature of Tokyo's urban space, which makes it a fully-fledged post-metropolis. It will also identify some of the rhizome's main nodes or junctions, thus highlighting its conformation in terms of efficient strength.

Index terms | *post-metropolis, Tokyo, rhizome, space, sakariba, architecture.*

“Tokyo has been my handiest prop shop for as long as I’ve been writing: sheer eye candy. You can see more chronological strata of futuristic design in a Tokyo streetscape than anywhere else in the world. Like successive layers of Tomorrowlands, older ones showing through when the newer ones start to peel.”¹ These words by William Gibson, father of cyberpunk and author of *Neuromancer* evoke the imaginative charm that this Japanese post-metropolis has exercised since the beginning of the 1980s in the creation of an urban space archetype of the future, on the verge of dystopia and wonder.

Tangled architectural bundles give life to pulsating spatial choreographies in a continuous and chaotic succession of minimal and gargantuan dimensions that alternate without any break. Short-circuited Escherian modules settle on a liquefied and multidimensional space where gigantic electronic hyper-surfaces transmit non-stop lysergic and dazzling images. This is almost a postmodern revisitation of the periegetic *mirabilia* literature. From an infinite and bewildering sprawl, an urban representation emerges to seduce us with its immeasurable indifference. Its meaning resists any constraint and logic because it goes beyond them by its very nature.

“Tokyo, a hyper-modern megalopolis, whose modernity is ante litteram, abysmal, and vertiginous, seems to have always existed and, as Barthes observed, ‘it constitutes the specialty of Japan itself.’”²

Here, then, the edgy film stills and sci-fi literature fragments, combined with a new global dimension, have fueled a new path that is both cognitive and imaginative. They trace the lines of a third Grand Tour through the emergent area of the planet spanning from China to Japan, and from Korea to Malaysia³. Tokyo is probably the most iconic and representative metropolis of this quadrant that emanates—as highlighted by the international relations specialist Parag Khanna in his latest essay *The Future is Asian* (2018)—a new global and multipolar economic and political power. However, we must not forget that competition from cities, such as Hong Kong, Singapore, Seoul, Shanghai, and Bangkok is growing as intense as the influence (especially cultural) of their respective countries.

Further, the sense of loss for the growth of information technology and the global economic emergence of first Japan, then followed by the Asian Tigers, has nourished a cyberpunk aesthetic through which Western iconographic imagery has given rise to a dystopian and noir archetypal post-metropolis mottled by fascinating and incomprehensible Oriental marks. How can we forget the shimmering kanji on the neon signs from *Blade Runner* or the fantastical Chiba City of *Neuromancer*?

We could easily say that sci-fi vision from the mid 20th-century and onwards reverted and inverted the famous sentence from *Lectures on the Philosophy of History* by Hegel. Circumnavigating the globe, the world’s history has once again reached the Far East from where it is ready to start again through an inter-connectivity deployment.

Now, cyberpunk aesthetics and functional geography offer keys and suggestions for interpreting Tokyo as a contemporary post-metropolis. However, on one hand, they risk flattening the complexity of urban phenomena in a utilitarian sense, whereas on the other, they keep us tangled among the knits of what new media scholar, Wendy Hui Kyong Chun, has called high-tech Orientalism⁴.

1 William Gibson, “My Own Private Tokyo”, *Wired*, January 9th, 2001, <https://www.wired.com/2001/09/gibson/>.

4 Wendy Hui Kyong Chun, *Control and freedom: power and paranoia in the age of fiber optics* (Cambridge, Massachusetts: The MIT Press: 2006)

The Deleuzian notion of rhizome can help us interpret the urban fabric of the immense Japanese megalopolis: “the rhizome connects any point to any other point, and its traits are not necessarily linked to traits of the same nature; it brings into play very different regimes of signs, and even nonsign states. The rhizome is reducible to neither the One nor the multiple. [...] It is comprised not of units but of dimensions, or rather directions in motion. It has neither beginning nor end, but always a middle (milieu) from which it grows and which it overspills.”⁵ It contrasts with the tree, whose binary structure consists of a settled center that organizes and tightens the multiplicities. Its dual structure presupposes a logical order in which meanings are arranged according to a pre-defined linearity. Imposition of an ontology, which is the metaphysical foundation of Western thought, is implicit in its paradigm.

Apart from any intrinsic axiological-political connotation inherent in these two systems, what is relevant here is the way these models act topologically in the organization of the urban fabric.

The European city features a *forma urbis* which, however residual, refers to an ideal model rooted in a *lebenswelt*. This is the result of a rational order at the base of which explicit logical processes lie. On the contrary, the Japanese megalopolis shows non-hierarchical fractal recursions that intertwine with a proliferating labyrinthine network. Here, the transport network nodes seem to generate hypertext connections capable of creating a loco-spatial continuum as undifferentiated as it is ambiguous. The European city reflects a transcendental order in opposition to contingency. It refers to a harmonic geometry aimed at recreating a metaphysical model where every detail recalls a wholeness that is organized and complete in itself. A common thread runs from Aristotle to Le Corbusier, and through the Renaissance and the epigones of modernity. It unfolds within the urban models of the Western European city and is visible in the Roman *cardo* as in Nevsky Prospect, Sunset Boulevard, and Broadway. It emerges in the Cartesian coordinate system as in St. Peter’s Square.

True, “geometry is very present in Japan, from the countryside to the city, from the rural rice fields grid (条防制 *jōbōsei*) to the the urban grid (条里制 *jōrisei*), and the variability of its application (fragmentation of the 下町 *shitamachi* grids) shows that Japan does not feel a need for general coherence.”⁶ Moreover, the axes, while remaining the foundation of both the cartographic and mnemonic map of a city, are often tinged by an evanescent ambiguity. In fact, except for those present in the *monzen machi* (門前町)⁷, the axes are not designed for a destination: “routes are interrupted (the chicanes of Ginza), obstacles stand in the way (the gates of the detached Akasaka palace), its end is crippled (the void prospective of Omotesandō [...])”⁸. Probably also this lack of geometric coherence, which highlights the absence of a pre-designed fabric, contributes to creating a persistent feeling of proliferating but intrinsically deterministic chaos in the Western visitor.

Add to this the absence of a square-shaped center to reinforce the estrangement that captures the misguided traveler. In fact, despite 広場 *hiroba* (the Japanese word suitable for translating square) exist in Tokyo, they are often shapeless and stereotyped, divorced from their context, if not even a mere road dilation. Japan lacks the monumentality and

7 Literally "the city in front of the door"—small towns and villages built around a large shopping street that ended before the heavy wooden door of a Buddhist temple or the *tōri* of a Shinto shrine.

8 *Ibidem.*, 61.

the socio-political functions of the Western square. Substantially the Japanese square is a shapeless spot, nothing but a passage or at most a meeting “non-place”.

Roland Barthes, in the *L'Empire des signes* (1970), identifies the center of Tokyo in the Imperial Palace (皇居 *kōkyō*). While the center of the Western city is full, according to a metaphysical vision that makes it the seat of a truth and the place appointed to shelter the values of civilization, the Japanese capital's center is instead empty. “The whole city revolves around a place both forbidden and indifferent, remaining hidden in the countryside, defended by water ditches, and inhabited by an emperor who can never be seen, i.e., literally, by someone nobody knows”⁹. Although suggestive, this oxymoron of absent presence is not unproblematic. First of all, one wonders if it makes sense at all to speak of a center in a city that is rhizomatic by definition. Then though, as the French architect Manuel Tradits points out, while recognizing the value of Barthes' analysis from a symbolic and semiotic spatial point of view, “this physical center exists, less void than it would appear, and the streets, turning around it, underline its shape.”¹⁰

From this place on the brink of the visible and the invisible, home of a “sacred nothingness”, eight rings of homothetic avenues unfold but with an intricate and at times uncertain path. Its eastern trajectory leads them to stop near the Yamanote (山手線) or to break against the bay, altering their concentric way. Such a system combines with the large radials. Although starting from the Imperial Palace and moving toward the periphery to turn into national roads, these converge on the Nihonbashi (日本橋), which have been the heart of Japanese transit since the dawn of the Edo period. This is another kind of center, but perhaps it would be better to call it a node, in agreement with a rhizomatic fabric that outlines the evanescent borders of a liminal urban spatiality. Its limits transcend the rigidity of political boundaries and tend to lead to a giga-city that appears to us as a natural and restless evolution of the post-metropolis. The ancient river routes and the criss-crossing highway network are installed on this dense fabric as links to hypertext connections.

It is, however, in the sprawling Tokyo railway network, whose heart is the Yamanote, that we witness the palingenesis of true independent cells. On one hand these configure a disharmonious continuum of places, whereas on the other, they constitute a malleable connective tissue. Through a wonderful infrastructure this is able to give a coherent form to the whole. Nerve nodes morphing into cloned urban centers spread from the six main stations (Shibuya, Shinjuku, Ikebukuro, Ueno, Tokyo, and Shinagawa)¹¹. It is the modern *sakariba* (盛り場).

These nodal junctions, which fully share the characteristics of interzones, had already begun to exist in the Edo period¹² when they served as gathering and shelter places in case of fire, earthquakes, or other calamities. Such a peculiar urban form of Japan often grew on broad streets (*hirokōji* 広小路), as in the case of Ueno, or near the *kawara* (原), the broad river banks that line Tokyo's Sumida. Two more spatial forms are at the origin of modern *sakariba*: the entertainment and trade districts developed along the main axis of the *monzen machi* and the red-light districts (*yūkaku* 遊郭)¹³. Asakusa, built around Sensō-ji, represents the maximum example of the first typology. This

11 *Ibidem*, 163.

12 The first literary source where it is possible to find the use of this word, literally “place full of fun”, seems to be the *Ukyoburo* (浮世風呂) novel, written at the beginning of the 19th century by Sanba Shikte.

13 Sepp Linhart, “Sakariba: Zone of evaporation between work and home” in *Interpreting Japanese Society*, ed. Joy Hendry (New York: Routledge 1998) 232-233.

includes leisure areas built near important temples or sanctuaries. This way people, who may even come from far away, might indulge in entertainment after praying and leaving offerings on religious sites. As for the yūkaku, on the other hand, it is noticeable how many modern sakariba developed from those areas that had once been used to house red-light districts. This turned into a spatial and behavioral continuity.

The catalyzing power of these places made them comparable to European squares. Notwithstanding, their fluid and informal nature, typical of interzones, where trade, distractions, and more or less legitimate occupations are mixed together, had caused these spaces to be relegated to the edge of Edo. Used as an escape from the rigid impositions of the Shogun authority, the sakariba expose the depth of the historical roots of Tokyo's urban heterogeneity. Since the Tokugawa period this has been "the manifesto of a coexistence, of a [...] profound and precarious balance, between the organizing and arbitrary will and the adaptation to contingency, [...] always on the verge of degenerating into a dangerous 'laissez-faire'"¹⁴.

While maintaining those elements of transgression and marginality that characterize them from the beginning, modern sakariba, with the onset of urban explosion and political changes, are swallowed up in today's metropolitan fabric. They become fractal matrices whose proliferating pace not only strengthens the amorphous character of Tokyo but also generates a rhizome in the rhizome.

Federico Farnè, already visiting researcher at Ritsumeikan University Kyoto, is a doctoral student in the Ph.D. course of "Philosophy, Science, Cognition and Semiotics" at the Bologna University. His project, *Contacts and Borders: The Aesthetic of Body and City Between Far East and West*, aims to examine the interactions of the body with the urban space from a comparative perspective by way of the embodied cognition theories. He published some articles of comparative aesthetic on cyberpunk and science-fiction in literature and in cinema. He participated in some international symposium and he was a part-time lecturer of *Iconology and Iconography* at the Faculty of Psychology and Education of Bologna University.

LETTER TO THE PEAR TREE

Abstract | There has been too much talk and too little action on ecological matters and for the protection of the earth. My involvement with nature has always been very intimate: caring for a garden and of protected sand lilies on the Aegean coast where I keep a wild garden, olive orchard and citrus trees. Although I started a text of theoretical arguments, it seemed not really up to the point. Therefore, here I am copying a letter I sent to my pear tree several years ago.

Index terms | *Pear tree, pears, garden, Ankara winter pears, empathy.*

A deep sadness reigns on the earth. We are powerless against the tide ... forests and rivers, fish who can no longer breathe, birds who can sing no more. I am worried about my trees, my brothers and sisters with whom we have grown up together becoming adults and aging together...to them I made a vow of care.

I fear that money forces will come and demolish my garden, will cut down the trees for 'urban renewal' even before ecological disasters arrive.

Is it possible to redeem what has been lost, to redeem the love that the trees have given us with their green, their oxygen their fruit, their beauty and their singing birds? I don't know. I am going to read you a letter I wrote to my Pear Tree:

Dear Tree, you sexy creature. What is this that you are doing, giving birth to tons of fruit and then with the first wind of autumn scattering them to pieces on the ground. I am worried about you, my worries are different each spring, each autumn. Different each year. You stand there still, without moving, without eating, just dancing with your shiny round leaves all green till winter. Each time I open the door and enter the garden I feel your thousand eyes on me; they seem to be saying, "hey here she comes again, she constantly comes and goes. " As I raise my head to look up I see the western branches painted red and even the tiniest ones carrying dozens of pears. After absorbing the humidity of the air and the water of the earth each pear will soon become a little bomb, each will weigh at least a pound. What will happen then?

Then your branches will break: on a pleasant autumn evening as I watch the garden I will hear a sound 'Garch!, a branch will break and a basketful of pears will fall to pieces and be wasted. How can I throw away so many pears? Besides your feelings will be hurt. But it is the same story every other year. I keep telling you: look sister your branches are not as strong as they used to be. It is obvious from their cracked skin they have become brittle. Your skin is as cracked as the skin of an elephant. Dear sister I tell you make fewer pears. But no, you are as obstinate as an Ankara woman. Maybe it is because you give birth every two years that you forget what an ordeal it is.

As your fruit begin to ripen a deep thought gets hold of me: Should I find a fire-brigade ladder, is there an athletic young man in the neighborhood who could climb your branches and gather your pears before they fall? Or should we find a large blanket and stretch it under your branches and make the pears fall with a long stick. That won't do either. The pears that roll down the blanket and hit each other become rotten in a few days. All the while I keep eating pears without stop so that your gifts are not wasted and that you don't think I do not value them. Each other year, when November comes all I do is eat pears. But as the tangerines from my garden in Izmir arrive in November life becomes real difficult, one pear one tangerine, one pear one tangerine. That is all I do. I have no intention to offend the tangerine trees either.

Years ago one evening I found my father standing on two chairs balanced on top of each other above small table. He was trying to reach the high branches. He wanted to collect the pears before they fell and keep them safely till they became juicy. He was 78 and had asthma. If he had coughed his bones would have broken into pieces with the pears. But he invited me outside the garden on my first warning. I see that I was never as crazy as my dad, all I do is devour the pears before they go rotten.

You cannot imagine how sad I was when one of your branches broke. It seemed as though my child had been wounded. I know, if a branch of yours is broken it wont hinder you from walking or from writing your articles, but I feel that your wound is deeper inside. I feel anxious because I am not sure how such incidents affect you or

how much pain you feel. That year I decided to prune one of your old branches. After consulting a few gardeners, we decided to do this in the coming spring. I called one of my most confidential friends. The angle of the saw was calculated, it was made clear where the branch would fall, my neighbor Ridvan Bey climbed the thickest branch, below, the gardener was waiting to hold the branch so that it would not break. I inside almost in tears. I kept going out to see if my tree was OK. Finally the cutting was over, a terrible anarchy on the ground, leaves were helter skelter, what a sad view it was!

The following year as I burned these in the fireplace I had a bad feeling. But As I look at you now I see dozens of new sprouts coming out from your amputated branch and that there are many pears on each. Sometimes I ask myself if this is much ado about nothing. Even when your branches break and your pears go to pieces, you seem to be quite happy. A few times your leaves had some pests, I would be worrying when I used pesticides. But that is over now and you are in full health. You seem to be making fun of me, your shiny leaves are playing in the sun, they flirt with the birds and with the lightest breeze they dance and sing. Don't think that I do not see or hear, when I consider your relation to life you seem to be a better artist than I.

Your big sister

THE VOID AT THE HEART OF TOKYO. THE VOID AS THE CORE OF THE FAR-EASTERN SENSIBILITY

Abstract | Roland Barthes has described Tokyo as a city whose downtown area is empty; this idea, however, can be taken as a paradigm for the entire urban fabric of Tokyo. The great primordial forest of the Meiji Shrine, encased in urban hypermodernity, is one of its cornerstones; and Tokyo Bay, which has become a marine lake embraced by the city, expands this dialectic between emptiness and fullness to its extreme. Land and water, gardens and canals, extending as they do along a horizontal plane, relate dialectically to the verticality of the skyscrapers and to the telluric and majestic backdrop of Mount Fuji.

In order to understand the space-pause, the space interposed “between” other spaces in Japanese architecture, we need to go back to classical Chinese thought, to the importance it assigns to the idea of the void. The space-pause appears in the urban fabric as the sensorial correlative of emptiness that assumes other forms, such as the syntactic and constructive element in all the areas where Japanese “ways” appear. Not only “owing to” and “with” but “through” the void, they achieve the highest degree of expressiveness in a process whose end point is the maximum rarefaction and emptying of form.

The *Tao Te Ching* is the most remote reference for the concept of the void in the Far-Eastern tradition. The classical Taoist begins by focusing on the fact that the Tao (way) eludes definition; it can be “described” only apophatically. The Tao is emptiness that generates and swallows everything, but it is an advancing, immanent and non-transcendent void, a charge of energy, an emptiness-energy that suggests interesting analogies with the so-called quantum vacuum, as opposed to pure nothingness. From the immanent void of the Tao emerges the principle of *qi*, the “breath-energy”. The *qi* is expressed in the oscillation of the binary *yin-yang* and plays a strategic role in a figurative art, i.e., Chinese “landscape” painting where incompleteness, indefiniteness, *the void itself* is assumed as the generative foundation of *form*. The void is the transcendental possibility of this bipolar alternation (*yin-yang*) in which *qi* appears. Two famous verses of the *Heart Sutra*: *form is emptiness, emptiness is form* (4th century A.D.¹) convey what the Tao asserts through well-known images: “We join spokes together in a wheel, / but it is the center hole / that makes the wagon move. / We shape the clay into a pot, / but it is the emptiness inside / that holds whatever we want. / We hammer the wood for a house, but it is the inner space / that makes it livable. / We work with being. / but non-being is what we use.”² This “useful emptiness” is a genuine “constructive” principle, one immanent in both nature and human activity, that which in our tradition is *poiesis*, from the most “useful” everyday objects (the wagon, the pot, the house) to the arts. In the Far East, emptiness (*ku* in Japanese, *wu* in Chinese) thus disclosed an essential, constructive role in sensory and signifying processes that are the substratum of fundamental Japanese aesthetic ideas. From this perspective, emptiness itself could be considered literally the most basic aesthetic and semiotic unit of the Japanese arts, owing to the critical influence exerted on them by Zen spirituality from the Muromachi period onward. This way, in Japan emptiness becomes the common denominator of the different arts, or “ways,” from poetry to Noh theater, from painting to architecture, from the tea ceremony to garden landscaping and the art of floral arrangement³. It is due to emptiness – as the white space between brushstrokes, the pause or suspension of action in Noh theater or in the flight of the arrow, the silences between sounds during *chanoyu*, etc. – that each expressive gesture can acquire its aesthetic and symbolic meaning in sensible forms. A void that is immanent in form, as the quoted chapter XI of the *Lao Tzu*, and more directly in the cited passage of the *Heart Sutra* indicate. Emptiness and form are connected by a reciprocal implication that “in-forms” all reality. For this reason, the void is not nothingness, like “non-being” in the western tradition; rather, it is the condition of possibility of all phenomena, their appearing and disappearing in the structural impermanence of all sensory reality, according to the Buddhist concept of the vacuum. Something similar to the Platonic *chora*, the place-

receptacle in which the Demiurge creates the forms he contemplates. Western art, instead, has remained anchored for millennia to the opposite principle of *horror vacui*, of which linear perspective, with its geometric three-dimensionality (where the same perspectival empty space becomes full) is the clearest illustration in the figurative arts.

Therefore the essential element of Far-Eastern aesthetics is the unexpressed. In the allusive and elliptical Nō theater, Zeami Motokiyo attributed great importance to the silent pauses during the performance. *The interval during which nothing happens* represents the flower, the essence of interpretation. Further, the haiku is harmonious because it is elliptical. The voids between the sections create a relationship between things that seem unrelated. Harmony is created by the receiver's reconstruction of mental procedures that the poet has deliberately left unexpressed. The poet sets aside his own self, melds with natural phenomena, and registers the events, allowing them to emerge as they are, and conveying them in a few syllables, according to the Zen rule of reducing things to their essence (*yohaku*)⁴.

The character that denotes the idea of *interval* or *pause* also appears in the word "time" (*jikan*). Importantly, the word itself indicates the fusion of space and time, both imagined as "intervals", and quite distinct from the categories of western thought. It is, indeed, the character *kan* that leads most directly into the *aesthetics of the void*. Due to its basic meaning and the wide variety of linguistic uses derived from it, this character has been taken, with its more common pronunciation *ma*, as the category of choice of the Japanese aesthetic sensibility. When the character is pronounced *aida*, it represents the preposition "between" and is composed of the character *mon*, "brings," and *hi*, "sun." The prepositional meaning of the sinograph is determined by the position of the character that represents the sun, placed "between" the door jambs. In combination with the other characters, it also acquires the meaning of "room", with the pronunciation *ma*.

Here we have an avenue to return to the idea of the void: in the correspondence between this first concrete meaning that the character produces – that of "room" – and the word "vano" or room, which, in Italian, refers to a room as empty space. Whereas the "vano" represents the idea of an emptiness contained within a predefined space, the Japanese room, whose boundaries are indicated by moveable partitions that are necessarily temporary (*shōji* and *fusuma*) is a space visualized as an interval within a larger void: an "in-between" that opens onto a space and generates a new one, made possible by the void, which also stands for its usefulness (as stated in the quoted passage of the *Tao Te Ching*). The western room "stays" and allows us to "stay," according to the etymology of the word ("stanza") in the Romance languages; on the contrary, the Japanese room appears and disappears, like the objects inside it; it is the negative version of the western room, just as the corresponding idea of emptiness is the opposite of the void, as traditionally conceived in the West. The Japanese room appears and disappears not only in space but also in time, as it manifests itself also as a temporal interval. The sun "between" the door jambs, in fact, also introduces the temporal element into the essentially spatial dimension of the image, and it confirms the indissoluble entanglement of space and time that unveils its full meaning precisely starting with architecture. Thus, the *tokonoma* (a word that, with its *ma* ending, denotes the niche inside the most important room of the traditional Japanese house) is not merely a spatial interval within the room; it also becomes a temporal interval, wherein the eye contemplates the calligraphic roll and the *ikebana* floral composition located

4 See, G. Pasqualotto, *Yohaku*, Padua: Esedra Editrice, 1992.

in a space that is considered sacred. Thus, there emerges the chronotopic dimension that characterizes all Japanese architecture, where space is not subordinated to the perspectival unity in which western reason has enclosed it; rather, it takes the form of a continuous series of transitional spaces, precise moments in an experience that is literally “aesthetic”, which can occur only in time.

Thus, before entering a Japanese house or temple, we pass through the *genkan*, the atrium where we remove our shoes in a transitional moment that is also temporal. Another transitional space in the traditional Japanese house is the *engawa*, a veranda that projects out onto the garden: a line connecting the exterior with the interior, a place of passage, but also of contemplation and meditation in both temples and traditional houses, a genuine zone where space-time is suspended and which, for this reason, represents the fullest architectural expression of *ma*.

Intermediate spaces are features not only of the structure of living spaces; they are also evident in the fabric of the major cities of Japan, where we experience unexpected glimpses of unsullied nature, genuine areas of spatial and temporal “suspension” that, in Tokyo, can be of enormous size. An aerial view reveals a green chasm in the center of the city, the nucleus of which being constituted by the Imperial palace, which is a villa encircled by a vast park and protected by moats and high walls. The center of Tokyo is “empty”, as Roland Barthes⁵ has incisively underscored. Similarly, the Shintō Meiji Shrine, dedicated to the modernizing emperor and Tokyo’s “monument” par excellence, is now concealed in the heart of the city like a prehistoric village in a forest that has remained uncontaminated, like the ancestral temples of Ise.

In the West, the city center is, by definition, the place of monuments, the area that is richest in meanings and symbols. One of the features that distinguish Tokyo and, in general, the Japanese cities from the monumentalized and centralized European cities is, precisely, the low-level monumentality. The temples of Kyoto, for example, are delimited and hidden by greenery and by simple enclosures on the outskirts of the city⁶. We are beyond Cartesian space and also time, or better, history, at least as we are accustomed to understating it in the West: namely, evolution, progress, *entelécheia*.

During the Tokugawa period – otherwise known as Edo from the ancient name of Tokyo, designated as the residence of the *shōgun* of the homonymous dynasty (1603-1868) – Edo, paralleling the unfolding of an uncontrolled urbanism, which is inseparable from that of the middle class, is transformed from a small community on the periphery into the most populous urban center in the world. Tokyo is built over the ancient urban structure of Edo, which emerged on the seven hills of Yamanote (topographically and socially the “high city”) around the fortified nucleus of a castle and the residences of the military aristocracy scattered throughout the land. Normally, we Europeans can identify in the unity and morphological compactness of our cities a *forma urbis* that is still visible. It is difficult to identify the structure of today’s Tokyo. Its layout, however, can be discovered through careful study, and with such scrutiny we discover that, from its origins, it has been “without form” – or, rather, that it has an “open” form. We are dealing with an urbanistic process, rather than a project, one determined by contingent, successive additions.

The verticalization of space is, perhaps, the main feature of Tokyo’s urban landscape, but it is not reducible to the height of the skyscrapers. We find ourselves immersed in a

three-dimensional space, where elevation is not, as in the western city, the orthogonal projection of an urban design as traditionally conceived, i.e. as flat and laid out against a perspective background. Here, the elevation is an important variable of the urban design itself, a carefully planned and articulated aspect, like that of the surface, by means of elevators, escalators, and ramps that stratify the city, where people and vehicles swarm simultaneously on the roads, waterways, aerial terraces, and superimposed bridges and pedestrian walkways. We need only enter on foot into any point of this palimpsest to realize this as we continually traverse from interiors to exteriors, orthogonal swerves and horizontal-vertical transitions, passages through building clusters that are perfectly homogenous or surprisingly inconsistent, the labyrinth of a unique circulatory system of the urban organism. The original layout of Edo was influenced by a deeply-rooted penchant in the Japanese sensibility for establishing a relationship between human settlement and the surrounding nature, city and countryside, coming together in an organic unity due as well to the absence of perimeter walls. Thus, in the Tokyo of today an urban design is perfectly identifiable, one that develops on a bay, with the scenic backdrop of the ocean and Mount Fuji, thereby replicating the ancient integration of nature and landscape that circumscribed Edo in a singular design. The name Edo itself means “estuary.”

Tokyo appears as a water city⁷; water was a critical factor in the urban topogenesis of Edo, where the Sumida river and its mouth, the sea, the canals that flow into the moats of the castle, have represented a unique circulatory and propulsive system for the city. This is a system that, in recent times, has seen the order of its factors overturned. While before it was the city that adapted to the water, exploiting its potential for defense and transit, from the second half of the last century it has been the city that has taken control of the water, with an increasingly intense urbanization of the bay, which is now crisscrossed by a spectacular network of bridges, landings, and artificial islands. Having become a marine lake embraced by the city, the bay pushes to the maximum the dialect between emptiness and fullness: land and water, gardens and canals, extending on the horizontal plane, enter into dialogue with the vertical skyscrapers and the telluric, majestic backdrop of Mount Fuji.

GILLO DORFLES'S AESTHETIC JOURNEY ALONG THE AMERICAN PACIFIC COASTLINE: A PROAIRESIS OF IDEAS

Abstract | At the prompting of Rudolf Wittkover, Thomas Munro and other scholars involved with the *Journal of Aesthetics and Art Criticism* – an American militant journal of aesthetics and art criticism, and the ideal continuator of the *Zeitschrift für Ästhetik und Allgemeine Kunstwissenschaft* – Gillo Dorfles was awarded a bursary, a travel grant, to deliver a series of lectures in the most prestigious universities of the United States, which, over the course of four months, took him across the country from one coast to the other. This international experience represents the initial, fragmented, phase of his career as a scholar. The lectures prepared for that occasion constitute the basis of *Discorso tecnico delle arti (Technical Discourse on the Arts)*, published by Lerici in the same year. From his notes and travel diaries derives a periegetic prose text titled “L'America tra Occidente e Oriente” (“America between the Occident and the Orient”), which appeared in the periodical *Letteratura* in 1954. The descriptive account of the American continent – already narrated in Italy by Emilio Cecchi and Mario Soldati – entails the exploration of the land from an observational and imaginative perspective, while traveling through both the urban and the rural landscapes, with their great variety. The journey, however, also tends to become a philosophical exercise in that it provides a key to understanding the anthropological and psychological relationships between the two coasts. In other words, the anthropological, social, organizational, behavioral, cultural, and religious phenomena illuminate the respective configurations – Atlantic and Pacific – in terms of an aesthetic and proairetic analysis of the civilization in the context of the present and future complexity of our world. It is precisely this penetrating comparative, naturalistic approach and the intentional awareness (*proairesis*) that informs Dorfles's interest in the spiritual and the sensorial aspects of the ancient civilizations facing the Pacific: understood as an ocean of connections and reciprocal occidental-oriental relationships. First among these is the Japanese civilization, from an iconic-linguistic, aesthetic-artistic, and philosophical-value-based (Zen, in the sense of *wabi-sabi*) perspective, which is an important element in Dorfles's aesthetics – as seen in the essays *L'intervallo perduto (The Lost Interval, 1980)*, and *Elogio della disarmonia (In Praise of Disharmony, 1986)*, where we find comparisons of the different global structures at the root of the psychological and perceptual life, as well as the “doctrine of aesthetic perception specific to art”.

Index terms | *Dorfles, Atlantic Coast, Pacific Coast, proairesis, Zen, wabi-sabi.*

1. As has been observed, even in the recently published posthumous edition of *La mia America (My America)*¹, Gillo Dorfles's first trip to the America in 1953 is at the root of many aspects of his criticism and philosophy, and the cultural implications of his aesthetic views on the Orient. That year Dorfles is awarded a travel grant to present a series of lectures encouraged a year earlier by Wittkover and others in the *Journal of Aesthetics and Art Criticism*, such as Thomas Munro, the editor. These international experiences constitute the fragmented, initial phase of his scholarship. From his four-month stay emerge a variety of impressions and reflections, which resulted in a narrated journey published in *Letterature* (March-June, 1954), titled "L'America tra Occidente e Oriente" ("America between the Occident and the Orient").

One of the article's last paragraphs (section XI) is titled, appropriately, "L'inversione di oriente e occidente" ("The inversion of Orient and Occident"). We are dealing with narrative or, more precisely, periegetic prose. We might even call it "imaginative" prose, but it is no less complex for that. The issues addressed here arise from several passages of that publication. To appreciate the independent spirit expressed in these excerpts, we need to look at the full range of subject matter (religions, society, glamour, architecture, customs, psychosomatic medicine, etc.) and focus on observations that stand out once we go beyond the "civilized zone" commonly associated with American East Coast, which is really much like the final phase of the "European Far West".

This would be a sort of advanced stage *Abendland (The Occident)* theorized by Spengler, which Dorfles translates adroitly as "Paese della sera" ("Evening Land"): the product of a civilization (in the sense of a "situation in which the notion of *Abendland* is debated"). For him, "something truly different seemed to be appearing on the 'barbaric' west coast". This statement shows traces of proairesis, especially as regards the "anticipatory" or "predictive" element of a "future semanticity" (i.e., "meaning that can be attributed to one's own conjectures and premonitions").

Without mentioning all those who predicted such a reversal, Dorfles's proairetic perspective cannot be seen insignificant if we consider the phenomenon subsequently called by Harvey Cox, *Turning East*, in reference to American society, culture, and literature.

Today we have another world view, entailing economics and geopolitics, which looks favorably to familiar traditions in "developing" Asian countries, even if these are enmeshed in the strident advance of new global markets (food, medicine, disciplines of the mind and body, religions); but the advance impacts the fundamentally weak social ties of western societies and their values.

Dorfles's interest in the Orient is complex and incisive; it appears clearly in a text like *Elogio della disarmonia (In Praise of Disharmony, 1986)* and is the foundation of his philosophy and criticism. That same element can be found in pages of his diary or notebook, alongside expressions of insatiable curiosity for "the mystery of the Japanese mind and spirit", which emerges from the notes of a journey to Japan. Dorfles writes:

An old passion of mine for Japanese culture that many years ago inspired me to acquire a large volume on the Kanji (Sino-Japanese ideograms) may be the reason for my journey. Now, confronted with such a westernized metropolis as Tokyo, along with the technological and electronic wonders of the country, I must confess that the Kanji continue to amaze and convince me that, if one day they were to vanish, the entire culture and originality of Japan would disappear with them [...] And, here too, the formative power of the ideogram as the root of all creativity that reveals its presence and tells us that "thinking in images", which accompanies the child and "shapes" his or her brain from infancy, is

truly dominant. As a result, I am persuaded by the view of neurologists who reportedly have found greater development in certain areas of the cerebral cortex, which can be attributed to the early use of the Kanji [...] and the development of that form of thinking, one that is both visual and conceptual, which is less evident in our part of the world, whereas in Japan it forms the basis of cognitive and creative activities of every individual and of the entire population.

Comparing this passage with a page in the diaries, which we should always keep in mind, we find that the reference to the book of kanji appears in 1964 (“I have just purchased a treatise on standard kanji and, even if I never learn Japanese, the study of a few dozen ideograms alone has opened up unexpected cultural horizons for me”²). The mention appears years after the period in which interest in the Japanese expressive and cognitive forms result in the first studies, published respectively in *Rivista di Estetica* (“Appunti per una ‘estetica Zen’ in rapporto all’arte moderna” [“Notes for a ‘Zen Aesthetics’ Relative to Modern Art”, 1959] and in *Ultime tendenze nell’arte di oggi* (*Latest Trends in the Art of Today*, 1961). It should also be noted that the diary notes cited come after an interesting repudiation of the most recent trends (“Of what use to me are the latest trends in literature and philosophy? To what extent do they enrich my work? [...] Among the few things that can truly enrich me are, perhaps, the languages, above all”).

2. As we have seen, this variety of models makes Dorfles a scholar capable of appreciating both the aesthetic phenomena of the Occident (the most topical one being the social forms of style and consumerism), and those of the Far East, which correspond to a kind of thinking “that is at once visual and conceptual”; this also makes him a western thinker perfectly in tune with oriental aesthetics.

By the same token, a predictive hypothesis of a general *inversion* of Orient and Occident (which, in fact, was originally formulated in a California university), the actualization of a possible utopia that the author predicts, applies to every established binary that life’s changeability destabilizes (for example, the “binary” mythos/logos).

Dorfles deals with this issue in various writings, such as *Intervallo perduto* (*Lost Interval*, 1980) and *Dal significato alle scelte* (*From Meaning to Options*, 1973) (which represents, to a certain extent, his “practical reason”, if I may be allowed the comparison) in terms that cannot be dealt with in the present venue: proairetic dynamics that focus on the common denominator of European cultural and moral being, its “way-of-being-in-the-world”. He also deals with these matters in *Elogio della disarmonia* where he identifies involution in the mental habits of western peoples:

It is certainly not easy to describe the situation in which the idea of the *Abendland* is debated today (It has never been more appropriate to describe Western Europe as the “Paese della sera” [“Evening Land”]: the twilight of a moribund civilization). The *terra firma* – not only ideological and anthropological, but ethical and aesthetic as well – on which its progress was still based in the middle of the last century, is slowly and inexorably disintegrating, perhaps sinking into bogs where eurhythmy, harmony, and symmetry no longer thrive, but where an emergent archipelago appears among the algae of eutrophication and the froth of pollution (These are not merely metaphors: eutrophication of algae, but also of ideas that are too much influenced by rotting materials; pollution of the oceans, but also of lucidity, as in “weak thought” or “negative” thought). What can emerge, then, from this decline of traditional certainties, and from this new seething of tumultuous and perhaps fecund forces?

The metaphor of the eutrophication of the European moral and cultural humus suggests an apocalyptic image of stagnation and decline: a typical image of asphyxiation, poisoned waters, and “confusion of languages” that characterize the semantic drift of terms that are boldly transported from one language to another.

And so, reflecting on transformations destined to be actualized “in our society, our customs, and our way of being and thinking”, Dorfles asks what foothold – “for our thinking and our world view” – can re-establish a renewed “intervallic consciousness” in the swarming of *Vorstellungen*, “that is, images that recur”, and of *Wahrnehmungen*, that is, “authentic perceptions” – among the toxic algae and pathological images of a life nourished by forms that have reached their expiration date, as in the “waste land”.

As he does for the “trend toward degree zero” in literary communication, against which he champions a “return of the values of reciprocity” or the *relationality* of language, Dorfles envisions an “assessment metric for the phenomena of life, art and society”, a sort of “preference platform” that functions like a necessary proairesis emerging from the current crisis: an *inversion* of models that we detect in the air and that returns us to the topic from which we started, namely, Dorfles’s encounter with the American Pacific coast:

But is the Pacific perhaps not a great, immense Mediterranean? This was one of the strongest and most unexpected sensations that I experienced [...] The Pacific is an immense sea on whose coasts emerged the extraordinary civilizations of China, Japan, India, the islands of the South Pacific, and, further North, Alaska; while in its occidental sector, the Incas, Aztecs, and the Mayans alternated their mysterious, often disconcerting, and certainly very evolved civilizations. It was not only the environment that shaped their culture, but a sort of telluric destiny, a geographic karma that pushes minerals, streams, plants, and humans toward certain parts of the world [...] Not only this, but if we look more closely the cultural and creative aspect of this vast area of America, we discover a swarming of new artistic expressions, a new and vigorous development in architecture, and many groups of imaginative young artists and sculptors; in other words, an unexpected ferment of ideas and innovations. For this reason, I maintain that in the future the development of an original and autonomous American culture is more likely to occur on the Pacific rather than on the Atlantic coast, and this is not only because of the discovery of oil or uranium deposits, but rather because these vast and still not fully explored territories face the Pacific Ocean – hence the Orient. If America can manage to integrate itself with the still living seeds of the Pacific civilizations, it is probable that from such a melding of cultures new and unimagined experiences can result [...] But it seems to me that a spiritual *integration* of the Far East and the Far West is propitious. America will no longer be able to find new creative impulses by drawing inspiration from a Europe that is by now rather “exploited”, but rather by distancing itself more from our civilization [...].

There is a naturalistic and philosophical tinge in his observing “rocky coasts whipped by seething waves”, and his viewing a simple “ethnographic-geographic map” that hangs in “a museum in California”. We must, therefore, turn to the memories and impressions generated by this American journey in order to contemplate “proairetically” a fertile *inversion* of cultural hegemony. We should also refer to the literary output of our thinker, where we find elements of the philosophy and the spirituality of the Far East (Zen, in particular). Mention of *Elogio della disarmonia*, which is entirely devoted to the spirit of asymmetry, should suffice.

3. Beyond its application to aesthetics, the greatest value of the concept lies in the consideration of asymmetry as a substitute or twin of proairesis. The polarity between symmetry and asymmetry does not lend itself to perception as such, but, rather, has an impact on all the values pertaining to the inversion of Occident and Orient.

Though the European artistic poetics of the post World War II period promoted its recovery, with typical allusions to Japanese “Zen” and Chinese Taoist traditions of one thousand years earlier (the taste for irregular forms and the asymmetrical arrangement of stones in the dry landscapes of the Zen temple of Ryōan-ij, the plan for the Katsura Imperial Villa with its famous “tea room” or “drawing room”, or “chamber of asymmetry”), Dorfles’s interest in Zen is not limited to art. He uses its symbolic language in order to access a deeper level of modern occidental feeling and thought. As regards the post-war artistic currents, Dorfles writes:

In the improvised cultural filiations in certain of today’s art, we must recognize an albeit vague trend toward something different from the usual occidental artistic practice, something that presents itself today to the man of the *Abendland* not only as a vision of freedom and expressive renewal, but one that undoubtedly betrays a need to find elsewhere those communicative and linguistic possibilities that our European civilization no longer offers.

If it is the trend of artistic practice toward something different from the occidental style and expressive attitude that initially awakens the interest in Japan on the part of our scholar, it is nonetheless *aisthesis* and its gnoseological elements that are of philosophical interest to Dorfles; that is, the cognitive constants of both irrationality and logical knowledge that affect the new perceptual and hermeneutic polarity between symmetry and asymmetry.

The oriental charm of the stones in the garden of Ryōan-ij, arranged according to a variety of geometric criteria, cannot but suggest a comparative vision from the standpoint of forms, while it is related to the Goethean concept of “metamorphosis”, which is not very different from this type of reasoning: from chemical compounds to the structure of crystals, the symmetrical-asymmetrical specularity of our brain, which is the source of all creativity, whether it is biological or it has implications for the problem of freedom. An aesthetic preference, therefore, that concerns philosophy and existence as a whole, together with the world view that can emerge from it, one directed toward the search for models that countervail the situation that pervades the human *Abendland* (at least in terms of nihilism, which, according to Heidegger, shapes the final phase of western history).

Turning, then, to the classes and particularities of every language, the asymmetrical clearly pertains to functions that remain difficult for the occidental mind to assimilate, since it has always been trapped within the web of symmetry – as Dorfles points out in an article from 1971 (“Premesse antropo-cosmologiche a un’estetica dell’asimmetrico” [“Anthropological-Cosmological Premises for an Aesthetics of the Asymmetrical”]), which predates *Dal significato alle scelte* and *Elogio della disarmonia*:

Why has mankind always been obsessed with the problem of symmetry? Why, even from the fragmentary recorded history of the first millennia, do we always find ourselves faced with questions concerning specularity, equilibrium, proportion, harmony, modularity and – most definitely – symmetry? There can be only one reason: the same physical and psychological constitution of and the universe. The same “laws” that govern some of the most conspicuous physiological, physical, cosmological, etc. situations apply to this essential principle; but, at the same time, they vary from that principle or shatter it. Only by plumbing the mysteries of symmetry and specularity can we understand that, like the history of mankind on earth, the evolution or involution of civilization is based on a constant conflict between the symmetrical and the

asymmetrical.

Nevertheless, the neuro-physiological explanation justifies, in a way, the hypotheses regarding the dominant factors (right and left hemispheres – then substantially reworked in *Mito e ragione (Myth and Reason)*, 1989), and regarding the authority of Aristotelian thought, whereby the author sees in “ideative and cognitive mechanisms” a “tending toward the asymmetrical [...] a shattering of the apparent laws of symmetry”.

In the cited “Appunti per una ‘estetica Zen’ in rapporto all’arte moderna”, the author deals with aesthetic notions pertinent not only to art but to the oriental mentality as a whole, which eludes our principle of non-contradiction, perhaps by intuiting a special kind of equilibrium that is different from our common propositions and conceptions. Even in this scenario, I limit myself to brief examples that illustrate innovative developments in the relevant discipline – in particular those deeply rooted in occidental peoples – far from the popularization that some terms, symbols, and Far-eastern therapies enjoy today.

Dorfles chooses to start with a general cognitive subdivision that reflects the diversity of mental activities and, consequently, the organization of human capacities: that is, the Buddhist distinction between two basic types of knowledge, *prajñā* and *vijñanā*. The second term corresponds to rational knowledge, the “principle of differentiation”, which is the foundation of all intellectual and discursive knowledge; *prajñā* is the equivalent of transcendental knowledge, the fundamental noetic principle, absolute and irrational, or intuitive knowledge. According to Suzuki, “*Prajñā* sleeps in us under a thick blanket of ignorance and karma”, and it is the task of the Zen practitioner to re-awaken it.

Assuming that *prajñā* is something “much more meaningful than what our ‘occidental words’ can express”, and *vijñanā* is something that may remind us of Schopenhauer’s *principium individuationis* – Dorfles’s use of the two Japanese terms indicates, once again, his vision of a unified aesthetic sphere: increasingly widespread expressions of a common sensibility, not only an artistic one, and psychophysical behaviors.

Thus, it is the ubiquitous axiological modifications in the notion of time and the tastes of the human subject – and not the artistic productions in the first instance – that bring about a gap in today’s widely perceived conflict between *being* and *willing*. It is a kind of Goethean *Umgestaltung* (reworking), that is to say, a temporal retrogression that brings about the “pause” and the essential behaviors conducive to an *inversion* of our values and adulterated percepts in the domain of experience and in the “extreme impairment of existential time”. Finally, revalorized is the sense of a *diastematic* pause, “for those who want to maintain intact [...] their own autonomy” in order to experience “a completely different notion of time [...] that is not yet dominant among some Zuni and Navajo peoples”. Also revalorized are those Zen concepts that Dorfles has always studied, namely, *wabi* and *sabi*, connecting them with as many psychological processes and axiological judgements.

Suffice it to underscore the fact that the *wabi-sabi* experience encapsulates “that element of privation and absence, but it is a positive privation and i.e., that sense of fullness acquired through a lack that transforms personal experiences into natural elements and generates an ardor that is, in a sense, suspended over a void, one present in the great events, the great laws of the cosmos as well as in minimal materials; similarly, it is in the style of products made in an unaffected manner, an intense feeling of subdued things that surround us – and whose recesses we could go on describing forever – which should bring us face to face with “the vacuity of many of the mythemes of our time”.

In Dorfles’s work, these themes are asserted vigorously, but with a delicate touch, and they are part of the legacy of essential principles in world philosophy, to

which our author periodically has recourse (such as Humes’s binary, *novelty facility*, Goethe’s dyad, *Gestaltung Umgestaltung*, etc.), as we can find in his studies, including his last writings, which invite the reader to explore the depths of his thought.

As for the term *wabi-sabi*, I would say that it remains a constant in a great number of emerging reflections, as do all the constants that identify the development of the author.

4. Is there more that can be said on a meditation on the American Pacific coast from more than sixty years ago? Perhaps only a reflection on the changeable “becoming” of Dorflès in the mirror of an oceanic fluidity, the subtle slowness, or the majestic presence that splinters in favor of the theoretical insight of a general condition that is never constrained or fixed, but experienced as “oscillation”, in the predominance of thought and unstoppable ephemerality.

As regards Zen, *wabi* and *sabi*, in the notebook *Horror pleni (Fear of Full Spaces)*, published in 2008, we find a text that appeared in the journal *Agalma* (“Disarmonia, asimmetria, Wabi Sabi” [“Disharmony, Asymmetry, Wabi-Sabi”]), which was written on the occasion of the inauguration of the exhibit curated by Giancarlo Calza (*Ukiyo, Il mondo fluttuante [Ukiyo, The Floating World, 2004]*). The topic of the article is this proairesis related to the floating world and the concept that expresses it, i.e., *ukiyo*.

Translated roughly – writes Dorflès – *ukiyo* means “floating world”: an image-symbol that embraces the entire social, cosmological becoming, the moral and religious afflatus of the Japanese civilization and feeling, as expressed through its artistic genres, starting with Noh theater and the great, lyrical, Sino-Japanese essence of mythic elements, ethical and animalistic trends, etc., which constitute its basis.

We can return, then, with the calm of the ancients and a new knowledge, to the spirit of the haiku, attributed to Issa, a lyrical flower that Dorflès held on to from the time of his initial reading of the book by D. T. Suzuki, *Zen and Japanese Culture*, a poem that reads as follows:

A firefly

floating floating

passes by

Dorflès writes:

Apart from the fact that the whole atmosphere of the poems is one of simplicity (meagreness), but also of restlessness (the firefly that quivers as it flutters past). What expresses fully the concept of floating, *ukiyo*, even in grammatical terms, is the use of verbal repetition *yurari yurari* (floating floating), which is common in Japanese and Chinese [...] because it represents a linguistic feature not found in other occidental languages, and indeed indicates imprecision, instability, chance (perhaps the equivalent of our use of the repetition of certain adverbs, such as *poco poco* (very little), *chissà chissà* (who knows)). In short, *yurari yurari*, supposedly denotes non permanence, the transitory quality of the flight of the firefly, which, however, would allow the actualization of that magical moment that a long duration would cause to vanish: an “imperfection”, more effective, however, than it would be in the case of a stable and static event.

If, after a long perusal of the book of life, we look for the symbol that captures everything and, at the same time, turns toward the natural isthmus through which our author connects rivers, continents of thought, probably this delicate and humble insect *wabi-sabi*, restlessly moving before our eyes, can also be the symbol of the brilliant personality of the scholar Dorflès, who, with unmatched energy, passes through

different Americas.

An example of freedom from imposed models and of independence of thought (as well as of economy that records the changes of the transient moment) that never ceases to ride the waves, encountering always new forms, describing with rigor a concept that fades before our eyes, Dorfles conceives of the aesthetic world as a category that conveys “floating” being.

This is a category that resembles the gentle flight of the firefly or the restlessness of the inexhaustible fluctuation of thought; like the masses of foam from the crashing waves of the Pacific (which is so different from Eugenio Montale’s Mediterranean, his lifelong friend), and like the repeated buffeting of the waves that the currents of perennial experience shape his phenomenology.

If “imperfection” means irregularity, asymmetry, and if occidental predicates tend to render static what is delicate and constant change in a stable *ousia* (essence), we have an aesthetics of becoming that coincides with the epistemic inconstant in which it is mirrored. If, despite a deliberately “weak” thought, it consists in a solidity derived from the constancy of transience, it would not be far-fetched to transgress the boundaries of language, indeed to establish relationships among remotely dissimilar things that are bathed by the same sea of sense perception, from which a *theory of the senses* draws its material.

Thus, from *wabi-sabi*, as from other occidental concepts (those of Hume, Vico, Cassirer, etc.), there is a convergence on the same mental schema “synonymous with change that perpetuates itself in duration” (Goethe) and is on the verge of restoring that which becomes its *Gestaltung*, “type”, or embryo; in other words, the “first operation” and, finally, the attempt to compare the aesthetic category with the flight of the firefly.

Luca Cesari grew up under the guidance of Luciano Anceschi and he dedicates his work as a scholar mainly to the recovery of a kind of aesthetic that has characterized the romantic and twentieth century tradition. He is the author of several books with publishers such as Allemandi, Scheiwiller, Archinto, and Bompiani. He holds the Chair of Aesthetics at the Academy of Fine Arts in Urbino. He is the author of several publications. The most recent include: the critical edition of the original draft of the monograph by Francesco Arcangeli, *Giorgio Morandi* (Allemandi, 2007), the writings of theoretical reflection on the art history of Arcangeli himself, *Uno sforzo per la storia dell'arte* (A contribution to the history of art, MUP- University of Parma, 2004), the opera omnia of the aesthetic writings of Gillo Dorfles, *Estetica senza dialettica: scritti dal 1933 al 2014* (Aesthetics without dialectics: writings from 1933 to 2014, Bompiani, "Il pensiero occidentale", 2016). Recently published is the edition of the opera omnia of Tonino Guerra, *L'infanzia del mondo. Opere 1946-2012* (The childhood of the world. Complete works 1946-2012, Bompiani, "Classici" 2018). He is a collaborator of *Estetica. Studi e ricerche* (Aesthetics. Studies and research) in which he published *Una tensione verso il mondo dell'eteronomia e della poesia. Il carteggio Antonio Banfi – Luciano Anceschi 1934-1955* (I, 2016) (A tending toward the world of heteronomy and poetry. The correspondence Antonio Banfi - Luciano Anceschi 1934-1955 (I, 2016)). He collaborated in the volume, Christian Morgenstern, *Aforismi e liriche nel segno dell'antroposofia di Rudolf Steiner* (Christian Morgenstern, Aphorisms and lyrics relative to the anthroposophy of Rudolf Steiner), edited by L. Renzi, with the essay *Rudolf Steiner e l'estetica* (Rudolf Steiner and aesthetics, Campanotto 2017). From 1994 to 2000 he supervised the *Quaderni della Fondazione Arcangeli* (Notebooks of the Arcangeli Foundation) published by Scheiwiller and was the Scientific Consultant, then President, during the year 2012-2013, of the International Center for Pio Manzù Research.

JAPANESE AESTHETICS ART AND THE PHENOMENOLOGICAL VIEW OF THE LANDSCAPE

Abstract | In landscape theory, there is a recent compelling debate between ideological and phenomenological viewpoints, as seen in James Elkins' *Landscape Theory* (Routledge, 2008); landscape is either a determined cultural production or an indeterminate subjective experience. As an alternative to the ideological thesis, the phenomenological viewpoint is becoming more significant, and it interprets the landscape in a founding, reciprocal relation of the self and the object, the sensing and the sensed, the seeing and the seen, and the touching and the touched in environmental and spatial consciousness. The phenomenological interpretation of the landscape is concerned with the hidden sensory and affective processes that allow a view to "come into being" for the subject.

Given that "landscape is an endless, reciprocal drama," (*Landscape Theory, op.cit., p.148*) as Anne W. Spirn states from a phenomenological viewpoint, how can the art of Japanese landscape be interpreted? A close look at Katushika Hokusai's *Mino no Kuni Yōrō no Taki* (c.1833), the splash of water hitting the ground, shows that viewers are amazed not only by observing the dynamism of the waterfall but also by feeling the air as they are integrated into the pictorial space, as they "are in that world." We can imagine the hidden sensory and affective processes of seeing, touching, hearing, or even smelling. German architect Bruno Taut discovered the Katsura Imperial Villa in Kyoto in 1934 and sketched its garden, noting: "You have succeeded in keeping philosophical stillness / Here, one hears the waterfall again, and naturally the view is cheerful / The cicadas sing / Everything is good..." Taut immediately noticed how the environmental space of the garden is to be experienced with the senses. In fact, he placed a key sentence in the middle folio of his album, with a special emphasis: "Art is the sense, in greatest simplicity." This traditional inclination for spatial consciousness and sensory processes could be the reason why the phenomenologist Gernot Böhme's *Atmosphäre* (Suhrkamp, 1995) was regarded as a competent theory in Japan.

In the round-table discussion of *Urban and Natural Landscapes*, the phenomenological trend in landscape theory will be considered by observing and reflecting on Japanese art and aesthetics of landscapes.

Index terms | *environmental and spatial consciousness; ideology vs phenomenology; Japanese landscape art; landscape; phenomenological dimension; sensory process.*

1. Japanese aesthetics of “being in the space”

Katsushika Hokusai (1760-1849), a well-known Japanese woodblock (ukiyo-e) painter, published his *Tour of Waterfalls of Various Provinces* consists of eight prints in 1833. Hokusai’s waterfalls comprise much imagination. Waterfalls have been appreciated by Japanese people for reasons of belief, religious asceticism, and most of all, for sightseeing that is connected with pilgrimage.

In Japanese art history, painters created waterfalls in unique forms and styles. Maruyama Ōkyo’s works in the room of landscapes (Sansui no Ma) in the Kotohiragu Shrine (1794, fig.1), which are so elaborate in their mise-en-scène. The waterfall painted on screen is intended to flow toward the west of the room and successively into the pond outside. The water stream enters the room again from the south side, going along the mountain landscape, then to the waterscape on the east side, to construct a circular water flow. Viewers were to hear the sounds of both the real pond and the depicted waterfalls. In this way, pictorial space merges with real space; fiction and reality become one, both in sight and sound. *Jōhei* Sasaki interprets this unique composition as follows: “[Ōkyo’s] attempt is to make the room exist in a great landscape of water flow, a cycle of birth, growth and death... When we are in the room, we become, indeed, a part of his landscape.”¹ His unique three-dimensional sense and animation originate from his intention to express landscape as an encompassing environment.

The commitment of the viewer in the pictorial space was essential for Ōkyo as also observed in the *Green Maple and Waterfall* (1787, fig.2). The water forcefully and directly falls onto a pool and splashes as it hits the stone. The atmosphere of light and mist dispersed in space, the sense of coolness, and the sounds of water beating the basin are delivered to the viewers beyond the frame.

Similar to Ōkyo, in Hokusai’s ukiyo-e, people in the pictorial space are not only amazed by the dynamism of the waterfall but are also surrounded by the splashing water that conveys the physical reality. In the *Aoigaoka Waterfall in Eastern Capital* (fig.3), water vapors dispersing around the fall are precisely drawn with a kind of pointillistic technique. Water mist is forcefully articulated especially in *Yōrō Waterfall in Mino Province* (fig.4) and *Kirifuri Falls at Kurokami Mountain in Shimotsuke Province* (fig.5). People in the pictorial space are depicted as awed in silence for the powerful nature before their eyes. The strong contrast between the roaring waterfall’s dynamism and the people’s silence is effectively expressed. The viewers share this extraordinary experience by identifying with the characters in the pictorial space.

The desire for being in the space is also seen in the fragmental composition of Japanese traditional paintings. The suggestion of “the whole from a fragment” influenced Impressionists during the Japonism movement in the last half of the 19th century. The common fragmental feature becomes obvious in the *Willows* of both Hasegawa Tōhaku and Claude Monet (16th Century, 1915, fig.6). It is pointed out that Monet might have been inspired by the hanging wisteria of Hiroshige’s *Inside Kameido Tenjin Shrine*.²(1856-58, fig.7)

Furthermore, in Japanese landscape paintings, elements are drawn from multiple viewpoints, and accordingly, the viewer’s eye freely moves around the pictorial space. *Mountain Stream in Summer and Autumn* (fig.8) - a seasonal landscape of a stream among Japanese cypress, lily, and maple leaves - for example, painted by Suzuki Kiitsu of the Edo Rimpa school, makes us focus on these motifs as we approach them. Such proximity urges us not only to see but also feel the drifting fragrance and humidity

of forest, by evoking our intimate physical perception. Thus, the methods of multiple viewpoints and fragmental expression invite viewers inside the painting to physically experience the space. The ultimate aim of the painter is to create an atmosphere by the pictorial space and the physical perception of being wrapped up in the space. If we recognize how these screen paintings were actually viewed, the depth into pictorial space is created further through folding the screen in zigzag form, giving deeper spatial effect. (fig.9)

Another important aspect of Japanese painting is the notion of empty space (*yohaku*). It is inherited from Chinese ink paintings of the 13th century; the poetic and lyrical expressions suggested in the “invisible” blankness of *yohaku* is successfully composed in *Sesshū Tōyō’s Splashed Ink Painting*. (1495, fig.10) According to Norman Bryson’s interpretation, the empty space in this landscape functions as an expanded field. Instead of the Western standpoint where the subject is at the center, Bryson introduces the concept of “blankness” (or “emptiness”) that attempts to dissolve the tight bond between the subject and the object.³

Sesshū’s technique influenced many generations, as seen in Kaihō Yūshō’s *Pine and Plum by Moonlight* from the 16th century or Ogata Kōrin’s *Azalea* from the beginning of the 18th century. (fig.11) These works effectively use *yohaku*, with a focus on flowers for fragrance.

Paralleling *yohaku*, Japanese preference for *yōjō* (suggestiveness or lasting sensation) has been favored in poems. *Waka Kuhon* (after 1009), edited by Fujiwara Kinto, categorized nine ranks for poems; the top ranking was for those that express *yōjo*. The following two poems were selected as the best of all.⁴

Faintly with the dawn
 That glimmers on Akashi Bay
 In the morning fog
 A boat goes hidden by the isle—
 Must be missing on return
 (*Kokinshu*, Anonymous Poems)

The spring has risen
 Is no sooner said, it seems,
 Than fair Yoshino
 Stands this morning to the view
 With a mist on its mountains.
 (“The Day Spring Begins” by Mibu no Tadamine)

Both poems articulate the sea and the mountain landscape, covered with fog or

mist, from a broad perspective. According to Fujiwara no Toshinari (1114-1204), *yūgen* (subtle and profound beauty)⁵ usually accompanies *yojō/yohaku*. It is not only invisible landscape that we cannot form in words; it is sensing spring flowers behind the mist, autumn behind a deer, the fragrance of spring wind behind a plum tree, maple leaves behind the rain—essentially connected to physical and environmental features.⁶

2. The phenomenological tendency in landscape theory

James Elkins, an art historian of The Art Institute of Chicago, regards phenomenology as an important aspect in thinking about landscapes. He emphasizes the “phenomenological encounter,” namely, a founding reciprocal relation of the self to objects:

...the theorizing on landscape, which was once avowedly an ideological matter, has been

increasingly replaced by a kind of de facto phenomenological understanding. Landscape is taken to be the most diffuse and dispersed, the most ungraspable, the most unbounded, but

also

the most optimal occasion for meditating on the unity of the self.”⁷

Considering his analysis of the landscape as the most diffuse, dispersed, ungraspable, and unbounded yet the most optimal occasion for meditating on the unity of the self, the characteristics of Japanese art, namely, being in the space and the expanding field of *yohaku*, are akin to contemporary Western landscape theory. In fact, Gernot Böhme’s new phenomenology relates to the typical Japanese phenomenon, the concept of *ma* 間柄 between the subject and the object, therefore, the spatial and the environmental. Böhme proposes a new aesthetics as *aisthesis*, in contrary to judgmental aesthetics, and from this point of view, emphasizes sensory perception in his book *Aesthetics of Atmospheres* (1995).⁸

Contemporary Japanese artist Fujiko Nakaya uses such atmospheric, surrounding function of fog/mist as material in her works; she is acclaimed as the first artist who worked with fog as sculptural medium. She explains that she doesn’t directly create images with her fog sculptures, instead, fog is a kind of transducer that reacts to the local meteorological conditions. (fig.12) She comments that the landscape can appear to be mostly static until fog is introduced. With the introduction of fog, as artistic procedure, nature’s stories and information become more accessible to the observer. Nakaya’s fog sculptures connect art and science; she created a technique for producing fog, which must be made of pure water vapor, allowing it to interact with the atmosphere. The artist desires to restore the idea of fog as something beautiful rather than problematic, and strongly relates to traditional Japanese thinking; she speaks of the fog in Japanese poems as “breathing of the atmosphere.”⁹

However, we cannot conclude that phenomenological understanding could thoroughly explain the Japanese thinking of being in the pictorial space, especially the relation between nature and humans. It is, in any case, flexible how we understand the phenomenological concept. To confirm this point of view, I would like to consider

another fog/mist sculptures of the Belgian artist, Ann Veronika Janssens.

Mieke Bal uses the following phrases in reference to Janssens' *Horror Vacui* (1999, fig.13a): duration, deceleration, interlocutor, ungraspability, participation of multiple senses in events of perception.

The mist entraps the viewer, body and soul, in such an unsettling experience that something

shifts in one's physical being in the world. Janssens attempts to elude "the tyranny of objects"

and their "overbearing materiality."¹⁰

Domains of sensation are united through the fuzziness of mist that suspends boundaries and their simultaneous appeal to hearing, seeing, and feeling.¹¹ The ontological meaning of the mist room is emphasized in Bal's analysis, so as its political feature: "It is, most fundamentally, art's contribution to the space we share—which I call 'the political'." Bal's interpretation of the space to countermeasure the movement of migratory culture could be visually seen in Janssens' people — an immigrant with a scarf on her head — trapped in the mist in *Blue, Red, Yellow* (2001, 14b).¹²

As the title *Horror Vacui* indicates, and according to Bal: "the first moment inside the mist installations yields an experience of lostness(...)Such an experience can simultaneously function as a social experiment, which draws attention to the practical aspect of the solitude of 'lostness.'"¹³ A mist room, *Horror Vacui*, may possibly develop to a moving space, which urge people to act in awareness, as Bal points out. However, we cannot avoid horror-evoking images¹⁴, or the images of the sublime, that alludes to the distances of the transcendental existence and human being shown in the landscape paintings of German Romanticism. It differs fundamentally from the concept of Nakaya's fog sculpture; according to the artist, 'happy', experience of the interactions between humans and nature.¹⁵

3. Postscript

Japanese traditional concept of space is also reflected in today's technical art such as that of the teamLab.. (fig.14) The Japanese artist group expands their activities on a global scale and tries to attain the sense of spatial awareness of premodern Japan. They explore the logical structure of space in a way that makes the three-dimensional space appear flat, as in traditional Japanese art: "to reintegrate the modern objective world and the subjective world that the predecessor saw." The essential concepts for teamLab are that "we are a part of nature," and "the world I am seeing is, the same world the figure in the picture is seeing."¹⁶

Comparing with the *Waterfalls* by Hokusai, the landscapes of digital teamLab seem very contemporary, but both are based on the same aesthetic concept. The global discussion on phenomenological thinking of natural landscape could be more specified under cultural diversities.

Academy of Film, Hong Kong Baptist University | Hong Kong, China | evaman@hkbu.edu.hk |

DISCOURSES ON THE EAST AND WEST BOUNDARIES IN CURTIS CARTER'S STUDY OF CONTEMPORARY CHINESE ART UNDER THE CONTEXT OF GLOBALIZATION

Abstract | Curtis Carter revealed that his interest in globalization in reference to Chinese contemporary art began with one of his writings in 2004, which started from global conceptual art in the works that are related to global exchanges taken place between China and the West. He has then studied the efforts of Chinese artists who worked on rich Chinese heritage while addressing the international art influences. He regards global art to be art that participates in worldwide cultural exchange or commerce. This talk will review some of Carter's original observations with cases of contemporary Chinese artistic practice, and their curatorial discourses, to demonstrate the complicated East and West inter-train and the equilibrium tactics, as well as the hegemonic fervors.

In Curtis Carter’s article, “Globalization, Modernity and the Place of Nature in Chinese Art”, he demonstrates his genuine concern of the captioned subject¹. In his brief of the prominent subject of Nature in Chinese Art history, he correctly points out that Chinese tradition featuring nature in the arts has carried forth from Tang artists through Song and Ming into the art of later periods of Chinese history. Natural landscape dominates both Buddhist and Daoist art, and their artists contributed to the development of the so called “artistic landscapes”, ranges from traditional “regulated” styles to more free forms.² The subject of Nature in both traditional Chinese paintings and poetry, as Carter nicely puts, “represented an imaginary paradise grounded in an idealized Nature.”³

Carter said in examining the literature of Nature aesthetics, one finds a wide range of understandings of the subject.⁴ I would like to add that besides Carter’s saying that in the tradition, Nature is valued for its visual features and its aesthetic values and the ways it is represented in painting and poetry, it is also appropriated to describe the personality and moral strengths of a person in both Confucianism and Daoism. Confucians like Mencius asks for regulation and cultivation of one’s physical nature and relates the exercise to moral nurturing.⁵ Daoists ask for living according to Nature or natural instincts to be a real person or a sage.⁶

Here comes Carter’s concern, “Modernity in the art of West had among its aims a shift away from Nature as a favorite source of imagery for purposes of representation or depiction.”⁷ Therefore, when Chinese art receives modern Western art in a series of events at the turn of the twentieth century and currently in the twenty-first century, Carter is concerned with the displacement of Nature which used to be a dominating subject in Chinese art. Carter quotes that in Western modernity, “replacing Nature as a principal source of art is the ‘fugitive, fleeting beauty of present-day life, the distinguishing character of that quality’ in modern life.”⁸ He continues the same concern when we enter into the state of globalization, and wonder, “what will be the impact of westernizing globalization on the place of Nature in Chinese art?”⁹ As he points out much of the art that globalization brings to China from the West does not any longer feature Nature, there is the risk that this factor will show negative results for the future of Nature’s place in the art of China.¹⁰

The Place of Nature in Traditional Chinese Landscape Painting

I have to say Carter’s concern is very valid. Before discussing his concern, a review of the meaning of Nature in traditional Chinese art is recommended. Here I want to revisit Shitao’s notion of Nature in his most representative painting notes, *Huapu*. Shitao

1 The paper was presented by the author at the American Philosophical Association (APA) meeting in 2014. Parts of the content of this article can be found in the book chapter, “Globalization and Chinese Contemporary Art, West to East, East to West,” in Curtis ed., *Unsettled Boundaries: Philosophy, Art, Ethics. East/West*. Milwaukee: Marquette University Press, 2017. pp. 113-128.

(1642-1707), the influential painter in the late Ming and early Qing period in China, is not only well known as an ink artist, but also a prominent art theorist who suggests art as metaphysics. His surviving notes on ink painting, *Hua-pu (Treatise on the Philosophy of Painting)*,¹¹ is regarded as one of the most important Chinese philosophical reflections on the art form. Shitao's key theory of "One-stroke" in *Hua-pu* provides a systematic discourse in artistic practice. The "One-stroke" in ink painting is argued by him as both a visible event and a metaphysical concept, which includes primordial intuition, spiritual transformation, and ways to achieve the proper forms of living.

Shitao's attraction to Daoism had been regularly demonstrated in his former thirty-years of painting career.¹² This could be reflected on Shitao's increasingly use of "raw" color, subjects of leisurely living and outings, in arresting extraordinary Nature subjects such as Yellow Mountain. It is argued that Shitao's subordination to Daoist sympathies "marks the culmination of a long pursuit of Oneness through painting over a period of fifty years."¹³ He states in *Huapu*:

I, having mastered one-stroke painting, can penetrate into the form and spirit of mountains and rivers. This is why I have always kept to mountains and rivers during the past fifty years. I neither neglected them as useless nor let them conceal their secrets. Mountains and rivers let me communicate for them. They are free from me and I am free from them. I thoroughly investigate strange peaks, making rough sketches. Mountains, rivers and I meet on a spiritual level and mingle together without trace."¹⁴

He further explicates the manifestation of Dao or Nature in his Oneness of stroke,

From Oneness, produce the ten thousand things, govern the One. Transform Oneness into this harmonious atmosphere, is indeed the highest achievement of art in the world.¹⁵

246

with Nature as the world/object,

If one uses the one-stroke to fathom it, he can participate in the transforming and sustaining of the universe (heaven and earth). The artist can then describe the conditions of mountains and rivers, estimate the breadth and length of the terrain, judge the dispersion and density of mountain peaks, and penetrate into the obscurity of clouds and mist.¹⁶

11 On the authenticity of the *Hua pu* and the question of the treatise's various recensions and titles, Jonathan S. Hay has provided an overview and list of bibliography, see Jonathan S. Hay, *Shitao: Painting and Modernity in early Qing China*. (Cambridge: Cambridge University Press, 2001), pp.208-209, 364. The citations in this paper come from Earle Jerome Coleman's English translation. The original texts of *Hua-pu* is from 石濤著, 朱季海註釋, 《畫譜》 (上海: 上海人民美術出版社, 1962)。

Shitao talks about the relationship between artist/subject and Nature,

It is not the function of particular aspects of mountain or water or the function of mere brush strokes or ink wash, or the function of antiquity or the present, or the function of the wise man. Within this function, there is reality. In short, it is the oneness of strokes. It is limitless, it is the Dao of heaven and earth.¹⁷

He further suggests:

The splashing of the ink onto the brush is to be done with spirit. Ink wash cannot be spiritual unless one has achieved the state of concealment in nondifferentiation. (which means communication with the Nature or Dao in whole). If the brush stroke is not endowed with vitality, then the brush is without spirit. If the brush contains the spirit of concealment in nondifferentiation yet cannot release the spirit of life, then this is ink wash without brush strokes.

When the awakening of cultivation of non-differentiation and lively spirit is grasped, then flowing everywhere, and embracing and encircling each other, will take place. When flowing everywhere, and embracing and encircling each other take place, then the function of mountains and rivers is fulfilled.¹⁸

Thus. the intimacy between Shitao's metaphysical ideas and Daoism is in light.

Shitao's view of the world is a self-regulating system, within which artists have their own ethical imperatives to fulfill and they function as receptive to Nature's gift. With the introduction of the painting method, "One-stroke" as the departure or the beginning of the first stroke, is affirmed its unique transcendental position that encompasses and unites all things in Nature.

Shitao, while dissolving himself in the state of Oneness, also participates in the Daoist ideal of the perfect man:

Therefore the perfect man cannot not be wise, cannot not be enlightened. Because he is wise, he transforms; because he is enlightened, he is free. When confronted by things, he is undisturbed. When he deals with forms, he leaves no traces. When he moves the ink, it is as if the work were already finished. When he grasps the brush, it is as if he were doing nothing. On a one foot wide canvas (small area), he manages heaven, earth, mountains, rivers, and the ten thousand things; yet, his mind is as pure as nothing. Because ignorance is diminished, wisdom is produced. Because ordinariness has vanished, purity of mind is attained.¹⁹

Shitao states the essentials and the highest reference of Chinese art with his deep

believes in Daoism, and the engagement of an artist with Nature in the deepest, meditational sense which will determine the quality of art when it comes to external manifestation. He lays out the principle of Chinese art and grants Nature the supreme state of artistic engagement. So it is not the imitation or grasping of Nature that counts, but also the artist's cultivation and devotion to one's understanding of Nature that determines. Therefore, the subject of Nature in Chinese traditional art goes beyond making Nature the object of art, but Nature and the artist are both the subjects that merge in one, turning the subject to be an disinterested, spiritually free being. In the Confucian sense, the implication is artist's moral strength as the Confucian Heaven or Nature is the supreme moral principle in itself.

Carter echoes the reading by mentioning traditional Chinese painter Gao Jianfu (1879-1951) and his work, focuses on Gao's suggestion of looking beyond painting to the improvement of human nature and the betterment of society.²⁰ Yet Carter's concern also hinges on the depiction of Nature in Chinese art, and says that the changing focus of landscape would appear to be on expanding the urban landscape under the development process of globalization. His elaboration is the situation for artists as well as for other citizens who value Nature is becoming critical, as the economic development consumes more and more of the land once reserved for appreciating Nature.²¹ He mentioned Garden in particular, saying that gardens in urban settings are supposed to keep a presence of Nature and exemplifies it as a symbolic presentation.²² He ponders if Gardens would be diminished or even replaced by all kinds of urban development projects. In addressing to Carter's concern, a review of Chinese garden using an exemplary case is provided here for reference.

Strolling in Traditional Chinese Gardens and the Displacement of the Aesthetic Experience

Geyuan Garden in Yangzhou, China was known as "the garden of the long-lived Ganoderma" during the Ming Dynasty. It covers an area of 2.5 hectares (6.2 acres), and is primarily composed of bamboo and rocks. Rocks of different hues and shapes are used to represent scenes from the four seasons; hence, the rock garden is named the "Artificial Mountain of Four Seasons." Arnold Berleant's description of a classical Chinese scholar's garden can best describe Geyuan.²³ It is said that Chinese gardens are carefully integrated into the landscape, embraced by trees and shrubs, and usually connected by covered walkways. They are interspersed by equally important semi-enclosed natural areas that contain a profusion of rocks and vegetation. That water is almost always present, often as a central large pond but also in smaller pools connected by narrow waterways traversed by small foot bridges. They are natural sculptures of arresting presence and absorbing detail, and the Chinese consider them 'a concentration of the creative forces of the Dao'. These features of the garden structures convey a sense of continuity. As one wanders contemplatively through the garden, the visitor becomes part of the landscape and nature. Nature is habitation and habitation is Nature. Wandering through a Chinese garden can evoke an association with a scroll painting and perhaps even its embodiment. Moreover, Classical Chinese garden is usually shaped by and for human participation. It requires human presence to be completed and fulfilled.

20 Note 2, p. 10

21 Ibid., p. 16.

22 Ibid., p. 18.

23 Berleant, Arnold *Aesthetics Beyond the Arts: New and Recent Essays*, GBR: Ashgate Publishing Ltd., 2012, 131-147.

Although Chinese gardens encourage a reflective, contemplative mood, this is not a state of passivity or inactivity. It is a roving contemplation, an immediacy of thoughtful presence in the activities of walking, noticing, listening, contemplating, and sensing bodily the garden's constantly varying environmental experience. Finally, it is due less to the layout and the formal arrangement than to what vibrates through and around the various elements of composition, enhancing their power to bring out the rhythm of Nature.

I want to refer to contemporary neo-Confucian, Tang Junyi's concept of landscape appreciation, namely, "hiddenness," "cultivation," "resting," and "traveling."²⁴ Tang's insightful analysis contributes to the understanding and appreciation of Nature in Chinese gardens that Carter is concerned.

Tang suggests that the notion of "travelling" in Chinese landscapes embodies both the physical and the spiritual, as manifests in different Chinese architectural forms, such as towers, palaces, gardens, and home interiors. Unlike the churches and castles in the West, Chinese architecture allows and enables the visitor to travel in the space, even if it has a deep courtyard, and layers of curtains and draperies.²⁵ The concept of travel has another layer of metaphysical meaning, as it echoes the Daoist concept of the intertwining relationship of the concreteness in the empirical world and the vacuous (*hsu*) in the metaphysical world of the *Dao*. Tang further suggests that in addition to "travelling", the notions of "hiddenness", "cultivation", and "resting" emphasize the unity of the visitor's inner feeling with the outer space in landscape traveling, and in this case, the experience one could have when travelling in a Chinese garden likes Geyuan.²⁶ He states,²⁷

"The meeting point of the concreteness and the vacuous is where one's mind and soul travel freely. The beauty resulted from this is the realization of a free-mind and openness...that is why I compare the aesthetics of Chinese architecture to that of travelling."

When travelling in a Chinese garden, one can appreciate the landscape by hiding alone ("hiddenness"), reflecting on one's moral life ("cultivation"), sitting around and resting the body ("resting"), and walking through the aesthetically natural or artificial space of the garden ("travelling"). The experience transcends the rigid binary opposition between subject and object in Western aesthetics, and that the visitor gains an overall understanding, self-nourishment, and enrichment when the mind departs from the garden and travels into the realm of the Nature or *Dao* and back again.¹ This going beyond enriches the viewer and results in his or her aesthetic appreciation of the fluid nature of artistic qualities. This is best illustrated by Chinese landscape painting in ink as much as the perception in a Chinese garden..

Tang regards the Daoist idea of travelling as the key to the aesthetics of the gardens, as it integrates the physical freedom of the body and metaphysical transcendence of the mind. Moreover, Geyuan Garden demonstrates that all of the elements and parts of the garden are designed to blend gently together to show the harmonious forces of Nature. In his words, to experience landscape aesthetics is "to follow the

27 Ibid., p. 316.

Dao of Nature, getting oneself in tune with the underlying rhythms of the seasons, the plants, the very universe, so that there was no discrepancy between inner being and outer reality.”²⁸ With this in mind, I could only share the concern Carter has laid over the impacts of globalization in terms of its values, rapid developments and lacking of concern over the place of Nature in humanity. The concern goes beyond the physical existence of Chinese garden sites, to the lost of extraordinary environmental aesthetic experience that traditional Chinese gardens have so much to offer.

Global Interventions and the Response of Contemporary Chinese Art

Carter suggests three major global interventions since the beginning of the twentieth century with particular relevance for the current place of Nature in Chinese art.²⁹ The first major global intervention he mentions refers to what took place at the beginning of the twentieth century when Chinese artists began studying western art in Japan and later in Paris. He suggests that for a variety of reasons, efforts to introduce western art during the era of 1920s had only limited success in China, and for the most part this movement posed little immediate threat to the place of Nature in traditional Chinese art.³⁰

According to Carter, the second main global challenge to Nature’s place in Chinese art comes during Mao Zedong’s Cultural Revolution, when art has to focus on the socialist’s agenda and traditional arts with their celebration of Nature, did not have the same value or support. Then the third stage of global intervention started in the 1980s when Chinese artists began their migrations to the West in search of greater freedom of artistic expression.³¹ Carter mentions the American artist Robert Rauschenberg’s launch of an Overseas Culture Exchange project in 1985, bringing paintings, installations, and mixed media arts to the China National Art Gallery. Yet despite the opening of China to western economic and artistic cultures through the processes of globalization, Chinese art did not mindlessly succumb to hegemonic dominance from the west.³²

250

In digging out the reason why, Carter turns to Chinese art critic and artist Gao Minglu’s views for understanding. According to Gao, Chinese history and its art does not fit the linear periodization of the western system, from being traditional, classical, modern to postmodern and contemporary. Gao argues for “total modernity”, which consists of the state of art in particular time and space, and cultural contexts. The fact is, in Carter’s reading of Gao, Chinese artists carry with them the long and highly developed tradition of Chinese art practices, and bear in mind the shared inventions of an endless stream of new paradigms for creating art which resources are now available worldwide.³³ Carter, in response to his main concern, suggests to look at the practices of contemporary Chinese experimental art, versus traditional art practices, to check if Nature is to retain a significant place in the Chinese art practices of today when under the strong influences of globalization.³⁴

The “Expansion” of New Ink Art

My study on the evolution of traditional Chinese Ink Art supports Gao’s observation

- 34 Ibid., p. 19.

and would like to supplement at here the phenomenon of contemporary ink art in China. Here I quote Tang Dynasty literati Wang Wei's words on ink painting:

*"In the art of painting,
Works in ink surpass all.
They stem from Nature,
And fulfill the functions of the universe."*

It has been emphasized that traditional Chinese ink painting, from its ancient beginnings in decorating Neolithic pots, has evolved and flourished in the hands of great masters from different dynasties, and shaped by social, economic and cultural values of the times. It has come full circle as contemporary ink painters have sought to expand beyond the two-dimensional confines of ink on paper or silk, and the continuous re-interpretation links ink art to our present-day society and keeps it alive.³⁵ Numerous daring attempts in ink deviate ink art from its traditional format and its usual subject of depiction including landscape, and has become geometrically framed than being fluid.

When Gao Minglu argues for a different kind of Modernity in China, it still shares with other forms of globalization in its elaboration on spectacle, and the excessiveness of spectacle captivate the modern Chinese subjects to the extent that they are actively involved in it. It is said that modern Chinese subjects face not only the passing of the past and the looking forward to a pluralistic future, they have come to terms with their own modern selves and new identities. Chinese modernity is in fact constantly renewed through the interactions between the subjects and their rapidly changing cultural environment.³⁶ As contemporary art is strongly expanding its range of expression, the mingling of all kinds of techniques, media and subjects is addressing to the recent cultural pertinence, strategy and speculation, which has no exception for Chinese ink painting. The following sayings are representative statements made among contemporary ink art curators:³⁷

"The unique spirit and the specific cultural connotations of Chinese ink painting that were formerly concealed by the contemporary may now be implemented as a kind of accessory or special flavor of the contemporary and thus compromise with current aesthetics. To define its position within a pluralist and multicultural context, we have to introduce Western artistic grammar into the context of ink painting, with a strategy that aims at producing diversified models of a contemporary quality. Only through such a process of continuous exchange can the factors participating in it successfully participate in cultural negotiations. .. one of the tasks of the contemporary ink experiment is to rediscover the cultural functions and spiritual implications of ink and to revive ink as an artistic language, as well as for the actual grammar and rhetoric of this particular language."

It is clear that new ink painting, together with its favorite subject of Nature, has to fulfill multi-functions: as spiritual revival and be as functional as culturally identifiable. That is why a curator raised such a question: "is it correct to say ink makes a sacrifice

35 *Ibid.*,14.

36 Pang, Laikwan, *The Distorting Mirror: Visual Modernity in China* (Hawaii: University of Hawaii Press, 2007).

37 Sun, Xiaofeng. "Note on the Contemporary Chinese Ink Experiment," *Infiltration-Idylls and visions*, Guangdong Mei Shu Guan (ed.), He Bei: He Bei Mei Shu Chu Ban She, 2007, 10.

to obtain a contemporary identity?"³⁸ We are reminded to avoid the illusion of the existence of a privileged domain of ink and that there is neither a definite conclusion, nor the declaration of the establishment of other norms for ink painting – only through the expectation of possibilities can we meet with the yet unknown possibility inspiring the experiment.³⁹ It is said that the contribution of the ink experiment lies in the fact that it preserves a text of the practice of the evolution of the concepts in the field of contemporary art and culture; and, what is more important, it provides a valuable experience in what concerns the appropriate strategy of a situational culture effected by the drive of globalization. But what about Nature, if even “spiritual resonance” as the first principal of painting in the Chinese tradition is now only regarded as a functional act for mental balance in the living of an international city?

To Shih Tao, the “One stroke” painting is the point of departure to the metaphysical intersection of self and Nature. One can find numerous evidences in *Hua Pu* in which he stressed on the transcendental origin of aesthetic experience:⁴⁰

“The art of painting is a manifestation of truth. With regard to the delicate arrangement of mountains, streams, and human figures, or the natural characteristics of birds, animals, grass, and trees, or the proportions of ponds, pavilions, towers, and terraces, if one’s mind cannot deeply penetrate into their reality and subtly express their appearance, one has not yet understood the fundamental meaning of the oneness of strokes.”

Somehow, the following Shih Tao’s sayings still echo among some of the ink painters of today:

“Those who know the subtle manifestation, but forget the origin of the fundamental principle of oneness of brush strokes, are like children who forget their ancestors. Of one knows that ancient and modern works never perish, yet forgets that their achievement of merit is not limited to men, this is the same as the ten thousand things losing what is given by Nature. Heaven can give man a method, but cannot give him skill.”⁴¹

“This is what heaven gives to man: Because he can receive, heaven gives to him. If one has a great capacity, then he receives a great gift. If his capacity is small, he receives a small gift. Therefore, ancient and modern works of calligraphy and painting originated from heaven and were completed by man.”⁴²

This revisit of Shitao’s texts bring us back to the concern of Carter over Nature and Chinese art, and what Gao Minglu has suggested, that

“not all Chinese artists or theorists will agree on the best routes to follow. Some may choose to continue to imagine Nature as it was and attempt to revitalize the traditional roles of Nature in art.”⁴³

AESTHETICS OF ART AND LIFE SCIENCES. COLLABORATIONS AND RESISTANCE

Abstract | In the paper the author pays attention to the actual phenomenon of art and life science collaborative projects. She is discussing the orientation of this projects towards the world. In the course of modernity, the fields of art and science have been established as a relatively autonomous fields with canonised methods and objectives. The author will compare the scientific and artistic activities and address the question of their objectives. If art and science strive for different objectives, are this art and science project about harmonizing them or what is the objective that art follows and perhaps differs much from science. The author emphasizes a certain role of art, which art has inherited from Romanticism. the role of art, which it has inherited from Romanticism. Comprehension of art as an avant-garde was extremely important for the 19th century art, in particular in France. The artists considered themselves as the avant-garde of the society and also used militant rhetoric. Mallarmé, for instance, said that the modern poet is “at strike against the society”. This romantic tradition of positioning themselves against the norms and cannons of the majority of population, the rebelling attitude insisted in art throughout modernism and expressed particularly strongly in historical avant-gardes. The author claims that exactly this heritage is crucial for the art that enters the field of science and is engaged with its socially relevant aspects. The contemporary art projects entering the field of life sciences inherit the tradition of the avant-garde. The modes of collaborations and resistance will be addressed in the paper. Particular relevance will be given to the orientation of art towards the future. That is the comprehension of art as a political agent.

Index terms | *Bio art, art and science, life sciences, avant-gardes, contemporary art.*

During modernity art and science have been established as relatively autonomous social fields with their own structures, institutions, and rules. In the beginning of the 21st century collaborations between art and science have become popular. Collectives of collaborators from both fields gather in very interdisciplinary or transdisciplinary projects. This situation calls for reflection upon the question, how is art compatible with science, so that these collaborations are possible and fruitful. Does art approach differently to the world and does it work for different goals than science? If art and science strive for different objectives, how are these art and science projects then harmonized. Does this meeting of art with science generate changes or does it require “the change of the state of the art”?

It is important to stress the concept of art, inherited from Romanticism. This heritage is crucial for the comprehension of art that encompass scientific research and that is engaged with its socially relevant implications. It means a concept of art as a political agent. It was extremely important for the 19th century art to comprehend itself as avant-garde, particularly at the end of the century in France. The artists considered themselves as the avant-garde of the society and also used militant rhetoric. Mallarmé, for instance, said that the modern poet is “at strike against the society”.¹ This romantic tradition of positioning themselves against the norms and cannons of the majority of population, the rebelling attitude, which reflected the revolutionary social atmosphere of the age, insisted later in art throughout modernism of the 20th century and expressed particularly strongly in historical avant-gardes. The artists have expressed concrete political affiliations, such as Italian and Russian Futurism, but also Dada. Some artists even got directly politically and military engaged. It is significant for these movements that the artists were writing manifestos. Consider, what is a manifesto. Manifesto is a programmatic text that sets foundations for further acting. With practical objectives a manifesto is a plan for the action. It is also an act of intervention with its concrete political demands into the society. It is a strike. Comparing it to a scientific paper, which is a reflection on what has been researched and a presentation of results, which is oriented to the past research activity, manifesto is oriented towards the future.

Jacques Ranciere emphasized that the idea of the avant-garde in accordance with Schiller’s model, and ascertained that it is rooted in the aesthetic anticipation of the future.² Not the artistic innovations, but the invention of sensible forms and material structures for a life to come, this is what gives the concept of the avant-garde meaning in the aesthetic regime of the arts. And this is what the «aesthetic» avant-garde brought to the »political« avant-garde, or what it wanted to bring to it – and what it believed to have brought to it – by transforming politics into a total life programme.³

This opening of art towards the future, but also towards the society has generated innovative artistic activities, which have surprised the world of art of that age and which have influenced the forthcoming artistic endeavors and the accelerated experimentations in art that where pushing the boundaries of art far into the domain of everyday life.

With entering the field of science art has got confronted with a challenge, how to operate in the collaborative complex of art and science and yet to be able to overcome the task of science to offer only interpretations of the world.

1 Matei Calinescu, *Five Faces of Modernity. Modernism, Avant-garde, Decadence, Kitsch, Postmodernism*, Durham: Duke University Press, 1987. pp. 107–108. Interview with Jules Huret in 1891.

2 Jacques Ranciere, *The Politics of Aesthetics*, New York: Continuum, 2006, p. 29.

3 *Ibid.*, p. 29–30.

I would like to introduce the concept of projectability into this discussion in reference to art, in particular to the recent art projects encompassing life sciences. I wish to argue, that these projects operate with the mode of projectability in their relationship to the world.

Projectability is here understood as an ability to project. Latin *proicere* that originates from *proicio* (*pro* – from, for, instead; *iacio* – to throw) is the opposite of Latin *perspicere*, from *perspicio* (to see through something and also to perceive, to distinguish clearly). *Projection* thus stands in opposition to *transparency* and marks the “throwing onwards” instead of “uncovering the existing”. This is not the mode of denoting the world as it is, but an active mode of shaping the world. The mode of projectability is not the mode of explaining the world, but the mode of effecting tomorrow. This feature is to be comprehended as a political dimension.

Among the two scopic regimes in modernity, *perspicere* played an admittedly important role for modern science. It is the regime of transparency or visibility that has supported the logic of a gaze penetrating through surfaces. For the beginners of modern sciences, it was an important principle for gaining knowledge. At present, it still has this importance. Consider the rhetoric that was accompanying the announcement of science that the human genome has been sequenced. The achievement has been discussed as if humans (the scientists) have managed to crack the code of life or in as if we have got a complete insight into the *Book of Life*. This is the promise of the *perspicere* regime, to assure an insight into the “truth”. *Proicere*, on the contrary, projects ideas into the future. If *reading* the book of life means in-sighting the truth of life as if it is an existing program that has been awaiting to be discovered, this is the domain of science – to *discover* what lies there in the universe and waits to be comprehended by man. Remember Thomas Kuhn’s definition of science – it is about doing the puzzles.⁴ The notion “cracking the code” speaks about this same unrevealing the truth. But furthermore, is science is the production of knowledge, what does this knowledge then serve to. I have claimed in this book that science (about body and life) is subjected to the objective to gain the power over the subject – the body, life and the social body, i.e. population. With gaining that power we are able to engineer – tissues, organs, “biological” life and what it also means – the social life. The micro scale of tissue engineering is directly linked to the macro scale of biopolitics. It is the mode of engineering as the mode of technology that has the central role in this social game.

Science is apparatus. Michel Foucault has emphasized the role of the apparatuses in the late capitalist societies and Giorgio Agamben has traced the genealogy of this notion. Foucault’s definition of apparatus is broad and never complete. In an interview from 1977 he defined apparatus as: “a thoroughly heterogeneous set consisting of discourses, institutions, architectural forms, regulatory decisions, laws, administrative measures, scientific statement, philosophical, moral, and philanthropic propositions – in short, the said as the unsaid. Such are the elements of the apparatus. The apparatus itself is the network that can be established between these elements.”⁵ Agamben summarized Foucault’s notion of the apparatus: the apparatus is a heterogeneous set that includes virtually anything; it always has a concrete strategic function and is located in power relation; it appears at the intersection of power relations and relations of knowledge.⁶ Agamben traced the genealogy of apparatus or dispositive back to

its Greek origin and the term *oikonomia*, which was later translated as dispositive in Christian theology. *Okionomia* meant the administration of the home (Gr. *oikos*) or more generally, management; for Aristotel *oikonomia* is “the way in which he [God] administers his home, his life, and the world that he created”.⁷ Agamben stressed the process of subjectification, that is inherent to the apparatus – they “must produce their subject.”⁸ Yet at the same time, the apparatuses in this phase of capitalism, act through the process of desubjectification, which is implicit in every process of subjectification.⁹ One who lets himself be captured by the “cellular telephone” apparatus, whereat desire has driven him to that, “cannot acquire a new subjectivity, but only a number through which he can, eventually, be controlled.”¹⁰ Here and with the stress on captivation within the apparatuses, Agamben refers to the theory of *the Umwelt* of Jakob von Uexküll on the circle of receptors and disinhibitors. Martin Heidegger later discussed the difference between humanity and animality originating from this concept. Within the *Umwelt*, a living being is captured. Agamben accordingly defines apparatus: “I shall call apparatus literally anything that has in some way the capacity to capture, orient, determine, intercept, model, control, or secure the gestures, behaviors, opinions, or discourses of living beings.”¹¹ For this discussion on the entrance of art into the apparatus of life sciences, the following Agamben’s conclusion is very helpful. For Heidegger, the break or the interruption of the relationship between receptors and disinhibitors produces boredom in living beings – “that is, the capacity to suspend this immediate relationship with their disinhibitors – and the Open, which is the possibility of knowing being as such, by constructing a world.”¹² In another work, Agamben focused on *the Open* as a possibility given to human with the descend from the position of superiority, as human has been considered as essentially different, distinct to animals altogether.¹³

This post-anthropocentric stance can help us consider the possibilities for art to resist the apparatuses. Art can be considered as striving for *the Open* and as such, art has the ability to interrupt the captivation of the subject in the apparatus, or at least to launch the process of becoming Open.

There are authors who have claimed that art in art and science collaborations serves just as a promotor of science with uncritically transferring the scientific achievements to the world of art and communicating the success of scientists with wider public. Furthermore, we meet a reproach that art cannot compete with science because of the level of complexity and high technical requirements that art cannot, but science can fulfill. Science is in this regard in a better position, this is not a question. It is systematically supported by the states, as well as certain lobbies with commercial interests. Exactly for this reason science works for the apparatus of power. And here art and science do not wear same shoes. If art is a sole promotor of scientific achievements, then all there is, is science, there is no art at all. But this is not what we aim for. There are interests in a requirement for art to glorify the promises of science and to take part in the processes of the mythologizations of scientific achievements or technological hits. But this is not the subject of my interest here.

There are two principles in art that are both accordant to *proicere* regime, yet different in their character. One is a practice closer to what Claude Lévi-Strauss called bricolage and the other is closer to engineering. According to Lévi-Strauss there is a huge

13 Giorgio Agamben, *The Open: Man and Animal*, Stanford: Stanford University Press, 2004.

difference between the practice of engineers and the practice of bricolage. Bricoler is a home master who improvises and is inventive and passionate in solving problems that appear to him in his everyday life. The engineering approach is well organized; the activity follows exact plan made in advance.

In the project *Maya's Yogurt* (2011) Maja Smrekar has designed a yogurt product by adding her own, the human enzyme to yeast. This is an engineered product that responds to the issue of global food deficit in the context of the planet exhaustion and to the political calls for science and technology to find solutions for the survival of the human (and not also other species).

With the series *K-9_topology* Maja Smrekar is challenging anthropocentrism with linking biology and culture, in particular addressing interaction between human and animal species. For the project *Hybrid Family* as a project of the *K-9_topology* series she nurtured a puppy to address this process as a process of becoming, of becoming-animal, becoming-woman and becoming m(Other). The process of becoming (m)Other is a biopolitical statement or an intervention of the artist with the investment of her body with the purpose to re-gain the position of power. This is an act of resistance to bio-power – the exercise of power on and through bodies.

Hege Tapio has engineered and produced human fuel as an alternative power.

Marta de Menezes and Luis Graça have planned and realized a skin transplant that will remain as a scar in their bodies forever, a visible stamp of their mutual affection, but also traversing and molding. Splitting those two condensations into two entities means splitting this course, scaring.

Of course, a contemporary art project that is highly involved in life science could be a deep poetic reflection. Robertina Šebjanič projects the living and moving of the animals into another medium – sound or music. The art project could be a deep cultural reflection on the imaginaries of the humans, as in the case of Robertina Šebjanič's interest for the cultural, political and biological realities of marine and aquatic environments. The artist thematizes the culturalization of nature and shows the picture of human power over the other species, i.e. the cultural appropriation and mythologization, which direct the politics over these species, their biological life. The project communicates nonscientific representations of the nonhuman species, even if she uses scientific depictions, she tells us about how cultures project the ideologies onto wild animals. This builds the notions of them and the politics over them and the environment.

These projects are serious voices in the discourse on the politics of life. It is not knowledge to what they aspire to, as well as it is not a functional outcome. They respond to power structures and build resistance. Yet they are not real political programs for overturning the world, grand plans for revolution. They are also do not offer knowledge and know-hows that could be used for power structures. But they are very much engaged in today and in the tomorrow world.

URBAN AESTHETICS IN MOTION

Abstract | Aesthetic considerations play a major role in all fields of urban planning, though most often, the nature and role of aesthetic values are not explicitly stated. Most parties – planners, architects, urban residents – take the aesthetic for granted, often relying on a set of tacit preconceptions. Moreover, there seems to be an operative consensus about what is generally regarded as an aesthetically satisfactory environment, and one may easily assume that there is no need to go into deeper analyses. In particular, the role of movement in constituting the aesthetic quality of human environments has been widely neglected both in urban planning and in the experience of urban dwellers. However, aesthetic considerations are vital for the living quality and well-being of humans, not only in that everybody prefers an aesthetically pleasing environment, but also in that these preferences, and aesthetic experience broadly, have far reaching implications on social, health, and ecological issues. In this paper we explore the complexities urban aesthetics from various points of view.

Index terms | *Environmental Aesthetics; Everyday Aesthetics; Legibility; Mobility; Urban Aesthetics; Urban Experience; Urban Complexity.*

VARIETIES OF THE AESTHETIC IN URBAN CONTEXTS

One of the central aims of this paper is to analyze the most salient meanings of the “aesthetic” and to develop conceptual tools for an improved understanding of the relevance and role of aesthetic values in the everyday lives of urban citizens as well as in planning processes, especially in relation to mobility possibilities. Contrary to standard engineering perspectives, we argue that human mobility should not be considered only under the assumption that the major or even the sole aim for planners is to minimize travel time. We emphasize the human perspective and the experiential character of cities.

There is a controversy and a confusion at the very heart of the discipline of Aesthetics – is there something that can be called “the aesthetic,” and if so, how to define it? There are a number of classic approaches and solutions to this issue, referring, for example, to the notions of taste, aesthetic attitude, aesthetic experience, aesthetic qualities and aesthetic concepts. The scope of the “aesthetic culture” is vast encompassing just about all possible artefacts, natural objects and scenes, as well as urban environments. We will give a broad outline of the scope of the aesthetic. Urban settings give a possibility to experience the whole variety of the aesthetic. In parks, for example, there are aspects that raise immediate sensory pleasures, whereas architectural constructs require historical and theoretical knowledge, sometimes even intellectual pondering until the aesthetic is captured. Both “surface aesthetic” and “deep aesthetic” are involved. An everyday leisurely walk in an urban environment provides aesthetic pleasure of its own kind – aesthetic of the everyday, is yet another modification of the aesthetic. All these three varieties of the aesthetic have a role in the urban experience.

Besides the notion of the “aesthetic,” “imagination” has been widely used as an explanatory concept in Aesthetics. It goes without saying that the concept of the aesthetic should have a prominent role in every aesthetician’s toolbox, but also imagination has clearly a role in the arts, perhaps even more broadly in all aesthetic phenomena. The aesthetic and imagination are, indeed, closely connected. When something – whether fictional or real – is imagined, it quite often, although not necessarily, gains the status of being an object of aesthetic consideration – an aesthetic object. There is broad enough a notion of imagination which is useful also when trying to understand the varieties of the aesthetic. Edward Casey’s phenomenological analysis is helpful here.

According to Casey, there is a certain kind of attitude we can adopt to things and states of affairs, regardless of whether they are real or not: imagination is a human capacity to entertain something in our minds. The stance is to posit whatever is the object as a pure possibility, “as *sheer supposition*: a supposing that is free from either overt or covert connection with what is actual.”¹ This stance can be extended to purely abstract and non-representational matters: we can entertain in imagination also visual forms and sound patterns. By this extension the notion of the aesthetic has also gained content. Urban environments and moving in them, offer a great variety of possibilities for this kind of entertaining. Although this kind of “sheer supposition” is most easily conceived when talking about the surface aesthetic, it is crucial also in cases in which the objects of our perception are conceptually defined. Entertaining the formal patterns of a Gothic or Neoclassical architecture requires historic knowledge of what is relevant in these styles. Entertaining forms and patterns is not, however, restricted to artefacts – very often the most powerful imaginings occur in nature. Walking in a

wintery forest and seeing pines and spruces heavy with snow forming many kinds of forms and shades of green, white and grey. Or we can entertain the different shades of green of an urban park in the spring.

The faculty of imagination helps us to understand the nature of the aesthetic. However, there is, at least, one variety of the aesthetic that requires a different analysis – the notion of the everyday aesthetic which probably is the most common when talking about urban environments and movement. In everyday aesthetics, we are dealing with phenomena that are, most often, in the background. They do not raise in the level conscious entertainment. Rather, they form the solid bedrock of our conscious activities by simply being there, by giving constancy and reliability to our everyday activities.

If we accept the relevance of everyday aesthetics – as we think we should – the consequence is that it is just as futile to try to capture the varieties of the aesthetic under of single definition as it is to try to define all the arts by referring to a formal feature or to the contents of works of art. But this is not a loss to philosophical aesthetics, rather the opposite: we are dealing with a fascinatingly complex phenomenon.

LEGIBILITY AS AN AESTHETIC ATTRIBUTE IN THE URBAN ENVIRONMENT

For a pedestrian, the legibility of an urban environment is a functional attribute of central significance. It is impossible for one to move and find one's way in the city, if one cannot "read" – i.e. perceive and interpret – the surroundings correctly. Besides this, the question of legibility has notable aesthetic relevance, though the relationship between legibility and aesthetic quality is multifaceted and ambivalent. On the one hand, easily comprehensible urban environment may be satisfying in its rationality, but also monotonous and dull; on the other, complicated and complex cities may be chaotic and frustrating, but also fascinating in their originality.

268

In order to fully understand the aesthetic relevance of legibility-related issues in urban environments, a conceptual clarification is needed, as the notion "legibility" is used ambiguously, and it may refer to multiple interrelated yet distinct phenomena. First of all, it is usually not acknowledged well enough that legibility is necessarily legibility *for someone*: there always is *an experiencer*, whose relationship to the particular environment and experiential background in more general have a central role in assessing whether an environment is legible or not. Despite the apparent significance of personal experiential history, the questions of legibility are not a matter of mere idiosyncrasy. Hence, instead of assessing the legibility from the perspective of a single person, it is reasonable to make use of reference groups, manifesting different *types* of relationships to the particular urban surroundings.

In practice, however, even though various user groups are often identified, and the differences in their relation to the urban surroundings are acknowledged to a certain degree, the potential variation concerning the notion legibility *itself* is not properly addressed. "Legible environment" is thus supposed to mean by and large the same for the members of the different user groups, even though their environmental experiences are likely to comprise a very heterogeneous and diverse entirety – not merely with regard to *content* of the experience, but also representing different *modes* of experience.

For example, in their analysis of legibility, King and de Jong categorize the users of

an environment into three distinct groups: locals, regulars and visitors.² According to them, locals “are very familiar with how to get around and rely mostly on landmarks”, whereas regulars “are quite familiar with their route, [and thus] do not necessarily need maps, signs, or local information”. For the visitors, the local environment and its idiosyncrasies seem more or less “foreign”.

Such a fundamental categorization is surely helpful to some extent, but it does not shed light on the *dynamism* inherent in our environmental relationship, and it remains unclear what happens *experientially* when we become acquainted with an environment. To be more specific: *how* does the regulars’ experience change in the course of time so that they do not have to (anymore) rely on maps and signs, and *why* locals can move around on the basis of mere landmarks?

It seems that we have here two distinct *modes* of knowing one’s environment: one based on propositional or declarative representations and mental images, and another based on procedural skills and habitual practices. These modes correspond effectively to knowledge *about* (navigating) a route, and knowledge of *how* to navigate the route.³ Legibility, in turn, is usually addressed merely in light of the former, emphasizing the abstract structural and visual dimensions of the urban surroundings and thus privileging the perspective of a *stranger*. What legibility means in a *familiar* environment – whose characteristics are “registered in one’s muscles and bones” as Yi-Fu Tuan⁴ puts it – remains then largely unanswered.

Such a distortion has serious and detrimental implications for understanding the relationship between legibility and aesthetic issues. For example, in an analysis founded on a traditional Lynchian⁵ notion of legibility understood as “imageability”, Nigel Taylor ends up defending aesthetic quality of an environment at the expense of legibility,⁶ whereas judged from a more holistic point of view, the overly sharp separation between legibility and aesthetic quality is ill-advised *from the very beginning*.

For ecologically-oriented environmental psychology, legibility forms one of the four main spatio-structural features behind the environmental preferences (i.e. the aesthetic appreciation of an environment),⁷ implying that we tend to *prefer* surroundings that are knowable – in the *both* senses of knowing. How, exactly, the legibility-related preferences may manifest themselves in a variety of either familiar or strange⁸ urban environments *experientially* is, however, a topic for further examination that falls under the scope of philosophical aesthetics.

AESTHETIC APPROACH TO EXPERIENCING URBAN COMPLEXITY

Urban lifeform in itself is undoubtedly one of the main characterising features of the 21st century. Urban environments have thus also become central territory for different types of contemporary debates and controversies. These controversies range from the ecological to the social, from the technological to the political but most of them have some types of direct or indirect aesthetic consequences that affect the everyday life of people living in cities. Following the paths these controversies open more closely will elucidate what are the unique approaches that philosophical aesthetics can provide to studying contemporary cities and understanding the conditions they provide for human life.

Urban aesthetics is still often defined as the study of urban forms of art. This narrow definition stems from the tradition of aesthetics focusing solely on philosophy of art. Instead, aesthetics offers a wider opportunity to understand the human experience in

and of the urban environment. Urban aesthetics points towards understanding how the urban lifeworld takes place, how it is shaped and how it shapes us. It is thus of interest, what form and shape things, planned and unplanned, in the urban sphere take, and how they become perceived and acknowledged. Recent advances in urban aesthetics have had focus on the meaning of place, mobility related aesthetic experiences, and the role of familiarity and strangeness in urban everyday life. Also qualities such as fluency and usability or notions such as atmosphere and the tourist gaze exemplify some of the central concepts that comprise the study of urban aesthetics.

If conceptualizing the lived quality of urban environments is stated to be the aim of urban aesthetics, some of the traditional accounts regarding what a city could or should look and feel like are in dire need of an update. Emphasis on moderate amount of aesthetic diversity, harmony, or traditional notions of beauty, for example, might not be fit to describe the aesthetic ideals of cities that aspire to high-level sustainability, efficiency, and livability. Cities have proven to be "emergent, far from equilibrium, requiring enormous energies to maintain themselves, displaying patterns of inequality spawned through agglomeration and intense competition for space, and saturated flow systems that use capacity in what appear to be barely sustainable but paradoxically resilient networks"⁹. In contemporary megalopolises of both Northern and Southern hemisphere aspects such as chaos, conflict or complexity are present also on the level of the urban experience and by no means necessarily in an inherently negative way.

Focusing on the form and characteristics of the 21st century cities, it is obvious that the forms that urban life is taking all over the planet is challenging the traditional aesthetic norms attached to city life. The inadequacy of traditional aesthetic notions in describing urban experiences is also symptomatic of a more general shift in describing the contemporary experience: also within the sphere of art new types of qualities such as interesting, cool, or cute has to some extent replaced more traditional aesthetic qualities¹⁰. Without taking this into consideration, there is a strong risk of universalising a certain form of the city as the ideal and not paying enough attention to the new aesthetics of cities. An example of this is the notion of "messy urbanism", an umbrella term for "understanding the 'other' cities of Asia"¹¹. Another example is related to how the bottom-up urban development strategies in cases such as Rio de Janeiro's favelas, for example, are feeding mainstream aesthetics.

The fast changing, postindustrial, and self-organizing megalopolis as a paradigmatically complex system might be to some extent understood through the notion of *the sublime*. This is exemplified, for example, in how perceptually acquired information about the limits of the city is not necessary for our understanding of the city, since we *know* that the city continues beyond our perceptual capabilities. This knowledge and the very borderlessness of the megalopolis itself are a source of pleasure that colours the aesthetic engagement with the city. Collective experience, immersion, *scale* that surpasses the human perceptive capacities, and *modes of organization* that surpass the individual human cognitive capacities are in the focus of this approach to urban aesthetics. In contemporary and rapidly changing megalopolises of the 21st century, the functioning mechanisms of enormous systems becomes visible in glimpses to the experiencers defined as *users* of the city, no longer categorizable merely as either tourists or inhabitants.

Arto Haapala received his Ph.D. in Philosophy at Birkbeck College, University of London. He has been Professor of Aesthetics at the Department of Philosophy, History, Culture and Art Studies, University of Helsinki since 1995. He has been a visiting Professor at Temple University, Philadelphia, Lancaster University, UK, University of Murcia, Spain, and University of Málaga, Spain. He has done research in different problems in aesthetics, particularly in ontology and interpretation, as well as in environmental aesthetics and Martin Heidegger's philosophy. His most recent interests are in the aesthetics of the everyday environment. His publications include *What Is a Work of Literature?* (1988), *The End of Art and Beyond* (ed. with Jerrold Levinson and Veikko Rantala, 1997), *Interpretation and Its Boundaries* (ed. with Ossi Naukkarinen, 1999), *Aesthetic Experience and the Ethical Dimension: Essays on Moral Problems in Aesthetics* (ed. with Oiva Kuisma, 2003), and *Ympäristö, estetiikka ja hyvinvointi* (Environment, Aesthetics, and Well-Being, ed. with Kalle Puolakka and Tarja Rannisto 2015). In 2010 he founded a journal entitled *Aesthetic Pathways* together with Gerald Cipriani; in 2014 the journal was relaunched under the title *Journal of Aesthetics and Phenomenology*.

Sanna Lehtinen is a Postdoctoral Researcher at the recently inaugurated Helsinki Institute of Sustainability Science (HELSUS) of the University of Helsinki. Since defending her PhD in 2015 on aesthetics of urban everyday spaces, the focus of her work has been on developing environmental aesthetics and urban aesthetics in particular. Her research interests cover areas such as aesthetics of (new) urban technologies, aesthetic sustainability and different forms of urban art. Dr Lehtinen takes part in the Urban Aesthetics in Motion (UrAMo) research project (Univ. of Helsinki & Aalto Univ.). She was a recipient of IAA's Young Scholar Award in 2013. Dr Lehtinen is currently the President of the Finnish Society for Aesthetics and a member of the board in the Nordic Society of Aesthetics. She is also an active member in the international Philosophy of the City Research Group (PotC).

Vesa Vihanninjoki's (MA in Aesthetics, Doctoral Candidate at the University of Helsinki) research deals with the questions of urban environment and urban planning from the viewpoint of humanistic environmental studies and environmental aesthetics. His PhD thesis aims at providing improved conditions and a more solid basis for achieving culturally and also aesthetically sustainable urban environment. Vihanninjoki is part of the Urban Aesthetics in Motion research group (UrAMo, University of Helsinki and Aalto University consortium project, <http://blogs.helsinki.fi/urban-aesthetics>). Anteceding his doctoral studies, Vihanninjoki worked as a researcher at the Environmental Policy Centre at the Finnish Environment Institute SYKE.

AESTHETICS OF JAPANESE CONVENIENCE STORE

Abstract | Comics sold at convenience stores are called conveni-comics (hereinafter abbreviated as CC); that is, they are not sold at book stores. The manga *Hitori-Gohan* (the title means “Eating Alone,” abbreviated as EA) is one of the CCs released every mid-month by the Japanese publishing company *Shonen Gaho Sha*, and as of February 2019, the 22nd issue has appeared. In this paper, through the consideration of EA, I try to illustrate certain aesthetics provided by Japanese convenience stores. First, I compare EA with food comics in general and confirm the specificity of EA within the genre of food comics. Then, I compare EA with another genre of CC, *pachislot* manga. By doing so, I will examine how the specificity of EA is related to its function in convenience stores. Finally, based on the above, I would like to suggest aesthetics that Japanese convenience stores offer. Normally, we think of a convenience store as full of light and bringing everyone to another place. For example, *pachislot* manga sold at convenience stores connects the reader not only to the real regional *pachislot* halls but also via the Internet to trans-regional sites such as SNS like other genres of pop culture. However, EA shows us the existence of another kind of consumer who wants to be alone without being connected to others. In this sense, a Japanese convenience store contains shadows within it. Contrary to its bright, open, and transparent appearance, it quietly offers to us another aesthetic of shadows.

Index terms | *aesthetics; convenience store; Japan; “Eating Alone” manga; pop-culture.*

INTRODUCTION

A convenience store is full of light. It seems to be the opposite of the Japanese aesthetics known as *In-ei Raisan* (In Praise of Shadows). Comics sold at convenience stores are called *conveni-comics* (hereinafter abbreviated as CC); that is, they are not sold at book stores. The manga *Hitori-Gohan* (the title means “Eating Alone,” abbreviated as EA) is one of the CCs released every mid-month by the Japanese publishing company *Shonen Gaho Sha*, and as of February 2019, the 22nd issue has appeared. Besides EA, other food comics (comics that deal with foods and meals) are issued by the same publishing company: we have *Omoide Shokudo* (Memorial Dining Hall), *Tokimeki-Gohan* (Heart Fluttering Meal), and *Min-na no Shokutaku* (Dinner for Everyone). Except EA, they all address meals with family and friends.

EA consists of around 20 short manga made by different cartoonists. Each manga depicts a female protagonist, normally a young girl, who eats her meal “alone” for some reason. The protagonist, in most cases, is tired of something; for example, she has troubles with work, family, or friends. However, when the protagonist eats some meal—usually a common food—it reminds her of past memories with her family during a meal or intimate fellowship with friends. At other times, that meal gives her new discoveries and insights. Furthermore, it gives her a new interpretation/awareness about her memories. Finally, that memory or new discovery encourages her and gives her the power to try harder from tomorrow. These are the stories common to almost all manga in EA. Sometime the protagonist cooks, and sometimes she only eats. In any case, the preparation of that meal is often described by protagonists or other characters.

In this paper, through the consideration of EA, I try to illustrate certain aesthetics provided by Japanese convenience stores. First, I compare EA with food comics in general and confirm the specificity of EA within the genre of food comics. Then, I compare EA with another genre of CC, *pachislot* manga. By doing so, I will examine how the specificity of EA is related to its function in convenience stores. Finally, based on the above, I would like to suggest aesthetics that Japanese convenience stores offer.

2. COMPARISON WITH OTHER FOOD COMICS

2.1 Comparison with general tendencies of food comics

Kei Sugimura organizes the reasons why food comics are interesting into the following seven points (Sugimura 2017, 4-7, the numbers from 1) to 7) are attached by Akiba forconvenience):

- 1) They are faithful to our appetite for foods.
- 2) They satisfy intellectual curiosity.
- 3) They give a useful introduction to foods.
- 4) There are elements of conflict.
- 5) They are also growing-up stories.
- 6) They give recipes on how to make various dishes.
- 7) They stimulate our five senses using various means, such as onomatopoeia and exaggerated expression.

I will briefly elaborate on each reason. 1) Because appetite is one of the most fundamental desires for human beings along with sexual desire, comics dealing with appetite cannot be boring. 2) They teach us unknown cuisine.

3) You can learn how to eat and the etiquette of the dish. 4) The protagonist fights against the chefs (competitors) of the business-enemy through cooking, acquires various items, and cultivates friendship and romantic emotions. Finally, the protagonist wins. Like many RPGs, this story invokes the empathy of readers. 5) As the protagonist grows from an apprentice up to a chef, readers also grow up together. 6) Recipes and tips on cooking are provided. 7) By skillfully incorporating onomatopoeia and exaggerated expressions into manga, which itself is a visual medium, it is possible to stimulate taste, tactile sense, smell, and hearing as well. The meal is made more delicious by inserting useful information about the food (rarity, value of ingredients, etc.).

Of these, 2), 3), 5), 6), and 7) will be easily found in EA. Because, as already mentioned, EA is a story where the protagonist gains new awareness through eating and develops as a character. If she is a beginner in cooking, she also gains new knowledge and know-how about foods such as recipes and food manner. In addition, in scenes where she eats meals, in order to make the reader realize the deliciousness of the meal, onomatopoeia (“pu ha” after drinking beer, “zuzzu” when sipping miso soup etc.) and expression of taste (the main character’s flushed cheeks, objects like flying soap bubbles, etc.) are used.

The circumstances are different with 4), because EA is a story that shows the protagonist overcoming her own weakness while eating a meal alone, switching her mind to the task of working hard from tomorrow forward. Therefore, she does not confront enemies but persists with a bearish self, even though the situations that tire the protagonist are often inserted briefly. For example, scenarios depict the protagonist as working and living alone and isolated from other classmates with family and children at the alumni association (Imobata and Taki 2019, 145). In another episode, a young girl protagonist is stupid of her favorite kabuki by friends because it is old-fashioned (Miyabe 2018, 65), etc.

As for 1), as with other food comics, it seems that a sexual meaning is superimposed on the scene where the female protagonist eats something. However, a more cautious analysis is necessary for the issue of sexuality in EA. Here, I do not deal with this problem.

From the above discussion, we can see that EA shares many of the characteristics of food comics in general, but its uniqueness is that the protagonist confronts herself through the act of eating alone.

2.2 Comparison with other “eating alone” manga

In this section, I compare EA with other manga where the protagonist eats a meal alone. Through such comparison, I aim to confirm the characteristics of EA in more detail. As is well known, the masterpiece of this genre is Qusumi and Taniguchi’s *Kodoku no Gurume (Solitary Gourmet)*, cf. Minami 2013, 236-237; Sugimura 2017, 125-130). The motto which forms the root of this comic is spoken directly from the mouth of a male protagonist. “When people eat, they must be free, not being disturbed by anyone, and ...how to say... they must be saved, alone, quiet and rich...” (Qusumi & Taniguchi 2000, 123).

Remarks that respond to this motto are also seen everywhere in EA. However, what is decisively different is that the protagonist of *Solitary Gourmet* is male, enjoying his meal in the diner of an unfamiliar town that he visits on business. He pays much attention to the town and the people living there. His interest is attracted by not only meals, but also by the people and the societies they live in. This characteristic is not seen in EA. Furthermore, while eating, the protagonist of *Solitary Gourmet* wants to be free, but it does not mean that he eats only what he likes. The protagonist is often forced

to order something he does not want to eat for various reasons and eats too much because of it. Yet, such accidental events are something that does not exist in everyday routine work; therefore, he enjoys it. In this sense he is free and rich while eating.

In addition, interactions with society and other people are described. Indeed, the remark of the protagonist quoted above comes from his anger for being hindered from his pleasure by a chef of the dining hall. Furthermore, the protagonist of *Solitary Gourmet* does not grow up through the act of eating. He simply eats something before him and observes everything around him. To tell the truth, *Solitary Gourmet* does not satisfy 1) to 6) of the seven characteristics of the food comics listed above. For that reason, it is different not only from EA but also from any other food comics. Nonetheless, the comparison with *Solitary Gourmet* highlights that in EA the protagonist is not really disturbed by anyone when she is eating, and she has a taste of bliss. Also, comparing the two leads to the following questions: Where is the social nature of EA? Does sociality and others not exist there? In the next section, I will compare this point with *pachislot* manga which is one of the representatives of CC.

3. COMPARISON WITH PACHISLOT MANGA

3.1 Sales strategy of *Panic 7*

Panic 7 is a manga magazine set against the backdrop of the *pachinko/pachislot* industry that is worth 30 trillion yen sales in Japan, and it is sold at convenience stores alongside EA. Its goal is to provide information to win the *pachislot* through manga and the DVD of the appendix. As of 2016 it has sold 100,000 copies. According to Yoshimura (2018), the following four strategies are responsible for such high sales (122-134); the numbers are given for convenience by Akiba).

- 1) Bold pricing.
- 2) Sales at convenience stores.
- 3) Effective issue format.
- 4) Community formation.

These are sales strategies that cater to the lifestyle of the *pachislot* practitioners called “slotters.” 1) The reason why the magazine can be sold at a high price is that for readers who aim to win through *pachislot*, it is quite natural for them to invest money (usually about 8 US dollars while EA is about 4.5 US dollars) for information on *pachislot*. An appendix DVD containing a movie showing that the writer actually practices *pachislot* is also attractive. 2) It is reasonable for slotters that *pachislot* manga is sold at convenience stores because slotters are too busy pursuing *pachislot* from early morning until late night, so they cannot go to book stores within normal business hours. So naturally, in the morning and late at night, when buying other items of daily living, they purchase *pachislot* manga at a convenience store. *Pachislot* manga is a tool that will heal them as entertainment and will give them useful information towards the next slot game. 3) There are three kinds of *Panic 7* (normal, special, and gold): the magazine released on the 7th of every month, a separate volume released on the 17th, and a gold released on the 26th. Popular manga characters appear across all three magazines, and popular *pachislot* models are featured in each of the three magazines, so readers are induced into buying all three magazines. 4) In addition, the publishing company hosts fan meetings in big cities, inviting prominent manga artists and writers who contribute to *Panic 7*, and it holds meetings with local readers at regional *pachislot* stores in cooperation with *pachislot* TV programs. In addition, the publishing company

also forms communities across the region using SNS such as Twitter and presenting or selling various kinds of cartoon characters' goods, in order to keep the readers' interest.

3.2 Comparison with EA

Thus, as the same CC, can the background of *pachislot* manga and its strategy described above be applied to EA too? It seems not. The meals in EA are much too common so only beginners may receive useful information on food while reading it. In fact, there are quite a few readers who actually cook and post the meals on SNS. Similar to *Panic 7*, EA shares popular characters with other CCs published by *Shonen Gaho Sha*. Therefore, the fans of such characters may purchase all of those CCs, but they have nothing to do with knowledge on cooking and meals.

Furthermore, most purchasers of *pachislot* manga are real slotters, and they purchase *pachislot* manga at convenience stores before and after their *pachislot* practices. The *pachislot* manga is incorporated into the life of the readers. Is EA incorporated in the life of the readers in the same sense as the *pachislot* manga?

Slotters buy a *pachislot* manga at a convenience store because it is a daily necessity. It is not the same as the biological need for food, but it forms part of the essential life for them. On the other hand, does the reader of EA purchase as a necessity for survival? Certainly, the meals that appears in EA are quite common; you can easily eat them. However, as I discussed in Section 1, the most important thing in EA is not the food itself but changing people's feelings through food in order to motivate working hard from tomorrow on. Actually, the readers do not have to eat that food tonight, tomorrow, or in fact, at all. The reason why the reader reads EA is not to survive by eating, but to survive by reading. In this sense, EA can be a part of their life. Its function is quite different from *pachislot* manga.

4. CONCLUDING REMARKS

From the brief consideration above, I can suggest another aesthetics that Japanese convenience stores offer. Normally, we think of a convenience store as full of light and bringing everyone to another place. For example, *pachislot* manga sold in these places connects the reader not only to the real regional *pachislot* halls but also via the Internet to trans-regional sites such as SNS like other genres of pop culture. However, EA shows us the existence of another kind of consumer who wants to be alone without being connected to others. In this sense, a Japanese convenience store contains shadows within it. Contrary to its bright, open, and transparent appearance, it quietly offers to us another aesthetic of shadows.

CONTEMPORARY PAINTING IN KENYA: MUKABI'S MAMA KIBANDA

Abstract | *Mama kibanda* is every woman, the woman of the kiosk. She is a permanent fixture in Kenya's urban life and the outstanding figure in Patrick Mukabi's paintings. Mukabi attempted to exhibit in several galleries. Gallery Watatu, foreign owned and active in the 1970s and 1980s, promoted naïve art from East Africa since this genre sold well in the international art markets. Mukabi rejected the style, opting for one that he believes reflects today's Kenya; one that rises about emotion to arouse thought.

He uses the figure of ordinary, everyday women saying that they are apt for reflecting society; they display the everyday with ease.

The rationale behind making images, any images not just paintings, is quizzed while the reader is asked to decide, for himself, whether Mukabi's paintings reveal who Kenyans really are.

Index terms | *Contemporary art, every woman, everyday aesthetics, naïve art, creating images.*

INTRODUCTION

The Artist

Mama kibanda loosely translates to the woman of the kiosk. She is, however, difficult to describe! She is that person who carries out odd jobs to put food on family tables; a casual labourer, participant in the informal economy. Her mobile restaurant, while boasting makeshift impermanent structures, feeds more than half of Nairobi's population. Wholesome meals she brings to those whose pockets are too lean for fancy restaurants. She may be found in homes sorting out laundry, doubling up as the nanny, the indubitable vendor of assorted wares in the marketplace; she is a permanent fixture in Kenya's urban life.

This *mama kibanda* is the outstanding figure in Patrick Mukabi's paintings. Mukabi has been practicing for the last 20 years (c. 1986 to date, 2019) He started in 1986 after completing studies in graphic design at the then Kenya Polytechnic (now upgraded to The Technical University of Kenya). He found graphic design somewhat slow, saying, 'there were no computers then and you did everything by hand. Producing one logo would take so long.'¹ Although Mukabi was always interested in painting, his father, Joshua Mukabi, a graduate of Makerere University, had advised him to study graphic design –not painting– hoping to employ him in the graphics department of the Kenya Railways Cooperation. Mukabi, the younger, did not enjoy graphic design. After graduating from the Polytechnic he joined Kuona Trust (a foundation for Kenyan contemporary artists) to the disappointment of his father.

The Galleries

Kuona Trust is an offshoot of Gallery Watatu.² Gallery Watatu (now defunct) was founded, in 1970, and operated by Joni Waite, David Hopcraft and Robin Anderson. It thereafter changed hands from one foreign owner to another, to eventually become the property of Ruth Schaffner, an émigré from Hitler's Germany.¹ The year was 1984. Gallery Watatu was active throughout the 1970s and 1980s. Mukabi took his early paintings to Schaffner who rejected them on account of style. Schaffner had been, and still was, promoting naïve art from East Africa. This genre sold in the international art markets especially in the United States –her adopted country. She however, took two of Mukabi's paintings for an ongoing local competition that had been sponsored by East Africa Industries, now Unilever.

Mukabi's painting won the second prize, about KES 70,000. After deducting Gallery Watatu's 50% (Schaffner's undisclosed fee) Mukabi received a cheque of KES 35, 000 and a voucher for art materials worth KES 10,000 as prize money for coming second in that competition. He continues, excitedly, 'I went home and gave the cheque to my mum. I then went straight to Science Scope (a shop in Nairobi that stocks Windsor and Newton art materials) and bought oil paints, acrylics, pastels, brushes, palette knife ... all those things that a painter requires but can never afford.'³

The Style

Schaffner was now interested in Mukabi's paintings but she continued to advise style change. If Mukabi's paintings were to be rendered in an abstract style, it would be easy to sell them as naïve contemporary East African art. 'Try to paint like Sane Wadu, Wanyu Brush, Mbuthia... if you paint like them, I will make you big.'⁴ Schaffner intimated.

Figure 3: *Everyday Chores* (c. 2010), (e.g. of a mama kibanda painting), Artist: Patrick Mukabi, source: facebook artist's page

Wanyu Brush, Jak Katarikawe and other Gallery Watatu artists have a style different from Mukabi's. Theirs is an abstract expressionistic style while Mukabi's is realistic.

Mukabi was not happy with Schaffner's request. He reported this conversation to his mother (his mentor) who replied, 'if she (Schaffner) didn't like your work but sold it, then continue painting as you like. It will still sell.'⁵ This is because the prize painting was in realistic not the naïve-cum-abstract style.

Commenting on Brush's painting above, *Never, Never, Never Again* that was executed as a response to the 2007/8 election violence in Kenya, an American critic says, 'His *Never, Never, Never Again* (2011) is the consummation of this particular abstract expressionist style; it's a danse macabre that depicts the brutality of the Kenyan riots in the style of Picasso's *Guernica* (1937). The detailed grotesqueries in Brush's paintings, while closest in spirit to the purview of the exhibition, do, however, belie a pronounced lack of depth of field and their grandiosities often overwhelm any complex sense of perspective – an accusation often levied at Francis Bacon, whose work is a kindred influence on that of Brush.'⁶ Mukabi, on the other hand, appears comfortable with depth, perspective and realistic depiction of the human form as can

be seen in the cartoon above, *Everyday Chores*.

Because Mukabi was unwilling or unable to adopt the naïve style, beloved to Nairobi galleries of the 1980s, Schaffner directed him toward Family Planning Private Sector (FPPS) run under the USAID. A calendar for FPPS was being prepared and paintings carrying the relevant message were required; the theme was the AIDS pandemic. Mukabi remembers that he ‘painted a woman in a nice *lesso* lying on top of a coffin.’⁷ *Lesso* or *khanga* is an iconic piece of fabric, carrying significant history and culture. It has been used, for several centuries, along the East African coast. And, like the language of similar origin, Kiswahili, it has gradually moved into the hinterland.

A month later, Mukabi was announced the winner. The judges appreciated his message of hope amid the hopelessness of the AIDS story. He was paid KES 20,000 as copyright and an additional KES 40,000 as prize money. ‘That was the year I started my painting career,’⁸ Mukabi recalls.

Contemporary Painting

The term ‘African contemporary painting’ may conjure up pale, indistinct images or none at all; it is understandable if the global audience questions what exactly it refers to. Contemporary art is not the ancient tribal collections, nor the assorted curios sold to visiting tourists; it is rather genuine artwork that engages life today, using materials, subjects and debates that resonate with the here-and-now. Mukabi’s *mama kibanda* is a case in point. And, because of the richness in variety, of this art, it appears to lack a dominant aesthetic.

The hopes, fears, joys, ambitions and concerns of individuals and society, animate contemporary painting. A recent author who compiled the work of 57 Kenyan contemporary artists summarised it as, ‘vibrant, edgy and growing. (It is) not the traditional images of masks, tribal figurines, bucolic scenes showing landscapes and wild animals. (Instead) it displays art’s vital role in documenting the social, political and cultural experiences. It shows the changing tastes, styles and narratives; how conversation about art and its function shifts with time.’⁹

And, these shifting issues find adequate expression in painting, although some critics¹⁰ are of the opinion that the East African (Art) scene is modest compared to South Africa’s well established scene, or Nigeria, Ghana and Senegal. Whether the critics refer to the more modest and quieter tempo of life in East Africa, is an open question. Perhaps the measurement alludes to the exuberance of artistic output, with its consequent commercial hubbub, as witnessed in South Africa and in Nigeria. It could also reflect government support (or lack of it) for the fine arts given that 2017 was the first time the Kenyan pavilion, at the international Venice Biennale, showcased artwork from Kenyans not Chinese or other foreign nationals.

What the measurement cannot possibly testify to, is the absence of paintings in Kenya that reflect today’s society; paintings that defy vague emotion to arouse thought, like the *mama kibandas*.

290 His message to Kenyans: find your identity and stay true to yourself.

Pertinent Questions about painting

Throughout his painting career, Mukabi has used the image of woman. Because artist draw attention to what merits a closer look, what merits appreciation or denouncement, they help shape our worldview. Salient questions therefore emerge about Mukabi's mama kibanda.

What does the artist want us to notice in Kenya's urban life?

What ideas does he have about women, about this particular type of woman?

These and similar questions were posed to Mukabi. His answers are reported as they were given.

Questionnaire and responses

Q1. Your paintings often have women. What are your ideas about women?

A: Women reflect better how a society lives: through their mannerisms, wealth, poverty, discrimination etc. All these are very visible in women –first.

Q2. What do you think about using the human figure as the main composition tool in your painting? Why not paint abstract images?

A: I am fascinated by the way the human figure can be posed, stretched and its many gestures. The effect of light and shadow, drapery is always fascinating...

Q3. What approach do you have toward the human figure? Are you critical, appreciative, questioning, explorative... say anything you think fits best.

A: My approach to the human figure is appreciative, I have a fascination with it. My approach is to also explore the human figure.

Q4. Why do you depict mama kibanda and not the super model, slay queen...?

A: That ordinary person I meet, everyday in the street, doing what they do, everyday, has for me, more to tell.

Q5. Who do you imagine as the main 'viewer' of your paintings? Kenyans, the international community... or it doesn't matter who wants to look at them?

A: I paint for all. I do not want to have a particular audience.

Q6. Why paint? For money, for pleasure, for expression.... all of these or only some of these?

A: The reasons have varied over the years. In the beginning, I painted for the pleasure of it, for fun and for fame. But with more responsibilities, I am now sometimes motivated by money.

Q7. You can add any other info that you want to.

A: The need for business, financial knowledge has become important. Branding and constant visibility in the industry is also important. Planning is necessary.

Mukabi does not flatter or beautify his women –he doesn't depict them for sheer emotional admiration.

Instead, these women are working; they are absorbed... they are far from appearing as beauty models. They are ordinary –the type of woman one expects and meets in the streets of Nairobi.

They are not prostitutes; they are not picturesque; but they stand out. How? Why?

The underlying reason for posing these questions is to better understand the *raison d'être* of painting or creating images.

What is image or imaging? Why do we need images?

Are they supposed to be artistic? Beautiful? and therefore Good?

What relation exists between our values and our images?

Images, these works of art, reveal our longings and our yearnings.

And when they treat of evil, it is because we want it not!

We try to understand evil for the sole purpose of avoiding it.

We affirm and revel in the good and the beautiful

because to it, we naturally tend.

Art, we fabricate, to celebrate the ideal, that which we so long for.

Art, we also fabricate, to mourn our loss and condemn our evil doing.

This is what image is for: a vehicle for our longings; a pointer of what to avoid;

a receptacle for what we cannot voice

and we cannot voice it because it is too deep.

Image is truly the unveiling of ourselves.

And when devoid of self, hollow is its ring, never to be heard.

It can hold no value; it can point to no good and is lost amid beauty.

Images that stray away from us, eventually lose the reason for their being.

Images that move in our direction, need a value if they are to belong.

And image is not happy in solitude. It wants to share, to communicate, to feel with another. Image builds our communities; it is the glue that holds us together.

Because an aesthetic discussion is neither prescriptive nor normative, the reader of this paper is invited to decide, for himself, if mama Kibanda does indeed serve this purpose.

CONTEMPORARY AFRICAN DESIGN: PERSPECTIVES FROM THE GLOBAL SOUTH

Abstract | Africa's design foundations are rooted in a culturally rich, artistic heritage – one that has produced some of the world's most iconic artistic expressions in diverse forms, such as in handicraft (such as beadwork, carvings and basketry) and traditional architecture; music, dance and performing arts; fashion and textiles; furniture and products; as well as in the form of surface graphics and colourful prints. These objects and art forms imbued with deep symbolism represent the timeless ingenuity of the classical designs that are primarily borne of a functional aesthetic.

Whereas the African continent is extraordinarily rich in creativity and natural materials, the range of excellence in artistic legacies appears to consist mainly of musical, dance and fashion clothing genres. This paper thus interrogates some of the key features and elements of contemporary design that expands critical discourse beyond the superficial and perfunctory – negotiating such notions as tradition and modernity, innovation and history, consumption and production, and form and beauty. Additionally, the paper offers an exploration of popular materials and processes that are ubiquitous in art and design endeavours across our dynamic continent. Further, unique characteristics and themes frequently incorporated include *inter alia: informality; hackability; hybridity; and sustainability*. The paper concludes with a future orientated discussion on practical implications, anticipated future trends and developments on art and design education and praxis in Africa and other regions of the Global South.

Index terms | *aesthetics; Africa; crafts; contemporary art and design; design education; materials; processes.*

A Rich Craft Tradition

The foundation of African design aesthetic is based on the continent's culturally rich artistic past that is credited for some of the world's iconic objects and artefacts that reflect the ingenuity and timelessness of the designs (Matsinde, 2015). The artefacts, sculptures and craft products produced reflected religious beliefs and cultural values – two inseparable elements that are enmeshed in African craft. It is therefore, futile to attempt to appreciate the aesthetics in African craft in the self-same manner as one would European craft with emphasis on elements such as symmetry and aesthetics (Mirow, 1997). To this end, Oludhe (n.d.) contends that African traditional art is fundamentally functional, meeting some specific utilitarian purposes whereas its aesthetic consideration is normally regarded as having some secondary significance.

In Kenya, the informal sector, which is also referred to as the *Jua Kali*¹ sector, is the predominant manufacturer of these craft products in clusters such as woodwork, metalwork, basketry, ceramics, leatherwork and textile (Kidenda, 2017). These crafts embody African design aesthetics that have retained traditional designs as much they also reflect elements of innovation, hybridity, hackability, sustainability and modernity (ibid).

From antiquity, woodcarving was deeply ingrained in African craft traditions and was predominantly practiced by men. There were numerous symbolisms, geometrical shapes, and human forms that were incorporated into the woodcraft based on their functionality. Besides masks and sculptures, stools/seats were other important iconic and important genres that were found in classic African carving (Matsinde, 2015). The other genre of woodcarvings involves the production of animal and human sculptures and masks, which is largely embraced by Kamba carvers (Safieli, 2016). Kamba carving is greatly influenced by carvings of the Zaramo and Makonde in Tanzania, after a few Kamba carvers interacted with carvers from these communities during World War I (von D. Miller, 1975). The key distinguishing feature of the Kamba carvings has been the use of dark wood, which has subsided with the decrease in the supply of the wood. The product range of the carvings has also not changed, which include wild animals such as birds, reptiles and mammals (see Figure 1) that target tourists (Safieli, 2016).

Figure 1: Examples of woodcarving

The Luo traditional stool is a good exemplar in the Kenyan context. The stool has a round top, which symbolises of the round universe; it is also a reflection of the round traditional Luo huts and homes (Ngore, 2014). In many African cultures these curved seats were symbols of prestige and leadership, reflecting the status or power of their owner within society (Ayima, 2012). In the Luo culture the top is also the symbol of the universe that the husband reins in a home, with its legs embodying male virility – only the father was qualified to sit on the seat as he had requisite authority (Ngore, 2014).

Stone carving is the other craft that is of significance while taking into consideration African design aesthetics. Soapstone carving is largely a craft of the Kisii people in western Kenya. The soapstone has been excavated and used for producing craft products at Tabaka in Kisii County since about 1885. It is currently used to carve a broad array of products such as jewel cases, candleholders, busts, animal sculpture and bowls (see Figure 2).

Figure 2: Examples of soapstone carvings

Basketry craft is dominated by women and is found in various cultures in Africa and basically involves skilful hand-weaving of strands derived from local resources such as grass and reeds. The examples of these are the Rwandese *agasege*, the Zulu's *ukhamba* and the Ethiopian *mesobo* that are largely functional and are used for serving food, winnowing and storing grain. Basketry crafts are characterised by broad range of intricate patterns that reflect the creative fingerprints of the weavers, with subtle variations that differentiate one from the other (Matsinde, 2015). The contemporary basketry craft is also incorporates the characteristic of *hybridity*, as its manufacturing has evolved from the use of traditional material such as reeds to include sisal, plastic twines and beads to enhance their look, durability and functionality – in a sense, basketry has shifted from its traditional African role, becoming a fine example of the combination of traditional art and contemporary design aesthetics (see Figure 3). Apart from using the traditional material artisans are adopting recyclable material such as plastics that provide more intricate design and greater weaving flexibility as well as demonstrating traits amenable to *sustainability*. In order to be relevant to the local and international markets modern weavers are combining the existing craft traditions and skills, with the good product design.

296

Figure 3: Examples of basketry

The metalwork clusters have also had a fair share of their contribution to the development of contemporary African design aesthetics. Traditionally, metalwork is believed to have emerged from ceramics during the process of firing clay. This led to the development of weaponry, sculpture, currency and agricultural tools (ibid). Currently, metalwork is still dominated by men who mainly make functional products such as cooking pans, utensils, cooking stoves, boxes, and iron boxes to name a few (see Figure 4a). Contemporary metalwork craft also include ingenious metal sculpture inspired by the rich Kenyan wildlife – these include lions, giraffes, and elephants, which are displayed inside malls, at roundabouts and in lawns at airports and other public spaces (see Figure 4b).

Figure 4a & 4b: Examples of metalwork

Ceramics is regarded as one of the oldest artforms in Africa, dating back to 9400 BC based on the fragments that were excavated at Ounjougou, in Mali. Ceramics was widely practiced predominantly by women across the continent. They moulded ceramics with their hands, using simple tools such as stones and shards, adapting their forms to suit a broad scope of functions. For instance, the pots that has slightly elongated bases were design to them stability while sitting on the ground. They also used shells, corncob, seeds, grass and wood to embellish their surfaces apart from incising, stamping and using slips to add colour (ibid). Presently, pottery craft reflect an evolution from the focus on functionality to aesthetics, whereby some of the ceramics artisans focus on the creation of flower vases of various designs. Notably, these ceramists are mostly found in the urban spaces where there is a demand for such products. There are however, those who are still tapping into the local market such as the Oriang' Pottery Women Groups and Ong'ayo Women Handicraft Group by creating ceramic products that bear traditional motifs and functionalities (see Figure 5). These include products such as *mbiru* (water pot), *kwesi* (traditional smoking pipe); *oswaro* (bowl for eating fish); and *ohigla* (pot for cooking fish).

Figure 5: Examples of decorated pottery

Beadwork is another craft that reflects African design aesthetics and often communicates personal information regarding the wearer. This is especially true amongst the Maasai and other communities in East Africa (Bigham, 2000). Notably, beadwork is considered as a traditional skill amongst the Maasai women (deSilva, 2014). The Maasai, beaded skirt symbolised a woman’s readiness for betrothal; beaded headbands indicated the initiation of a young man into warrior status; whereas wearing beaded earring indicated that a woman had given birth to her first son. Significantly, the Maasai have over forty words specifying the different types of beadwork (Bigham, 2000).

Materials and Processes

Quotidian aesthetic applications within the African context include natural materials such as wood/timber, ivory, leather, bone, shell, beads, seeds, stone, metal, clay, sisal, and hyacinth; as well as synthetic materials such as nylon, various plastics, glass, rubber and various found objects. According to Kimairu (2015) the design process involved in craft production falls into four categories *research, conceptualisation, designing and production*. These processes are never distinctly demarcated and they more often than not overlap – in many instances, the characteristic themes of eclecticism and *hackability* are evident.

With respect to processes, few Jua Kali artisans follow a traditional ideation and tend to move from the conceptualisation straight to production phase, and even fewer still conduct research on the products that they make. There are some Jua Kali artisans who are a little enlightened such as the Ber Neno Creations who make sketches for their hyacinth furniture and allied products such as those depicted in Figure 6. Others such as the Kamba carvers at the Nairobi Handicraft Cooperative Society, who have tacit knowledge, they claim the product ideas ‘are in their heads’. This is largely based on what they have learnt by doing as intergenerational apprentices and then craftsmen using largely manual methods of production (Akoojee et al., 2013).

298

Figure 6: Examples of hyacinth products

Craftsmanship and Design

Traditional apprenticeship is the most predominant methodology of the acquisition of design skills in the Jua Kali sector – improvements in basic workshops would aid in complimenting this approach (Kasfir *et al.*, 2013). Kamuiru (2015) considers traditional craftsmanship as the most tangible exhibition of the intangible cultural heritage. The traditional craft is normally based on the knowledge that is implicit in the craft product itself in the manner it which is it made and used. The purpose of safeguarding is to ensure that the knowledge and skills that relate to the innovative craft and design traditions are recognised and co-produced via an emerging narrative so that they continue to promote social equity and cohesion for generations to come (M'Rithaa & Abbas, 2017). The craft traditions have thus developed age-old systems for facilitating instruction and apprenticeship by tapping into *tacit* and embedded (as opposed to explicit) knowledge (Langenkamp, 2000; Maina et al., 2017).

Such forms of tried and tested competency-based model of transmitting skills and knowledge should be aligned with novel pedagogic and didactic strategies so as to make the skills more pertinent to current socio-economic and geopolitical imperatives. Additionally, a future-oriented educational and training agenda that promotes social innovation would need to address such wicked problems and their concomitant and developmental challenges so as to remain socially conscious, resilient and sustainable within the broader academic project (Manzini & M'Rithaa, 2016). To this end, the inclusive *STEAM* (as opposed to STEM) agenda of Science; Technology; Engineering; *Art & Design*; and Mathematics should be interrogated with an aim to adopt and adapt the same to each country's needs. Such progressive policies should be reinforced within *Quadruple Helix* partnerships (of academia; business/industry; civil society; and government).

Implications for Design Education

The findings from the research on the Jua Kali sector and its potential contribution to Kenya's national economy and developmental agendas is instructive – there are key lessons to be learnt and implications for design education. These include the following:

Informal creative industries are markedly labour-intensive and make a significant contribution to the national fiscus and should be supported to expand activities, improve financial, entrepreneurial, infrastructural and logistical sophistication, and play a more important role in co-developing competency-based human-resource capacity in alignment with national, regional and international developmental agendas, visions, priorities and goals;

Quadruple Helix partnership models (including public-private partnerships) should prioritise capacitation of properly trained artisans who enjoy a decent quality of livelihoods;

Digital platforms are uniquely suited to diverse African contexts should be incorporated within the broader skills and training programmes for both formal and informal education and training sectors;

Design [Thinking] (within the STEAM framework) is an important component of any creative, service or manufacturing industry and should be mainstreamed within national developmental policymaking and praxis. Higher education institutions should have formally recognised and sanctioned programmatic learnerships (including work-

integrated learning, internships, and cooperative education) with Jua Kali and allied sectors; and

Emerging context-specific themes (such as *informality*, *hackability*, *hybridity*, and *sustainability*) should be systematically documented, codified, and disseminated in an open-source ethos to encourage uptake and valorisation of the informal creative industries and manufacturing sectors across the continent.

IS THERE AN OUT OF AXIS ART?

Abstract | I intend to propose the discussion of the notion of art out of axis. When we think about the axis, we think of something that organizes and defines. I understand that the proposal to think about art in Latin America is made thinking about the center-periphery axis, but we can still consider another starting point, thus changing direction, a change that is not only geographic but of what will be the reference to think of art taking into account the artistic production submitted to the market and the stock exchange. Nowadays we seek to account for the phenomenon of urbanistic growth and we remain perplexed by the force that assumed financial capitalism, which, now, not only transforms everything into the value of exchange, but has also resulted in the loss of any meaningful reference to the original value. A first observation is that artistic productions, in order to be faithful to what art means and expresses, did not seek to account for this phenomenon, but rather to respond to it in different ways. I will refer to it using some examples of artistic productions and urban interventions that respond to it in a way to provide solutions to problems created by urbanisation.

Index terms | *aesthetic thinking; Brazil; urbanism; urban interventions.*

INTRODUCTION

Characteristics of Contemporary Life and Art

A first observation is that artistic productions, in order to be faithful to what art means and expresses, did not seek to account for this phenomenon, but rather to respond to it in different ways. To refer to this phenomenon we will use the images of Nelson Brissac Peixoto and Umberto Eco as they present us with the scene of American culture at the height of the 1980s, and then give some examples of artistic productions and urban interventions that respond to it in a way to provide solutions to problems created by urbanisation.

The Cities

... are contemporary landscapes. The skyline of São Paulo, seen from the top of the buildings, spreads like the archaic floor of Pelourinho. The pretensions of Belém circumscribe the same emptiness of Brasília (...). Field of intersection of painting and photography, film and video. Between all these images and architecture. Horizon saturated with inscriptions, deposit in which accumulate archaeological vestiges, ancient monuments, traces of memory and the imagery created by contemporary art. This cross between different spaces and times, between different supports and types of image, is what constitutes the landscape of cities "(PEIXOTO, 1996: 10).

Despite referring to the B-movie scenario, Brissac Peixoto gives us a description of how the contemporary man experiences the urban landscape: everything happens as if the city hides an abstract scenario, simplified environments, "everything is a staircase, a window" (PEIXOTO, 1987: 228) just as in the film, everything is image, not reality. Everything is done for a certain narrative to take place. Thus we live in the city, a kind of trap that conditions our perception and our actions. The expression through images corresponds to a world saturated by the media: our identity is forged by the movies, comics, music, novels. There is an aesthetization of the self at the same time that the personality is fragmented to correspond to the innumerable stimuli. To match these images, the inhabitants of the cities become deceivers, alienating themselves.

The city presents a "pretend" world, without frontiers, in which all stories are the same, "all their stories are family histories" (PEIXOTO, 1987: 92). If, as Adorno and Horkheimer postulated, the cultural industry made men distant because the media put itself in the place of personal relations, now it makes homogenous histories, there is no differentiation. But this absence of frontiers is artificial and consists only of the monetary unit and the unique scenario that it is intended to create. And the inhabitant of the city has to learn to make this scenario in its place. To adapt to the scenery is a necessity, and that makes us forget who we are or what we are, just being part of the scenery. The internal dramas, and the lack of space for their expression are reflected in a difficulty in expressing themselves. When we express ourselves it is with formalism, the formalism created by the space of relations and coexistence. "Unable to portray themselves and the landscape around. Lacking of image in which to recognize" (PEIXOTO, 1987: 153). Such difficulty is reflected in the production of visual and literary images, for which it is possible that the cinema can provide elements so that the inhabitants of the city can recognize themselves.

Despite the daily life of the city: every day people wake up, they go to the same place of work (whatever it might be) in the same means of transportation, constantly

passing the very same places, with nothing in this day-to-day life making relations any deeper. Life passes, time passes and no one knows the why or wherefore. An artificial life is lived in an artificial landscape. Umberto Eco had already denounced this characteristic of American culture in *Journey into Everyday Unreality*, that has extended into contemporary culture in all imaginable directions; not only related to the culture of the false, the imitation, but also the unrealistic scenarios that define reality. “The new aluminum and glass mirrored buildings are another form of urban simulacrum. The glazed front only shows the reflection of the clouds in the sky or the deformed image of the other buildings in front. Huge buildings appear to have been decomposed geometrically or are about to collapse (...) A street seems to start on a façade, when in fact it is on the opposite side” (206). We can call these images surreal, but they are actually effects produced by the materials used that give us the impression that we live in a way that can disappear.

These scenarios, however, are ambiguous, “fluctuating vertiginously between reality and representation, between true and false, between what they are and what they pretend to be” (Peixoto, 1987: 207), and the great task of those who live in this scenario is that of unravelling the artifices of its construction, of its appearance, just like Dorothy in the land of Oz. Peixoto asks the question: “How to survive in this realm of opinion?” (PEIXOTO, 1987: 207). We can add: what is the function of art in this context in which life seems to be an illusion? Can art be reality? Real? What kind of image will it be?

How can Art be an Image that is opposed to this?

We will examine some examples of artistic productions that seek to respond to the effects of modern life (be it life in the big city, disputes over power and wealth in the context of international capitalism, contempt for life for profit, or abandonment of ethics in relations). However, these responses are not uniform, which often results in the public visiting these major exhibitions to state that they do not understand contemporary art. What this audience fails to appreciate, however, is that the current artistic production takes into account public reception, which is a participant of artistic production in the sense that it matters how this audience receives the work, and that it is especially for this audience that it has been produced¹. Some artistic installations and interventions seek to recall a traumatic past, as Dominick Lacapra, James Young, and Karen Till² refer to them. Alfredo Jaar, a Chilean artist whose work deserves special comment, insists on the importance of art as a way of occupying spaces, as well as questioning the representation itself. He has produced a series of interventions with the objective of drawing attention to events that we see simply as facts³. With his multidisciplinary artistic practice, Jaar explores the unequal power relations and the socio-political divisions that result from globalisation. One of his best known works, *The Logo for America*, 1987, consisted of an electronic billboard in New York’s Times Square that displayed the statement “This is not America” on a contour map of the United States (see Figure 1). Through an apparently contradictory juxtaposition of word and image, Jaar drew attention to the fact that the word “America” is routinely but erroneously applied to only a part of the American continent⁴.

Figure 1: Examples of decorated pottery, <http://www.phaidon.com/agenda/art/articles/2014/july/31/alfredo-jaar-tells-nyc-again-this-is-not-america/>, acessado 01/02/2018

Over the past three decades, Jaar’s work has focussed on human rights violations and, in particular, on humankind’s fulfillment of inhumanity. From hunger in Sudan and gold mining in Brazil to the Vietnamese refugee detention centers in Hong Kong and the Civil War in Nicaragua, Jaar combines photography, cartography and language to question the ethics of image and representation.

We would like, however, to emphasize the Arte/Cidade project, an urban intervention project curated by Nelson Brissac Peixoto, which took place in São Paulo from 1994 to 2002. According to the definition of the Arte/Cidade project: in the 1994 exhibition, City without windows, the project “leaves from the urban horizon as a backdrop to the multiplicity of experiences and languages that characterizes contemporary art production” (Art/city: City without windows, p.9). Whereas in this first exhibition a “relationship with the still-typical world of the nineteenth century is presupposed: the Baudelairean city, the field of experience, the path, the gaze ... it is no longer possible to make this itinerancy as a tour. The displacement has long led the passerby to get lost in urban chaos “(Art/city: The city and its flows, p.9). This perception of the life of individuals in the city as chaos, violence, practically, and in opposition to a human body’s requirement for survival, guides the last exhibition of Arte/Cidade, which was held in the eastern zone of the city of São Paulo, the site of this city’s first industrialization. “The region went through a period of disinvestment and the establishment of the railway. In the abandoned areas of the region, favelas (shanty towns) , street vendors and other informal occupational activities emerged. The result of this form of occupation was the development by local populations of equipment “to inhabit and operate the global city”. The artists and architects participating in the project “developed proposals for intervention for different situations in the region” (all quotations up to here 15) as a way of “discussing urban processes and the devices of

art production” (idem) and thus “to create new modes of intervention in megacities” (idem).

The intervention proposals have all the hallmarks of the solution to problems that a city like Sao Paulo has; problems that arise from the political options of city organization: demolition over conservation, to build over rather than maintain, or construction based solely on appearance whilst ignoring people’s needs in terms of space and practical occupancy. - v. p. 130 - v. p. 138. Another aspect that characterises these interventions is in the attempt to undermine current perception of the excluded with the production of vehicles for the homeless population (p.108-9), the valuation of the informal economy “and its role of resistance against the globalising economy “(170).

There are also four aspects to be emphasised that contribute to the discussion on art today: the function of art, the role of the artist, the audience in relation to the interventions and what is being talked about.

The artist in this project is seen as an agent, almost as a facilitator, who in proposing new and unusual solutions brings into question the relation of the individual with the city, and the city with him, insofar as it restricts his area of activity. In one of the interventions it is clear that the audience is not merely a spectator, but assumes the role of “curator or publisher of the content generated by the artist” (215). He also has a voice, and is thus called upon to state his position. Art is therefore a channel of expression and no longer of representation⁵. By showing the “failure” of representation, contemporary art is a way of pointing to what is beyond all abstract urban forms. The intervention of Waltercio Caldas in creating an empty auditorium has the dual function of pointing to the opacity of social processes for the individual as well as to refer to the beyond, beyond the city, beyond this life. What do we talk about then? We are talking about us, this “we” that has become opaque in the face of the innumerable processes and machines we have interposed between us, both inwardly and outwardly.

Sonia Campaner Miguel Ferrari is an assistant professor at the Department of Philosophy of the Pontifical Catholic University of São Paulo. The early years of his research focussed on the work of the German philosopher and critic Walter Benjamin, having worked mainly on notions like philosophical criticism and dialectic. Currently, she coordinates a research group in ethics and political philosophy with emphasis on the interface of aesthetics and politics. She works more specifically in the area of Aesthetics and Philosophy of Art, Political Philosophy, with emphasis on the following themes: Walter Benjamin, modernity, sovereignty, cultural industry and education, contemporary philosophy, Artistic Production. Her publications deal with aspects of Walter Benjamin's work related to modernity, political action and contemporary artistic production.

ROUND TABLE 17 |
THE TRANSFORMATION AND INTEGRITY OF EAST ASIAN AESTHETICS AND ARTISTIC CULTURES:
A DOUBLE COMPARATIVE PERSPECTIVE OF EAST AND WEST, AND OF INTERCULTURAL TRAJECTORIES WITHIN
EAST ASIA ITSELF

ON THE AESTHETICS OF OBSCURITY AND METEOROLOGICAL ATMOSPHERE IN EAST ASIA FOCUSING ON JAPAN

Abstract | Contemporary aesthetics, despite prioritizing Western hermeneutical models, aims to be global in its scope. East Asian culture embodies a unique approach which may be said to exemplify an aesthetics of obscurity. For instance, although the aesthetic charm of fog, haze, and cloud has been cherished for more than a thousand years in Japan, Oscar Wilde’s maxim that fog is attractive for Londoners because nature imitates art, dates back merely one hundred years. Moreover, whereas the nude is a longstanding genre in Western European art and regarded as a virtue, East Asian aesthetics does not make a comparative distinction between nude and naked, and correspondingly does not have an aesthetic category of the nude. The import of the genre of the nude to Japan generated various reactions, not all positive. Natsume Soseki, a novelist and critic of modern Japan, describes in his novel *Kusamakura* (1905), a Japanese refusal to paint nudes. Interestingly, this refusal is not based on an ethical but rather an aesthetic reason. Soseki’s novel proposed that the East Asian aesthetic of obscurity is to be preferred. That is to say, the beauty of a naked lady is enhanced by the translucent haziness or thick steam of a hot spring, a quality lost by the revealing clarity of nudity.

Such respect for aesthetic haziness is associated with the aesthetic sensitivity cultivated by the unique climate of East Asia. In a famous haiku, Matsuo Bashō appeals to the “vague and hazy” beauty of pine trees in Karasaki. This aesthetics of obscurity is also strongly exhibited in the *Tsurezuregusa*, or *Essay of Idleness*. Even in the modern era, Usui Kojima, who introduced the Western European style of mountain climbing to Japan, insisted on a logic of aesthetic haziness for landscape painting.

At first glance, the vague aesthetics of East Asia may not seem to fare well in comparison to the aesthetics of clarity epitomized by Western aestheticians such as Thomas Aquinas. Indeed, the appeal of the Japanese aesthetic practice of viewing cherry blossoms at night may not be readily apparent. However, the aesthetic of vagueness should not be perceived merely as dark contrasted with clear vision. Rather, visual darkness and vagueness itself offers an opportunity to grasp and perceive even brighter things with the mind, the soul, or the whole body. For this profound experience, viewing cherry blossoms at night becomes a paradigmatic symbol.

Takao Aoki, Professor at Hiroshima University. His main interests are in Japanese aesthetics, comparative aesthetics and the philosophy of arts and culture. Professor Aoki's achievements are primarily in the aesthetics and art of East Asia, especially of Japan. He has published many articles in this field. In addition to pursuing research into the internal workings of the aesthetics and art of Japan, Professor Aoki has also pursued relevant comparisons with Western Europe, and with China and Korea. He is the Chief Editor of the *Journal of Comparative Aesthetics* (ISSN 2188-157X). He is also the editor of the book *Anthology of Classical Theory of Arts and Aesthetics in East Asia* (Geijutsu-Kotenriron Shusei, 2012), and the editor of the book *Theatre and Film (Engeki to Eiga)*, etc. He also has served as an editorial board in several journals. He has academically supported the Japan-Korea Aesthetics Society and the Eastern Aesthetics Society for many years as well as several societies in Japan. He also has served as a guest professor in China, including Shandong University, Hubei University, South-Central University for Nationalities, etc.

EMPIRICAL STUDIES OF THE ARTS BETWEEN HISTORY AND PSYCHOLOGY

Abstract | Contemporary empirical aesthetics using artworks as primary data in order to build up a new science of mind (Seeley, 2014, 2018) is part of a tradition of humanistic studies which took up the methods of natural sciences in the pursuit of an ideal of objectivity. For instance, the science of human nature of the Enlightenment and the positivistic mental sciences of the end of 19th century, including art discourses such as *Kunstwissenschaft* (Woodfield, 2009), aimed at understanding the human mind from an empirical standpoint by grounding it in psychological explanation. What is lost in this endeavor is a historical conception of mind (Collingwood, 1946, p. 82-83, 218-219), since historical concerns are regarded as incompatible with articulating general laws which govern the observed phenomena. As a result of placing art studies within the framework of natural sciences, their objects of knowledge tended to be conflated, and thus artifacts, originally considered as historical facts, were conflated with scientific facts. This can be problematic for explaining the appreciation of works of art if we take into account both their perceptual and historical component.

In order to analyse the consequences of present disciplinary re-framings for aesthetics I will be following Collingwood in articulating the conceptions of history, nature and art. Throughout his philosophical work, Collingwood reflected on the possible connections between historical and natural-scientific modes of explanation (1945, p. 177; 1946, p. 167). In which category does aesthetic understanding fall when considered as involving psychological explanation? Is historical inquiry still relevant for explaining appreciative practices from an empirical standpoint? What does it mean for an attitude to exist in time, to be 'time-bound' (Panofsky, 1955, p. 24), assuming that psychological categories of aesthetics have a historical component? In my presentation, I hold that historical awareness and conception of mind are intimately related and this is liable to contribute to a dynamic view of psychological aesthetics. I aim to outline the characteristics of empirical aesthetics based on psychology and history.

Index terms | *Collingwood; empirical aesthetics; historical understanding; Kunstwissenschaft; natural-scientific explanation, positivism; psychological explanation*

INTRODUCTION

One of the possible worlds of contemporary aesthetics is cognitive aesthetics, which investigates the cognitive mechanisms involved in our engagement with art and aesthetic forms of stimulation. My aim in this paper is to give an outline of what led to the emergence of the cognitive discourse in the arts and show how the study of the arts became empirical in its concerns. More specifically, I would like to put in perspective the present re-framing of aesthetics in terms of natural and cognitive sciences by looking at its relation to both history and psychology. My hypothesis is that both a conception of mind and an awareness of the historical dimension of works of art are determinant in art investigations and that establishing what ties cognition to history is liable to contribute to a dynamic view of psychological aesthetics. I will take Collingwood as guide to a range of questions that are asked within both a historical and psychological framework.

HISTORICAL AND NATURAL-SCIENTIFIC MODES OF EXPLANATION

Let me start with a classical distinction between *scientific* modes of explanation and *historical* modes of understanding. On the one hand, *scientific* modes of explanation are based on the observation of facts¹, which are further examined in the light of general laws that would reveal the fixed nature of things and the constant relations that hold between them. *Historical* modes of understanding, on the other hand, deal with individual, contingent facts, which are subsequently ordered in temporal sequences so as to reveal the changing nature of things.

Against such a “secessionist movement”² within areas of knowledge, Collingwood reflects on the possible connections between historical and natural-scientific modes of explanation, calling into question, at least provisionally, a methodological dualism which foregrounds the difference between nature and history. Here’s a relevant passage:

natural science as a form of thought exists and always has existed in a context of history, and depends on historical thought for its existence. From this I venture to infer that no one can understand natural science unless he understands history [...] And that is why I answer the question, “Where do we go from here?” by saying, “We go from the idea of nature to the idea of history”³.

Importantly and for the purpose of this paper, in connection to the idea of nature and the idea of history, Collingwood also articulates a conception of art. I will come back later to what holds together the three strands.

Now, what does history add to our understanding of concepts in natural science and why is this significant for the study of the arts? The distinction between historical and natural-scientific explanation is important for the empirical the study of the arts, which aims at a causal explanation of appreciation and at deriving laws verifiable through observation that would hold irrespective of the temporal and spatial location of appreciative practices. The difficulty is that observation in aesthetics and art history targets a class of historical facts (i.e. individual works of art or art practices or a wide range of possible responses to art, made under changing conditions). Explaining appreciative practices from an empirical standpoint should in principle include the historical factor and not restrain itself to the mere experience of works in their physicality. Hence the ambivalence of the status of aesthetic understanding, which is

located both within the framework of natural sciences and history.

That aesthetic understanding might be a shared subject matter in both natural sciences and the broader field of humanities is open to debate. Panofsky, for instance, finds in temporality the main criterion that differentiates natural science from the humanities: on the one hand, natural processes, although time-bound, are described in terms of timeless laws, on the other hand historical processes (among which works of art) that the humanities have as their objects are considered in their context, “where time has stopped of its own accord”⁴. Another criterion, shared both by Panofsky and Collingwood, is the subjective character of the analysis of human productions deemed to elicit a particular kind of experience. This analysis is called mental re-enactment, which refers to the capacity to think for oneself thoughts that lie at the basis of human actions (but not ways of perceiving or remembering, which are unreflective, unconscious⁵). We would thus have a phenomenal privilege, not only an epistemic one, to such thought processes; they would become singled out in experience rather than be accountable in causal terms⁶. “Mental re-enactment” or “re-creative aesthetic synthesis”⁷, as applied to the arts, appeals to the original intention of the artist.

Following these criteria of temporality and subjectivity, as events that happen in time, episodes of art production and appreciation could not lend themselves to direct empirical apprehension through perception⁸; they would fall within a historical inquiry. On Collingwood’s view, historical inquiry is intimately related to human experience, more specifically to the activity of mind; it is a reflective, mediated mental activity⁹, and also a means toward knowledge of one’s own mind.

PSYCHOLOGICAL EXPLANATION IN HISTORY:

A HISTORICAL CONCEPTION OF MIND

But what does it mean when we say that historical inquiry is intimately related to the activity of mind? Is there a historical component of the scientific knowledge of human mind? Would an account of a historical psychology – a psychology that is historical in character –, or a historical psychology of thoughts re-enacted at the experiential level¹⁰, as Collingwood puts it, be unintelligible? If not, what exactly would be the characteristics of a conception of psychology based on history, what would be its subject matter? With these questions I come to closer to integrating historical and natural-scientific modes of explanation. There were several attempts at such integration.

If we were to retrace the significant moments whereby humanistic studies took up (or at least aspired to take up) the methods of natural sciences, positivism would be a good place to start. The nineteenth-century positivist programme deemed to foster an objective, scientific knowledge of man¹¹, and aspired to be associated with the natural sciences while it was in fact a philosophical doctrine, a “grandiose philosophy of history”¹². It also sought to articulate a conception of mind where nature and history are coalescing¹³.

Positivism rested on the assumption of a progress or development of human mind¹⁴, while in its original phase paradoxically rejected psychological explanation. In Comte’s view, for instance, positivism proposed a dynamic view of human nature considered from a historical perspective¹⁵, seeking to provide the fundamental laws of the human

mind derived through historical verification and consideration of the past¹⁶.

The positivistic method, which consisted in conducting inductive research based on the observation of facts in order to arrive at broader generalizations, was adopted in a number of art discourses, namely in the Vienna School of Art History¹⁷, by the proponents of a scientific study of art (Riegl, Dvorak, Gombrich). A number of art historians shared the positivist's interest for objectivity, but no longer dismissing psychological explanation, grounded the study of art phenomena in perceptual analysis, emulating nineteenth-century psychology of perception¹⁸. In contemporary empirical aesthetics, on the other hand, although not differing in aim, the reference to the positivist project is lost. Positivism can be considered as an important stage in constructing empirical aesthetics, which not only draws from nineteenth century experimental sciences but also continues a rich tradition of humanistic studies.

Collingwood also allows for the possibility that there might be a "historical conception of mind"¹⁹ that would consider human nature as a variable, as product of an historical process. Whereas eighteenth century science of human nature stressed the constancy, uniformity, and unalterable character of human mind, as well as its accountability in terms of universal causal laws, Collingwood's conception of mind puts emphasis on its liability to change and development:

whereas the right way of investigating nature is by the methods called scientific, the right way of investigating mind is by the methods of history. I shall contend that the work which was to be done by the science of human nature is actually done, and can only be done, by history²⁰.

On this view, mind appears as a historical rather natural process, which can be investigated primarily through historical reconstruction. While there are various ways of knowing mind, only historical thought can capture the specificity and context sensitivity of actions to which it gives rise²¹. In seeking to articulate the constancy of human nature, philosophers, and more particularly Hume, were in fact endorsing the humanistic principles of Western Europeans in the early eighteenth century²². This might be a sign that Collingwood is after all a dualist with respect to modes of explanation and their proper subject matter. His exposition is equivocal since he also holds in an earlier work that "one could consider the scientific fact as being a class of historical facts"²³.

The psychological categories upon which aesthetics and art history rest equally have an historical dimension: it may arrive that art historians, like philosophers, work with a conception of man modelled upon worldviews that prevailed at a specific time in the past, for instance Panofsky speaking as a "Renaissance viewer located in time and space, detached from what he observes as he is from the process of observing"²⁴.

PSYCHOLOGICAL EXPLANATION AND AESTHETIC UNDERSTANDING:

A DYNAMIC VIEW OF PSYCHOLOGICAL AESTHETICS

There has been a revival of the study of art in psychological terms in contemporary empirical aesthetics. One could legitimately ask what forms of psychological investigation are adopted as methods of inquiry since there is no unitary scientific method.

Collingwood insists on clearly delineating the subject matter of areas of knowledge:

history, and humanities more broadly, have for their object thought or the activity of thinking, natural sciences deal with the given objective world, whereas psychology, which is conceived in terms of reactions to sensory stimuli, studies immediate experience, sensation, and feeling, understood as purely sensuous-emotional experience (as distinct from thoughts, imagination, and will²⁵). These phenomena are studied for their own sake, leaving aside the relation to their object²⁶.

Despite the establishment of these disciplinary divisions, Collingwood seeks to find out in what relation psychology stands to history and the natural sciences²⁷. Neither dissolving into history by pretending to study the functions of reason, nor reduced to mere physiology, psychology's aim is to study of the psyche, that is, irrational or unconscious elements, blind forces behind our actions²⁸. The psychical level comprises the mere experience of sensations, possibly emotionally charged²⁹. Moreover, psychical experience, unlike imaginings³⁰, cannot be the object of self-reflection. If the study of art should have as its object thought, then a stimulus-and reaction theory of art, situated at a psychical level, therefore focusing on sense experience rather than imagination must be misplaced³¹. Following this line of reasoning, art cannot be the proper field of study of psychological science; it can only be the field of study of reflective practices such as history or philosophy of art. Psychological reactions would be irrelevant to determining the essence or a definition of art³². In Collingwood's terms, focusing on the stimulation of reaction in given audiences would make art as irrelevant "as a pharmacologist's account of the effect of a hitherto unanalysed drug would be irrelevant to the question of its chemical composition"³³. Psychological aestheticians would be holding "a pseudo-aesthetic conception"³⁴ that reduces art to craft, to organizing sensory materials. This view rests on the assumption that a proper theory of art or aesthetics should primarily answer questions such as: what is the essence of art, how can we explain the nature of art?

Collingwood imports re-enactment within the aesthetic realm, considering art as manifestation of mind, as part of human experience rather than works as such. He holds that "discovering what art is [...] involves not an examination of the world around us in order to discover and analyze instances of it, as if it were a chemical substance, but a reflection upon our own activities, among which art has its place"³⁵. Art is therefore playing a role in the life of thought; more specifically it marks the passage from unreflective to reflective thought (referring to an activity that might be taking place in the mind of the artist's³⁶ or the viewer's).

According to Collingwood, any engagement with a work of art is twofold, with an emphasis on the second fold: art experience is made of sense experience and imaginative experience, the latter not necessarily connected to its "sensuous basis"³⁷. He posits a dynamic view of both the perceptive and imaginative act; looking and imagining are presented as mental processes actively used in order to find in the picture what "the artist has put there"³⁸. Rather than passively receive sensory impressions (a view that is endorsed by empirical theories of the eighteenth century), we transform these impressions into ideas, a conversion³⁹ that would allow avoiding the confusion of art with pure matter or craft. Here's Collingwood's working definition of aesthetic experience that puts emphasis on this process conversion: "The aesthetic activity is an activity of thought in the form of consciousness, converting into imagination an experience which, apart from being so converted, is sensuous"⁴⁰. Artistic experience is generated neither by crude sensation nor emotion (psycho-physical states or psychical processes) – although they are part of such experience –, but by imaginative activities;

controlled by consciousness⁴¹. We experience artworks through imagination, where imaginative experience is an intermediate level of experience, neither full-blown thought (intellect) nor psychical experience (sensation or emotion) but in-between⁴².

The above analysis suggests that a dynamic framework for understanding the human mind in its relation to the arts would leave aside psychological explanation. But we need not embrace Collingwood's conception of psychology, now obsolete in many respects, which is reduced to the study of passive reactions to sensory stimulations. We may turn instead to work in cognitive science, which approaches the mind from an interdisciplinary perspective, including psychological contributions, focusing on the acquisition, representation, and manipulation of information in eliciting particular behaviours⁴³. If there is a lesson to be drawn from studies in cognitive science, this would be that the causal explanations of processes that link stimuli to behaviour are much more complex than the passive relation of stimulus-response evoked by Collingwood. Contemporary empirical aesthetics falls within this framework of cognitive science, using artworks as primary data in order build up a new science of mind⁴⁴. Hierarchical models of aesthetics⁴⁵, for instance, articulate cognitive processes underpinning a wide range of responses to art and aesthetic stimuli.

This shift in perspective allows us to re-think Collingwood's aesthetics: what kind of questions about art and mind are asked within the contemporary cognitive framework? Paradoxically, the same Collingwoodian puzzles resurface, namely epistemological questions, related to the nature of concepts employed⁴⁶, ontological questions, related to nature of works – for instance whether there is such a thing as artistic salience⁴⁷, or normative⁴⁸ questions, knowing whether there are standards of appreciation etc. One of the main objections to contemporary empirical aesthetics is that it accounts for art appreciation in terms of perceptual explanation, looking at the immediate engagement with a set of stimuli⁴⁹; since only common perceptual mechanism are evoked, it would fail to locate art⁵⁰, to identify an artwork as art. Another objection, also Collingwoodian in flavour, is that only sub-personal psychological processes⁵¹ or basic mechanisms are summoned in empirical studies of the art, which are blind to the conventions of artistic practices and to established categories of art. This would make history irrelevant for how one engages with artworks⁵². Is then the historical conception of mind lost in this contemporary empirical endeavour? Are we back to square one, to a Collingwoodian division among the areas of knowledge? My suggestion is that a dynamic framework for understanding the human mind in its relation to art appreciation is conceivable within contemporary empirical aesthetics. In order to see how exactly it could be articulated, a closer look at its rich humanistic past might be a good starting point.

WHAT MATTER(S). A MATERIAL AESTHETICS BETWEEN ONTOLOGY AND LINGUISTICS THROUGH THE WORK OF DERRIDA, RANCIÈRE AND DIDI-HUBERMAN

Abstract | The philosophical inquiry on digital images and new media tends to stress the permanence of the form beyond its different supports. These latter in fact, despite their ability to modify the fruition and configurations of the former, guarantee its separated existence (Mitchell 2018; Nancy 2002); it is indeed precisely because of their variability and precariousness, that the mediNa show the timeless and eternal nature of the image, able to survive to their degradation. Thus, the reproducibility of forms coincides, most of the time, with some kind of revelation: by putting together a chain of similar images and removing one out of the series, or examining its variations through the different media, it seems to come to light something as a “truth of the image”, a constant form, emerging from the variability of its different figures.

My paper aims instead at analyzing the nexus between the image, its fictional nature, and its materiality as a line of inquiry parallel to the one that investigates the truth (or, on the other side of the cognitive and moral evaluation, the falseness) of images. I will thus examine how the concept of matter can be understood and employed as a key-word of contemporary aesthetics, using the theoretical tools developed by three French philosophers who have enlighten its theoretic implications: the work of Didi-Huberman, which can be interpreted as an archeology of something as a “subconscious of the matter” (or a material subconscious) and of its ability to signify (Didi-Huberman 1998, 2007, 2008, 2011); Rancière’s theory of the power of fiction, and therefore of art (which translates at the same time the Greek concepts of *techne*, *poiesis* and *mimesis*) of restructuring the «partition of the sensible» (Rancière 2011, 2000) ; and Derrida’s linguistic inquiry on the rhetorical, and therefore fictional, nature of language (in the wake of Jakobson’s studies), particularly on the material component of the metonymic axis, rooted as it is in the ontological dimension of the sensible (Derrida 1967, 1972, 1993).

This axis of metonymy allows indeed, in its logic of contact and material proximity, a never-ending process of transformation of linguistic figures and metaphorical identifications. In turn, this metonymic signification makes it possible to reconfigure the ontological implications of matter, which, precisely because of its ambivalent position between ontological and linguistical dimensions, is able to reshape forms and figures according to a logic of its own, which is different from the eidetic logic of metaphor (Muraro 1981). My thesis is that here, at the intersection of fiction, ontology and linguistics, it is possible to rethink the role of matter within the sphere of art: the aesthetic issue becomes therefore not the truth or falseness of the image but the fictional and linguistic power of its materiality to modify the partition of (artistic) reality, exposing it to the contingency of time and becoming.

Index terms | *Matter; Form; Image ; Ontology; Linguistics; Metonymy; Metaphor; Partition of the sensible .*

INTRODUCTION

1. *Image, Form and Matter*

This paper takes its cue from a somehow anachronistic question: how it is possible to think the material dimension of the image in contemporary aesthetics, i.e. in the age of the web and digitalization? While form, in its abstraction, seems to be able to cross the different concepts and praxis of the image, matter instead, rooted as it is in the time of contingency and becoming, finds itself always in a position of withdraw: of the techniques and the materials, bound to be outdated or to re-emerge from a recent or remote past; of the materiality of the artwork that confines it in a specific point of time and space, therefore leaving it to its archeological destiny; of the handcrafted dimension of the artistic process, compared to the automatism of technology – that aims at the abstraction and the extraction of the form from its disposable material support (Mitchell 2014).

The anachronism of this investigation must therefore be specified: on the one side, it seems to relate to a somehow intrinsic “archaism” of the matter, one that concerns the artwork, its production, and its critical fortune; i.e. that concerns matter as the “heavy” element of the image, bound to register the “encrustations” of the ages that hold it in the time of restoration, marking its antiquary regression. On the other side, it seems to relate to the theoretical notion of matter in its tormented relationship with the notion of form. In fact, it is as if image arises from the combination of the two far ends of the ontological order, as well as of their conflicting temporalities: the eternity, the atemporality, the duration, the permanence of the form, and the genealogy, the decadent (or recurrent) temporality of the matter. It is indeed between these two orders of time that, at least since Plato, image finds its own space, where two anachronisms coexist: that of the *eidōs*, of its survival, and its return – the anachronism of the *Nachleben*, i.e. of the «surviving forms» that «open» history (Didi-Huberman 2018, pp. 15-35); and that of the matter, hanging between the atemporality of its mechanical process (Didi-Huberman 2008, pp. 9-20), the aoristic punctuality of its registrations, and the double temporality of its microscopic and macroscopic movements. This “collapse” of times and its peculiar link to the ontological and “metaphysical” dimension of matter are, therefore, the starting-points for the development of a contemporary theory of the image’s materiality.

2. *The Icon Paradigm*

In Western thought, as above mentioned, the image comes to life in the cracks of the ambiguous and conflictual nexus that traditionally links the concepts of form and matter. Depending on which of the two prevails, the image is either 1) what exists in a suspended time beyond its material support, always reproducible on a different medium, (Mitchell); or it is 2) the “limit” in which the invisible emerges from its material incarnation, but also that in which its individuation risks being lost in the «puddle of matter» that always threatens to swallow the form (Nancy 2005, p. 25).

However, this paradigm is no longer viable if we leave the «art galleries of the West» (*Ibidem*, p. 25), outside of which we run across a different aesthetics (rooted in a different artistic tradition) that defines the bond between form and matter on the basis of a peculiar comprehension of the materiality of the image. Such aesthetic theory is developed within the theology and the artistic praxis of the icon, as elaborated by the Russian philosopher Pavel Florensky in his essay *Iconostasis*. According to him, what distinguishes the icon from the Western sacred image is, first and foremost, its ability to work as a threshold (between human and divine world), on which different temporalities are brought together, despite their ontological difference. What gives the icon its clearness – i.e. what makes it possible for the divine to reveal itself in it – it

is not the fact that the form reproduces, in the contingent substance of the material support, the supersensible truth; it is, rather, the fact that the form (and the truth it displays) exists *as* substance and material structure. The process of its production and its material composition are therefore what enable the icon to act as the visible limit between the human and the divine:

That metaphysics, that profound perception of the world that the creative will of the artist tries to express as a whole through his work, is stated directly by the consistency of the color and the way it is applied on the surface, by the chemical and physical nature of the color's matter and binders, by the composition and the texture of the solvents and of the same colors, by the varnishes and other fixative substances of the painted work, and by other "material causes" (Florensky 2000, pp. 81-82).

None of the elements or the procedures are too trivial or insignificant: each one of them participates in that «concrete metaphysics» that differentiates the icon from the artworks of Western tradition by defining its liminal position.

Therefore, the image not only cannot disregard the matter of which it is made, but it cannot exist outside of it. In fact, the nexus between meaning, painting and metaphysics depends on such materiality: «The sense of the icon lies in its concrete rationality or in its rational concreteness, in its incarnation. [...] Both metaphysics and painting are rooted on this rational fact or factual reason: nothing is simply given within the celestial manifestation, without being soaked in the sense, and there is none abstract teaching, but everything is incarnated sense and concreteness full of sense» (*ibidem*, p. 133). The subversion of classic metaphysics determines in turn a subversion of the notion of temporality that traditionally goes with it: i.e. the division between the eternity of the being (the form, the *eidōs*, the divine), the historicity of the phenomenal world, and the becoming of the matter. On the contrary, the time of the icon is an oneiric one: as in dreams, the cause-effect relationship is subverted, as well as that of aim-fulfillment (*ibidem*, pp. 26-28).

The theory and the praxis of the icon make it possible therefore i) to reconsider the function of the support (medium) of the image on the basis of the essential role of its material configuration, and of its binding connection to the form; ii) to link such image to a «concrete» meaning, developed along those same lines that in the icon enlighten (according to a strict set of rules, both theological and practical) the boundaries between different ontological levels, and through which the exchange between life and metaphysics takes place (*ibidem*, p. 133); iii) to gain a surface for the breaking-down of different temporal planes – I shall return to this later. For now, it is worth notice that, thanks to the peculiar status of the material medium, it is possible to recognize, along the material and metaphysical borderlines of the icon, a distinctive process of signification (different from the one matching the classic ontological nexus of form and matter): i.e. that «sense of concreteness» to which Florensky refers, that permeates both the techno-poietic-material dimension of the icon, and its divine and metaphysical component. The point now is to see what happens when we transfer this way of signifying from the field of theology to the materialistic investigation of the image I wish to carry out.

3. *Metonymy*

The first effect of this transfer is that those lines that marked the boundaries between ontologically separated orders of existence now become mobile. That is, they no longer stand as markers of the axis along which the invisible becomes visible but, rather, as signs of the modifiable borders between the forms of an image that no metaphysical order can guarantee in its epistemological validity, in its ontological endurance, and in its duration. Therefore, the image, rather than an icon in the orthodox tradition, looks

more like an artwork of Arcimboldo, in which the representation is never definitive, its «vital semantics» descending from constant movements that do not crystallize in a univocal meaning (Barthes 1991, p. 141), and in which «what has been combined forms aggregates which can combine again among themselves a second, a third time» (*ibidem*, p. 141).

The mobility of the lines, their material structure and the processes through which they compose the forms make it possible to name that peculiar process of signification that the Florenskyan icon, in the metaphysical concreteness of its materiality, had already evoked. In so far as the images signify according to the material proximity of the elements and the figures that result from the endless movements of their lines, they produce meaning according to a *metonymic* signification. That is, they signify according to the modifications of a matter that, far from being the abyssal, chaotic, and irrational principle of the ontological tradition, is one and the same with those ontological as well as linguistic movements of lines, borders and limits between forms that occur on the *surface*. Because of their onto-linguistic nature, these movements are always able to establish material nexus of sense – the part for the whole, the whole for the part, the sequence of “pieces” close to each other, the series of elements that share the same physical structure (Muraro 1991) – and to determine a subversion in the order of time – the effect for the cause, the fulfillment for the aim etc. To such material-metonymical movements (that continuously redetermine the forms and their individuation) the metaphorical signification stands as a counterpoint: indeed, it establishes, on the side of the determination of figures and objects, the correlations of similarity and analogy, along with the criteria of substitutability between forms and phenomena. However, any metaphorical association – as the ontological structure it defines – is always modifiable along the lines of the material signification that organize the fabric of reality.

In his *White Mythology*, Derrida writes that «like *mimesis*, metaphor comes back to *physis*, to its truth and its presence» (Derrida 1982, p. 244). However, there will always be a blind spot of the *physis*, where the connection between metaphor and metaphysics is created (*Ibidem*, pp. 230-245). Still, the material signification and the «metonymical catachresis» (*Ibidem*, pp. 254-257) make room for another interpretation of the link between metaphysics, *physis* and language. In fact, if the configuration of the sensible world can always be modified along the lines of the material signification that mark the boundaries between the sequences of the metaphorical nexuses, therefore metaphysics becomes the discipline of the onto-linguistic movements of these lines, i.e. of what stand «between» (according to one of the possible translations of *meta*) the “things” of the *physis*: a science of the intermission, of the borders, of the way in which the «material edge» (Nancy 2005, p. 25) of the images re-determine, over and over again, their signification and their ontology through a constant process of modification of what Rancière refers to as «the distribution of the sensible» (Rancière 2006).

4. *Anachronism and Archeology*

Thus, besides the identifications and the reproductions of *mimesis* and metaphor, there are also the «dissemblances» of matter (Didi-Huberman 1995), the metonymic connections of which “open” to a different space and time, in which the image becomes the point of catastrophe – in its etymological sense of overturning, inversion, but also of condensation and relocation – of the organization of the sensible, of its metaphysical structure, of the logical sequences that rule it, and of the consequentiality of its temporal order: oneiric image, according to Florensky’s definition, anachronistic image according to Didi-Huberman understanding of Warburg’s visual theory:

In a famous essay on the Florentine portrait of the Fifteenth century, Warburg was

brave enough to introduce in the notion of Renaissance [...] an underlying impurity [...]. Such impurity made it possible to see, in the modern and expressive beauty of the faces painted by Ghirlandaio, suddenly, the cold plaster of the *Roman* funereal masks, the *Etruscan* terracotta and the wax of the *medieval* devotional objects. Different times collided and contradicted each other as symptoms in those images from which Warburg would evoke [...] a new model of temporality [...], a complex model of what he called «survival» (*Nachleben*) (Didi-Huberman 2008, p. 11).

Indeed, the materiality of the image implies – in the clash it entails between techniques, materials and tools – the collapse of the temporal levels. Therefore, along those same material lines, the metonymical movements of which determine the reconfiguration of the image, the composition of different temporalities takes place. While the Warburgian “survival” names the return of the form, the anachronism of the matter identifies something as a procedure of assembly: assembly of the objects and the elements of the phenomenal world, ordered according to their new combination – as in the case of Arcimboldo’s *Heads*; but also assembly of pieces of artworks and monuments, remains of a disused material culture, that are brought together producing something as a puzzle-image made of what Benjamin once called the «rags of history» (Agamben 2009, p. 73), the material proximity of which goes hand in hand with the anachronism of its parts – Florentine, Roman, Etruscan, as in the case of Ghirlandaio’s portrait.

Due to this work of assembling, the puzzle-image becomes therefore also an archeological image: i.e., an image made of the remains and the scraps, taken out of different ages, reorganized according to a metonymical principle of material combination; and, simultaneously, a suspended image hanging outside of time, on account of the chronological “disorder” it displays. Such suspension is what, according to Rancière, makes an image archeological as well as aesthetic. In fact, nor the archeological image, neither the aesthetic one do just comply with the metaphorical principle of substitution, according to which the figure «is simply an expression that is substituted by another one» (Rancière 2011, p. 110), but they both register a plurality of expressions brought together by the metonymic signification, the polysemy of which descends from the material contact of heterogeneous parts. Thus, the anachronism of the image, «emancipated» from the univocity of the meaning, allows to conceive the project of an *Atlas* of the material memory (Didi-Huberman 1995, 2007, 2008), in which archeology intersects the linguistic and ontological capacity of matter to create figures and forms, the motility of the internal and external lines of which transforms each image in an *image ouverte* (Didi-Huberman 2007).

5. Conclusions

So, if on the one side the concept of matter outlined here explains and deepens the anachronism of this interrogation on the materiality of the image – matter understood as an inner mechanism of image’s signification and configuration cannot but be archaic and contemporary at the same time –, on the other it brings it to the heart of contemporary aesthetics, dominated by the enormous amount of images and their possible combinations in that immense catalogue which the web is. The work of assembly, composition and decomposition of pieces, lines, forms and figures, juxtapositions and conflagrations of sense and time indicates here how materiality in all its meanings is always active in any image, be it pictorial, sculptural, poetic, analogical or digital.

THE ADVENTURES OF THE THING. MARIO PERNIOLA'S SEX APPEAL OF THE INORGANIC

Abstract | The scientific revolution changed the flow of history. The first victim of science was, without doubt, religion, the truth it promised the faithful proven infan- tile. Now it is science that administers truth according to the criteria of verifiability and falsifiability. Only the existent has value, only the real. Along with this, the sci- entific spirit evolves as authority. New sciences are constantly born, natural but also human ones. The universal dominion of science is indisputable, with Metaphysics too among its early victims. Within this framework, Science confronts Art, with its distinc- tive values; the unconscious mind, mimesis, imagination, inspiration, talent, allusion, the ineffable, the hidden, the beautiful, aesthetic delight, aesthetic experience... The scientific spirit does not give ground, it creates new sciences that seek to bring order to the chaos of creativity. The discourse on art has changed, but along with this so has art itself. It is a common secret that modern art has left the limits of art behind – faced with it, the spectator remains absolutely unmoved. Is every “contemporary art” revolutionary and for that reason impossible for us to follow? Is every “contemporary art” ahead of its time, such that we must await someone from the future to explain it to us in simple terms? Or is it not art? Is it Science that transformed Art? Is it modern art that was strongly influenced by science or is it omnipotent Science that imposed on Art its values? The conscious mind, reality, experiment, technology, judgment, ar- gument, words, the division of subject and object, the superiority of the intellect over the senses, indifference to matters of taste ... Artists needed great powers of resistance to stand up to it – the great ones managed to, but did the multitude? However, great artists themselves opened the door to the values of science. (There are, of course, also great artists who know how to exploit science for their own benefit and for the bene- fit of Art without taking on its values.) The values of art are slowly passing away. The contemporary artist no longer thinks in images, nor with his hands, he thinks in words. He leaves his work half-finished, and completes it with words. That which distinguished Art from Science is now buried. Art has been defeated and savors its defeat as victory. It senses new roads opening up for it – while it has been absorbed in its entirety by the scientific spirit.

Index terms | *conceptual, contemporary, modern, art; genius; imagination; reality; scientific spirit; theater.*

INTRODUCTION

The scientific revolution, the beginnings of which can be traced back to the mid-16th century, changed the course of history. More and more new ideas –which had been stifled in Aristotelian antiquity for centuries, clearly until the Middle Ages– began to penetrate the sciences, while more and more intellectuals began to be impressed by and to align themselves with the new scientific knowledge. Physics, chemistry, biology, astronomy, anatomy and medicine were rewritten almost from scratch. The Enlightenment supplied Western society and its culture with more and more of its advocates.

Religion was, undoubtedly, the first victim of science: Galileo proved that heaven was empty or, more specifically, that there was no heaven. (Kings and all kinds of Gods were deposed.) Darwin proved that man is descended from the ape. (Adam and Eve were deposed, too.) Religion felt that its foundations were being shaken, the truth that it promised the faithful was proved childish. In the late 19th century Dostoyevsky¹ was bold enough to ponder: if there is no God, then everything is permitted, then I am God. Nietzsche² had a madman announce the death and, indeed, the murder of God by the last man. It was not long before ideologies and ideals collapsed; within this framework, people at some point were convinced that they were dying for something which did not exist. The meaning of death gave way to the value of survival. Only what is real has value (Sartre³). What is logical is real and what is real is logical. (Hegel)

Metaphysics came under fire (Hobbes, Locke, Hume⁴). Philosophy gave birth to the Sciences and had nurtured them for long. In modern times, we praise (or bewail) the end of Philosophy because it became divided into so many autonomous yet at the same time increasingly interacting sciences that it lost “its own” cognitive subject-matter (Heidegger⁵)

Contemporary and future philosophy is only the philosophy which appeals to scientists who recognize only scientific philosophy i.e. epistemology, logic, bioethics, philosophy of mind, analytical philosophy... Aristotle, Kant and Wittgenstein become their guides. Philosophy becomes the servant of science – and justifiably so, as science now provides the answers. Science is what now manages the truth with Popper’s criteria of verifiability and falsifiability. Truth ceases to be a transcendent substance or a transcendent substratum of the authentic, but, on the contrary, it necessitates a strict correspondence to reality. Wherever no satisfactory scientific answers have been given yet, philosophy is called upon to aid and confer. Philosophy quite willingly accepted the invitation –the challenge– to be upgraded by being subordinated to the needs of science. The philosophy of mind leads the way, while the neuroscientists are its leaders. Doctors do not welcome professors of philosophy to bioethics committees any more as they themselves have doctorates on philosophy.

Once Philosophy had been emasculated by Science, it was Art’s turn. Art, from its early beginnings, had shown that it could cooperate with Science very easily and creatively: even better, that it needed to be based upon Science. The examples are well-known: music, architecture, sculpture and the golden ratio, painting and perspective – anatomy, mathematics and geometry are the main collaborating sciences. Here Art comes first, it borrows what it wants and what it needs from Science. It borrows them even to posit them as the main body of works of art. There are even a few cases, (such

as that of Takis), where the result belongs to an artistic science or a scientific art.

At the turn of the 20th century, more and more artists began to seek the company of scientists and were inspired *en masse* by technoscience. The Modern and modernity were precisely defined as Art that began to flirt, to be inspired by and imitate Science. Duchamp, Mondrian, Magritte, Picasso, Kandinsky, Valery ... The values of Science at first restored fresh vigour to Art, until insidiously, however, they destroyed it and fully assimilated it within a century. Was the viewer stimulated by the coexistence of the values of Science and Art in Modern art? Art generously hosts Science – we all remember the ending of Pinter's *Servant*.⁶

In the meantime, scientific discourse has strengthened its position and affected us with (absolute) authority. More and more new exact sciences are being born, as well as the humanities. The omnipotence of Technoscience is indisputable, positivism has been able to acquire the bed of Procrustes, with which it measures the scientism of all theories. Very often one scientific theory opposes another, but scientific discourse as such cannot be contradicted nowadays as Philosophy and Art do not counteract Science. One chant that is heard is religious, but it is also helpless and has already recognised the omnipotence of Science. The faithful light a candle whenever they are in danger but they first go to the best doctor they can afford.

Let us focus on Art, however. Within this framework, Science finds Art with its own values standing opposite it: the unconscious, imagination, inspiration, talent, allusions, the ineffable, hideaways, beauty, aesthetic pleasure, aesthetic experience... The scientific spirit does not acquiesce, it now knows how to handle its antipodes so as to deaden it – or to include it: it creates new sciences that will seek to put the chaos of creativity in order. From aesthetic philosophy and the philosophy of art to the history of art, and from this to the psychoanalysis of art, to the psychology of art, to the sociology of art, to the anthropology of art... The face of the discourse of art has changed. In the meantime, however, art has also changed its appearance. The mythologization of the artist and the work of art have reached their end, they have been deposed. It is an open secret that so-called “contemporary art” has overstepped the boundaries of art. Is every form of “contemporary art” revolutionary and hence is this why it is difficult for us to follow it? Is every form of “contemporary art” ahead of its time and are we left to be taught it in plain words by someone in the future?

Heisenberg proved that in the microcosm of quantum mechanics the observer intervenes in the observed particle and its measurements. Is it Science that has distorted Art by analysing it? Or was Art enchanted and did it surrender itself (we can say this today) unconditionally to Science? What is certain is that omnipotent Science hypnotised artists, propagated and imposed upon them its values in its own way.

Art, however, has its own values, which do not combine with or do not keep pace with the values of Science – only at the cost of the degeneration of Art itself. The unconscious, a deep and bottomless well, (from which Art largely drew its subject matter and its method) was suddenly pensioned off and consciousness was left on its own, with works of art originating from it. Indeed, consciousness, in its turn, became creative, creating and obeying the newspapers and self-censorship. Reality, not imagination, is now the vehicle boarded by works of art. At best, imagination degenerates into science fiction. In the worst-case scenario, we are overwhelmed by stark reality. Imagination, namely humans' ability to escape from earthly things and

fly, ensured the flight from reality, an important escape provided by Art. (Freud⁷) Now the emergency exit is locked and the key has been lost. The artist's expression, which was essentially identified with the work of art, has been abandoned, if not forbidden, because what rules is the division between subject and object, a strict precondition of the cognitive process. The scientific terms have defeated the ineffable that nestled in the core of every work of art: the language of art (the language of allusions which is also the language of the ineffable) has now become a dead language, a foreign language to everyone. The contemporary artist no longer thinks through materials (Bachelard⁸), no longer thinks with images (Bachelard⁹) or with his hands (Anaxagore¹⁰); he thinks with words. (Mirasyesis¹¹) He leaves the work half-finished and completes it with words. The mystery concerning inspiration has been abandoned: it is succeeded and abolished by the Kantian artist's rationality because he does not need it – it may even be harmful to him. However, it is not just the source, namely inspiration, that mutates but the method of art itself copies the method of science: observation, working hypotheses, experiments and research now accord very well with our works of art and artists. Induction has conquered us the length and breadth of the earth. The image has been vanquished by the text. The artist's talent is converted into sloppiness and cleverness. What about the myth of the beautiful? All the bibliography on the institutionalisation of beauty has been out of date for a long time. The scientists' indifference to good taste is being imitated by our ephemeral artists.

Contemporary viewers respond coolly to contemporary works of art. Viewers stop being immersed in the work of art (Benjamin¹²); on the contrary, they distance themselves from it and judge it. "The essential point of the epic theatre is perhaps that it appeals less to the feelings than to spectator's reason. Instead of sharing an experience the spectator must come to grips with things. At the same time it would be quite wrong to try and deny emotion to this kind of theatre. It would be much the same thing as trying to deny emotion to modern science." (Brecht¹³) Value judgements have become second nature to us. The aesthetic pleasure from a work of art also belongs to the past, it has fallen victim to the prevailing superiority of the mind over the senses. You do not need to see the contemporary works as their description is sufficient. They do not address your sight, only your intellect as they do not seek to produce aesthetic pleasure. Spiritual pleasures have fallen from grace. All are rushing to enjoy material, tangible pleasures. The viewer of the contemporary work of art responds silently to all of this: from an emotional reaction to feeling indifferent and aesthetically bored. The viewer passes by, skips the aspiring work of art, and returns home empty. We mourn the aesthetic experience. Do we win or lose from this swing in art? "We lost in dreams what we won in reality." (Musil¹⁴)

Artists needed great strength of resistance to rival Science – the great ones achieved success, but what about the majority of artists? Yet many great artists themselves gave way to the values of Science. The values of art are quivering they have begun to breathing their last one by one. Whatever singled out Art from Science has today been flattened to the benefit of Science. Art has been defeated and is enjoying its (crushing) defeat as if it were an outstanding victory. It feels that it breaks new ground, whereas it has been fully assimilated by the scientific spirit. Naturally, there are artists who are independent, but the term "contemporary art" refers to the art that is promoted. Of course, there are great artists who know how to use Science to their benefit and to the benefit of Art, without approving of its values.

The majority of contemporary artists have moved towards Science and have surrendered

the track towards Art to a few who yearn for the old, true? authentic? art. Art as an offshoot or, rather, as a hangnail of Science. Who are the artists and philosophers who waged such a struggle? Have all the great minds gone to science? Who remains for Philosophy and Art? The mediocre, the few? Naturally, there are notable exceptions. Deep down, what is being persecuted is genius, talent, inspiration, diversity. What is being persecuted is anything that cannot be assimilated by rationality.

Kant's attitude to genius is characteristic. First of all, it does not concern the Scientist but only the Artist. Because in science known and clear rules that determine its methods take precedence. By contrast, genius is unable to describe the course it followed thus far. It does not know how its Ideas occur to it, nor can it produce Ideas whenever it wishes, nor give to others instructions as to how they can attain it, as Newton can, for example, nor pass on to others all the steps followed. In Science there is continuous progress towards knowledge. By contrast, the skill of genius cannot be taught and dies along with it. (Kant¹⁵) Kant believes that imagination and intellect collaborate and join forces in genius. In a work of art good taste is more important than genius, just as the power of judgement is more important than imagination... For the presentation of art does not need to be so rich and original in terms of Ideas. What is needed is for the imagination to be free to play with the laws of understanding ... Good taste, just like judgement, is discipline, instruction, education that of genius: this results in its wings being clipped very much and makes it civilised and shiny. It guides it, however, and cultivates it so as to appear fertile to others... If, then, one of the two must be sacrificed, let it be genius. Let the imagination be limited for the sake of the intellect. (Kant¹⁶)

Why is there so much rage? What do Art and Science have to share out between them? Science acts as the authority in our culture and in our entire civilisation: it is Science that holds the right over life and death. Since the only lawful death is illness (Mirasyesis¹⁷), since the highest value of the modern world is survival so as to live for as long and as well as possible (Mirasyesis¹⁸), Medicine becomes omnipotent. Can Art today resist Science? Only if it claims the right to death, only if it manages to design another motif for life, where its values will be apparent. *"We have art so that we may not perish by the truth."* Will nihilism perhaps be overcome through Art? Let us recall Nietzsche, who saw the world as *"a work of art that gives birth to itself"*, as *"a work of art without an artist"*. (Nietzsche¹⁹) *"Our religion, morality and philosophy are forms of decline. — The countermove: art."*(Nietzsche²⁰) *"It is only as an aesthetic phenomenon that existence and the world are eternally justified."* (Nietzsche²¹) *"One must understand the basic artistic phenomenon, which is called 'life' — the spirit that it creates."* Nietzsche wants us to *"to look at science from the perspective of the artist, but at art from that of life..."* Will the moment ever come when Art becomes an authority? With the object-as-work-of-art completely lost, will Art embrace life? *"Man is no longer an artist; he has become a work of art."* (Nietzsche²²)

10 "Man is the wisest animal, because he has hands." (*DK 59A102*)

11 It is not words that bother Hegel, but, on a deeper level, thought itself within art: in his opinion, the artist has become infected by thought, which gathers around him ever more thunderously. It requires of him to create in a world where opinions are voiced on art and criticism is leveled at artworks from all directions. As a result, he is induced to introduce more and more thoughts into his own work. Living and creating in a world of thought, the artist is not strong enough so that he could ignore it on his own, through his own desire and decision. He cannot stand up and assert his own solitude to replace what he has lost either through some special kind of training or by distancing himself from his everyday life and his social contacts. G.W.F. Hegel, *Vorlesungen über die Aesthetik*, I, Werke 13, (Frankfurt a/M: Suhrkamp, 1986) σ. 25. (For Georgia Apostolopoulou, however, this does not mean that art is assimilated by intellect and is about to reach its end. Cf. Georgia Apostolopoulou "The determination of art after 'the end of art'" in *Annals for Aesthetics* 39-40: 57-72.)

What is happening is clear for us. The artist no longer thinks with images or colors, shades, lines and volumes; he thinks with words. He no longer thinks with his hands or his eyes; he thinks with his mind. How appropriate is it, however, for flimsy words to offer refuge to artists and works of art? How much of an artwork survives if words have overwhelmed and inundated its depths to its very foundations? Are words a kind of funeral offering to a work of art, or do words flow like water, eroding and eating away at the work like mice? (Athena D. R. BARTHES AND J. LACAN ON THE INEXPRESSIBLE: THE PUNCTUM AND THE OBJECT A

Abstract | Roland Barthes in *Camera Lucida* describes an event of meeting the inexpressible in photography, something that makes the photography exist for us, that appears as a prick – a punctum, which, in our opinion, is no other than the non-symbolizable object a.

The paper compares the concepts of punctum of Roland Barthes and object a of Jacques Lacan. We argue that these are translatable concepts. Barthes himself referred to Lacan when he wrote about “Tyche” meaning a photograph. In addition, he mentioned that punctum often appears as a partial object. However, he made no more references of such kind.

We study how the two concepts speak to each other and compare them using the ideas of anxiety, “extimacy” and a special temporality “always already, not yet”.

First, we draw a parallel between the affective intention that the punctum causes, and the anxiety, “lack of lack”, that accompanies the meeting with the object a. We also stress the “extimacy” as an inherent characteristic of the punctum. Punctum is always something extremely personal that was taken out, and that is why it touches and pulls out of the usual reading mode. Third, we argue that the two phenomena are similar in their specific temporality: “always already and not yet”. Punctum is what one adds to the photograph and at the same time what the photograph “always already” has.

Index terms | *punctum, object a, anxiety, extimacy, Roland Barthes, Jacques Lacan, psychoanalysis, photography, inexpressible.*

What is a punctum in the theory of Roland Barthes? What does the concept mean and how does our encounter with a punctum happen? It is a phenomenon of appearance of something inexpressible and touching, which we find while looking at photos – Barthes is trying to grasp this moment of encounter. The author himself lists such meanings of this Latin term as “sting, speck, cut, little hole and also a cast of the dice”¹. Most important for us are the indications of the nature of the wound, the inevitability inherent in punctum, and also its instantaneousness, captured in these translations.

A punctum is an element in a photograph that interrupts the polite interest, *Studium*, introducing affective intentionality into its reading. One could say that a punctum appears when the photo begins to have its own gaze for me – it constitutes me, animates me, makes me be. I *am* in front of it, as it *is* in front of me. It looks at me – a photograph that has the punctum, appeals to me as to a subject with my own personal history, and not to me as a citizen or a person of culture.

Let’s try to recreate the situation, the conditions of the encounter with a punctum. You are looking at photos, and there is something in one of them that touches you, deprives you of calmness, balance, destabilizes, actualizes unsteadiness, disassembles, deprives of the usual reading pattern.

This encounter is always individual and unique. Barthes says that what is the punctum for him would not be the punctum for us, so the author does not see the need to show readers a photo of his mother, which exactly implied for him this inexpressible. His inexpressible will not be such for us, this photo will not happen to us. In other words, a punctum, like an object *a*, falls out of the intersubjective space, the space of the Symbolic. This is an encounter with the Real, and it is traumatic.

Roland Barthes uses expressive metaphors, comparing a punctum with an arrow – it is something instantaneously striking, instantly wounding, something from which one cannot completely dodge, look away, one cannot avoid the encounter with it. It is an occasion, *tuche*, which happens instantly and knocks off the usual reading mode – makes it impossible for us to remain indifferent.

Barthes does not give an ultimate definition or a single translation of this term since it is a phenomenon that eludes symbolization. Instead, Barthes’ task is to try to define the indefinable, talk about what cannot be said or attempt to at least indicate it.

It is important to emphasize that such an encounter causes affect. As Barthes writes: “What I can name cannot really prick me”². The affect can be of different nature – e.g., euphoria, nostalgia, disgust, anxiety: “I realized that some [photographs] provoked tiny jublations, as if they referred to a stilled center, an erotic or lacerating value buried in myself”. It is important for us that this affect is associated with desire.

Jacques Lacan speaks of object *a* in the same terms: it is something that cannot be symbolized. It is a remnant, a blunder of symbolization. And besides, it is what points to our lack.

Unlike other authors, Lacan believed that anxiety was not objectless (*n’est pas sans objet*)³. It has a specific object – this very aphenomenological objet *petit a*. The French psychoanalyst described this affect as something which never lies, since anxiety illuminates an encounter with something that is not amenable to signification, that is absent in words and cannot be called or marked otherwise than by the very appearance of this affect. Anxiety indicates that something *is* for us – an object *a*, or a punctum in

terms of Barthes. A punctum is something that can cause anxiety, that can wound, and this is of fundamental importance about it.

Our thesis is that when we encounter a punctum, as well as an object *a*, what we feel in fact is anxiety. Why do we believe that the affective intentionality arising from this encounter is no other than anxiety? Roland Barthes himself, besides anxiety, pointed out many other possible affects. The fact is that anxiety is understood in psychoanalysis as a transformed libido⁴. Thus, various affects may take the form of anxiety. Repressed desire declares itself through anxiety.

Recall that Barthes speaks of this affective intentionality, which appears in us, as associated with desire. Lacan notes the close relationship between desire and anxiety. An object *a* in his theory is the object-cause of desire. This is what the desire in a loved one is directed at.

The French psychoanalyst in his X seminar writes this way about the affect that occurs during the encounter with an object *a*: what constitutes anxiety is when something appears at the place of an object *a* – “and when I say something, you should understand anything whatsoever”⁵.

According to Lacan, when something arises in the place of a – by definition lost – object of desire, pointing us to our lack, then we begin to lack the very lack. Lacan calls such a situation “lack of lack”. In other words, when we encounter an object *a* or a punctum, something becomes too much — too much of an enjoyment. We face something that must remain lost.

Roland Barthes detects the expansivity (*a power of expansion*) that a punctum entails: a photograph, when it contains the inexpressible, becomes a thing itself, not a signifier. Such a photo overgrows its boundaries, “transcends itself”⁶, becomes “received right here in my eyes” and as a result causes anxiety.

In Lacanian terms, this is the moment when the Imaginary coincides with the Real. An example can be the phenomenon of duality, as if a mirror responded with a look. The reflection only has eyes, not *a gaze* (object *a*). By acquiring the gaze, the reflection becomes independent, begins its own being. At the place of the loss, something appears that causes horror, threatens to destroy our reality.

In the VIII seminar, where Lacan interprets Plato’s *Symposium*, he compares his concept with the Greek word *agalma* (precious thing). It is something I see in the others, which is bigger than they themselves, because this is my own cause of desire which has been put outside. In our experience, we encounter an object *a* in a situation of love: “I love you, but, because inexplicably I love in you something more than you – the objet petit *a* – I mutilate you”⁷.

This is something that, by its own definition, is lost, and in finding it, this dimension of loss reminds of itself: I find in the other (for example, a loved one) something that I do not know how to name, and it eludes symbolization – I see in this impossibility to name that it is already ready to leave me.

When we spot an object *a*, we see in others what is in fact not present in them. And here we proceed to another important point – a temporality *always already, not yet*. An object *a* is the object-cause of our desire. What we see in an important other, no one sees the same way, because each subject has his own history. An object *a*, or a punctum, is what appears for the subject.

The researcher of Lacanian psychoanalysis Mladen Dolar gives falling in love as an example of meeting with an object *a*. Love is our choice, which we are to make (*not*

yet), but we make it in the past tense, which has never been present (it has *always already* been made). In other words, when we meet a person whom we fall in love with, we experience a strange feeling of something already seen, like *deja vu*. We have always loved, but still never did it before, not yet. Inherent to the encounter with an object *a* is repetition – in falling in love, we repeat some earlier conditions, which, however, were never designed by us. This is a choice that we have never made. We follow our trace (the past), which has no source (which has not been present), because it is the effect of the structure, as Lacan claimed: “...one seeks and finds again the trace rather than the trail”⁸.

A punctum from such a perspective appears as an effect, a trace in our history. In our opinion, the two phenomena under consideration are also similar in this specific temporality of their existence. Roland Barthes points out the same thing “always already, not yet”: the author says that we bring a punctum ourselves, but somehow it was always in the photo in some way. A punctum, a significant detail, existed in the photo, but only we could read it as the punctum: “...it is what I add to the photograph and what is nonetheless already there”⁹. We construct the punctum retrospectively. This is a detail to which we pay attention, as if it had already been highlighted, was a mark, although in fact we ourselves introduced it.

For a punctum to be brought into existence, someone needs to exist whom it can prick, who can spot it. The operator cannot intentionally add a punctum to his shot – there is no technical method for it, it does not depend on the skill of the photographer. A punctum is called to life only in connection with the Spectator, it lies on the side of the viewer: “...from my Spectator’s viewpoint, the detail is offered by chance and for nothing; the scene is in no way “composed” according to a creative logic”¹⁰.

The appearance of a punctum is what seems to us as *tuche*, but is actually an *automaton*. It is an occasional encounter and an encounter which was determined by our whole life. It is at the same time something extremely personal, intimate, and taken out, therefore another, alien.

The Lacanian neologism “extimacy” (the concept *extimité* was coined by applying the prefix *ex* to the word *intimité* which means “intimacy”¹¹) problematizes this relationship between the external and the internal, inherent in an object *a* and, in our opinion, also in a punctum. A photograph that touches us, reveals something intimate in something external, is intimate alienity.

What does an object *a* refer to? To the primary object. Recall that Freud proposes two possible ways of choosing an object: by anaclitic type (when we love someone who reminds our family member, for example, a nursing mother or strong, protecting father) and by narcissistic type (in this case, the choice is based on self-similarity) in his work *On Narcissism*.

Thus, we face two alternatives of a possible encounter with an object *a* – love with a mirror’s reflection (me as another) or falling in love following the pattern of the parent. That is, an object *a* is associated with such an object, the choice of which was made in the childhood and in which we are doomed to fall in love again and again. In this regard, it seems interesting to us that the photo which Barthes describes as undoubtedly existing for him, containing the punctum, is the photo of his mother.

The encounter with a punctum, as well as the encounter with an object *a*, only seems to be something unexpected, an occasion. In fact, it is a smooth mechanism, it contains the necessity: to see it, you just have to penetrate its logic.

In one of his Spanish lectures, Jacques-Alain Miller declares the existence of an almost

mathematical “formula of love”, a formula of *tuche*, for each person, which is almost an oxymoron: there exists such an occasion which is a necessity. He draws an example: a man desires a woman if and only if she embodies a certain condition of his love, for example, when X (woman) is Y (woman of another man). In this case, only married women, unfaithful wives can be desired for this man.

It is a condition closely related to some earlier condition, a fantasy that repeats what has once been. Reminding of this lost fundamental object can be some minor detail. Let us turn to another example to illustrate this. “If I happen to sexualize the experience of someone’s handling my hair (even if the childhood genesis of my doing so was a defensive sexualizing of my mother’s abusive hair yanking), and my sexual partner loves to run his or her fingers through it, I am not likely to go into psychotherapy”,¹² – writes Nancy McWilliams. We could add that this condition of enjoyment is revealed by an encounter with the other, and it could not be highlighted without the object that would satisfy it. Paraphrasing Barthes, a desire does not exist without an object, just as a photograph does not exist without a referent. The other is needed to identify this mechanism.

A punctum can just cause an affect, but also tell something about the subject. We suffer and enjoy due to ignorance. It can be assumed that the interpreted punctum, like the interpreted symptom, will deprive us of the affect, distract us from direct relation to the punctum, but will allow us to learn something about ourselves, to highlight the conditions of this initially passive experience. Thus, the expressed conditions of love demonstrate to the subject his fantasy and allow him to cross it.

A photograph is a signifier for Barthes. A punctum as a sign marks a photograph and makes it existing for us, makes it, as opposed to *Studium*, “my delight or my pain”¹³. This detail pulls the subject out of polite indifference, creates a certain rhythm, performing the function of punctuation, noting the indifferent signifiers with an affect.

What makes a person not indifferent, what makes one signifier meaningful in a series of other ones, and determines the way of using these signifiers? The history of the subject. It seems to us fundamentally important that Barthes points out that in order to perceive this inexpressible detail in a photo, we do not need to analyze this photo, but we need memories¹⁴. Memories are what brings us closer to the logic of the unconscious, to the work of free associations, which allows us to single out one photographic signifier not another; closer to something that opposes intellectualization and other defense mechanisms. Memories open access to another way of thinking, that we have forgotten, but perhaps more direct, relating to our truth. This is not cause-effect thinking, but an attempt to think effects and immanent causation.

In general, the Lacanian approach seems to be related to that which was developed by Roland Barthes, overcome by “an ontological desire”¹⁵ in relation to photography. In his work, Barthes considers psychoanalysis to be a method of reduction, while he himself dreams of inventing *Mathesis singularis* about photography, the science of the singularities. On the contrary, we see in this intention a link with psychoanalysis, the theory of which grew out of practice, and the method – from an individual approach to each patient with his own unique history.

A SYSTEMATIC THEORETICAL ANALYSIS OF AESTHETIC INTERACTION BETWEEN WORLD CULTURES.

Abstract | Human culture is the productive result of the surplus of energy remaining available after covering two key instincts: survival and reproduction. Thus, the need for survival is transformed in an increase on our knowledge of the world, becomes logic and science, while the need for reproduction is transformed into love and becomes beauty, emotion, art.

Every distinguished culture has the fundamental characteristics of a system. An isolated society whose members are associated with strong social and / or racial links functions as a closed cultural system. In the course of time each such community constructs its own collective world image. From the expansion of the imaginary part of the world image, the community increases its power as a result of the continuous flow of the energy surplus within it. This flow, precisely because of its self-referentiality, produces the aesthetic characteristics of each civilization. In closed systems, however, this growth is not permanent and deliberately drives to stagnation or decline since we know that, according to the second thermodynamic law, the sustain growth of a closed system based solely on its own energy is impossible. On the contrary, a fertile dialogue between different cultures is a catalyst for developments and fruitful changes.

The differences of cultures are the foundation of dialectical synthesis between civilizations. In cases of peaceful contact between cultural systems, open societies are created through the exchange of information that generates new amounts of energy and dissociates each civilization from its thermodynamic equilibrium. So far history has shown that every time different peoples and cultures meet in an environment of peace and prosperity an information and innovation explosion occurs. This leads to the dialectical synthesis of the antinomies created by the coexistence of different cultural systems and therefore of ideas and aesthetic patterns.

Provided that every distinct culture is a system, a unity of ideas under the rule of Logos, the evolution of world culture is a perpetual dialectical synthesis of systems; every synthesis always goes through the process of resolving antinomies with the creative incorporation of new ideas into existing structures. But if each culture needs another to be able to evolve, our long-term goal must be to preserve the special identity of cultures in order to enable creative synthesis through the variety of ideas. This demand is a harmonization with natural standards: since culture depends on language and the climate, then cultures, like biodiversity, differentiate on the basis of climate and color the surface of the Earth.

Index terms | *Human culture; civilizations; system; structure; aesthetics; open society; information; synthesis.*

Human culture is the productive result of the surplus of energy remaining available after covering two key instincts: survival and reproduction. Thus, the need for survival is transformed in an increase on our knowledge of the world, becomes logic and science, while the need for reproduction is transformed into love and becomes beauty, emotion, art. As the dividing line between art and science is not delimited, what we are finally looking for through our work is the meaning and value of our existence. So we can assume that the transcendent struggle of man is filling the gaps of our supervision and the simultaneous pursuit of emotional completeness and beauty. If anything perfect in nature is nice, then the pursuit of perfection is the quest for beauty. With this approach we come from a different path to the concept of Virtue, which includes logic, beauty, and harmony as integral components of the concept of perfection (Fais 2015).

People all over the world create mythology, philosophy, art and technology because they have the same anxieties and desires. Through our constructions we are expanding our world image by defining more clearly our position in the world. In the context of a culture, everyone is exploring the structure of the same Paradigm, as the concept of Paradigm was described by Tomas Kuhn in the *The Structure of Scientific Revolutions* (Kuhn 1970). Each individual Paradigm, like any construction, is constantly evolving until completion and that is when its evolution stops. But if the cultural development of a people reaches on a threshold beyond which it can not continue to develop based on its own forces, then every culture needs to draw power from other systems. Within a global civilization community, this process continues with the exchange of information between cultures. The achievements of a culture fertilize and redirect the evolution of another culture, and a prerequisite for this is to have fruitful contact, a constructive dialogue between cultures. So we can conclude that the evolution of our world image is a dynamic process. In order to improve our worldview, our intellect must be fertilized by the worldviews of other cultures, just as a scientist or an architect develops his work by studying the work of his colleagues all over the world.

If Construction as a process and result is an oriented structural activity from a starting structure to an arrival structure, then our civilization is typically constructive, since every man's creation, architecture, philosophy, science, art is the result of construction. If every distinguished culture has the fundamental characteristics of a system, then each cultural system has a potential energy and an available free energy (ideas, power, wealth). An isolated society whose members are associated with strong social and / or racial links functions as a closed cultural system.

In the course of time each such community constructs its own collective world image. From the expansion of the imaginary part of the world image, the community increases its power as a result of the continuous flow of the energy surplus within it. This flow, precisely because of its self-referentiality, produces the aesthetic characteristics of each civilization. In closed systems, however, this growth is not permanent and deliberately drives to stagnation or decline since we know that, according to the second thermodynamic law¹, the sustain growth of a closed system based solely on its own energy is impossible (Adkins 1968/1983). On the contrary, a fertile dialogue between different cultures is a catalyst for developments and fruitful changes.

The examples abound. Western philosophy began in the cosmopolitan Miletus on the Ionian coast in the 6th century BC. That is the time when the Greeks came into contact with the peoples of the Mediterranean and the Near East. Then, it was Pericles' Golden Age in the 5th century BC which was a result of the immigration of philosophers and artists from all parts of the Greek world to Athens, the scientific revolution in the cosmopolitan Alexandria of the 3rd century BC, the creation of Greek-Buddhist art after the fertile contact of the Seleucid kingdom with India in the 2nd century BC and more recently the technological miracle of the USA in the 20th century. All these brilliant periods of human history were the result of the creative coexistence of different cultures and therefore ideas. The dialectic of cultures is at the same time a timeless process. The examples are also plentiful. The Toltec culture of the American continent, through the work of Carlos Castaneda, has decisively influenced New Age philosophy in the United States, which over the past few decades has begun to rethink the ancient wisdom of the New World natives, while equally important is the influence of ancient eastern thought and philosophy (Buddhism, Taoism), which fertilized European philosophy after the 19th century, as well as scientific thinking in the 20th century, especially in the field of quantum physics.

The differences of cultures are the foundation of dialectical synthesis between civilizations. In cases of peaceful contact between cultural systems, open societies are created through the exchange of information that generates new amounts of energy and dissociates each civilization from its thermodynamic equilibrium. So far history has shown that every time different peoples and cultures meet in an environment of peace and prosperity an information and innovation explosion occurs. This leads to the dialectical synthesis of the antinomies created by the coexistence of different cultural systems and therefore of ideas and aesthetic patterns.

But at this point it must be stressed that the prerequisite for any dialectical synthesis is to have freedom of expression and equality of value for all the constituent forces. In any other case, contact between different cultures can be disastrous especially when the technological level is different. If there is no mutual respect between the cultures that come into contact then the struggle becomes a war and the opponent becomes an enemy, and as known each war ends with the extermination of the opponent and the definitive prevalence of one of them.

Provided that every distinct culture is a system, a unity of ideas under the rule of Logos (Kant, 1929), the evolution of world culture is a perpetual dialectical synthesis of systems; every synthesis always goes through the process of resolving antinomies with the creative incorporation of new ideas into existing structures. But if each culture needs the other to be able to evolve, our long-term goal must be to preserve the special identity of cultures, in order to enable creative synthesis through the variety of ideas. This demand is a harmonization with natural standards: since culture depends on language and language on climate (Everet 2013), then cultures, like biodiversity, differentiate on the basis of climate and color the surface of the Earth. On the other hand the forced globalization through merge of cultural systems leads to the inevitable evolution of the world civilization to one closed system, with catastrophic results for mankind. We are now at this turning point. We need to introduce new values into our perception of the universe and succeed in slowing down the illusion of the speed of Western civilization.

The evolution of man has passed into the planetary era, as Edgar Morin described it on his work *Homeland Earth* (1999). As the rapid development of the flow of information, communication and transport has transformed the land into a planetary village, civilizations infiltrate, often violently, one within the boundaries of the other. If the 20th century was marked by irrational industrial growth, now at the dawn of the 21st century of high technology we need to redefine the goals of our evolution, by reviving and empowering forgotten concepts regarding the management of our constructions, the concepts of Virtue and Harmony, which can be reloaded with new meaning with the help of information theory and systems theory. We need new concepts so that we can understand the challenges of the times and envision new construction projects based on the dialogue of cultures. It is only sufficient to agree that the “other” is always a competitor and not an enemy in the great evolutionary struggle of man.

One proposal towards this goal could be the creation of a new model for the redistribution of world wealth based not on combating poverty, but on strengthening the cultural achievements and distinct characteristics of each culture. Poverty in Third World countries is the result of the imposition of Western civilization through capitalism and technological superiority in structurally different cultural models. The wealth of a civilization must represent its culture. By funding and reinforcing cultural diversity through a global system of recording, assessing cultural value and redistributing the surplus wealth according to the estimated cultural calibration of every people that respects and develops its cultural identity, we can shift global interest from frantic material and technological progress on a new era of ethics and aesthetics on the basis of a new relationship between wealth and local cultural value.

1 The second law of thermodynamics states that the total entropy of an isolated system can never decrease over time. The total entropy of a system and its surroundings can remain constant in ideal cases where the system is in thermodynamic equilibrium, or is undergoing a (fictive) reversible process. In all processes that occur, including spontaneous processes, the total entropy of the system and its surroundings increases and the process is irreversible in the thermodynamic sense. The increase in entropy accounts for the irreversibility of natural processes, and the asymmetry between future

and past. https://en.wikipedia.org/wiki/Second_law_of_thermodynamics#cite_note-2

NATURAL AESTHETICS ON PLANT SPECTRUM OF SONG DYNASTY

Abstract | Plant spectrum books have emerged in large numbers in Song Dynasty. The people in the Song Dynasty showed an unprecedented interest in plants. Different from the previous dynasties, the knowledge of plants in the Song Dynasty is increasingly scientific, systematic and aesthetic.

In terms of the way of cognition, due to the influence by the theory of gasification and sympathetic, the people in the Song Dynasty formed their own cognitive theory about the plant properties, that is by carefully observed the external characteristic of plants in the process of growth, we can realize the nature of plant through the sympathy of inner and outer gases.

In the way of expression, influenced by the theory of the image-number and philosophical connotations in yijing , formed a unique expression patterns to plant cognition. Such as orchid-yi, a book about orchid's yijing, completed by imitating yijing's structure and thought, and painting plum blossom spectrum, a book about understanding the image-number of plum blossom according to the idea of the number of heaven and earth in yijing, these two books also reflected the thoughts of yijing.

According to the principle of Li Yi Fen Shu (“理一分殊”), we can say all things have one unified principle, but there are different embodiments, so we can find that the plant nature is communicated with human nature, if we understand the nature of plants we can understand human nature. But in order to understand the nature of plants better, we need to use the heart of selfless to experience them, not the selfness. From the “one principle of all things” to the “one body of all things”, from cognition to aestheticsn, people formed the emotion view of the universe .

To sum up, this article believes that understanding, sympathy and love for natural things will help to re-establish the deep connection between human and nature, which is of great enlightening significance for the establishment of the beauty of ecological civilization in the new era and the formation of new life aesthetics.

Index terms | *Natural Aesthetics; Plant Spectrum; Song Dynasty;the theory of gasification;y-ijing.*

INTRODUCTION

The Plant Spectrum of Song Dynasty exceeded the previous dynasty in categories and numbers. The Plant Spectrum include floral spectrum and economic plant spectrum, which mainly record the origin, form, type, characteristics, anecdotes and related literary works of the relevant plants, with exquisite illustrations. Literary works of the relevant plant spectrum showed people's interests in the investigation of things, scientific cognition, ethical attitude and aesthetic emotions. The botany of Han and Tang dynasty was greatly influenced by the fairy tales and Buddhism. The botany of Ming and Qing Dynasties was deeply influenced by the science of mind and the scientific knowledge of Western science. However, the botany of Song Dynasty was different from these, especially focusing on the exploration of physics and physicality, and the combination of the nature of plants, human and morality. Based on the foundation of focusing on science, it was featured with scientific literature and literary artistry as well, thus forming the basic structure of "one body and two wings" and the characteristics of Mingli, application and empathy, reflecting the unique value of aesthetics of plants in the Song Dynasty.

1. Cognition about the plant properties

Based on the theory of gasification and sympathetic, people in Song Dynasty showed their own cognitive theory about the plant properties. Take the (*Tong Pu*) written by Chen Zhu as an example.

Tong Pu was the earliest book about tung tree in China. Based on the author's many years of planting, observation, and research, he wrote a detailed account of the species, breeding, growing environment, tools, and related poetry stories.

Firstly, based on the principal of "plant nature is communicated with human nature", the book described its cognition about plant properties from the perspective of gases. Everything grows with gases. The growing depends on inner and outside aspects, which means it grows with inner gases and develops with outside gases. The two different kind of gases interrelated with each other. Since it grows with different gases, the nature of plants would be different as well. If the seeds of the tung tree are in a low-humidity place, they would not burgeon. They should be grown in high and thick places. Thus, it can be concluded that the nature of tung is yang and high. So the conclusion is that the gas of tung is pure.

As it endures the pure gases, paulownia wood has its unique attributes. Therefore, it can be seen that paulownia wood has polished and pure texture with rigidity and flexibility.

Secondly, because it is rugged and hardly to be decayed nor damaged whether in dry or wet environment, paulownia wood is good to be chosen as the material to make ancient inner and outer coffins. At the same time, most of the musical instruments are made from paulownia wood of good quality. Made from the trees next to the springs, the Qin, a musical instrument, gives out a clear and elegant sound. Cai Yong (132-192), well-known for *Ci Fu* in the Eastern Han Dynasty (25-220), who was interested in Qin, once heard the resonant sound given out by the burning paulownia wood. Then he made the burnt paulownia wood a Qin, named *Jiaowei Qin*, to show the existence and the peculiar sound of the paulownia wood to the world.

Finally, plants sympathize with gases and they get together if they are the same. So are the plants and human beings. The reason why the old saying goes like that is that phoenix trees are a superior kind of trees and phoenixes are a superior kind of birds, the gases of which are similar, so that they can sense and summon each other.

As a consequence, it can be seen that the studies on the characteristics of natural

plant properties, carried out by the people in Song Dynasty (960-1279), were mainly based on the way of observation and the theory of sympathetic, which formed the unique oriental view of nature. In other words, by the carefully observation of the external characteristics of plants in the process of growth, the nature of plant through the sympathy of inner and outer gases could be realized. Moreover, on the basis of understanding the nature of plant, one should adapt to the nature and help it grow to make its nature perfectly realized. Meanwhile, one could understand plant properties as well as human properties at the same time, which could be sympathized with each other and play a mutual promotion. In addition, only when plant properties are understood could they be used, so that full use of plants could be made to achieve the great cosmic beauty.

2. Expressions of plant properties

People of Song Dynasty are inclined to be affected by neo-confucianism, especially *yijing* theory when they describe flowers and trees. Their cosmic outlooks come from *yijing* theory which provide a kind of new cognitive pattern for them to know, describe as well as appreciate nature. Founder of ink plum Huang Guang taoist priest created *plum blossom spectrum* which even connects plum's image with *yijing's* mathematical philosophy, using harmonious image-numerology theory to explain plum image. *Book of changes* holds that nature has its image numbers, the image is basic structural unit and numbers are rule and vectors to connect these units. Huang Guang taoist priest connected plum images, tai chi, yin and yang, the five elements with numbers of eight diagrams, formed a unique theory to appreciate and painting plum. It is believed that plum is born of the harmonious nature and flowers bloom in response to the weather variations. It is yang and is integrated into the image of nature. Trees absorb the air of earth and grow naturally, it is yin and is the image of earth. According to the *yijing's* theory, the number of days is yang, that is, one, three, five, seven, nine which is called cheng number or odd number. The number of the earth is negative, that is two, four, six, eight, ten, which is called an even number. The flower elephant belongs to yang and its number also takes yang. When drawing plum blossom, the flower stem uses one ding, that is, using the clove head in traditional Chinese painting to draw the plum blossom stem which symbolizes the number of tai chi. The green house uses three points to represent the three elements of heaven, earth and human beings. The number of calyx is five petals which symbolizes the five elements of metal, wood, water, fire and earth. Seven stems are used to draw root fibril, representing the sun, moon as well as metal, wood, water, fire, earth and stars. Because nine is the number of anodes, nine variations are used to represent the blossom fall which conform to the days.

When people in the Song Dynasty draw the plum tree, they will make use of the number of the earth. The root of the plum is drawn in two, which means the root is not born in single. The image-number of its trunk represents the four seasons in a year, which can be drawn in four drawing techniques, they are: bottom-up, top-down, left-right and right-left techniques respectively. For the branches, there are six ways of drawing: laying down, upturning, covering, attaching, arborizing and folding the branches. For the treetops, there are eight techniques of drawing, which are expressed as lengthening, shortening, tendering, overlapping, interacting, isolating, separating, and wired. And there are ten kinds of plum trees, namely, Kumei, Xinmei, Fanmei, Shumei, Shanmei, Yemei, Gongmei, Jiangmei, Yuanmei, Panmei, representing the number of earth, etc. That is to say, the drawing of the plum tree should accord with the image-number of heaven and earth, following the laws of the nature.

Besides, the influence of the theory of the image-number, philosophical connotations in *yijing* also have a great influence on the expression of the plants. For example, the book, *orchid-yi* written by Lu Tingweng in Song Dynasty stressed more on philosophical connotations of plants. *orchid-yi* details the growth and cultivation of orchids, and its structure is right generated from the book named *Zhou yi*. The book is divided into two volumes, the first volume named *Tian yigen*, and it takes the twelve allo-trigrams as the lunar order of twelve months, which is similar to the hexagrams in *Yijing*; the second one named *Twelve yiyi*, which is like the Appendices. Thus, in terms of the structure of the book, its ways of thinking and understanding the orchid are exactly with Chinese characteristics.

Twelve hexagrams in *orchid-yi* are taken from the hexagrams of twelve months in sixty-four hexagrams in *Zhouyi*. Of all the hexagrams, *fu* hexagram refers to November, symbolizing the winter solstice: yang sheng, which means from now on, yang-qi increases and yin-qi decreases day by day; Gou hexagram represents May, is the symbol of the summer solstice: yin sheng, that is, yin-qi waxes while yang-qi wanes therefrom, the growth and decline of yin-yang in four seasons continues endlessly. Seeing from the picture, we can know that *fu* hexagram represents November, *lin* hexagram represents December, *tai* hexagram represents lunar January, *da zhuang* represents February, *guai* represents March, *qian* means April, *gou* means May, *dun* refers to June, *pi* refers to July, *guan* refers to August, *bo* refers to September and *kun* refers to October. (the months here are lunar months)

The writing of *orchid-yi* starts from the orchids in *fu* hexagram, that is, from the orchids in November, *fu* hexagram means “everything in the world originates from their roots, the roots are on the basis of the heaven, while the root of heaven is fundamentally based on *fu* hexagram, even the heaven has its root, let alone all things on earth and the orchids.” The orchids in November are the foundation of all, should be enshrined rather than be used. Generally speaking, the book is a pretty wonderful one, showing the patterns of the lunar order in Chinese agricultural planting, meanwhile, the writer mentioned the announcements of cultivating the orchids in other months. The last hexagram in *orchid-yi* is the orchids in *kun* hexagram in October. Which also means the changes of yin-yang, the recurrence of a year, and the returning of life, meeting the principle of the nature.

3. Understanding and empathy between plant nature and human nature

While the people in the Song Dynasty found the plant nature outward, they saw human nature inward. On this basis, the sympathy between human and plants was formed. In terms of objects, the sympathy turned from human-plant to person-person. From the effects of perspectives, the plant nature is communicated with human nature, and they can be achieved mutually.

As we know that the education of people and the cultivation of the plant are interlinked. Only when understanding the nature how to cultivate everything, we can raise our own better. It is the same principle to make everything and everyone best, just like horticulturalists cultivate trees and teachers educate people. This is not only a superficial analogy, but also a connection in the root. The similarity in root properties means the same in source, that is “one principle of all things.” On this basis, the “one body of all things” was formed, and then the emotional system between people and nature was established.

Respect for the plant properties and understanding of human nature are synchronized, which constitute a real interaction and equivalence between human and nature. It emphasizes the respect for nature and establishes the relationship of equality, affinity and mutual achievement with all things in nature.

The nature view of “one principle of all thing” is different from that of the West. The traditional view of nature in the West holds that the nature is not only the object transformed by human, but also the resource that people can use. At the same time, humans are the subjects and the nature is resource, which is an unequal relationship. The unified view of nature emphasizes the integration inward and outward and the organic unity of human and nature. Therefore, the nature is not a different existence or just the resource and means, but a natural sympathetic relationship between human and nature.

Summary

Based on the theory of gasification and sympathetic, the plant aesthetics in Song Dynasty established the deep connection between human and nature. In the background of contemporary ecological civilization, it is of great value and significance to rethink the relationship between human and nature, reflect on the predicament of modernity and rebuild the connection between human and nature.

THE ADVENTURES OF THE THING. MARIO PERNIOLA'S SEX APPEAL OF THE INORGANIC

Abstract | This paper explores the concept of “thing” in the work of the Italian writer and philosopher Mario Perniola. The main objective is to develop the controversial and original aspects of Perniola’s thought within his aesthetic theory of feeling. Firstly, Perniola’s perspective on the notion of thing will be distinguished from that of spiritualism, vitalism, and marxism. In fact, according to the Italian philosopher, these traditions share a metaphysic prejudice against the thing. Although departing from different theoretical methods and premises, they all reach the same conclusion, namely that the thing (as an inanimate, inert, inorganic object) is the contrary of life and should thus be regarded as inferior, alienating and reifying. This prejudice comes from the Western dualism which polarizes organic and inorganic, animate and inanimate, living and dead, male and female. Conversely, Perniola’s theory focuses on the “transit” between the two poles of the supposed metaphysic dualism. In doing so, he elaborates the so called “thing that feels”, namely a feeling in which the neutral and impersonal dimensions of the things flow into organic life and vice versa. Perniola traces this peculiar aesthetic experience back to Paleolithic engravings, Egyptian architecture, Stoicism, Zen rituals, Post-Renaissance Catholicism and contemporary phenomena (such as drug addictions, horror and sci-fi movies, hardcore music, perversions and so on). An alternative philosophical framework emerges from this approach. Departing from the traditional Western metaphysics it can be called “the sex appeal of the inorganic”, following the title of one of Perniola’s most renowned books. This perspective, as will be clarified by dissolving the vitalist and spiritualist drives of the subject, enlarges the horizon of aesthetic feeling by welcoming what is commonly left outside of it: the inorganic and material world, in its surprising aspects, but also in its uncanny and disturbing ones. Therefore, the main goal of this paper is to show the significance and the value of an aesthetic challenge, oriented by the experience of becoming-thing, within contemporary society. The analysis is part of the author’s PhD research at the National University of Ireland, Galway, and is developed taking into account the international state of the art over the subject studied.

INTRODUCTION

This paper aims to show the conception of inorganic sexuality elaborated by the Italian writer and philosopher Mario Perniola.

Perniola wrote extensively for more than 50 years ranging from theory of literature to aesthetics; from radical thinking to critique of Western Society. Specifically, this paper will concentrate on a book entitled *The Sex Appeal of the Inorganic*, recently (2017) re-published by Bloomsbury. This book contains in fact several core themes of Perniola's overall perspective and, at the same time, it allows the reader to better understand his developments over the so called neutral and philosophical sexuality.

In order to clarify the main issues emerging from the book, the following letter – which Perniola sent to a friend in order to settle some of her doubts – can be a useful starting point:

Dear Madam,

[...]

A conception of sexuality linked to beautiful appearance, game, recreational fun, is too poor. It forgets, ignores, removes all the disturbing and perverse aspects from which excitement is born and maintained. It provides an idyllic and sweetened vision of the [sexual] experience. It is too tied to an ethical-aesthetic conception of sight, which was formulated by Plato and above all by neo-Platonism, for which sensitive beauty is appreciated as a moment, a step in the ascent towards transcendental, metaphysical and spiritual beauty.

From this conception a discrimination against the ugly, the sick, the old, the disabled arises, which has no foundation in the sexual experience! This discrimination is based on the neoplatonic ethical-aesthetic spiritualism.

My volume *The Sex Appeal of the Inorganic* elaborates an alternative conception of sexuality: it does not step back scared before perversions (sadism, masochism, fetishism, vampirism...), but crosses them: it questions the relationship between sexuality and pain, sexuality and reification, sexuality and death, sexuality and fear... It sees beyond desire and pleasure, looking for a bond between excitement and activities based on abstraction, such as philosophy, mathematics and music, it searches a way beyond the conflict between masculine and feminine, it seeks a cosmic experience regardless of beauty, age and generally form. Do we want to call it a conceptual sexuality (by analogy to conceptual art)? Yes, provided that we keep in mind that it is based on the idea of the human being as a "thing that feels".

[...]

Many kind regards

Mario Perniola (Taken from Perniola's archives, forthcoming publication)

This letter concentrates and briefly clarifies the main perspective of *The Sex Appeal of the Inorganic* by introducing several key notions. Firstly, the concept of "excitement" appears, specifically intended as an experience created and maintained by all the phenomena – perversions and uncanny feelings – left behind by natural sexuality. In fact, while the spiritualistic and transcendent conceptions understand sexuality as a straight line, bi-dimensional, in which the only directions viable are ascent (sexual arousal until the coitus) and descent (the fall into a normality without tension after the brief climax), neutral sexuality is given in the horizon of complete availability and permanence (through excitement). In order to explain the implications of the word excitement, Perniola does not focus on the Italian word but on the English one.

Indeed, he claims, *eccitato* in Italian is too often translated and intended whether with “sexual aroused” or with *inquieto*, *agitato*, *impaziente*, corresponding respectively with the English “restless”, “worked up” and “eager”. On the other hand, the English term excitement emphasizes much more the aspects of enthusiasm, stimulation, and physical emotionality. In Italian, thus, there is a critical prejudice over *eccitazione* rooted in spiritualistic or vitalistic assumptions. In other words Perniola sees in *eccitazione* two polar meanings: sexual libido (vital) and moral assessment (spiritual). Conversely, his aim is to emancipate the concept of “*excitement* from the pleasure-displeasure problematic through which Italian language imprisons *eccitazione*” (Perniola 1994, 90). Excitement, thus, is not intended as a strong feeling of elevation, close to an ecstasy, nor as a vitalistic descent into the realm of sexual libido, in which enjoyment and pleasure play an essential role. On the contrary, according to Perniola, excitement *accompany* all those experiences related to the feeling from outside, that is, the experiences in which exterior and interior transmute in one another. Excitement “arises and is maintained when the boundaries between one’s own and the extraneous, between self and not-self fall: while pleasure keeps the ego closed in itself, in its intimate tact, in a feeling from the inside” (Perniola 1990, 92). Precisely because the ego is suspended, here emerges an *epochistic reduction*, to be intended as a suspension not only of judgment towards reality but as a suspension of personal pleasure. And yet, neutral, epochistic sexuality does not mean not mean neutralization of feelings but an entrance in another realm, that of excitement: a feeling from outside that flows uninterruptedly because it frees sexuality from the crescendo ending in the climax of coitus.

Neutral sexuality is indicated as alternative, “conceptual”, because of its in-between status that places it next to perversions and abstraction. Organic sexuality, conversely, sees in perversions a drift from the traditional sexual act, which is oriented to pleasure and orgasm through conventional areas of sexual stimulation. In addition, neutral sexuality casts out speculation for a common place, namely that abstraction means “distance”, “departure”, and thus not full physical involvement in the sexual intercourse. Moreover, I claim, Perniola’s goal as an interpreter of contemporary feeling is to challenge the clichés and prejudices on sexuality. From the letter emerges, in fact, that our daily and traditional perception of sexuality is heir to the Platonic spiritualism, which has always considered sexuality according to partial terms such as ascent / fall; beauty / ugliness; male / female; youth / oldness and so on. This division represents and reproduces the metaphysical discourse inside the sexual field. The erotic attraction to a beautiful body, for example, taken usually for granted if not obvious, was firstly established – in Western society – by Platonic tradition. Plato, in fact, in his dialogue *Phaedrus*, claimed the essential unity between sexuality, attraction, love on the one hand and beauty on the other. Consequently with his theory of ideas (Plato 2010, 47), love sparkles when seeing a body that reminds the subject of the ideal beauty contemplated by the soul beyond heaven (before being born and falling into the actual body). In doing so, sensitive beauty is “appreciated as a moment, a step in the ascent towards a transcendental and metaphysical spiritual beauty” (Perniola 1998, 11). Perniola’s effort is focused on refuting this argument, which asserts itself as “The essential” truth once-and-for-all given, by claiming its partiality and one-sidedness.

The Sex Appeal of the Inorganic, in my opinion, is an “uncanny” book, in the Freudian sense of the term. That is to say, through his writing style and his provocative conclusions, Perniola managed to make unfamiliar an everyday activity (sexuality commonly understood as the pursuit of pleasure-orgasm) by creating a distance with the reader, a displacement that takes him/her away from his/her ordinary experiences and conceptions. Sexuality, in fact, is commonly associated with pleasure, erotism and hedonism. Conversely, in Perniola’s book, it emerges as an extraneous and estranging

practice, a “subversive dimension”, as it emerges in the following passage:

When you realize the realization of the Cartesian thing that feels in the cunnilingus or in the fellatio of your partner, when you notice in the coherent and rigorous unfolding of philosophic prose the inexorable movement that brings you to lick the cunt, the cock or the arse of your partner who has become a neutral and limitless extension of cloth variously folded, when you yourself are able to offer your body as a desert or a heath so that it can be traversed by the detached and inexorable examination of the eye, the hands and the mouth of your lover, when nothing else interests you or excites you or attracts you besides repeating every night the ritual of the double metamorphosis of philosophy into sex and sex into philosophy, then, maybe [...] you have celebrated the triumph of the thing over everything, you have led the mind and the body to the extreme regions of the non-living, where, perhaps, they were always directed (Perniola 2017, 16-17)

In this quote not only, so to speak, the familiar experience of sexuality is “distanced” by an almost pornographic prose, but, in addition, an alternative conception of sexuality is brought “closer” through what is commonly understood as far from it: the philosophical theoretical discourse. From the very table of contents of the book the reader might remain puzzled: “Descartes and the Thing that Feels”; “Kant and the Feeling of the Thing in Itself”; “Hegel and the Thing as ‘not this’”; “Wittgenstein and the Feeling of ‘This Thing’” etc. Why a book on sexuality has so many chapters devoted to classics of speculative philosophy? How can the Heideggerian *Ding*, the Kantian thing in itself, or the Cartesian *Res extensa* open up the experience of a neutral sexuality? The answer lies in the fact that, for Perniola, it is a prejudice claiming that philosophy – for its speculative orientation – leads away from the earthly features of sexuality. It is rather the opposite: sexuality is considered as a philosophical experience enabling the exploration of “unknown lands”. In this regard, Perniola himself asserts that his philosophical style aims at making “unlawful matches and divorces of things” (Perniola 2014, 6). Perniola borrows this “method” – taken from Bacon’s remarks on imagination – and reproduces it within philosophy, even though he does not consider his uncanny “matches and divorces” as “unlawful”, but as anti-metaphysic.

In her review of *The Sex Appeal of the Inorganic* (2010), Patricia Marino objects that “the mental image of two persons touching one another in intimate ways with no desire and no pleasure is an unhappy one” (Ivi, 182). What this critique misses, according to this paper, is that is not happiness the goal of a neutral sexuality. Marino remains stuck within a hedonist perspective for which the sexual intercourse is meant to produce beautiful images of peaceful unity. On the contrary, Perniola stresses the focus precisely over uncanny, enigmatic, and surprising images linked with abstraction, perversion, philosophy and so on. In other words, if one does not go out from a vitalistic/erotic vision of sex, one is not able to fully understand what Perniola means with neutral sexuality, namely a new experiential territory ready to be explored for those who are not afraid of becoming *feeling-things*: “To do philosophy today means becoming world, abolishing the distance that separates man from thing. It means doing away with building great philosophical systems, and transforming philosophy in adventure with the sole expectation of expanding the territory of the visible and the thinkable by offering oneself to a movement which is both neutral and impersonal” (Verdicchio in Perniola 2001, 36).

Considering the individual as a “thing that feels” implies precisely an entrance into a desubjectivated and suspended dimension, a neutral feeling. The sex appeal of the inorganic means being against the personal pronoun “I” by praising those feelings emerging from an impersonal “it is felt”. Perniola, in doing so, widens the sphere of affections, by including in it also artificial, neutral and cosmic/astral “feelings”. Paradoxically, Perniola argues, the “I feel” is a narrow and partial aesthetic experience; only from the osmosis between “I” and the “world” it is possible to say “it is felt”

without perceiving it as a reification or alienation. Now, even though the individual becomes smaller by turning into a thing in a world of things, at the same time he/she experiences the same world according to an alternative, lateral and marginal (however dating back to the primordial traces of the *Homo Sapiens* in rock art and cave paintings) with respect to classical Western metaphysics. Metaphysics, both in its spiritualistic and vitalistic ramifications, is considered by Perniola as a theoretical construction through which the individual experiences reality by privileging what is far and transcended (God-spiritualism) or what is close but only insofar as it is organic (animal-vitalism). Metaphysics, in other words, goes only upwards or downwards: what is organic remains separate from the inorganic. Perniola's argument is instead lateral, marginal, moving *in-between*. The post-human philosophy developed by Perniola can be understood only if the classical polar oppositions and dualisms are left behind. Difference emerges if within the same space, reality, human, thing, animal or plant the process of reciprocal osmosis takes place. Perniola, through his researches, demonstrates how it has always existed alongside metaphysical dichotomies – in the specific case those of organic / inorganic, life / death, exterior / interior – a less common way of thinking and acting, an alternative feeling and experiencing reality that has never polarized the things of the world but that have always kept them together. By not focusing only on one of the two sides of the supposed polarity, the neutral dimension does not imply a neutralization of feeling. In fact, the metamorphosis of the human into a thing and of the thing in a feeling surface, implies devitalization as well as revitalization; animation and inanimation; abstraction and concreteness; form and content; and, ultimately, life and death: “becoming a thing, just a thing [...] [means] venturing out in the open, having death behind one rather than before one, exiting from time as conceived as a straight line, little by little becoming space” (Perniola 1995, 46). As Steven Shaviro claimed in an article over Perniola's concept of thing: “Perniola invents a new ontological category, that of the ‘thing that feels’: something that is utterly apart from the duality of subjectivity (which we usually equate with sentience) on the one hand, and of insentient objects on the other” (Shaviro 2005). The neutral dimension implies the awareness that polar oppositions are entangled within a logic of false conflicts: turning oneself into a thing means understanding how dichotomies (even masculine-feminine) are actually interpenetrating, *transiting*, flowing into one another unceasingly. Thus, the neutral is the third term between organic and inorganic that allows oneself not to fix unduly on one of the two poles and at the same time keeps them both active.

PHILOSOPHY AND LITERATURE: SO CLOSE, YET SO DISTANT

Abstract | In this presentation I analyze the relationship between Philosophy and Literature. First, there is an essential historical summary, then, I analyze the contrasting positions of Derrida and Habermas about this topic. Finally, I use their considerations to give an answer to three fundamental questions regarding the relation between Philosophy and Literature: 1) Is philosophy still able to be a useful tool for describing the truth? 2) Is literature capable to describe contingent realities and not just universal ones? 3) Is it possible to conceive a relationship between Philosophy and Literature without subordinating one to another?

Index terms | *Aesthetics; Derrida; Habermas; Literature; Philosophy; Philosophy of Literature; Relation between Philosophy and Literature.*

INTRODUCTION

This paper aims to underline some critical aspects regarding the debate about the link between Philosophy and Literature, from an aesthetic point of view.

Thus, I will provide the state of the art for answering three main questions about this problem: 1) Is philosophy still able to be a useful tool for describing the truth? 2) Is literature capable to describe contingent realities and not universal ones? 3) Is it possible to conceive a relationship between Philosophy and Literature without subordinating one to another?

To find these answers, I will begin with a brief historical summary of the development of the debate about the relationship between the two disciplines. At the end, I will frame the discussion on the confrontation of two antithetical positions emerged in the twentieth century: Derrida vs. Habermas. I will focus on this because it seems significant to fully understand how Philosophy and Literature are linked.

Therefore, I will compare both positions, starting from the Derrida's thesis. He states in *"Of Grammatology"* that currently philosophy is just a particular type of literary genre, which is also useless to express any kind of truth.

Secondly, I will analyze the thesis of Habermas, who wrote in *"Philosophy and Science as Literature?"* a strong critic to Derrida. In his work he claims the importance of Philosophy as a tool to express the truth, in this way, he accuses Derrida of belittling the role that Philosophy overplayed.

Given this antithesis about the relationship between Philosophy and Literature, I will take advantage of the intuitions of Derrida and Habermas to answer my main questions, but also to suggest a third way. Actually, although the positions of Habermas and Derrida are antithetical, cannot be possible to build, in the Hegelian way, a synthesis of them?

HISTORICAL SUMMARY

I will do a brief historical reconstruction of the debate about the relationship between Literature and Philosophy. The purpose is to give a satisficing background for the two theories that I will analyze in the second part of this presentation (Derrida's and Habermas' theories).

Frequently, in the West when we try to analyze the historical root of a philosophical problem, we have to focus on Athens, particularly in Aristoteles and Plato.¹

Plato is the first thinker to speak about the relation between Philosophy and Literature (*poiesis* - *ποίησις*), asserting that the poetry² can only convey fake messages since it is an imitative practice. According to this, poets' work cannot catch the real essence of the ideas because they are inspired by the nature (*mimesis* - *μίμησις*), and this one is an imperfect imitation of the ideas in the *Hyperuranion*.³ Then, it is clear that the *poiesis* is a knotty method to pass on the knowledge. In the best case it is useless, in the worst it is dangerous. It is important to highlight that the idea of Literature as subordinate of Philosophy had been accepted until the appearance of the post structuralists thinkers.

In addition to this, I want to underline another characterization introduced by Plato, because it marked a turning point on the debate about the relation between Philosophy and Literature: according to him, Philosophy should not be written. Plato concludes that it is not possible because Philosophy is an oral discipline, and any attempt to write it is wrong because it stiffens the contents in a univocal “form”, denaturing the dynamism of the Philosophy. This is a paradoxical position because we can read it in a text written by the same Plato.⁴

We could overcome this apparent contradiction considering the literary genre used by Plato to write his philosophical thought: the dialogue. In this way, it is possible to know the system by which Plato conciliates his need to write the Philosophy with his bad impression about it: through the dialogical style, he tries to provide the dialectic dynamism to the text, typical of the oral conversation. This Platonical choice provides a very important idea: the philosophical knowledge is transmissible by writing only through the dialogical genre.⁵ In other words, following the Platonical conception about the relation amid Philosophy and Literature, only the dialogical genre is suitable for writing the philosophical thought, just the dialogue can show the philosophy’s dynamism.⁶

Aristotle disagrees with Plato. On the one hand, he revalues positively the poetry,⁷ on the other, he speaks about the form in which the philosophy should be written. Actually, this is his position about the Plato’s style: “To say that the Forms are patterns, and that other things participate in them, is to use empty phrases and poetical metaphors.”⁸ In particular, the pupil criticizes the poetical method used by Plato on his dialogues. According to Aristotle, his kind of exposition does not have the necessary rigor that Philosophy requires. Thus, speak about philosophical arguments is dangerous because it is possible to create a misunderstanding. In fact, Aristotle chooses another style to expose his philosophical ideas: the treatise.⁹

As everybody knows, the Aristotelian philosophy became the canon of the West. That is, the reference point for almost any branch of knowledge. The way to transmit the knowledge was inspired by the Aristotelian method: undoubtedly, I can assert that for more than one thousand years every person who wanted to write philosophical texts chose the form of treatise only.¹⁰ I can add that: “one of the main characteristics of the relationship between Literature and Philosophy through several centuries is the reciprocal discussion and exclusion, the pendular swinging between amalgam and discord.”¹¹ This clear division lasted out a lot of time, at least until the arrival of *post structuralism*, which compromised the *status quo*:

Until two or three decades, the roles seem well distributed. [...] Render unto Philosophy the things which are Philosophy’s, unto science the things that are Science’s, and unto Literature the things which are Literature’s. In the intellectual scene, the irruption of works of Foucault, Gadamer and Derrida, among others, mean a disturbance and alteration of functions and limits of those spaces, at the point where it would not be ridiculous to assert that the main feature of poststructuralism is to question the clear bounds that separate philosophy from literature, and vice versa.¹²

Precisely because *post structuralism* altered the situation, I will now present the two most relevant positions on the relationship between Philosophy and Literature, beginning with its main exponent.

TWO CONTRASTING POSITIONS: DERRIDA VS. HABERMAS

In this context, and bearing in mind the aim of this presentation, I prefer to concentrate my attention only on Derrida's work. I consider him the main representative of this new stance on deletion of all the formal and content borders between Philosophy and Literature.

Derrida expresses his ideas about this topic in *De la grammatologie*.¹³ In general terms, he states that western truth is expressible only through the occidental language.¹⁴ But, the development of this language is a contingency born in the contradictions of the western culture. Hence, the truth, like we enunciate it, has not value because it can be expressed only by an inadequate instrument. Then, if the truth is not expressible with the language that we normally use, there would not be difference between the various languages that we use for expressing concepts and, in consequence, there would not be useful languages to express any kind of "truth". If we accept the vision of Derrida, we have to conclude that there is not difference between philosophical and literary discourses and, thus, among the different types of literary works either. In that sense, Philosophy is considered like another type of literary genre.

Against this popular school of thought, Habermas appears with his essay *Philosophy and Science as Literature?*¹⁵ Starting from Derrida's theory, Habermas criticizes the poststructuralist thesis according to which Philosophy and Literature are perfectly correspondent, in this way:

In passing through structuralism, this movement of thought has made transcendental subjectivity disappear without a trace, and indeed in such a way that one also loses sight of the system of world relations, speaker perspectives, and validity claims that is inherent in linguistic communication itself. Without this reference system, however, the distinction between levels of reality, between fiction and reality, between everyday practice and extra-ordinary experience, and between the corresponding kinds of texts and genres becomes impossible and even pointless. The house of 'being' is itself sucked into the maelstrom of an undirected linguistic current.¹⁶

After this description, Habermas become judgmental:

This radical contextualism reckons on a language made fluid, one that continues to exist only in the mode of its flowing, so that all innerworldly movements first emerge out of this flow. This concept finds only weak support in the philosophical discussion. It is primarily based upon aesthetic experiences or, to be more precise, on evidence from the domains of literature and literary theory.¹⁷

According to Habermas, if we accept the poststructuralist vision it would become impossible to write texts referring, in some way, to ontological truths.

This is a brief description of the two most representative positions of the 20th century Philosophy. I chose to describe them because they show the contradiction within the contemporary debate,¹⁸ and because I think that it is possible to underline some relevant aspects of these positions for trying to outline a new approach to the problem.

CONCLUSIONS

As I said before, starting from the comparison between Habermas and Derrida, my objective is to answer the three questions that I formulated at the beginning:

- 1) Is Philosophy still able to be a useful tool for describing the truth?
- 2) Is Literature capable to describe contingent realities and not universal ones?
- 3) Is it possible to conceive a relationship between Philosophy and Literature without subordinating one to another?

Before to reply, I think it is better to make a clarification about something that has remained latent throughout the presentation: until these days, we do not have rigorous and formal standards to discern when a text can be considered philosophical or literary. In addition, one of the lessons of post structuralism is that each concept has its own *historicity*. For that reason, it is incorrect to speak about these concepts without specify the historical period we consider. Thus, I want to precise that my conclusions do not have a historicist nature, so I limit my considerations at the contemporary situation. Under these premises, we can try to answer all the questions with just one response.

Beginning with the idea of Habermas that it is important to distinguish between Philosophy and Literature, but abandoning the old prejudice that only Philosophy is able to express and describe the "Truth"; I would like to propose a new approach with the scope to offer food for thought for the scholars about the relationship between Philosophy and Literature. For sure, it is not an exhaustive approach, but it can be a good start.

Bearing in mind the difference that Habermas underlines, we have to consider the importance of the Derrida's considerations about the language too. Piecing together these two perspectives, we can affirm that the border between Philosophy and Literature cannot be thought in cognitive terms but in expressive terms. Both of them are necessary (in a different way) to describe the reality: "The important place to draw a line is not between philosophy and non-philosophy but rather between topics which we know how to argue about and those we do not."¹⁹ Regarding the choice of the objects to study, the question is open yet and it is not clear. For the purpose of this presentation, it is enough to declare that, regardless of the objects in themselves, all of them are part of a group that can be called "objects analyzable by Philosophy and Literature". In other words: there are not objects that we cannot study through Literature and Philosophy. Considering this, we can go on with the consciousness that we are not able to distinguish the different types of objects, but at least we are sure that all the objects are appropriate for our analysis.

But pay attention, I do not want to say that we have to ignore at all the *How*. From this point of view we must take a cue from the attention that Derrida poses in language, albeit with some reservations, judiciously. It is clear that the language is a fundamental part of the cognitive act, but it is wrong his judgment that label the west language as not suitable to express the "truth". This is good for taking another food for thought about the importance of the literature for the knowledge: if the language is a fundamental element, it is true that poets and writers are the "designated" to study and experiment the limits of language's activity. Without the poets' work and sensibility, the language cannot follow the reality,²⁰ they give the necessary dynamism to the language which is

essential for evolving itself in the contemporary environment.

Methodologically, it is sufficient for concluding that philosophical analysis cannot ignore the Literature on its reflection: joining these two disciplines we can describe and know subsequently various “phenomenon” that otherwise can be misunderstood.

Thanks to these arguments, I can answer to the three starting questions in this way: The philosophy is a medium able to describe the “Truth”, the same “Truth” that the Literature can describe with a different methodology. This push to think a relationship between Philosophy and Literature without to subdue the second one to the first one. According to this, it is necessary to think this relation as a complementary relationship, not subordinate.

I want to finish my presentation reminding that these conclusions are not definitive yet. This work is part of a developing project which is in an embryonal state. I wrote this for listening the opinion of other experts in medias res, but also to share my preliminary conclusions with other scholars that study the same problem facing up with the complexities of relating Philosophy and Literature.

Endnotes

1. I don't speak about the pre-Socratic thinkers because they do not speak about it.
2. I will use the terms Literature and Poetry like synonymous because the distinction between them was introduced in the XVIII century.
3. Cfr. Plato (2000), *Republic*, Cambridge University Press, this theme appears in the book 10.
4. The famous criticism to the writing appears in the myth of Theuth, in Plato (2018), *Phaedrus*, Cambridge University Press.
5. To deepen this theme cfr. Vegetti, M. (2003), *Quindici lezioni su Platone*, Einaudi, in particular the 4th lesson 4: *Scrivere la filosofia*.
6. I think that his position about the form of the written philosophical discourse is significant for the Philosophy's history as much as his criticism to the *mimesis*. In this historical summary, I focus on this topic too.
7. Cfr. Aristotle (2013), *Poetics*, Oxford University Press. Unlike Plato, he excludes the negative function of the *mimesis*. However, he chooses a decided distinction between Literature and Philosophy.
8. Aristotle, *Metaphysics*, 1.991b, available in <http://data.perseus.org/citations/urn:cts:greekLit:tlg0086.tlg025.perseus-eng1:1.991a>.

THE ART OF LIVING: JOHN DEWEY AND THE MELIORISTIC CHARACTER OF AESTHETIC EXPERIENCE

Abstract | Today aesthetics is a fertile branch of research which tries to transcend the narrow art-oriented approach, widening the focus of attention to include objects, phenomena and activities of our contemporary world that had been traditionally neglected or forgotten. Challenges to the traditional scope, nowadays aestheticians recognize the continuity between fine arts and experiences from other domains of life. They discuss about the complex circumstances and coexistent ways of life and claim the aesthetic character of different aspects in our everyday life. Thus, aesthetics can not only be considered a subdiscipline of philosophical studies, but an essential study of humanities. In this context, this presentation attempts to defend that John Dewey's insights into aesthetic experience and its melioristic nature seems to offer fresh insights into the field of current aesthetics. Dewey holds that there is a relation between theory and practice, employing a concept of experience which interprets aesthetics in terms of creativity. He develops a contextualist approach which begins in "the raw", i.e. in the events and objects that arise in everyday life. Therefore, aesthetic experience does not come about in a finished world, but in one where human beings continuously lose and reestablish harmony with their surroundings.

Following contemporary analysis of human creativity, the aim of this paper is to analyse the meliorism that runs through Dewey's aesthetics. On numerous occasions he expresses his firm belief that the human condition can be improved and that aesthetic experience has a vital role in attaining that goal. That is, he thinks that aesthetic experiences promote a harmonic way of life. Many scholars have regarded Dewey's emphasis on everyday life as one of the most powerful ideas in his thought. However, an exclusive focus on *Art as Experience* has presented a somewhat misleading picture and a gap in the literature on Deweyan meliorism. Through this presentation I try to fill this gap, firstly, exploring the main characteristics that make a common experience into "an aesthetic experience", a *modus vivendi* that gives license to creativity. Secondly, I deal with the question of imagination, emphasizing action and the infinite possibilities of our lives. This paper is accomplished by a final reflection on Deweyan notion of aesthetic experience today as a way of experiencing a meaningful life, as an art of living.

Index terms | Aesthetic Experience; Creativity; Everyday Life; Imagination; Meliorism.

INTRODUCTION

Nowadays aesthetics presents new avenues of inquiry and has become a common concern for numerous scholars across the world due to the profound worldwide changes in contemporary culture and art. Aestheticians attempt to transcend the limited scope of aesthetics began during the latter half of the twentieth century with a renewed interest in daily's life. In this way, John Dewey's philosophy offers fresh insights into the field of aesthetics, which has been extended to include objects and experiences that have traditionally been ignored. His proposal, ahead of its time, tries to restore the continuity between art and life, laying the foundations for an everyday philosophy and defining the notion of aesthetic experience as a harmonic interaction between living creatures and their surroundings. Thus, Dewey conceives of aesthetic experience not as a special attitude or distinct encounter with works of art, but as a previous phase of knowledge; it is the kind of experience which merges in the immediacy of situations.

The vital core to Dewey's aesthetics is not an analysis of properties of art objects or aesthetic events, but instead concerns the interaction which constitutes our vital process. Our everyday lives entail different experiential qualities depending on our orientation toward the activity or event in question. This kind of orientation fits into the important term of meliorism. This pragmatist notion alludes to that particular interaction which attempts to improve our lived experience, and, as Scott Stroud has addressed¹, have an essential role in aesthetic experiences.

The aim of this paper is to show this melioristic character of aesthetic experience from a reflection which will explore two main points: what makes a common experience into "an aesthetic experience" and his notion of imagination. I begin defining the main characteristics of "an experience" and describing its vital role in improving our everyday life. Secondly, I would like to address fundamental aspects of imagination (the role in Dewey's aesthetics, its functions and the dynamic organization) for explaining how living creatures develop a cumulative progression toward fulfillment experiences. That is, they are not permanent constants, but variable and changed situations of creative process that constitutes our lives. Finally, I will emphasize how important it could be for people on the street to re-focus interest in Dewey's notion of meliorism because this can make the process of life aesthetically possible.

AESTHETIC EXPERIENCE AS A *MODUS VIVENDI*

Dewey starts *Art as Experience* criticizing the aesthetic theory which has separated the existence of the works of art as products that exist apart from human experience. Artistic objects have been isolated from both conditions of origin and operation in experience and have been set in a remote pedestal, "a wall is built around them that render almost opaque their general significance, with which aesthetic theory deals"². Nevertheless his notion of "aesthetic experience", as I attempt to show, is a multifaceted and multilateral concept that alludes to a creative tension which human beings experience every day. For Dewey, the term "aesthetic" is no intruder in everyday experience, but a quality which makes reference to the intensified development of a normal experience; every experience is potentially an aesthetic experience. Therefore, what makes a common experience into "an aesthetic experience" is a variety of features that made it more unified, consummatory, and meaningful.

The first characteristic is its unity, in other words, every successive part flows freely, without seam or gap, into what ensues³. We have "an experience" when the material

experienced runs its course to fulfillment⁴. That is, experience has a unity that gives it its name, although it shows different phases and emphases⁵. Dewey says “such an experience is a whole and carries with it its own individualizing quality and self-sufficiency. It is an experience”⁶, and this is not an unusual fact. Aesthetic experience is a full act what happens in our lives when we are both most alive and most concentrated on the engagement with the environment. What distinguishes aesthetic experience is the qualitative unity and a “closure in consummation, not a cessation”.

In “an experience”, the conclusion is not merely an ending, but the result of an organizing process, which reveals the meaning of the human encounter with the world. Therefore, such experiences may have pauses or silences, but not gaps or breaks. It is important to note that this is a pervasive quality, “the existence of this unity is constituted by a single quality that pervades the entire experience in spite of the variation of its constituent parts”⁷. However, this unity is not to be constituted by the fact that the consummation is anticipated throughout the experience, as Sherri Irvin has suggested⁸. Through this pervasive quality, Dewey is indicating an organizing quality, the temporality of the event as a whole⁹.

Rhythm is the second main feature of aesthetic experience. For Dewey rhythm is a universal scheme of existence, underlying all order in change. Nonetheless, rhythm does not involve a fixed model, but a constant variation. Dewey characterizes it as a quality of life and nature. Human beings are affected and participate in nature’s rhythms, from sunrise and sunset to circadian rhythms¹⁰. Thus, rhythm is not only a phase of artistic product; it is the harmonization which directs the interaction with our environment. In Dewey’s words rhythm is “as an ordered variation of manifestation of energy”¹¹.

Life supposes energy and attention, but also pulses or stimulus; life is a process of interacting and interchanging through which man dynamically organises his environment. For that reason, Dewey gives the same value to change and order; in fact, if there is a greater change or variation, there will be a more interesting aesthetic response. Aesthetic perception is a full act of perceiving what happens in our lives when we are both most alive and most concentrated on the engagement with the environment. At every single moment, every living creature experiences the world and organises the energies, involving past experiences and creating new meanings.

Hence, the notion of rhythm leads to the quality of form. For Dewey, form is the organization of energies; that is, a dynamic configuration which human beings develop in problematic situations. According to him, we experience tensions which require new responses. Therefore, form is not found exclusively in works of art, but in everyday aesthetic experience as well. That is, it is the operation of forces that carry the experience of an event, object, scene and situation to its own integral fulfillment¹².

This configuration is the aesthetic cause of its creative feature, but also it, is vital and functional: it is whereby men develop their lives; and also it is a way whereby men could experience a fulfilled life. In other words, it is the way in which human beings can make our experience more unified and adaptively engaged with the situation in spite of all its obstacles and tension. And this process does not cease, being alive implies to create new relationships in different contexts with different consequences. Every phase, every conclusion, even every pause, are important parts of that configuration¹³.

The last feature of aesthetic experience alludes to a conscious attitude toward the

activity or interaction. In *Art as Experience* Dewey explains that we carry out aesthetic experience by “dealing consciously and expressly with the situation in which we find ourselves.¹⁴”. He explicates this particular orientation using the notion of “mind”. According to Dewey:

Mind is primarily a verb, it denotes all the ways in which one deals consciously and expressly with the situations in which we find ourselves. Unfortunately, an influential manner of thinking has changed modes of action into an underlying substance that performs the activities in question¹⁵.

Therefore, according to Dewey, mind implies every mode of variety of interest in, and concern for, things: practical, intellectual and emotional. That is, it never supposes denotes anything self-contained, isolated from the world of persons and things, but is always used with respect to situations, events, objects, persons and groups¹⁶. It alludes to the engaged interaction of human beings with their surroundings. In Dewey’s words: “mind denotes a whole system of meanings as they are embodied in the workings of organic life. Mind is a constant luminosity; consciousness is intermittent, a series of flashes of different intensities.¹⁷”.

These characteristics show the melioristic quality of aesthetic experience. As I have attempted to expose, they present how meliorism entails a focus on the present situation and try to improve the experience through a creative and concentrated interaction. In this kind of interaction human attention moves in a unified direction instead of wandering, it is controlled by the pervading qualitative unity. And, as Dewey asserts, not only must this quality be in all parts, but it can only be felt, that is, immediately experienced¹⁸. Thus, aesthetic experience can be taken to be a process of cultivation, a *modus vivendi* which provides an artful approach to our everyday life.

THE CREATIVE FACULTY OF IMAGINATION

According to Dewey, nature, our surroundings, is not immutable and eternal, but a changing environment where problematic situations arise, contributing to a reconstruction of meanings. The faculty responsible for this reconstruction is the imagination. Dewey attributes an imaginative faculty to human beings, emphasizing action and the infinite possibilities of our everyday life. But, what is the imagination and how does it operate?

As Thomas Alexander has exposed¹⁹, Dewey’s treatment of imagination is difficult to summarize. In *Experience and Nature* he defines imagination as an organ of nature; “it is the appropriate phase of indeterminate events moving toward eventualities that are now but possibilities²⁰”. Imagination emerges when a habit is impeded or an action frustrated and human beings become aware of the intentional structure of the activity. In other words, it arises in consciousness as a crisis of the activity, and is pregnant of full aesthetic force. Imagination creates alternative possible meanings of situations and secures a restoration of activity’s on-going unity.

Therefore, as Kalle Puolakka has defended²¹, imagination is “the faculty that keeps the experience intact and structures the experience into an articulate, complex unity”. That is, imagination guarantees the unity of the experience, seeking to understand the actual in light of the past experiences and the possible in an experimental way. In Dewey’s words, it is “a way of seeing and feeling things as they compose an integral

whole”²².

This power that unifies all the constituent parts providing a new meaning, as a way of experiencing that offers new understandings of the situational nature of the world. Dewey describes as an aesthetic mode of understanding, a pervasive quality which permeates our everyday experience when we become conscious of the extended environment of a situation. In this sense, imagination has become a center faculty in pragmatist ethics, as Kalle Puolakka has pointed out, Dewey had already found imagination to be “the chief instrument of the good”²³

However, in this paper I attempt to highlight its creative character. Imagination is the faculty which leads human beings to develop a melioristic interaction with their surroundings. Through our imaginative encounters with the world, people can live life as an artist, experiencing the problems, disruptions and tension as an opportunity to develop his creativity.

CONCLUSION

As Thomas Alexander has noted²⁴, Rorty’s interpretation of *Experience and Nature* and Dewey’s later works has promoted a portrait of “two Deweys”: the cultural critic and the metaphysician. This reading, which presents a “good Dewey” and a “bad Dewey,” has a long history even on its own home ground. Whether scholars take a stance on the “two Deweys” issue or not, these views of Dewey often remain unrelated and opposed. Recently, Alexander has challenged this approach by going back to Dewey’s primary concern: the philosophy of experience in terms of aesthetic experience. Following Alexander’s inspiration, these pages present Deweyan philosophy in general and aesthetics in particular as a school of “the art of life.” That is, he is not searching for some essential reality, but seeks to cultivate harmonious relationships with one’s surroundings

As pointed out above, Dewey’s notion of aesthetic experience can be understood as a *modus vivendi*, a creative and engaged interaction with our surroundings. This contextualist approach feeds into a philosophy of life that takes events and situations as its key factor, seeing them as dynamic presences. His aesthetic theory links aesthetic experience with everyday cultivation through his notion of imagination and promote a way of developing a meaningful life.

To conclude I would like to briefly highlight the importance of my proposal. Several authors have regarded Dewey’s emphasis on cultivating our everyday life as one of the most powerful ideas in his thought. However, through this presentation I try to claim the human creativity which makes possible to experience an artful life and place aesthetics not only as a subdiscipline of philosophical studies, but an essential study of humanities.

Her primary research interests are Pragmatism and John Dewey's Philosophy, Transcultural Aesthetics and Everyday Aesthetics.

THE NATURAL CONCEPT OF LAOZI

Abstract | In the history of Chinese thought, Laozi firstly proposed the concept of “nature”, and this is one of the most important concepts of Taoism. Nature has two main meanings, the original nature of things and the natural world. Nature provides human resources for survival and development, and is the source of human life. Therefore, nature is the greatest beauty and the highest beauty. The beauty of nature means that the beauty is in nature and the beauty is natural, but natural beauty is influenced by the relationship between man and nature. Therefore, in the rapidly developing industrial society, Laozi’s natural concept is of great significance for how to deal with the relationship between man and nature.

This article starts from Laozi’s “Tao Te Ching” and mainly discusses it from four aspects. Firstly, explaining basic concepts of “nature” and “Tao” in the Tao Te Ching. Secondly, in order to understand Laozi’s view of nature from the angle of Tao, the article is to discuss the relationship between “nature” and “Tao”, which involves propositions, such as “the way of nature” and “the Tao way follows nature”. Thirdly, exploring the relationship between nature and the beauty, involving propositions such as “the beauties of nature” and understanding its natural view from the perspective of aesthetics. Lastly, summing up the characteristics of Laozi’s view of nature, and pointing out its significance to Taoism and contemporary society.

Index terms | *Laozi; Nature; Tao; Tao Te Ching; the beauties of nature; the Tao way follows nature.*

THE NATURAL CONCEPT OF LAOZI

In the history of Chinese thought, Laozi first put forward the concept of “nature”, which is the central value of Laozi’s thought.

1. Laozi and Nature

The concept of “nature” is very important in Taoist thought. The word “nature” is mentioned five times in *Laozi*. They are as follows:

The sage is at ease and cherishes his teachings. When it was done, people said, “we are what we are.” (Chapter 17)

Less speech is the natural nature of the Tao (Chapter 23)

Man follows the earth, the earth follows the heavens, the heavens follow the Tao, and the Tao follows its own nature. (Chapter 25)

The reverence of the Tao and the preciousness of virtue is that they do not command everything but let it be. (Chapter 51)

The sage follows the natural nature of all things and does not dare to act. (Chapter 64)

Laozi’s concept of “nature” means that something is natural and not affected by external forces, and reaches a state of freedom in his thoughts. In *Laozi*, “the Tao way follows nature” (Chapter 25) expounds the relationship between “Tao” and “Nature”, which is the Tao is based on nature, and the nature of Tao is nature. In Chapter 51, Laozi pointed out that the growth process of all things should not be interfered with, so that everything is natural. Secondly, the concept of “nature” is the state in which the living individual lives in a “non-action” way. Laozi advocates the theory of nature. He believes that everything is natural in the universe, and people should conform to their original nature, that is, adopting the attitude of nature¹. In addition, the concept of “nature” expresses Laozi’s concern and universal humanistic care for the existence of beings.

To sum up, the word of nature has two main meanings, namely, the original nature of things and nature. As one of the most important Taoist ideas, “nature” mainly means that everything should be subject to its own possible trend of operation.

2. Nature and Tao

Laozi attaches importance to the analysis of the relationship between “Tao” and “nature”, which is one of the important factors that distinguish his philosophy from other Chinese philosophies. The chapters 25 and 51 of *Laozi* focus on the relationship between Tao and nature. Among them, “the Tao way follows nature” is an important proposition of the relationship between “Tao” and “nature”.

Of all the statements that describe the Tao, the chapter 25 is the most important. “*Man follows the earth, the earth follows the heavens, the heavens follow the Tao*” points out the relationship among the four important factors, namely Tao, heaven, earth and people. These three sentences show that “Tao” is the ultimate source of heaven and earth. Not only heaven but also people and the earth should follow “Tao”. But the Tao follows what it is. As mentioned above, “Tao” is a chaotic thing without substance, so “Tao” only shows itself through the existence of all things. To imitate the Tao is to

imitate nature, which is our own nature."Nature" here is a state of being,which is the state of being of Tao.

The chapter 51 focuses on how the Tao nourishes all living things.The universe was first created by the "Tao" and then fed by virtue.As a result,the universe takes on various forms and the surrounding environment enables various substances to grow.In this chapter,"*The dignity of Tao and the nobleness of virtue*" means that "Tao" and "virtue" selflessly nourish all things."*The reverence of the Tao and the preciousness of virtue is that they do not command everything but let it be*"shows that the dignity of "Tao" and "Virtue" is presented through the development process of all things, and is also reflected in the formation and development of all things.

Tao creates all things without consciousness and purpose,so it is "*breeding all things but not possessing them,becoming everything but not relying on him and guiding everything but not dominating them*". "Breeding","Becoming" and "Guiding" explain the creative function of "Tao",and "not possessing ","not relying","not dominating" explain that "Tao" has no possessive desire to control.The growth of everything is completely natural and free in the whole process of Tao creation.Therefore, "nature" is the way or state of being of "Tao".In other words, everything bears the "Tao",and the nature of everything is reflected through the existence of the "nature" of things."Nature" is a value or principle,which is extracted from "*the Tao way follows nature*", and its essence is that the origin of the way is constantly emerging in the universe.It can be seen that "nature" is rooted in "Tao", and there is no "nature" if "Tao" is abandoned. At the same time, "nature" also defines "Tao".

To sum up,"*the Tao way follows nature*" does not imitate the nature but a state.This means that the Tao exists according to its own nature.

3.Nature and beauty

Nature is the greatest and highest beauty,because it is the source of human life,providing resources for human survival and development.The beauty of nature refers to the beauty in nature and a state of nature.² All things in nature change unconsciously and without purpose,but their results are in accordance with the purpose.The principle of Tao's natural inaction governs all things in the universe,as well as the phenomena of beauty and art. It is the fundamental principle that must be followed in the appreciation and creation of beauty and art.³

When Laozi talked about his ideal life of "*a small country and a few people*",he said, "*Sweet food,beautiful clothes,peaceful residence and happy customs*".(Chapter 80) Here,the beauty of "beautiful clothes" is not the beauty of "beautiful blindness" (Chapter 12),but the beauty of simplicity and nature in Laozi's ideal.Laozi is fear of exterior pretense obscures the simplicity of nature,thus reminding people to be sensitive and cautious about carefully crafted language."*Faith is not beautiful, beautiful words are not believed*"(Chapter 81).But it does not completely abandon beauty,on the contrary,he believes that beauty and truth can be unified.Therefore,Laozi pursuit of beauty lies not in the external ostentation and decoration,but in the nature and harmony.

Laozi believed that people should comply with the requirements of nature everywhere, "*supplement the nature of all things without daring to do it*" (Chapter 64), "*The fate of man is often natural*" (Chapter 51), and not deviate from the laws of nature to

pursue their own purposes, then they can achieve all purposes, that is, "The people all call it natural when things are successful." (Chapter 17). In chapter 45, "Pride apes humility", exemplifies the natural inaction of Tao. Coincidentally, it is not to show off one's intelligence against the law of nature, but to conform to the law of nature and make one's purpose come true naturally in conformity.

So Tao-Te Ching is a beautiful speech to Tao.⁴ Laozi put forward the aesthetic thought of "beauty in nature" on the basis of the philosophical thought of Tao, emphasizing the beauty of nature and advocating naturalness. Taoist aesthetics emphasizes the non-utilitarian relation between human beings and external objects, that is, the aesthetic relation, which is the inner, spiritual and substantial beauty.⁵

4. conclusion

Nature has two main meanings in Laozi. The first one is natural world and the other one is a spontaneous state.

Laozi saw that nature did not consciously pursue or achieve anything, but achieved everything in the end. Laozi also saw that only by conforming to the laws of nature could man achieve his own goals, and that any attempt to change or destroy the laws of nature artificially would only fail. Through the observation of people and things, Laozi concluded that the thought of "inaction and all action" has a far-reaching influence in the history of Chinese thought, and has a very important relationship with Laozi's aesthetics. Laozi's philosophy and aesthetics were observed from the point of view of Tao's natural inaction and how individual life seeks free development. In this respect, it has developed far more profound thoughts than Confucianism. In addition, Laozi's natural thought has a far-reaching influence on modern society. Laozi's philosophy is a kind of pragmatism philosophy of life, and Laozi's view of nature is a kind of value judgment and choice of life and life state. As far as people are concerned, Laozi advocates that what is natural is beautiful, which means to return to nature and find the most real and natural side of humanity, and finally find a place to settle down in line with the life state and make the life choice in line with the life state.

Endnotes

1. Nature is the most important concept of Laozi. "Doing nothing" means to let nature take its course and not to make people do it. Everything should be allowed to develop according to its own conditions, thus giving rise to the idea of full freedom. Laozi talks about "doing nothing" from a political standpoint.
2. Ekman, an admirer of Goethe, said, "things look beautiful when they reach the peak of their natural development." (Zhu Guangqian. *History of western aesthetics*. (Beijing: People's Literature Publishing House, 1979), 423.)

THEORETICAL ASPECTS OF NON FINITO FORM

Abstract | The paper discusses *non finito* form (an expression of the aesthetic principle of unfinished) and its relevant theoretical aspects in art. One of the best examples of the application of the unfinished as a creative principle is Michelangelo's sculptural opus known as *non finito*. In this kind of sculpture the direct connection between the final background layer and the first foreground layer of modelling is especially important. The latter lies directly upon the former, with virtually nothing in between.

The key feature of *non finito* sculpture is the contrast of *non finito* segments and so called *troppo finito* segments of sculpture, which creates the impression of movement; through the process of perception we are given the experience of the creative process. That's the reason why *non finito* form can be defined as process form.

Non finito sculpture can also be analyzed as an expression of Renaissance neoplatonism. We get impressive results when applying the combination of iconological and phenomenological method in the analysis of these works of art. It helps immensely in understanding the philosophical colouring of the Renaissance. The paper is based upon phenomenological aesthetics, iconology of E. Panofsky and studies of G. Maiorino.

Index terms | *non finito form; process form; aesthetics; phenomenology; iconology.*

INTRODUCTION

One of the most emblematic examples of the unfinished form in the history of visual arts – an example of the application of the unfinished as a creative principle - is Michelangelo Buonarroti's sculptural opus known by the Italian title of *non finito*.

A characteristic shared by all Michelangelo's *non finito* sculptures is the powerful contrast between the rough un-worked stone and the finely moulded human forms (mostly male nudes) which emerge out of the coarse medium from which they are formed.

And why the title *non-finito*? Because of these elements which remain intentionally in a rudimentary state; the state in which nature left them, shapeless, (amorphous) and undefined to the human eye.

Michelangelo's maieutics

According to Michelangelo, the essential quality of sculptural technique is the removal of the excess from the rudimentary block and the uncovering, or discovery, of the figure which lies hidden in the stone - Michelangelo's beloved marble. The sculptor's mission, then, was to free the figure from the rude, bulky matter within which it lay, imprisoned.

The statue, therefore, already exists within the material, its true form is imprisoned in the rough state, and like Socrates, who assists at the birth of truth from the pregnant soul, so Michelangelo delivers the finished sculpture from the pregnant stone. It is Socrates' maieutics transposed into the sculptural process. Michelangelo created these works of art as living testimony to his theory of artistic creativity, rendering perceptible his own understanding of the essence of the act of artistic creation.

Michelangelo's genius lies in exactly this - in a uniquely fruitful observation, he offers the experience of the whole process of wrenching the form out of the material and more, the possibility of continuing the sculptural process, i.e. the removal of extraneous material which imprisons the living form. We experience these works of art as an attempt of form to escape from amorphous matter. And this was Michelangelo's gift, something which appears to be a *contradictio in adjecto*, philosophical speculation rendered perceptible in matter.

Non finito form - window into the process of creation

This tendency of Michelangelo's towards un-free sculpture may seem strange. The Renaissance in sculpture which began with Donatello's release of sculpture, is characterised by the revival of free-standing sculpture in counterpose (*contrapposto*) which does not require the support of a stone mass behind it. Michelangelo had the habit, on occasion, of going against the currents of his times to give us, in his *non finito* works, a window into the process of creation. This opening of the window into the process of creation is one of the most important aspects of *non finito* form and it occurs when applying the phenomenological method to *non finito sculpture* and analysing it through the prism of phenomenology.

Phenomenological aesthetics has brought forth the thesis that due to the principle of transparency, in the process of perception, passing through several layers, recipient

comes to the last possible layer – metaphysical, layer which only masterpieces reveal.

As regards *non finito* form, there is a very special situation. Phenomenologically speaking,

we can recognize direct and tight connection between the objectively existing, real foreground, and the very last layer of subjectively, mind dependent existing background, which consists of several layers. *Non finito* form has the strength to make breakthrough and jump over interlayers, leading recipient directly up to the final layer.

In other words, thanks to the transparency of layers in *non finito* sculpture, when watching Michelangelo's *non finito* slaves, we can see, through the extremely reduced layer of figuration, just the male nude in the amorphous marble, the last, so called metaphysical layer- the contrast between the un-worked marble and the shapely human form as a conflict between form and material. With this, and through it, we are offered a perception of the very process by which form emerges from matte, the process of emergence of a figure which we experience due to the contrast between the shaped and un-shaped.

And through the process of perception we are given the experience of time, the experience of time in naked stone, in sculpture, which is, by definition, spatial art.

Sensory perception allows us to experience the process of movement outside the medium of time which, as Lessing so perceptively observed, is not available to the sculptor as a creative possibility. The sculptor has space as his medium and a single moment in time which, depending on his talent, he may (or may not) imbue with the passage of time, happening, movement. Michelangelo's philosophically ambitious *non finito* approach allows him a powerful breakthrough into time as a creative possibility and enables supreme control over the medium of time.

Giancarlo Maiorino, a contemporary American aesthetician, defined *non finito* form as a *process form*. He develops the thesis that Michelangelo's *non finito* works opened the form, out of which first mannerism and then the baroque would emerge.

"Michelangelo committed violence against the shell of form... He brought to light... the very life of form, for him the sculptural act was a biological process.¹"

The sculpture of Michelangelo however, offers itself as the opening of form, accentuating the creative process which is immanent to it. The essence, therefore, lies in the act of production itself, in the discovery of the sculpture which lies imprisoned.

Michelangelo's *non finito* sculpture offers a new, different and completely specific interpretation of form. Form is open and continues to open up, it is no longer the form of the created work, it is the *form of the creative act – form as process*, not as finished item. This openness is an immanent process and in artistic terms it is a visualisation of process.

This direct, tight connection between foreground, between the *non finito* form of the real, material, foreground and the last layer of spiritual, mind dependent background, is the reason why it is permissible to call *non finito form a phenomenological shortcut*.

In the specific phenomenological analysis with which we are engaged in this study, with the help of the phenomenological principle of transparency of layers, we immediately

discover in Michelangelo's *non finito* works the last metaphysical layer founded on the very first material plan, without intermediate layers except one extremely reduced layer of figuration – just the male nude. That imprisoned body seems to grow out, *a vue d'oeil*, as the French would say, of the rudimentary material, due to accentuated contrast between the undefined, natural stone and the subtly shaped form.

Non finito captives in stone can be interpreted in terms of Aristotle's thinking about relationship between matter and form as the aesthetic embrace of matter and form, the possibility of form to 'drink up' matter, to take matter into itself, and on the other hand, as the possibility of matter to take form and fill it up with itself. We experience this moment of mutual fulfilment as a *process* – the dynamic structure of the fulfilment of form and matter.

As August Rodin said, every great work of art leads us to the border of

“what can be known. Every master arrives at the wall of that forbidden grove where the unknowable Secret resides. Some of them lacerate their foreheads beating their heads against the wall...2”

Thus, every great artist, every great work of art, allows us, in the radiance of sensuality, to guess at the transcendent. Works of art, conceived according to *non finito* principle, above all.

MICHELANGELO'S SCULPTURE AS AN EXPRESSION OF NEO-PLATONISM

The second important theoretical aspect of Michelangelo's *non finito* sculpture is the possibility to be analysed as an expression of epoch; more precisely, Michelangelo's *non finito* opus has the strength to express the neo Platonic philosophical colouring of the Renaissance.

With reference to Michelangelo's *non finito* works of art in their philosophical context, we get impressive results when applying to them a combination of phenomenological and iconological method. It helps immensely in understanding the whole context of *non finito* opus and above all the philosophical colouring of the Renaissance. This combination of two methods is logical and fruitful because of one important characteristic immanent to both of them – transparency of layers.

Viewing through the prism of iconology Michelangelo's *non finito* slaves, we can see that so-called primary meaning or natural meaning of the work of art, both factual – the way marble has been formed, and expressional – powerful dynamism of process form achieved by contrast between formed figure and rudimentary stone, comes to visualisation of the intrinsic meaning,³ in this case – principles of neo-Platonic philosophy.

And once again we have the very same situation we had when analysing these works of art through the prism of phenomenological method – jumping over interlayers and some kind of shortcut between the first layer of primary meaning and the final layer of essential meaning. And this similarity backs up my assertion in this paper that tendency to jump over intermediate layers is *differentia specifica* of *non finito* form.

Influx of creative energy into matter

What strikes us first with *non finito* sculptures in the context of neo-Platonism is

Michelangelo's emphasis on the *process of becoming*, the creative purpose understood as *the influx of creative energy into matter*.

The neo-Platonic vision of the artist as the one who completes that which nature began, and where nature left off, continues her mission, is rendered sensory before our very eyes. We see the marble in the state that nature left it, we see the steps taken by the artist in his creative process, and, moreover, we see the steps that the artist has yet to take, following the form-giving footsteps of creative nature. All of Michelangelo's *non finito* works carry the same philosophical message – they define the creative process as the influx of creative energy into obdurate matter, the struggle with it, with its passivity, and the wrenching of the form out of it.

According to Plotinus, the artist imbues the dead matter with spirit - this is his mission; the artist completes what nature leaves incomplete. It is in this process, the giving of spirit, form, that the creative energy of the artist stands shoulder to shoulder with the energy emanating from Nature herself.

Just as nature removes layers of dead matter, liberating the form that lies imprisoned within, so the sculptor removes layers of stone, searching for the figure which the block conceals. With the contrast between the rough texture of the rudimentary stone and the fine texture of the fully formed content of that stone, Michelangelo, using the self-same technique as that of nature – leaving his work unfinished, suggesting openness to the possibility of a creative process without end, offers to the viewer the metaphysical approach of the artist who completes that which nature began and left unfinished.

When nature tires, the artist continues. What nature could not manage, the artist will achieve.

It would seem that there is no greater deification of the artist and the artistic process in the history of aesthetics.

The dungeon of soul

One thing that strikes us powerfully about Michelangelo's *non finito* works, and which, at the same time, is characteristic of neo-Platonism, is the treatment of matter as the principle of un-freedom. I have already shown that Michelangelo's *non finito* works carry a powerful philosophical message; they succeed in rendering sensory the creative process as the penetration of creative energy into solid unshaped matter, the struggle with it and the wresting of the figure from the block of stone as analogous with the emergence of form from the amorphous. Through all this, in the next layer, we can see the conflict between spirit and body. Just as the unworked *stone is the dungeon of form*, so too, is the *body the dungeon of soul*. All the *non finito Slaves* offer us an intimation of the bonds which the physical places on mankind's spirituality.

Plotinus's concept of Man clearly builds on the Platonic tradition of conceiving Man as an oyster in its shell,⁴ as a creature torn between two opposing principles, tormented by their continual conflict. The soft, refined body of the oyster is our eternal soul, and the bulky rough shell is our physicality.

Just as the uncut rock is the prison of the fully formed body which must be found in the stone and liberated from it, so too, that same fully formed body is the prison of the

human spirit, the ill-fitting shell which hinders and humiliates.

Through the artistic clash between unformed stone and fully formed figure then, with Michelangelo, a conflict of higher rank is always made plain – the conflict between body and soul – his life-long philosophical obsession, that aspect of neo-Platonism which he had absorbed completely.

Michelangelo's artistic life long obsession, slaves, they are always that – the clash between man's immortal soul and the limitations the body lays upon us.

Michelangelo's work is so redolent with meaning that, as a perfect example of Kant's aesthetic idea, offers a forceful and nuanced perception for which "no concept can be fully adequate."⁵

Philosophically powerful and aesthetically convincing, *non finito* is recognised in the modern age as a principle which does not strive for beauty, does not offer beauty, but rather offers us something much greater and more powerful than beauty alone. When asked why he admired the unfinished *Slaves*, Henry Moore, one of the modern masters, answered:

"I like them more than the others because they have much more strength than the finished ones; there is a strange thing about the truly great artists of the past: In a way their final works became simplified, fragmentary and *incomplete*. It is as if the artists ceased to concern themselves with beauty... There is a difference between the beauty of expression and the power of an expression... The former seeks to please the senses, the latter has a spiritual vitality which, for me, is more exciting and deeper." ⁶

In my opinion Moore is wrong here in only one respect – *non finito* does not sacrifice the beauty for the sake of the strength of the expression, on the contrary – the strength of its expression is actually its specific beauty. It is different, perhaps, from the beauty of the mature style of Ancient Greece and the beauty of the Renaissance, but beauty it is, nonetheless.

THE CITY STATE AND SOUL IN PLATO'S THEORY: BY READING THE FOURTH VOLUME OF THE REPUBLIC

Abstract | The Republic is a painstakingly drawn painting by Plato to appeal to the Athenians for spiritual reform with the spiritual authority of philosophers. A dramatic blueprint for leather, By reading the fourth chapter of the book through text analysis, this paper focuses on the soul trilateral theory and its relationship with the city-state's four virtues paradigm. Referring to the "communitarianism ego", "individualism ego" and "negotiationism ego" proposed by Areng, the author explores three parts of soul and four virtues of city-state. The connection between the extension of the soul and the orderliness of the city-state; In connection with Kant's decision on the attraction of happiness to the rational being and his ability to desire, the author explores the decisive role of soul shift in the achievement of justice and the attainment of happiness. The conclusion is that the good of the city-state political system comes not from its paradigm, but from the imprint of the ruler's soul. Plato is not a utopian idealist, but a spiritual realist. Then take the ancient times as a mirror to seek the present individual happiness principle.

Index terms | the Republic; the third part of the soul; the city-state paradigm; Plato;dramatic interpretation.

This paper is concentrated on the fourth volume of *the Republic*, which consists of ten volumes. The fourth volume can be regarded as a transitional chapter between the third and fifth volumes, which is not very long, and the Chinese translation of the Commercial Press is nearly 20 pages. The fourth volume carries on the cultivation of the third volume of defenders, starting from the happiness of the defenders, reiterating the importance of the education about “how to be a proper human”, and establishing the four virtues necessary for a great city-state. Including wisdom, courage, restraint, justice, as well as the rationality, passion, desire of the three-third keep internal harmony in the individual’s mind. The beginning of “external proof”, which is based on individual value and based on city-state justice analogy, is intended to show that the intrinsic value of democratic politics will help individuals to gain a mature self-cognition. It helps individuals to gain inner self-awakening, which can be seen as a defense of democratic values. At the end of the fourth chapter, on the basis of three parts of soul, the honor personality of Sparta militarism, the oligarchic personality, democratic personality and tyrant personality correspond to four political paradigms: honor system, oligarch system, democracy system and tyrant system. The discussion of polis by individual justice shows that inner goodness can also bring external good and lay the foundation for internal evidence.

1.Charges and pleas

First, according to the third volume of Socrates, he put forward to the defenders a simple and militarized way of life with a pure mind and no private property. Admantos began volume IV with a sharp question that this would make them completely unhappy, because in the performance of their escort duties, the defenders received no personal benefit. Admantos’ s doubts can be understood in part as driven by egoism. In other words, any voluntary action is ultimately motivated only by the desire for one’s personal interests.

Socrates never denies something straightly. first he counting on Admantos’s allegations: “...it won’t even be possible for them, or give gifts to lady companions”(420a)¹ at a time of somewhat complacent relaxation of vigilance in Admantosh, Socrates made a clear and conclusive answer: “it is not surprising that if these men, as they are, are also happiest,” he said,“However,in founding the city we are not looking to the exceptional happiness of any one group among us but, as far as possible, that of the city as a whole. “(420c)² then he take the painting of sculptures must focus on the beauty of the whole as an example. It is pointed out that Admantos’s concept of happiness is the judgment of individual value, which is only aimed at the defenders themselves. Socrates regards happiness as a social attribute, and puts individual happiness in the city-state as a whole. Everyone does their work well then the city-state develops harmoniously, and each class gets its own happiness. To show that public service is in the best interests of the individual and will bring them happiness, Socrates has discussed and given answers in *the Republic*, as in the first volume of the debate on why good people agreed to rule the city-state (346e). ³The second volume explains how the community forms (369b), ⁴and the seventh discusses why the philosopher returned to the cave and tell others the outside world (519d)⁵. In addition, Socrates tried to convey moral responsibility to rulers and defenders by using the Cadmus myth, which tells how indigenous peoples were born on the earth, as a strategic means under a rational spirit. They tried to teach them to protect their land as their mother, and to love citizens as much as they did to their brothers.

Plato’s this opinion also closely related to the historical background of that time. When *the Republic* was written around 375 BC, the Hirotts who were conquered by Sparta rebelled. Plato was equally concerned that a deeply rooted warrior class, the guardian, would oppress the defenseless civilians of a dictatorship or a self-reliant dictatorship.

Become Plato's fear of "conquering the country". The single Spartan education and the chaos caused by the Spartan wholeness run counter to Plato's purport. Therefore, from the third volume, Plato asked Socrates to emphasize that defenders should be both brave and submissive, and then compromise on public affairs and public affairs after raising their dedication to the utmost. Plato intended to intervene in real life and solve practical problems. Instead of focusing only on Plato's rejection of Homer's poems, strict regulation of life defenders, and so on, he categorizes them simply as the harsh Spartan model, which Plato spends a great deal of time emphasizing on, that is, music, poetry, and moral education of the soul. The training of the body is also because it benefits the soul, which is obviously closer to the traditional Athenian model of education. This nurtured guardian is a philosophical dog, similar to the existence of Shepherd Dog. Then, in order to argue with his opponents and strengthen the reasonableness of the principle of happiness as defined by himself, Socrates shows that citizens do not perform their duties if they do not insist on "one person, one skill." Without the whole happiness of the city-state and only pursuing the individual or the individual happiness of a certain class, Socrates went to corruption. Socrates also cited the corruptions of the potters as an example to illustrate the serious consequences of the corruption, just as an Chinese old saying goes: "thousands miles of dam destroyed by the ant nest".

2. The influence of rich or poor of the city-state

By indulging the hedonism can not finally be happy, Socrates began to think about the poor and rich. "since the one produces luxury, idleness and innovation, while the other produces illiberality and wrong doing as well as innovation"⁶ Socrates thought to prevent too poor or too rich, because these two will cause the products of the arts and the men worse. One of the duties of defenders is to prevent the city-states from becoming too poor and too rich.

Then Socrates took the example of the "thin and powerful" man who could defeat the two rich men who were "fat and weak", and showed that in battle, a city-state that was not poor or rich could easily defeat a loose city-state, and could also confederate with other city-states. You can always have the most allies and the least enemies.

As for Socrates's diplomatic strategy, Admantos believes that this is unrealistic, that it will create a situation of "one country being single and strong", that poor countries will be in danger, so that Socrates's city-state war theory is not valid.

Socrates explained the definition of "one city-state". To maintain such a "city-state", one needs to consider the size of a city-state, that is, "one man, one skill," It is reminiscent of the maxim written by Democritus in *the remnant*: "it is shameful to interfere in the affairs of others without knowing what you are." broad and superficial knowledge is not only detrimental to the acquisition of wisdom, but also to social disorder. This is probably a critique of a philodoxos, not a philosophos, a philodoxos who focuses on "more" than "one", which is contrary to Socrates's emphasis on exploring things themselves and pursuing truth.

In order to keep the city-state moving forward like a wheel, education and training are repeatedly emphasized by Socrates. In the third volume, there is a great deal of discussion on the education of guardians. Censorship of sports and poetry, children's games, and so on, Children are trained and educated from an early age to establish the right rules in their minds and make them law-abiding citizens. At the same time, Socrates opposed the law. Only the guidance of strict education can solve the problems. In Plato's later work, *The Law*, in the first volume of the discussion of the interests of the law, the Athenian guest said, "good judgment is in itself the most important interest of God."⁷ The second is the use of rational souls and natural self-control. If you combine the two with courage, you get justice. "The law is merely a phantom of "divine wisdom," dressed up by the supreme skill of the legislator, in order to be false

in the presence of ordinary people, and the universal movement of the moon and stars is supplemented by the special god of Olympia, Cosmology is hidden in the dark for the sake of the theory of God and righteousness. The pure intellectual “God” is given the interpretation of the physical nature, and the law restates the myth in the language of the flesh. At this point, Socrates’s good city-state model was finally established.

3. The four virtues of the city-state of justice

After the establishment of a *just* city-state, Glaucon could not wait to return to the original question, also the central question of *the Republic*: to find where was justice in the city-state, and where was injustice, and what was the difference between this two. Socrates is ready to use the exclusion method, first find the other three, then the rest must be just. The logic of this exclusion is considered problematic because Socrates did not prove that good only has these four virtues, such as in the third volume of *the Republic*, and in another Plato’s famous work *The Meno*(78d),⁸ “devotion” is also attributed as a virtue of good. ¹Here we can understand that in Plato’s time, the universally accepted definition of “good” is the four parts: wisdom, courage, moderation, justice.

First of all, to looking for the first element of the city-state’s virtue, Socrates put wisdom at the top of the four great virtues of the city-state, because wisdom points to reason, and reason is paramount and dominates the overall situation. Wisdom comes from knowledge, and then according to the principle of “one person, one skill,” that is, “to acquire a name related to a profession with knowledge of a particular aspect”, Socrates came to the conclusion that the wisdom of a city-state only comes from the leaders and rulers. Here Socrates has not put forward the concept of a “philosopher king”, but calls this class a “protector of the kingdom”. They care about the interests of the city-state as a whole, and their duty as rulers is to apply abstract social order rules to the construction of the polis through the insight into the idea of good.

Then Socrates put forward the courage. Courage can be divided into rational courage and bloody courage, and bloody courage can be understood as an order of recklessness. Ancient Greece was martial, worshipped warrior heroes, and the importance of honor was often incomprehensible to us as modern men. During Socrates’s tenure as a member of Parliament, ten generals had not buried the bodies of the dead after the war. No monument was erected, and the failure to perform without defeat was condemned to death, for it was an honour to do so; During the Peloponnesian War, the Athenians fought the Corinthians, and the Collins soldiers were also severely condemned by elders for failing to erect the monument, which they had to return to the battlefield two weeks later, resulting in numerous deaths and injuries to the Corinthians. The city-state’s courage is manifested in the battlefield, so the city-state’s courage belong to those who defend the country.

The inner spirit of courage is expressed as a maintenance and understanding as a firm belief. According to Plato’s Protagoras, courage is defined as: “the knowledge of what should be afraid and what should not be feared.” For example, Socrates in wool dyeing ratio, only after selection and finishing to start dyeing, wool can not fade purple. In the selection of defenders, who have gone through a similar process, in order for them to have a brave heart, Socrates again emphasizes the importance of physical education and music education, as mentioned in volume III. It is this model of education that allows the guardian to be brave and to control it within a certain range, to avoid the evolution of courage into recklessness and rebellion. In the end, Socrates reiterates that courage is in pain and joy and it is possible to maintain the beliefs about terrible things that have been built up through childhood.

Moderation, compared with other virtues is more like a harmony between the individual and the city-states, which is the virtue that every class of the city-state needs to possess, and runs through all its citizens. “combine strong and weak notes to

produce a harmonious symphony.” For temperance is a good order and a control over certain pleasures and desires. It is a humble self-restraint and a self-knowledge of one’s own. As Socrates famously said, “our only knowledge is to know our own ignorance.” Socrates believes that to an individual, there are two parts in a man’s soul. A better part and a bad part, “to be master of oneself” means that this worse part of the soul is controlled by the better part of the nature. If not, it would be an unrestrained “slave of his own”.

To the polis, abstinence is the consistency and harmony of good natures and inferior natures in the question of who should rule and who should be ruled. A few good men with talent, higher education, and desire to control should rule the most lust. The control of the city-state requires the control of a few, but moderation exists among all citizens. In this way, the harmony between individual and city-state can be achieved. Justice is that every person living in this country must take on a position that is most appropriate to his nature, doing only his part” The ruling class manages with wisdom, the guardian class defends the city-state rationally and bravely, and the peasants, coppers and other unwise and brave civilian strata also perform their respective duties. Socrates stressed that the city-state had grown “naturally”. The justice of the city-state naturally requires the existence of social stratum and social division of labor in the city-state, which means that the social class and the social division of labor are the essential attributes of the human being, and justice is the only way to return to cosmic justice and to reach the true “best”.

A controversial question is whether city-state justice can be restored to individual justice. Gregory Vlastos refuted Grothe and Popper’s argument that Socrates envisions the happiness of the entire city-state as an acronym for the well-being of all citizens. Lesley Brown believes that when Socrates discusses this issue, he has taken the polis as an organic whole, which has its own characteristics and needs, especially the need for harmony and unity. Ask if his internal components are happy or as happy as imagination, as if a sculpture’s eyes are beautiful or as beautiful as imagination.

4. city-state justice to individual justice

A good city-state is built to discover justice and apply it to individuals. Socrates put forward that “there is no difference between a just individual and a just nation” (435b).⁹ The city-state has three qualities: wisdom, bravery, and abstinence. City-state justice is the correct division of labor among the rulers of the city-state, the defenders and the common people. So the soul corresponds to the character and class of the city-state. Glaucon is divided from Socrates about the classification of passion. Glaucon believes that passion belongs to desire. The story of Socrates’ undefined anger by Leontios, who is angry because of his desire to see the dead body of the execution ground. It shows that passion is not a desire and not an ally of desire. The example of born children and dogs shows that passion is not rational. Socrates, by saying that passion is an emotional will, that when a man’s desire is more powerful than his reason, he will be angry at the power within him, and that he will fight for victory for justice when he receives injustice.

So Socrates sees human passion as an ally of reason. Passion is an ally of reason, but when passion is biased on the scales to the side of desire, both the city-state and the individual will fall apart. Therefore, Socrates concludes that the three parts of the soul play a leading role in reason, that passion leads it, that they lead again, and that desire is monitored. The three parts are friendly to each other and achieve individual harmony. In the third chapter, Socrates emphasizes the role of education in justice. At this point, Socrates may have been influenced by Aeschylus, and in Prometheus, Hera Klees atonement for the loss of order of soul, Aeschylus was intended to warn that rational-based order should be added to uncontrollable passion. After that, Kant further developed Socrates in his critique of practical reason, exploring from the angle of pure reason how to balance desire and reason in the proper order, and thus to obtain

happiness, “the principle of individual happiness,” No matter how much intellect and reason are used, there is nothing to do with the will except on the basis of decisions that are appropriate for the lower powers of desire. “ And it is only when reason can decide its own will that it is a truly superior ability to be determined by instinct.

After arriving at the division of labor and interaction among the three parts of the soul, the two people continue to discuss the relationship between the justice of the city state and the justice of the individual. Plato seems here to combine individual experience and collective experience as a “state organic theory”, as Dworkin put it, “A collective life is a life of giants, similar to the lives of a number of citizens who make up it.” Have the same form, encounter the same ethical dilemma and watershed, and follow the same criteria for success or failure. “Rational counsel, passion and bravery, and both lead the desire together. Let desire play a good role. The three parts of soul harmony correspond to the four virtues of the city-state: the passion under the control of reason is the courage of the individual, and the wisdom of the individual is the realization of the common interests of the rational leadership; Each of them plays its own role. It is individual restraint to obey one’s own position and not exceed one’s duty. Therefore, individual justice is the non-interference of each part of the soul, separate, but also coordinated to form a harmonious whole. In the end, Socrates put forward that true justice is not about the external “doing each’s own thing”, but about the inner thing, that is, the real thing about itself, the real thing. Both individual justice and city-state justice describe the correct division of labor, but Socrates emphasizes the “natural” of the division.

Generally speaking, in order to bridge the gap between paradigm and reality, positivism will dilute the paradigm, but with the definition of “normal form” by Vergreen: “Paradigm”. Is a yardstick that can be used to measure things; If things do not reach the standard, or if we cannot bring things close to the standard, the reliability of the standard will not be diminished. “the idealism, based on the principle of justice, is still influencing the political philosophy of the day,” he said. Plato is by no means a utopian or an idealist. He analyses the political paradigm he constructs calmly and with great foresight and is squeezed by “the process itself that makes it happen.” what he leaves us is a “very conscious play.” This play is about “seeking” and “the reality of consciousness and its clear symbolic expression in the existence of philosophers”. The pedigree of the paradigm shift in the polis helps us to understand more intuitively the contest and hierarchy between the various parts of the mind. From low to high, conflicts arise, resulting in turnover, until the noblest part of the soul, the triumph of reason and goodness, and the power and absolute power of order. All the equality embodied in the port of Piraeus symbolized the death of Athens, the disappearance of the meaning of order, and Socrates’s attempt to die. The “supreme goodness” pursued by his book belongs to the transcendental world. We can only feel its clear direction in our soul, and we can only depict its misty figure of the symbolic symbol. Live as a rational and limited being. The way to get happiness went on and on.

PERFORMING DANCE AND ITS FUTURE - FROM BADIOU'S INAESTHETICS THEORY

Abstract | This study researches the aesthetics relationship between creation and appreciation of the performing dance, and the significance of dance in future. It starts from Alain Badiou's *inaesthetics* theory, and then explore three crisis of present performing dance. The conclusions are as follows: 1. The performing dance itself lacks of thought and can not be seen as an independent art form; 2. The body requirement makes dance no artistic but athletic; 3. The necessity of life of performing dance is threatened by artificial machinery and digital simulation. Finally, performing dance is changing to respond those crises.

Index terms | *Dance, Aesthetics, Badiou, Body, Life.*

1. The First crisis of performing dance as art: the lacking of thought

In a paper entitled *Dance as a Metaphor of Thought*, Alain Badiou cited some passages from *Thus Spoke Zarathustra*, and discussed the characteristics of dance with Nietzsche. Nietzsche believes that dance is a resistance of human to the gravity and marching, so it also means freedom. Therefore, Nietzsche uses a few words to describe the dance: *light, fountain, air, flight, bird*. (Badiou 91) However, Badiou pointed out that dance, like marching, was also trapped by shackles. He believes that dance is still trapped by shackles, because dance means the body afflicted by the urgency of music. (Badiou 98) This is an oppression of time. Then, according to his *inaesthetics*, Badiou compares the difference between dance and drama. He defines dance as the following six elements: 1) the necessity of space; 2) the anonymity of the body; 3) the ubiquity of gender-erasing; 4) getting rid of itself; 5) the bareness; 6) the absolute sight (Badiou 100). The dance described by Badiou is like this: on a small stage, a dancer who does not play as any character, who blurs his gender, who forgets the established rules or steps, who wears the simplest costume, becomes the geometry of the movement, and finally his body gets peered in flash by the audience. According to Badiou's *inaesthetics*, which emphasizes on artistic thought, dance does not show enough thoughts therefore it is not an independent art. (Badiou 109) Since dance is attached to the formal beauty of the flesh, which limits the extension of the ability to explore artistic truth. The creation of art should be the exploration of truth, while the dance is the exploration of the body. But since the extension of human corps is quite limited, this exploration is quickly saturated.

From the perspective of accepting aesthetics, Rancière also draws a similar conclusion. He pointed out, "When it is only seen as a religious or healing ritual, it is not art. While it is seen as a simple body skill, it is not art. In the era of Stendhal, This 'something' is called a story. For 18th-century poetry critics, whether the art of dance belongs to beauty has been attributed to a simple question: Does dance tell a story? In fact, imitation is the distinction between craftsmanship of artists and craftsmanship of craftsmen or players." (Rancière 99)

In this debate, Badiou made a shift to the concept of Nietzsche's dance. For Nietzsche, dance refers to those spontaneous, primitive, folk, or traditional, not competitive or performing. While for Badiou, dance means clearly the performance on stage. And from his description, we find that Badiou means mainly the modern dance. Badiou emphasizes the difference between dance and drama. Similarly, Rancière focuses on the difference between concert dance from participatory and social dance. They all challenged Kant's formalistic aesthetics on dance. Although the dance defined by Badiou and Rancière is only a small part of all types, those descriptions of the performing dance highly accord with our daily aesthetic experience. The independent status of dance as a performing art is decreasing in last century, and audience are truly waiting for a kind of "thought" in art, not just "appearance". Therefore, the first crisis of performing dance as art is: lack of thought.

2. The second crisis of performing dance: the limitation of body

If as an art, another crisis of performing dance in the contemporary is the physical limitation. When Badiou criticized the lack of thought in dance, he also mentioned that dance dependent on body. And Rancière mentioned that dance as a body worship and acrobatics. In Heidegger, the skill of dance is also a skill of technology, since art and technology are homologous. As a result, the dance on stage present the mathematics in music (the line of motion) or the literature in music (the story of concert dance), while dancing it itself offers nothing but the skills of corps. Furthermore, dance only needs rhythm. It can be with out music but it has to accompanied by rhythm (Wang 107-109). However, precisely because music and dance have the commonality of rhythm, they

naturally come together and then eventually become difficult to separate, so that they complete a work together for a long time (Zhang 79-82).

Thus, performing dance emphasizes physical ability more than dramatic performance. This makes dancing seem more like a sports challenge than an artistic challenge. As a sport, it naturally leads to an element: strength. Dance is full of demands for the dancer's physical strength, while no other art has such a requirement. But compared to other sports, the power required for dance is less, because it is neither confrontational nor racing or competitive. Therefore, the performing dances are more like rhythmic gymnastics and synchronized swimming, all with rhythm and music. On the other hand, the status of these sports is also seen as more artistic. However, they are more limited than performing dance on strength of corps, while their limitations of body and rules are even greater, so the final expression is even smaller. Does this imply that there will be a stronger expressive performing dance once it is out of physical limitations? This will lead to the third crisis.

3. The third crisis of performing dance: the cancellation of life

As mentioned above, dance at present lacks thought and it depends on the body but it cannot break through the limits of the human body. It is more like acrobatics driven by music. This is the crisis of thought and body of dance. And, in post-Anthropocene, life is also facing a crisis: dance no longer needs human being. It is not actually a crisis of dance, but rather a crisis of flesh. Of course, on the other hand, it is also the liberation of dance from flesh. In the future, dance can be done by a lifeless robot, a virtual anthropomorphic program, or even a virtual object with out human shape. Here are three types:

a) Mechanical dancers. Human labor will gradually be replaced by robots, one type of those is human shaped robot. As an example, Honda's ASIMO (Advanced Step Innovative Mobility) was developed since 2000. It can imitate human movements, because engineers have carefully studied the movements of the legs of insects, mammals, and human climbers, especially at joints, and computerized a complex joint movement program for it. Another similar example is Atlas, a robot from Boston Dynamics. Although this type of robots was originally used for assistance, it will soon move into the show business, acrobatics, and sports industries, since show business has been regarded as one of the main business areas of robots. In the plan of Boston Dynamics, the entertainment industry is an important branch of the robotics industry, replacing human beings in heavy performances that may exceed the limits of the human body, and may even be injured or killed.

b) Virtual dancers. This branch includes movies, video games, and computer software. When we draw a character with changing movements on the edge of a notebook and then quickly flip the pages, they look like dancing. This is the origin of animation and film. Nowadays, dances by virtual characters in movies are not uncommon, since it is a cinematic entertainment demand. For example, in *Ready Player One*, hero and heroine dance in disco. Also, Groot (an alien like a tree) in *Guardians of the Galaxy 2*, the candlesticks, the clocks, and the tea sets in *Beauty and the Beast* can all dance by imitating humans corps. In many video games, virtual characters are also designed to get dance. For example, in *World of Warcraft*, when players enter the command "/dance", their characters will dance. And now there are also commercial and open source software on it. Released in 2004, *Universal 3D* carries out more general three-dimensional modeling and makes programming easier. By 2008, MikuMikuDance, an open source program specially designed for dance making, let everyone even not trained can simply enter the action instructions to make the virtual characters to dance. The simplification makes the program like a mobile phone with camera lens that simplifies photography for everyone, and this making choreography popular online. Since then,

people who have no space or muscle strength have become choreographers, and dance creations have a trend to go behind the scenes. The focus of the dance is still the rhythm of the lines, but the dance becomes technical writing. And in terms of perceptual intuition, the audience also recognizes the dance of these virtual characters. When people watch, they don't care whether dancing is a physical or a virtual object, and people don't even feel the difference. As a result, the real creative dancers who becoming choreographers retreat behind the scenes, while a more powerful, never-fatigued, and infinitely extensive avatar replaces him. In addition, the avatar is also out of the physical limitations, since it can instantly complete the changes in clothing, hair style, and even skin color, and also the scene completes the increase or decrease of characters and the switching of stage and other unrealizable functions in the world of substance. The dance then will be separated from life and substance.

c) Non-human shape dancers, including mechanical substance and digital simulation. Even non-human creations or avatars can dance in their own way. They don't even need to imitate the movements of human limbs, but dance in their own actions. The dance of the Boston Dynamics mechanical dog SpotMini in 2018 is a typical example, which has won a huge applause from the audience. Due to the different limb structure, it can perform some movements that the human body can not achieve. When the treble is getting higher, it can stretch its neck into the sky. This movement transcends human limbs. We can also assume that various other virtual objects, such as octopus or jellyfish, which have more and softer limbs than humans may have a unique expression in dance. This has been done in the era of hand-painting cartoons, and now there is a greater possibility in the era of computer animation. Dance usually still needs limbs, but not necessarily the human body. It can even be the movement of a movable installation art in music or rhythm.

Therefore, dance can abolish life. This crisis is an extension of the crisis of human body's expressiveness in dance, and it is also the crisis of human performing dance on stage. But for the stage performance dance itself, it can radiate even greater potential. Because the abolition of life is a crisis of human performing dance, but not a crisis of performing dance. The performing dance can be changed as same as other art forms -- the architecture from masonry to computer design, the sculpture from stonemasonry to three-dimensional design, the painting from hands to digital, and the film from hand-held photography and rocker to computer animation or drone, literature from writing to typing, music from orchestral to electronic music keyboard and synthesizer -- it can also become a programming activity. Our stage is constantly changing and performing dance is changing, just as contemporary writers are more familiar with keyboard input than with various pens.

THE WHISPERING OF PLATONIC MYTH IN PHAEDRUS

Abstract | The subject of Plato's *Phaedrus* is interpreted by many scholars as a dialogue on the nature of love and the possibility of philosophical rhetoric. The dialogue is divided into three parts: prologue, stroll and speech. We have to admit myth plays an important role in *Phaedrus*. So this paper focuses on the core of the dialogue -- myth, abstracts from the four points of dialogue between Socrates and Phaedrus, and interprets *Phaedrus* from the four dimensions of landscape, speech, writing and soul, revealing the whispering meaning and philosophical value the Platonic Myth.

Index terms | *Myth, Landscape, Speech, Writing, Soul.*

Introduction

Plato's dialogue Phaedrus has been widely concerned by scholars, and its writing time has once been controversial. Some scholars believe that it is the first time in Plato's early years; Some people think that it is Plato's writing in the middle and late period. There are also scholars who follow the content of dialogue as philosophical rhetoric and immortality of the soul believe that Phaedrus is the summary of Plato's life thoughts. But the current consensus is that Plato wrote the dialogue around 360 BC. The reason for this judgment is more based on the content of dialogue and the analysis of creation, besides the speculation of Lysias and Phaedrus' age and the change of words in Plato's early and late writings: it discusses the conventional rhetoric; it discussed love as a divine ecstasy; it discusses the dialectics, writing conception and the art of writing distinction. it discussed rhetoric art based on dialectics and truth; it discussed priority of memory and writing. Which can show the importance of the Phaedrus.

Phaedrus is divided into three parts: prologue, ramble and speech and it has two universally recognized themes: the nature of eros and the rhetoric of philosophy. Although the dialogue between Socrates and Phaedrus is largely supported by the third part, the introduction and the ramble in the first two parts seem to have little connection with these two themes. Thus, Plato's dialogue throughout the full text of another clue. From a close view of his words and a far view of his power, Plato's subtle words are reflected between the lines and the new mythology based on dialectics is taken out. Plato leads people to the truth through the myth of the soul. In this dialogue, Plato adopted four main myths: he myth of the wind, he myth of the wind, the myth of the soul and the myth of Egypt. He established his own new myth through four aspects of the main points of the dialogue: scenery, words, wisdom and writing. Plato pursues truth, and through this new myth of soul based on dialectics, he guides people to self-knowledge and truth.

|

In Plato's series of dialogues, there is very little description of the natural landscape, and the most description of the natural landscape is Phaedrus. The Phaedrus begins with Socrates and Phaedrus encountering each other, looking for a quiet place to sit down and rest in order to appreciate Lysias's writing, then they walk along the river to the shade of the sycamore tree where then can sit and lie. and in this part Plato sketched the natural landscape of the site of Phaedrus with exquisite delicacy:

By Hera, what a lovely secluded spot! This plane tree is very tall and flourishing, the agnus is tall enough to provide excellent shade too, and since it is in full bloom it will probably make the place especially fragrant. Then again, the stream flowing under the plane tree is particularly charming, and its water is very cold, to judge by my foot... The whisper of the breeze chimes in a summery, clear way with the chorus of the cicadas. But the nicest thing of all is the fact that the grass is on a gentle slope which is perfect for resting one's head on when lying down.¹ The direction of this walk is to walk out of the city to the outside of the city, where two contrasting landscapes are formed: materialistic, politically intriguing urban landscape; beautiful scenery, calming natural landscape. Socrates uses his unique Socratic irony: "You'll have to forgive me, my friend. I'm an intellectual, you see, and country places with their trees tend to have nothing to teach me, whereas people in town do."² to imply the desire for nature and the irony of city life. At that time, the youth in Athens were all good at rhetoric, engaged in politics and indulged in the political life of the city, but few of them had any real desire for nature.

Socrates was amazed by such a beautiful scenery, the cool and clear water, the green and comfortable grass, the tall and shade sycamore trees, the long cicadas singing, as beautiful as a picture scroll. But the most beautiful must be the best? Plato sounded the alarm while we were intoxicated with the beautiful scenery and told us beauty and risk coexist. Plato put it in a Phaedrus' tongue: "it is in these regions that Boreas have abducted Oreithuia, the daughter of Ilissus. Both the myth that Boreas robbed the god's daughter, Oreithuia, or that she died while playing nearby, all tell a sad story about the beautiful place. It is worth mentioning that the name of Pharmaceia, the playmate of Oreithuia, has the meaning of "medicine". The medicine has two sexes, both antidote and poison. Here, beauty and the beauty of the scenery all contains danger and the playmates of Oreithuia have brought happiness to herself and brought disaster to her. The word "pharmakon" after turning into "writing" in Egypt - metaphorical writing is both a poison and an antidote. The emergence of the myth of the god of the wind in

this context can be understood as the enthusiasm of the sacred after the indulging in the beauty, the beauty and the danger coexist. The whispering meaning of the myth is recreated by Plato from the original myth.

II

Socrates and Phaedrus wander into this beautiful space and begin the main point of the dialogue. Plato uses Phaedrus to expand Lysias' discourse on eros. As a Greek sophist, Lysias argues in his article that a lover without eros is better than a lover with eros. The arguments of Lysias can be summarized as follows: People who have no love are never regretted, and those who have eros may regret it after the ecstasy retreats; Eros will cause harm, may ignore your career, or cause family disputes; A person who is full of love is not a good thing even if he is respected, because he hovered in the new love of old love; It is difficult to find true love in the minority of people who have eros, while it is relatively easy to find the right person in the majority of people who do not have eros; The desire of the people for his appreciation of others and desire for fame, no desire of the people can control themselves, only speak real benefits and not talk about fame; People with lust will affect your interpersonal relationships and interests due to good jealousy, people without lust as long as they meet the desire never envy; Love should be given to those who are most eager to pursue it, just as being with those who have no desire for love can be appreciated to the greatest extent.

Lysias's rhetoric and ingenious language argue that one should choose a person without eros. The beauty of the words in this article can also be seen from the reflection of the article after reading it: "I think that I have said enough to make my point. If you think I have left anything out and you want to hear further arguments, you have only to ask."³ And Socrates's testimony of Phaedrus' reflection after reading this article: "I'm sure that once he had heard Lysias'

speech he didn't hear it just once. No, he nagged him to read it again and again... Eventually he borrowed the scroll himself and pored over those parts of the speech he particularly wanted to look at, and continued with this, sitting in his place from daybreak onwards, until he got tired

and went for a walk..."⁴ Although Lysias's words are beautiful, they are dangerous because his arguments and what he has argued are not the truth of eros. He merely reverses right and wrong with subtle and beautiful words. Lysias's speech is purely based on personal interests. He believes that choosing a person without love will not harm his own interests and will be grateful. What Lysias talks about in this speech can be reduced to a kind of animal love. This is by no means the nature of eros, and

Socrates criticizes it in his second speech and argues for the nature of true eros. Socrates' second treatise overturns the arguments of the first two treatises on the sanctity of love, because love is related to the soul. Lysias thought that people who have eros are prone to mania, and this mania is a kind of bad, unrestrained. Socrates, however, captures this flaw and defines mania in his essay: First of all, madness is sacred. The first two articles (Lycias's article and the first article by Socrates) smashed love and thought that love is a state of madness. Socrates must celebrate the love from the beginning of the madness. Secondly, Socrates elaborates on the essence and evolution of the soul. To understand the sacredness of

madness, we must further understand the soul:

1. The soul is immortal in nature, sacred, because the soul is automatic.
2. The movement of the soul, like the procession of one man riding on two flying horses, symbolizes the control of the mind over the will and desire. Whether the procession is smooth or not depends on whether the two horses are tamed and whether the stewards have the ability. Therefore, god and human are distinguished from each other.
3. The parade of the soul symbolizes the experience of life here. The gods squad patrol the heavens, the souls of mortals accompany them, the tamer is flying high, and the truth is glimpsed; the poor horses are all able to follow the ability, the more they see The shallower; the ruthless horses fall into the ground, and combine with the flesh to become a variety of different figures.
4. Reincarnation of the soul in conjunction with the body the soul, depending on the degree of its spiritual efforts, and the length of the wings of the strength, in accordance with a certain period of time reincarnation, rising or falling into the realm of animals.
5. As for the memory of the soul, the sensory experience of the human being in the world can awaken the memory of the truth seen in the heavens before the birth, because the sensory experience is the transcript of truth, and the memory revives the soul and prepares to fly again.

Thirdly, Socrates turned from soul to love and determined the essence of love:

1. Love is the state of tension in the heart when recalling the aesthetics of the beauty because of the sensory impression of beauty. The average person thinks that it is mad. In fact, it is attached by the gods. In love, when the soul draws nutrition, it grows its wings; love is the attachment to the essence of beauty, the pursuit of truth, so it is philosophical.
2. The categories of love vary according to the depth of the day, and the sensuous impressions of beauty in him who has not seen the form can only arouse the animal desire, and the sensuous impressions of him who has seen the truth can arouse his worship of beauty, and teach him to be more perfect.
3. The love of a shallow person is often a conflict between will and desire, and reason is reconciled. In summary, Socrates demonstrates through the myth of the soul carriage that people who should have love should be chosen. Therefore, the problem of Lucias's speech is exposed, and the beauty behind his words also contains dangers. It is easy for people to indulge in it because of his gorgeous words and beautiful language, and ignore the meaning of the words behind the words is not the truth. The more beautiful the more tempting, the more confusing, therefore, in the face of the beauty of words, we must be cautious.

III

In the second half of the dialogue, Plato cites Egyptian mythology, a dangerous invention that directly threatens the existence of truth. Socrates said that he heard that Egypt had an ancient god named Titi, inventing many things including numbers, astronomy, geometry, etc. Of course, the most important thing was he invented the writting. One day, Tuti came to see the Egyptian king and presented his invention. When it was the turn of the writting, Tutti paid special attention to: Writing can make the Egyptians have a higher education and a better memory. It is a good medicine for healing education and memory. But the Egyptian king declined writing without hesitation: Writing will make people who learn the words forget, because they no longer try to remember. Writing can only be cured and recognized, and cannot be memorized. Because of the help of writing, they can swallow a lot of knowledge without a coach, as if they know everything, but they actually know nothing.

In his book *Dissemination*, Jacques Derrida discusses this episode in the *Phaedrus* under the title "Plato's medicine". Derrida believes that if the critics are serious and carefully savor this dialogue, they will find that this mysterious text is not a superfluous word, but a key point in Plato's thought. As we all know, the invention of words is a symbol of human writing language and a tool for exchanging information. It is one of the greatest inventions. The birth of words is an important symbol of humanity entering a civilized society and a major achievement of spiritual civilization. The emergence of words is the watershed of human beings from obscurity to civilization. It has far-reaching significance for the inheritance and exchange of civilization. Even in ancient Greece, philosophers wrote books in words. Plato inserted this mythical story in his conversation, although its origin is very suspicious. The key is not to say whether there is evidence or a letter of mouth, but under the surface of the hearsay, there is a hidden rejection of words. Plato does not think that philosophy should first be a kind of text. Words are just a kind of carrier, a tool, a means of expression, and have nothing to do with the thoughts expressed. Even words have become obstacles to that idea. The words(writting) weakens and reinforces the memory of the person while helping the person to recognize it.

The beauty of writing is undeniable, but the danger behind it must be recognized. This problem has become more apparent in today's information technology era. The development of science and technology, such as mobile phones, networks, and computers, has broken people's limitations and extended human capabilities. We can now do it without leaving home. Knowing the world, but at the same time information technology has bound us and ruled us.

The culmination of anthropogene is the rule of technology to man, so we have to get rid of anthropocentrism, open up and move towards negative humanity, reverse the

IV

Plato pursues truth, loves wisdom, and loves philosophy. Truth and wisdom are beautiful but at the same time dangerous. This problem is conveyed in the Earl myth of Plato's

Republic tenth volume. At the end of *Republic*, Socrates tells a myth of reincarnation of the soul. After the war, a warrior named Earl was arranged to watch everything that happened in the post-mortem world, including the rewards and punishments he received after his death, his own choice of the fate of the afterlife in his reincarnation, and the regaining of the flesh by the river of forgetting. Before the reincarnation, other souls drank the water in the river of forgetting, and forgot all that they experienced after death, while Earl was forbidden to drink the water in the river. After the

resurrection, Earl told the world what he saw. Plato tells the immortality of the soul in a mythological way, and aims to tell the world that truth or truth is cruel. Just as in the “cave”, you can’t tell the truth to them, only educate them through myths. Myth is of great significance to ancient Greeks. Both Phaedrus and Socrates’ attitude towards myth is both dependence and farewell. From the beginning when Phaedrus swore in the name of Zeus and Hera to Socrates using myth to organize his speech. As a young man who was influenced by the emerging democratic movement of Greece at the time, his attitude towards mythology was so sloppy, and Socrates, who was a philosopher, was more aware of the attitude of the myth at that time. Socrates was sentenced to death for blasphemy, the introduction of new gods, and the seduction of young men. But deep thought, is philosophy and myth absolutely opposite?

Wisdom and truth are truly beautiful. The pursuit of wisdom and truth is correct, but the truth is cruel and cold. We are often blinded by “opinions” by the influence of our own environment. Therefore the way to truth is full of thorns. So how do we reach the truth? Many scholars hold the view that Plato rejects myth and that myth is irrational. In my opinion, it is not. Plato is not rejecting myths, but building new myths, and pursuing truth in a mythological way.

Plato’s Phaedrus, which seems to be a discursive dialogue, can be understood as an education on the basis of dialectics through the establishment of new myths about the soul. Plato teaches people through the myth to pursue beauty, pursue truth, love wisdom, and love philosophy.

Understanding the relationship between Plato’s philosophy and mythology is not so much that philosophy replaces myth, but that myth is philosophy. The ultimate goal of Plato is to establish a rational myth - Platonic Myth.

Hello, my name is **Liluyan**, I am from Beijing, China. Currently, I am a candidate for master degree in Beijing International Studies University (BISU), majored in philosophy. And I have got bachelor of Chinese Language and Literature in Hebei Normal University. Here are my academic experience: I have attended the 15th Congress of the Society for Chinese and Foreign Literary Theory: Symposium on the Innovation of Literary Theory in a New Era in November 2018, and the 7th October Academic Forum: Cross-cultural studies and the lifeblood of Chinese and western humanities in October 2018, and the 6th October Academic Forum: Classical revival and cultural transformation in October 2017. I translated the paper: Homer, TEACHER OF TEACHERS with my classmates and it has been published in our college’s magazine. I have great interest in Classical literature, especially Homer, Plato, myth and so on.

It is really a great honor to have this opportunity for academic exchange. And on this note, I wish you all a successful and fruitful conference. Thank you.

AESTHETICS IN THEORY OF TRAUMA - THE JEWISH MUSEUM UN BERLIN

Abstract | The experience of trauma begins with exposure to a non-normative or high upsetting sequence of events that disturbs the 'self'. The trauma reaction is a complicated process that contains the personal values and images of the event and also encompasses the deepest parts of a person's internal experience of world, self and ends in a specific adaptation. Cultural trauma arises when a dreadful event leaves inescapable marks upon a group perception marking the memories forever and fluctuating the future identity in important and final ways to the supporters of a collectivity. Holocaust Monuments are produced to understand or recreate events specifically to be historically referential to lead viewers beyond themselves. As public monuments these memorials generally avoid mentioning hermetically to the procedures that brought them into life. I would like to critically assess and evaluate the Jewish Museum in Berlin and the problem of the depiction of the Holocaust in a museum space. I will examine the aesthetic and philosophical theories of Adorno, the ethical limitations and how the theory of trauma is represented in that museum. The Frankfurt School had initially seen Nazism and the Holocaust as a function of capitalism but beginning with *The Dialectic of Enlightenment* (1947), Adorno and Horkheimer saw it instead as the end point of an even longer Western tradition of instrumental reason. There are polarizing opinions in narrating the Holocaust, and in general, trauma. Theodor Adorno famously uttered and then retracted the oft-misinterpreted statement "to write poetry after Auschwitz is barbaric. A traumatic event, whether personal or universal, is an illogical outlier and thus it should be near impossible to make any sense of it—to be able to translate that illogic into a poem, book, or painting after an act of barbarism is equally barbaric. The choice of making a memorial or a museum is interesting especially in the middle of Berlin.

Index terms | *Adorno; Aesthetics; Berlin; Ethics; Jewish; Museum; Trauma.*

There are polarizing opinions in narrating the Holocaust, and in general, trauma. Theodor Adorno famously uttered and then retracted the oft-misinterpreted statement “to write poetry after Auschwitz is barbaric”. A traumatic event, whether personal or universal, is an illogical outlier and thus it should be near impossible to make any sense of it and to be able to translate that illogic into a poem, book, or painting after an act of barbarism is equally barbaric. Or not? What about the Jewish Museum in Berlin? Is it a live paradigm of an after Auschwitz “poem”?

Trauma:

The experience of trauma begins with exposure to a non-normative or high upsetting, or sequence of events that disturbs the ‘self’.¹ The psychological systems that we are interested in are the following: the self, the psychological needs and the cognitive schemas.²

Significantly, the psychological trauma can be described as follows: An event is traumatic if it is surprising, sudden and non-normative; if it surpassing the character’s skill to meet its anxieties and disrupts the person’s edge of psychological needs, related schemes and orientation.³

More specific, *Cultural trauma* arises when a dreadful event leaves inefaceable marks upon a groups’ perception, marking its memories and its future identity. In this paper we will examine a cultural, historical and founding trauma, the Holocaust.

The *tragic grid* that reached a supreme place in the Holocaust is the one that binds together the victim, the perpetrator, the collaborator, the bystander and the resister. In limit-cases the perpetrator may be traumatized, suffer from nightmares, visions and other indications of trauma. There is a projective effort to conflate the perpetrator with the victim and to accuse it.⁴

In addition, Dominic La Capra as a nation’s absence and loss defines *historical trauma*. He continues with the definition of the *founding trauma*. Such a trauma is typical in traditions of origin and may perhaps be situated in the more or less mythologized history of every people. It is understandable that the Holocaust can become a founding trauma.⁵

Adorno and his theory of barbarism:

“To write poetry after Auschwitz is barbaric.” Adorno, 1986.

“The more total society becomes, the greater the reification of the mind and the more paradoxical its effort to escape reification on its own. Even the most extreme consciousness of doom threatens to degenerate into idle chatter. Cultural criticism finds itself faced with the final stage of the dialectic of culture and barbarism. To write poetry after Auschwitz is barbaric. And this corrodes even the knowledge of why it has become impossible to write poetry today. Absolute reification, which presupposed intellectual progress as one of its elements, is now preparing to absorb the mind entirely. Critical intelligence cannot be equal to this challenge as long as it confines itself to self-satisfied contemplation”⁶.

A certain barbarism is thus, per se, implied in our very being in an era post-Auschwitz.

The past cannot be reversed. Furthermore, a consequence of this is that the whole being itself *is* barbaric which suggests that, everything is barbaric and including our whole existence. What Adorno actually meant, is that people had to deny participating in that fundamental criticism in order to avoid the perpetuation of that barbaric idea. Amongst other things, Adorno here links the holocaust to the culture that produced it. He points the failure of a culture that could allow the Holocaust to happen in the first place. He mentions the end of the humanity. After World War II, the Holocaust became a framework for everything Adorno wrote. For him, it was a representative of all that had gone wrong with philosophy and politics, thus the imperative to think through the implications of this event became the

fundamental task of thinking itself.

“Perennial suffering has as much right to expression as a tortured man has to scream, hence it may have been wrong to say that after Auschwitz you could no longer write poems. But it is not wrong to raise the less cultural question whether after Auschwitz you can go on living, especially whether one who escaped by accident one who by rights should have been killed, may go on living”.⁷ Adorno, 1996

Adorno ultimately admits the possibility of poetry after Auschwitz. In *Negative Dialectics* suggests that, while one can still write poems, the unprecedented atrocities of the Holocaust have radically altered the nature of all art. Art becomes a scream, mourning, and that, which the stench of remains expresses. As Adorno states in *Aesthetic Theory*, “the artwork is not only the echo of suffering, it diminishes it”⁸. For Adorno it is not promoting the redemptive function of art, but the opposite: an erasure or annihilation, art’s critical power.

Also, Adorno believed that art after the Holocaust should portray this catastrophe only indirectly, and that Beckett provides such an oblique aesthetic remembrance. He is the exemplary post-Auschwitz artist: “Beckett has given us the only fitting reaction to the situation of the concentration camps. Beckett’s work exemplifies the legitimate post-Holocaust artistic endeavour by depicting the cultural wasteland remaining.” As Adorno explained, “in Beckett the poetic process declares itself to be a process of wastage as the old artistic parameters melt away to reveal a new locus for aesthetic possibility in an age characterized by barbarism and pervaded by a legacy of catastrophe Adorno prizes Beckett’s work as the embodiment of authentic art par excellence”⁹

The Holocaust changed the face of life and death, and changed the task of philosophy. Thus, for Adorno, it is critical that art, as that which provides the appearance of something death cannot touch, enlighten the way forward for thinking and politics. After he identified the new philosophical voids and chasms opened by the Holocaust, he tried to find a gesture towards the future possibilities for thinking in the wake of this catastrophe. Rather than turning away from the Holocaust, humanity must accept its own responsibility in this event. Mankind must face the Holocaust by working through the past and, indeed, by working through the present, towards the future.¹⁰

Therefore we can suggest that Adorno’s disappointment about art, culture and humanity, reminds us Nietzsche’s Nihilism. Trauma is the cause of these beliefs. It is interesting to see what Daniel Libeskind did in his own “poem”.

Jewish Museum in Berlin:

As Daniel Libeskind mentions, ‘the theme of culture and trauma, the void, and the experience of architecture can be talked about in conceptual terms as well as expressed in concrete reality’¹¹

The museum building designed by Daniel Libeskind and opened to the public without displays in 1999 and with the objects installed, in 2001, has also received much study, admiration, and some criticism. Museums such as the JMB provide a historical example for cautious, liberal, post-national narratives in present and suggesting a varied German identity preceding Nazism and the Cold War.¹²

The building was opened as an ‘empty shell’ without any museological objects or exhibits and persisted until its re-opening in September 2011 nearly three years after its practical conclusion and exhibition. However, the museum itself is considered as a monument, an object of deconstructivism, a building that provokes the visitors feelings in regards to one of the most important historical events, the memory of the Holocaust.¹³

‘Between the Lines’ is Libeskind’s project title, regarding the inseparably entwined lines of German and Jewish history. These lines are stated and quite literally representing German history as violently rambling and Jewish history entrenched within it. Libeskind’s description for the building is: ‘emblem’ and he presents the Star of David in the building’s plan as a delayed answer to the swastika and the Imperial eagle.¹⁴

However, the building is a “five storey, angular, zinc-clad volume, a zigzag in plan, with the shortest façade fronting and indeed protruding into, Lindenstrasse.”¹⁵ The visitor experiences this disorientating lack of visual coherence, entering the building via the underground tunnel. Borrowing the words of Daniel Libeskind “the light that cuts through the windows which are not regular windows, not just holes that bring light to the collection, but rather lights that fall from deep lines of intermarriage and lines of destiny, which are irretrievable. Moreover, light and lines of retrospective annihilation reflected on the trauma of the after-death.”¹⁶ The line running the center of the building, which would have been the logical back of movement, is instead a series of purposely-empty spaces, restricted *voids* accessible only from the ground floor and by a series of bridges.¹⁷

However, the most important spaces in the museum are the voids. In that spatial and metaphorical epicenter of the museum, these deeply affecting spaces, is signified the catastrophic failure of the Enlightenment project, concurrently with the memory of its human victims. The space is dedicated quite precisely to absence but also absence as a reproachful form of presence of a burned culture and society in whose incineration modernism was scorched as well.¹⁸ Moreover, Libeskind embodied into the building, voided spaces to confuse the visitors on where they are. Voids do not intend to teach ‘per se’, but to leave previously conventional instruction into question. The purpose is to make visitors feel The JMB, though, has received a deluge of aids of objects, household items, gadgets, paintings and musical instruments, decorative arts and particularly letters, documents and a lot of artifacts.

The Jewish Museum works by creating an emotional and psychological commotion to the visitor and rebuilding discrete subjectivity through the tragic “experience” of the building. Jewish Museum’s visitors are classify gently with aesthetic representations but not asked to experientially re-enact the Holocaust.¹⁹

Furthermore, the museum's visitors must remember that it is not easy to put back what is forever gone. The purpose is to remember the absence, the void. 'The state of instability/stability, of disconnection/connection, of disorder/order will be understood intellectually and kinetically.' The light of the void and the white line of sprint will be along the visitor's road.²⁰

The interesting fact is that Libeskind designed the building in the center of Berlin, because he wanted the history to stay alive forever. Talking about the building itself, in JMB the building is "alive" it expresses the pain the trauma and the loss into every inch of it and that is Libeskind's purpose from the beginning. In JMB the building is a museum object itself and everything in the museum is created to symbolizes the trauma and memory.

Regarding the curatorial practices, the curatorial purposes are to produce an exhibition about the Holocaust and its memory through the play with the building. The JMB is the object. There are objects from the Holocaust and dedicated to the Jews but there are a lot of empty rooms with sounds or with the "feeling" to make the visitor to experience the pain the trauma and the loss.

Libeskind's museum holds the loss of a culture, the shame of a nation. It is broken, almost impenetrable: one of the jewels of the Deconstructivist movement. He managed to display the un-displayable, to create a building that pointed to absence, to loss, to that which no building could ever encompass. All visitors leave the museum profoundly moved by a loss that cannot be calculated or communicated. Jewish Museum in Berlin is a fitting and lasting evidence to a depthless hole in the history of humanity. It is after all, a *poem* disguised as a building. My conclusion suggests, that it may be a live paradigm of art after Auschwitz.

Marianna Mavroudi was born in 1987, in Athens, Greece. After graduating from her Bachelor's Degree in Theatre Studies, she continued her studies, by completing a Masters of Art in Museum Studies degree at Birkbeck College, in London, UK. She started her professional career as an Educational program Coordinator for the Museum of Greek Folk Arts, whereas during her Masters degree in London, she was working as an Assistant Curator and Researcher, for the Moving Universe Organization. Furthermore, she has worked as a museum guide at the Hendel's Museum in London. Soon after she returned to Greece, she took the position of the Assistant Curator for the Museum of Greek Folk Arts for a one-year period.

In 2014, Marianna Mavroudi became the Director of Artion Galleries and after two years she left that position in order to continue her Academic career and PHD in Aesthetics and Philosophy of Art, at the National Technical University of Athens, Greece. At the same time, she started working as a Freelance Curator and Art Advisor, organizing and managing several art exhibitions.

Finally, in 2017, she started working as a Curator and Art Sales Consultant at the Blender Gallery. Currently, she is working as a freelance Curator and Art Sales Consultant and she is looking forward to submit her PHD to start her Academic Career she has been dreaming of.

WHAT CAN IT MEAN TO LIVE IN AN AESTHETIC REGIME OR: WHERE DOES ART HAPPEN?

Abstract | The french philosopher Jacques Rancière refers to the existence of a so called aesthetic regime. The description of the aesthetic regime has so much political potential because it opposes a world in which everything serves for something. In the aesthetic regime, the hierarchy of genres and forms of representation is destroyed. The hierarchy is replaced by an equality of artworks, which have become equal inhabitants of a common sensorium. In the equal coexistence, democracy realizes itself in art. Why? The equality of all objects denies any necessary relation between a particular form and a certain content. The aesthetic regime of art is added to the previous regimes. Rancière called them the ethical and the representational regime of art. Thereby the aesthetic regime of art is characterized by an inner contradiction, by a paradox. As the boundaries of art dissolve and all activities can be identified as art, a place of art that is separated from all other activities asserts itself and makes it possible to identify art as art. The aesthetic regime of the arts confirms the absolute peculiarity of art and at the same time destroys every pragmatic criterion of this peculiarity. Rancière records to Kant's or Schiller's "Neither Yet": the aesthetic judgment is not subjected to the law of reason, nor to the law of perception. They both impose an object of volition. The aesthetic experience abolishes both laws at the same time. It therefore removes the balance of power that normally structures the experience of the discerning, acting, or willing subject. The place where the dissolution of the opposites of acting and thinking seems currently possible is the arts, because in its production thinking materializes. The arts are performative, translating an idea into an activity, into an expression or a form, into a sensual experience. To do this art needs to be both in society and at a distance from it. It has to absorb experiences from society and then process them in a position opposite of society: we are confronted with a form of reflection. At the same time, art can develop a suggestion from this distance to society, and introduce it into society again, implement it, and thus absorb it. By being able to be both inside and outside society, art can reconfigure the sensual, which means: it can be political. Art is primarily political in that it creates a spatio-temporal sensorium through which certain modes of being together or separated, of being inside or outside, of being opposite or in the middle are determined. Art happens in the scope of freedom. This is one possible answer to the introducing question. But to make "it" happen, we have to step deep into an elaborated discourse which surrounds the field of aesthetics, politics and the poetics of space. Following the work of Jacques Rancière and Gaston Bachelard we will approach the main question of our topic and start to give deepening explanations on the concept of the aesthetic regime and the effects on humans.

WHAT CAN IT MEAN TO LIVE IN AN AESTHETIC REGIME? OR: WHERE DOES ART HAPPEN?

The French philosopher Jacques Rancière refers to the existence of a so-called aesthetic regime. The description of the aesthetic regime has political potential, because it opposes a world, in which everything serves a purpose. In the aesthetic regime, the hierarchy of genres and forms of representation is destroyed. The hierarchy is replaced by an equality of artworks, which have become equal inhabitants of a common sensorium. In the equal coexistence, democracy realizes itself in art. Why? The equality of all objects denies any necessary relation between a particular form and certain content. The aesthetic regime of art is added to the previous regimes. Rancière called them the ethical and the representational regime of art. Thereby the aesthetic regime of art is characterized by an inner contradiction, a paradox. As the boundaries of art dissolve, and all activities can be identified as art, a place of art that is separated from all other activities asserts itself and makes it possible to identify art as art. The aesthetic regime of the arts confirms the absolute peculiarity of art and, at the same time, destroys every pragmatic criterion of this peculiarity.

Rancière refers to Kant's or Schiller's "Neither Yet": The aesthetic judgment is not subjected to the law of reason nor to the law of perception. They both impose an object of volition. The aesthetic experience abolishes both laws at the same time. It, therefore, removes the balance of power that normally structures the experience of the discerning, acting, or willing subject. The place where the dissolution of the opposites of acting and thinking seems currently possible is the arts, because thinking materializes in its production. The arts are performative, translating an idea into an activity, into an expression or a form, into a sensual experience. To do this, art needs to be located both within society and at a distance from it. It has to absorb experiences from society and then process them in a position opposite of society: we are confronted with a form of reflection. At the same time, art can develop a suggestion from this distance to society and introduce it into society again, implement it and thus, absorb it. By being able to be both inside and outside society, art can reconfigure the sensual, which means it can be political. Art is primarily political in that it creates a spatio-temporal sensorium through which certain modes of being together or separate, of being inside or outside, of being opposite or in the middle are determined.

Art happens within the scope of freedom. This is one possible answer to the introductory question. But to make "it" happen, we have to step deep into an elaborated discourse which surrounds the field of aesthetics, politics, and the poetics of space. Following the work of Jacques Rancière and Gaston Bachelard we will approach the main question of our topic and start to give profound explanations for the concept of the aesthetic regime and the effects on humans.

In this essay, I try to shed light on Rancière's approach to aesthetics. In particular, I will work out the three different regimes. In addition, there are a few specific explanations on politics and the term *dissent*. In a concluding step, I try to make some connections to Bachelard's reflections on the poetics of space in order to suggest exciting consequences for human everyday life. The primary goal is to bring these two theorists closer together and to elaborate on this in ensuing studies.¹

About aesthetics and the aesthetic confusion

Aesthetics has a bad reputation. It is a captious discourse through which philosophy turns the sense of artworks or the judgment about a piece of art in its own favour. What we can see is that different philosophical positions on aesthetics have adopted the prevailing opinion which shows how the glorious presence of art is consumed by a discourse of art. Ultimately, this discourse tends to become its own reality. What we can see is that all those different philosophical discourses similarly criticize the aesthetic confusion.

The aesthetic confusion, as referred to by Rancière, first tells us that there is just as little art in general as there are aesthetic behaviors or feelings in general. Aesthetics as a discourse arose two hundred years ago. At the same time, the indefinite peculiarity of art has begun to contrast with the list of fine or liberal arts. For there to be art, it is not enough that there are painters or musicians, dancers or actors. For the existence of an aesthetic sense, it is not enough to enjoy seeing or hearing those aesthetic senses. To have art requires two inevitable mechanisms: a sensitive look and a thinking to identify art. Looking at and thinking about art are taken up in this essay as two central categories. This is nothing new, as from Kant via Schiller, Hegel, Schopenhauer, or Nietzsche to Adorno the aesthetic discourse has no other object than the act of thinking about this indeterminate relationship. What we find here is the attempt to express the new and paradoxical regime of identifying the art things. Jacques Rancière suggested calling this regime the aesthetic regime of art. And it is this regime, on which we put our focus. It is important to accept that aesthetics is not just the name of a discipline. It is the name of a specific regime of identification of arts, which is one of the main points in Rancière's view on aesthetics. The revolutionary break materialized itself in the separation between the works and the functions, and by that the emergence of a new undifferentiated audience has been accelerated. This audience replaced the specific recipient of representative works. The undifferentiated audience can be seen as a hub to talk about the specific change that hits the audience.

Aesthetics is furthermore the thinking about disorder. The creative activity, to which I will return when discussing Bachelard, and the sentiency can meet each other freely. The hierarchy between active intelligence and sensual passivity is abolished.

Jacques Rancière's intention is not to defend aesthetics but to contribute to the clarification of the meaning of that word, to think about it as a regime of the functioning of art as a matrix of discourse, as a form of identifying the true nature of arts and as a redistribution of relationships between forms of sensory experience. For these reasons, dealing with Rancière's approach to aesthetics is immeasurably enriching.

The fine arts derive their name from the laws of mimesis which define an orderly relationship between a style – a *poiesis* – and a mode of being – an *aisthesis* – that is influenced by it. This threefold relationship determines a regime of identification of the arts, which Rancière suggests to call representational regime. As soon as art substitutes the singular for the plural of the fine arts and evokes a discourse called *aesthetics*, this knot of creative nature, sensuous nature, and legislative nature, called *mimesis* or *representation*, dissolves. The pieces or things of art are now less identified according to pragmatic criteria of modes of production. They are increasingly defined as sensual modes of being. Thus, aesthetics is not the thinking about sensitiveness; it is the thinking of the paradoxical sensorium that now allows determining the things of art. In fact, art is not a common term that unites the different arts. It is the arrangement that makes it visible. This means, for example, that painting is not just the name of a

specific form of art; it is the name of an exhibition arrangement, a form of the visibility of art. What renders art special is the delimitation of a representational space, through which the things of art are identified as such. What links the practice of art with the question of the common is the material and symbolic creation of a certain space-time, a suspension of the ordinary forms of sensory experience. So, art is not political because of the messages and feelings concerning the world order which it transports nor is it political in the way that it portrays the structures of society or the conflicts and identities of social groups. It is politically defined precisely by the distance it takes in relation to this function, the type of time and space it establishes, the way it divides the time and populates that space.

This distance allows for a first response to the leading question of this article. The conflicting different regimes of sensuality are one main aspect which empowers the evolvment of art.

It is peculiar to art to redistribute material and symbolic space. This is precisely where art touches politics, says Rancière. At this point, we need to draw attention to this concept of politics. Politics is not the exercise of power or the struggle for power. It is the formation of a specific space, the separation of a particular sphere of experience, of objects considered to be common and in need of a common decision, of subjects that are recognized as capable of determining and arguing about these objects. Politics occurs when those who lack time take the time necessary to act as inhabitants of a common space. They prove that they are capable of producing a language that is common and not just a voice that signals the pain. This distribution and redistribution of identities, this decomposition and reassembly of spaces and times, of the visible and the invisible, of noise and language constitute what Rancière calls the *distribution of the sensible*. The policy is to reshape the division of the sensible, define the commonality of a community, introduce into it new subjects and objects, make visible what was invisible, and make audible those who were only perceived as noisy animals. This work of producing dissent constitutes an aesthetics of politics that has nothing to do with the staging of power and the mobilization of the masses, which Benjamin called the *aestheticization of politics*. The relationship between aesthetics and politics is thus more exactly the relationship between this aesthetics of politics and the politics of aesthetics, i.e. the manner in which the practices and forms of the visibility of art itself affect the distribution of the sensible and its transformation. Artists and curators operate in the same way: Both cancel the normal coordinates of sensual experience of spectators. Thus, art and politics are linked to each other.

A prominent example is the statue called *Juno Ludovisi* discussed in 1795 by Friedrich Schiller. The medium (*Juno Ludovisi*) is not the matter, in which the artist works. It is a sensory milieu, a definite sensorium, alien to the ordinary forms of sensory experience. But, like Rancière points out, this sensorium can not be identified with the eucharistic presence of the here. Also, identification by the sublime flash of the other is ineffective. In order to shed light on this argument, the most important criteria of the three regimes will be explained in the following.

The three regimes

The ethical regime is the first identification regime of art described by Rancière. In the example of *Juno Ludovisi*, this means that the same statue of the same goddess may or may not be art. The statue can be art in different ways depending on the identification regime, in which she is recorded. In this first regime, the statue is captured exclusively

as a god. Several questions arise: Can one represent a god? Is this represented god a true god? Is this goddess portrayed as she should be? In this regime, there is actually no art, but there are images that are judged in terms of their inner truth and their impact on the customs of individuals and the community.

In a second regime, the representative regime of art, the statue is freed from the questions of the validity of the goddess. The specific category here is that of imitation or mimicry. In this way *Juno Ludovisi* becomes a product of an art form, namely sculpture, which deserves the attribution to art in two ways: First, because it imposes a form on matter, and second, because it is the realization of a representation. It is the creation of a probable appearance, which links the imaginary traits of the deity to the archetypes of femininity. Furthermore, the monumentality of the statue becomes connected with the expressiveness of a particular goddess, which possesses certain characteristics. Thus, in this case, the statue is a representation. It is seen through a whole grid of expressions that determine the manner in which the skills of a sculptor, who gives a form to raw matter, can coincide with his ability to express the corresponding forms of expression.

In the third regime, the already mentioned aesthetic regime of art, the statue owes its artistry not to the adaptation of the sculptor's work to an adequate idea of divinity or to the canons of representation but to belonging to a specific sensorium. The property of being a matter of art does not refer to a distinction between modes of production but to a distinction between modes of being. That means that aesthetically art is no longer given by criteria of technical perfection but by the allocation to a certain form of the sensory capacity of perception. The statue is a semblance and defies its representative status twice. It is not an appearance that relates to a reality that serves as a model, and it is not an active form imposed on a passive matter. It is a sensual form that is different from the ordinary forms of sensory experience that are characterized by these dualities. It is given in a specific experience that cancels the ordinary connections not only between illusion and reality but also between form and matter, activity and passivity, mind and sensuality.

This new form of the distribution of the sensible is summarized by Friedrich Schiller with the word *play*. Reduced to its minimal definition, *play* is the activity that has no purpose other than itself, it does not aim for actual action over things and persons. Immanuel Kant has systematized this traditional view of play through the analysis of aesthetic experience. This is characterized by a double suspension: a suspension of the knowing capacity of the mind, which determines the sensible realities according to the categories, and a corresponding suspension of the power of sensuality to determine objects of will. The free play of the cognitive and the imaginative power is not just an activity without purpose but an activity equivalent to inactivity. In Kant's analysis, free play and free appearances abolish the rules of form over matter and intelligence over sensuality. Within the context of the French Revolution, Schiller translates these Kantian philosophical statements into anthropological and political statements. He sees that the rule of form over matter is (1) the rule of the state over the masses, (2) the rule of the class of the intelligentsia over the class of sentience, and (3) the rule of the cultural man over the natures. These rules suggest an original and incessant contradiction. What Rancière points out is that the secludedness of the work carries a promise of emancipation. But the fulfillment of the promise is the abolition of art as a

separate reality, a transformation into a form of life.

Under the linear scenario of modernity and postmodernism as well as under the opposition of *l'art pour l'art* and committed art, we must recognize, as Rancière writes, the original and persistent tension of two great aesthetics policies: the politics of the becoming-alive of art and the politics of the resistive form. The first identifies the forms of aesthetic experience with the forms of another life. The second, on the contrary, locates the political promise of aesthetic experience precisely in the separation of art, in the resistance of its form to any transformation into a form of life.

There is no art without a specific form of visibility and *discourse* that identifies it as such and no art without a certain distribution of the sensible, which binds it to a certain form of politics. The aesthetics is such a division. The tension between two policies threatens the aesthetic regime of art. However, it is this tension which makes it work.

Space – the prison is outside

The French philosopher Gaston Bachelard is relevant in the current reflection because of his thoughts on Topophilie. Topophilie tries to determine spatial possessions of humans. It focuses on the analysis of spaces, which are defined against hostile powers. Within this field, we are looking at and talking about loved places.

In *Poetics of Space*, Gaston Bachelard writes that people are enclosed in existence; thus, everything revolves around getting out of it. But what can a human do to free him- or herself? We find a field of support in the arts. The prison is outside, says Bachelard, and an abundance of space is more crowding to a person than a lack of it. But human beings have a unique ability: imagination. Imagination increases the values of reality, and without imagination there is no aesthetic regime. At this very point, the connection to the aesthetic regime is evident. Art in the aesthetic regime is tightly connected to imagination. Without imagination there is no becoming-alive of art, no arrival of dissent, which is constitutive for an elaborate development of a political conscience.

The first universe of a human is the house. This refuge has the value of a shell. The house is the first cosmos. But the cosmos of any human grows and has a helping hand in the human ability of imagination. Imagination imagines incessantly and enriches itself with new images. So, the experienced house is not a lifeless box. The inhabited space transcends the geometric space. Space stores compressed time. This means that the house, the cosmos, is one of man's great integrating powers, because it is home to thoughts, memories, and dreams. The space calls the action. But before it acts, imagination works. She mows and plows.

To live in the aesthetic regime of art could mean to inhale this action, to use it, transform it into vivid energies for the raise of dissent. We have to remember: the dissent is constitutive for politics. To live in the aesthetic regime of art means that we are confronted with spaces, pieces of art, and human beings which are full of this dissent. It is a dissent which has an important source in the ability of imagination. To walk through the ethical and representative regime also means to reach the aesthetic regime. And there we have to deal with freedom. We adjust and re-adjust, and we accept the pluralism in life. Keeping an open mind will allow fixations of bliss.

Gaston Bachelard analyses the poetic imagination. For him, the rise of a poetic image

is a sudden emergence of a mental event. And those mental events are characteristic for the life in the aesthetic regime of art. Those images can transform a human being into a vivid participator in a democratic community. The moment, in which the image emerges in the consciousness, holds the tension. The image that appears here is a direct product of the heart, soul, or even of a human being in his or her immediate presence. When Rancière encounters the records of the carpenter Gauny, he is also confronted with his immediate presence², a presence constituted by the distribution of the sensible. Gaston Bachelard brings us closer to two mechanisms: (1) the approval and (2) the reverberation. In the first mechanism, a person hears something (e.g. a poem) or sees something (e.g. a figure), and in the second mechanism, the person says it, appropriates it. When a person appropriates something, there is a shift in the existence, says Bachelard.

A poetic image, the unique event of the logos, is a renewal of our personality. It contains the ability of constructiveness of the becoming existence. An aesthetic regime without this marvelous capability of imagination is unthinkable.

We can ask ourselves, in which regime of art we live³ and whether the unpredictable occupies a firm space. In many cases, the aesthetic regime of art probably encounters closed doors. But wherever it enters, life explodes in all its wonderful forms. Let us not forget that the speaking subject is the whole subject (Bachelard). The question remains whether we are able to leave the language we have learned and find our own.

Endnotes

1. In the essay, I look very closely at Jacques Rancière's statements in his book *Aesthetics and Its Discontents, Distribution of the Sensible*. Many of the remarks on the three regimes have been applied by the author to specific fields. An example of this is the book *Politics of Literature*. Regarding Gaston Bachelard, I focus on his reflections on the *Poetics of Space*.
2. The comments on the carpenter Gauny can be found in Rancière's wonderful book *Proletarian Nights. The Workers' Dream in Nineteenth-Century France*.
3. It would be wrong to believe that a regime appears as a singular phenomenon. The historical context, the constitution of a society, and the view of the individual – everything plays a role and makes the regimes changeable. Thus, a clear identification is usually impossible.

Michael Manfé, born in 1967, in Mittersill, Austria, studied Communication, Politics and Pedagogy in Salzburg and Vienna. He obtained his Magister degree at the Paris Lodron-University of Salzburg in 2000, his doctorate at the University of Vienna in 2004. His main fields of research are the effects of media on social behavior and aesthetics. Last publications on: *Immorality* (2017), *Unconsciousness* (2016), *Revolution of the Conscience* (2015), *Art and Methodology* (2015).

ALCHEMY OF WORDS: GASTON BACHELARD'S THEORY OF IMAGINATION

Abstract | Gaston Bachelard (1884-1962), a French thinker associated both with a philosophy of science and philosophy of literature, analyzes the problem of alchemy throughout all his academic career. Alchemical imaginary is valued differently depending on the applied perspective: from the scientific point of view is seen as a source of misstatements, but it contains a huge wealth of symbols for art.

Through research on a variety of sources: alchemical treatises from the 17th and 18th centuries, texts influenced by hermetic traditions (Novalis, Gérard de Nerval, André Breton) and Carl Gustav Jung theories from Psychology and Alchemy, Bachelard finds the universal character of alchemical symbolism and emphasizes its importance for man's imagination.

In *The Formation of the Scientific Mind*, where he describes theories rejected by modern science, alchemy is one of the most widely analyzed examples in order to indicate the epistemological obstacles active in human's mind.

In books about poetic imagination published between 1938-1948 - *The Psychoanalysis of Fire, Water and Dreams, Air and Dreams, Earth and Reveries of the Will, Earth and Reveries of Repose* - philosopher reinterprets the subject of alchemy in terms of artistic creativity. He tries to demonstrate how human imagination is governed by the law of four elements - operations on fire, water, air, and earth as well as relations between them are sources for poetic images.

In the phenomenological *The Poetics of Reverie*, Bachelard uses the alchemical terms to describe poetic language: the hierogamy of words, the distinction between the approach of anima and animus and the crucial role of sublimation in a process of creation prove that alchemy is a structural element of philosopher's thinking.

By revealing alchemical motifs at different levels of Bachelard's works, I would like to indicate a multitude of contexts in which alchemy is examined: the history of science, the problems of artistic creativity, the depth of the human psyche, and show the importance of alchemy as a source of knowledge about human imagination. It will allow posing a question: to what extent alchemy is valid nowadays and how it could be used in artistic creation?

INTRODUCTION

Gaston Bachelard (1884-1962), a French thinker associated both with a philosophy of science and philosophy of literature, analyzes the problem of alchemy throughout all his academic career. In the book *The Formation of the scientific mind* (1938), which analyze the theories rejected by modern science in order to indicate epistemological obstacles inherent in the mind, alchemy is one from the most analyzed examples. In the years 1938-1957 french thinker published works devoted to poetic images according to the classification of four elements: *Psychoanalysis of fire, Water and dreams, Air and dreams, Earth and reveries of will and Earth and reveries of repose*. After switching to phenomenological position, in *The Poetics of reverie* (1960), philosopher reinterprets alchemy in the terms of poetic creativity.

Bachelard emphasizes the specific character of alchemy, which is psychologically lasting symbolism, manifested in the mind of a modern man. Philosopher usually does not base on specific texts but uses a generalized concept of alchemy driven from 16th and 17th-century treaties. Wherein points out that “there is no one form of alchemy. To discover material imagination of alchemists in its subtleties a dialectic apparatus is needed”¹. Bachelard realizes this postulate by changing methodology from the philosophy of science to reflection about the poetry. These fields represent for him two opposite tendencies thinking - the scientific axis and the poetic axis. Alchemical imaginary is valued differently depending on the perspective: from the scientific point of view is seen as a source of misstatements, valued negatively as an epistemological obstacle, but for art, it contains a huge wealth of symbols.

It is worth noted that Bachelard refers to Carl Gustav Jung’s ideas about alchemy. Jung devoted many years to research on alchemy, convinced that it conceals the material necessary to understand the psyche of modern man. His *Psychology and alchemy* (1944) presented a wide comparative material to show how the dreams of his patients are related to alchemical symbols. In 1946 Jung published *The Psychology of the transference*, containing the analysis of *Rosarium philosophorum* from the 16th century, showing similarities between the psychoanalysis and the process of transmutation². These works are a reference point for Bachelard, but French thinker developed an original approach to the alchemical imagination.

In my paper, I would like to show the analysis of alchemy by Bachelard and its influence on his philosophical ideas. The alchemical key is one of many interpretation possibilities, none of which should claim to express the full complexity of his thoughts. However, due to the recurring motives, it is worth paying attention to significant similarities. For this purpose, I will first reconstruct a vision of the world of alchemists, which are important for Bachelard’s theory. Then I will refer to his views as a philosopher of science: he strongly opposes the thesis that modern chemistry is derived from alchemy. His work emphasizes the discontinuity between these areas, resulting from a different cognitive attitude. Among the works about poetical imagery, I will draw attention to Bachelard’s predilection for the use of alchemical symbolism as theoretical concepts: the elements, the distinction between *anima* and *animus*, and the role of sublimation in a process of creation.

THE VISION OF NATURE IN ALCHEMY

The philosophy of nature emerging from the alchemical treaties is dominated by the idea of the unity of nature and organic development. Nature is not seen as a system of

entities governed by laws; her life-giving, creative power is accented. For alchemists, all beings come from the same source-root. They have varied degrees of development and organization and also transform from one to the other. Natural evolution is making the same transformation that the alchemist tries to accelerate in his laboratory.

Alchemists perceive the problem of matter in terms of becoming, therefore the time is an essential component of their worldview. Bachelard, discussing the universe of alchemists, reconstructs the division of the world into three kingdoms: mineral, plant, and animal. They are characterized by a different time rhythm: for minerals, it is a millennial cycle, counted in thousands of years, for the plants the change of seasons is important, and in the animal kingdom the daily cycle dominates³. Alchemists are interested in the millennial life of metals - Bachelard names it a cosmic dream, a dream of a great rhythm of the world. It enables an imaginary journey in space-time: deep mines draw back into the distant past, and each metal is a multi-dimensional substance with the ability to persist in time and to self-improve.

The surrounding world is given vital significance - the idea of life is projected onto the cosmos. Consequently, every being has a gender. Hence the classifications of masculine and feminine metals, arbitrary from an objective point of view, but justified in the overall vision of reality. The joining of metals is then perceived as chemical wedding, *hieros gamos*.

The role of the alchemist is to direct this *mysterium coniunctionis* by purifying the material essence. He assists the world in its becoming by participating in the process, almost usurping the role of the causative entity. Man feels able to interact with nature, supporting the processes of chthonic growth. The alchemist, continuing the perfection of nature, manipulates time by replacing it.

EPISTEMOLOGICAL OBSTACLES IN ALCHEMY

In the work *The formation of the scientific mind*, Bachelard focuses on the problems of epistemological obstacles, defined as superstitions, erroneous theories and conditions slowing down or even preventing the development of science. He analyzes the theories rejected in the scientific progress, being convinced that errors reveals something about the subject of learning and thus can discover structures inherent in the human mind. The concepts of alchemists provide him with numerous examples when discussing epistemological obstacles.

One of the most characteristic features of alchemist thinking can be seen as a general knowledge obstacle. The vision of the harmonious Nature gives the opportunity to think through analogies, harmonies, and sympathies, leading to easy, premature generalizations. The correspondence between stars, metals and body parts is a faith in the unity of the world, which is typical for pre-scientific mentality⁴. The conviction of common interdependence and influences makes it possible to easily connect all sorts of properties, defining one by another. Then everything becomes the cause of everything and the precise, abstract scientific idea can not develop.

Bachelard contrasts the alchemical and scientific thinking about the purification process. In alchemy it is not the elimination of impurities through methodical fractionation, because "the alchemist, once the distillation has finished, reshapes the elixir and dead matter, clean and unclean, so that the elixir will learn how to release from the impurities (...) objective references to the purification of matter cannot tell us anything

about the dreams of purity, which give the alchemist patience to start again (...) we do not face intellectual patience in alchemy, but we are caught up in the very act of moral patience. The Alchemist is the educator of matter"⁵. As the scientist is making progress, the alchemist begins again.

Alchemy for Bachelard is an initiation not so much intellectual as moral, initiation in a spiritual culture, in which it is not important to prove something but to experience it. The matter becomes the subject of contemplation through slow substance manipulation - but alchemists work in a world of values, not facts. When the value is given to something, the imagination works regardless of the negative experiences. Therefore, the reason for the failed experiments is not searched in the wrong theory, but in conditions such as inadequate time, inappropriate place, unfavorable constellation of stars. The alchemical work depends on Kairos, the right moment - processes of transmutation do not always happen by themselves, but only at a favorable astrological moment. The reason for failure is also seen in the subject itself, in the alchemist's fault of an impure soul. The scientific mind separates morality from science and the failed experiment is only an intellectual failure.

For Bachelard, alchemy is too intuitive, too personal and emotional, based on the identification of the subject and the object and symbolization, so that it has all the features of pre-scientific thinking. That is why there is no continuity between alchemy and modern chemistry.

Bachelard's contribution to the psychoanalysis of objective knowledge is intended to reveal irrational beliefs, but this is not only a historical work, but urgently current. Cognitive structures can reveal a content characteristic of different time orders, which means that past mistakes still pose a threat: "Even in a clear mind there are dark areas, caverns still haunted by shades, and traces of the old remain in our new ways of thinking. The eighteenth century still lives secretly within us and may - unfortunately - return."⁶. The scientific mind should eliminate epistemological obstacles from one's own thought, realizing that "what is more immediate in the original experience are still ourselves, our unconscious desires, the active foundations and the subjective dynamics of our perception"⁷. Therefore, alchemy provides a necessary negative pattern - its reasoning based on far-reaching analogies, too easy generalizations, unjustified valuation - allow to reveal intuitive, though erroneous, thinking patterns and assumptions that can still be present in the mind of a modern man.

ALCHEMICAL MOTIFS IN POETIC IMAGINATION

The idea of universal symbolism of alchemy gave Bachelard the basis for a new project: books about poetic imagination. In these considerations, alchemy appears next to the analyzed fragments of the poetry of Romantics, Symbolists, and Surrealists. It is a significant counterpoint. Among the quoted texts are those influenced by hermetic traditions (Novalis, Gerard de Nerval, Andre Breton), but also authors who did not refer to this heritage. Bachelard wants to draw attention to the similarity of the work of the imagination of alchemists and poets in general.

A series of books on the four elements is an ambitious project to capture the laws of the imagination. Bachelard examines the various aspects of the four elements, reveals the wealth of values that are attributed to them. For that purpose, he quotes poetic images that have a source in reflection on material substances. Bachelard emphasizes the inseparable connection between the imagination and the world, which can be

compared to the alchemical relationship between the microcosm and the macrocosm.

The Poetics of Reverie (1960) is a phenomenological essay full of alchemical motifs. For Bachelard, every dream is a creation and animation of the world. The attitude of the subject is significant - the philosopher distinguishes between *animus* and *anima*, referring to the idea of androgyny presented in Jungian psychology, according to which the soul of every man has male and female aspects. *Anima*, which means a state of peaceful dream for Bachelard, is an important symbol in alchemy - it appears in many engravings as a *soror mystica*, helpful sister of an adept⁸. Described in the chapter *The dreamer of words*, activity of matching words guided by the grammatical type resembles the alchemical *hieros gamos*. In this way, the matter of language became the substance of alchemical transmutation.

Bachelard, after Jung, draws attention to the role of the unconscious in the creation process. Through the work, alchemist experiences hallucinatory or visionary insights. Isolation gives rise to unconscious, which compensate the lost contact with the outside world. During the transmutation, the unconscious is projected onto the substance over which the alchemist works. As a result, the internal content is accompanied by observation and sensory knowledge. Contact with the unconscious is an indispensable element of creating artwork. For Bachelard the purpose of the alchemical process is identical with the ethical duty of art: the substance is to be transformed through the creative process. Because the processes of the physical world repeat and symbolize the processes of the soul, during the transmutation, the soul of the alchemist goes through the same stages of melting, purification, and transubstantiation, leading to spiritual rebirth. Which means that the artist, through working on the artwork, also transforms himself.

Bachelard captures poetry in reference to a reservoir of universal images. "Therefore, faithfully following an alchemist who meditates on a selected substance, a substance always is chosen from nature, one sees a poetic benefit, which for us is proof that poetry is not a game, but a force of nature. Explains the dreams of things"⁹. The unusual language of alchemical symbols expresses the process of creation: "the language of alchemy is the language of dreams, the native language of cosmic dreams, (...) the language of the beginning of the world"¹⁰. Alchemical symbolic language is a wealth for the imagination, it is a model of a dream creating the entire cosmos. The figure of a lonely alchemist focused on work gives the philosopher the essence of the creative process, which is spiritual renewal and sublimation driven by the instinct of verticality.

CONCLUSION

422

Bachelard's alchemy can be called the subconscious current, which drives the dynamics of his thoughts and influences the choice of topics and metaphors. Objectivistic evaluation of alchemy made in the field of philosophy of science later loses its negative valorization. After changing the perspective, in the analysis of poetry, alchemy is present not only as the subject of research but also as a structural influence. This can be seen in many points of his philosophy of the imagination: in the choice of the elements, symbols which refers to this heritage and the role of the unconscious in the process of creation.

Alchemy is understood as significant phenomena, having its source in the psychological constitution of man, which is re-manifested in history. Its imagery becomes a theoretical model valid nowadays. For Bachelard alchemical philosophy of

nature is not a systematic knowledge, but rather a great imaginary vision that speaks more about the subject than about the external reality. In this lies the timeliness of its issues: the alchemical imaginarium is seen as a mirror in which a modern man can view himself, noticing his own longings and strivings about nature and creation.

ONE POSSIBLE REGIME OF AESTHETICS WITHIN INSTITUTION OF HIGHER EDUCATION: APPLIED AESTHETICS

Abstract | As someone who has a privilege to teach at the Faculty of Music (University of Arts, Belgrade, Serbia), I would like to point out to the specific contemporary regime of aesthetics within this institution, that is given as applied aesthetics. I define the applied aesthetics as a critical history of humanities, or as a critical meta theory of various disciplinary shaped discourses about art (philosophy of art, philosophical aesthetics, history of art, art sciences, art theory, art critic). These discourses are understood as forms of representations of art, that is, as forms of a foundation of our experience of art work and our understanding of the function of art in culture and society. The main research question of the applied aesthetics is: how different discursive forms about art direct our understanding of art, and how relations between the artistic and the theoretical are established, depending on the specific disciplinary paradigm from which knowledge about art comes and different historical and geographical locations of that paradigm? I also present the disciplinary profile of applied aesthetics as a distinction between applied and philosophical aesthetics, where this difference is expressed in the way of understanding of the relations between the work of art and its interpretation. Aesthetics as a philosophical discipline observes art in relation to the interpretative criteria of philosophical interests. Such aesthetics does not start from the individual theoretical statement or the artistic fact itself, but from a certain philosophical platform in such a way as to represent the views, interests, knowledge, and values that confirm the status of philosophy as an autonomous discipline. On the contrary, applied aesthetics as a theoretical discipline starts from the fact that the purpose of theoretical work is not only the representation of philosophical knowledge in relation to art but also the possibility of practical and concrete application of knowledge about art in conditions that are not exclusively philosophical but express the different interests. These interests are related to the specter of practical procedures for determining and identifying both the areas of art work and the field of discourses about art. Applied aesthetics is concerned with specific examples of how art work is meant under particular conditions and how the possibilities of its theoretical representation are embodied, multiplied and disseminated in various types of knowledge about art.

Index terms | *applied aesthetics; art work; discourses about art; humanities; interpretation; philosophical aesthetics;*

As someone who has a privilege to teach at the Faculty of Music (University of Arts, Belgrade, Serbia), I would like to point out to the specific contemporary regime of aesthetics within this institution, that is given as *applied aesthetics*. I define the applied aesthetics as a critical history of the humanities, or as a critical meta-theory of various disciplinary shaped discourses about art – philosophy of art, philosophical aesthetics, history of art, art sciences, art theory, art critic. The *criteria* on the basis of which I differentiate the existence of applied aesthetics as the one specific regime within the many aesthetic regimes today are the components of disciplinary paradigm of aesthetics: research object, research problems and questions, disciplinary profile, and time and space of aesthetics. According to the interrelation of these components, the applied aesthetics can be determined and described by means of six claims.

First claim

Applied aesthetics starts from the thesis that knowledge about art is crucial for the existence of art and as the criteria for determining specific values and functions of art it sets interpretation, textual and theoretical mediation of art. Thus, applied aesthetics deviates from theorizing the category of disinterested aesthetic experience of work of art and points to the *intertextual* relationship between work of art – as a result of author's gestures on the material of art – and textual mediation of knowledge about art that is *applied* in expressing the values, functions and status of art in a particular society, and thus the constitutive for our understanding of art. Applied aesthetics moves the focus of problematization from identifying the poietic paths of a work of art creation to the ways of *reception* of art, where the interpretation of aesthetically perceived is always mediated by theory and given as a part of one specific context, time, and place. This means that applied aesthetics treats the *aesthetic* – as experiencing of art by senses – and *knowledge about aesthetic* – as materialized experiencing and understanding of art – as a series of the multiplicity of historical or actual cases that are always performed under some cultural conditions of an individual or collective relation to art and culture. Applied aesthetics starts from the thesis that there is no art without an interpretation. Therefore, instead of the idea of a work of art as an idealized object for a disinterested aesthetic experience, applied aesthetics emphasizes the *intertextual* nature of all aspects of art – poietic, phenomenological and aesthetic.

Second claim

The objects of applied aesthetics are different forms of *presentation* and *mediation* of art or different forms of *knowledge* about art understood in a way of *discursive formations*. Using the concept of discursive formations, the existence of knowledge about art is understood as the *sets* of specific statements whose *conditions* of existence can be determined. Hence, it follows that the applied aesthetics is a *general theorization of discourses about arts* which, as its object of research, distinguishes not only the past historical regimes of aesthetics, but also other disciplines of the humanities and their historical regimes. In other words, the applied aesthetics 1) concludes that the history of the humanities exists as a history of different disciplinarily formed platforms for understanding of art and knowledge or discursive formations that emerging from these platforms; 2) concludes that the research platforms of the humanities are not defined by frozen epistemological bases but by transformative, auto-critical potentials through which the one disciplinary paradigm transforms itself from within; 3) registers moments of disciplinary transformations and fractures from which discursive formations of knowledge about art arise reflecting and advocating new axiology of art. Therefore, in the sum of its theoretical statements, the applied aesthetics could be understood as the *critical history of the humanities*. The humanities as a research object and criterion of differentiation of the applied aesthetics simultaneously determine the characteristics of a certain aesthetic regime in terms of its other components.

Third claim

The applied aesthetics is interested in understanding the way in which the relationship between art and textual mediation of art is realized within various disciplinarily shaped types of academic knowledge about art – scientific, philosophical, and theoretical. The set of applied aesthetics **research problems** is related to the question how different discursive formations about art direct our understanding of art, and how relations between the artistic and the theoretical are established, depending on the specific disciplinary paradigm from which knowledge about art comes and different historical and geographical locations of that paradigm? On the basis of which disciplinary platform did knowledge of art come about? Is this knowledge scientifically, philosophically or theoretically oriented and formed? How specific disciplinary frameworks make an impact on art as the object of their research? What distinguishes one type of discursive formation about art is positioned differently among other types of mediation of art and what values and functions are imputed to a particular artistic phenomenon depending on a specific disciplinary model of understanding art? In order to find responses to these questions, the applied aesthetics defines its disciplinary model in the direction of theoretical presentation of individual cases of the relationship between artistic work and its mediation in the field of academic knowledge about art.

Fourth claim

The applied aesthetics is a **theoretical discipline**. It deals with the particular identification of the conditions under which the statements about art exist within historical and actual, academically recognized and grounded discursive formations about arts – aesthetics, philosophy of art, sciences about arts, art theory, art criticism. According to their defining elements, these discursive formations are mutually different, while they are consistent in their internal level. Defining elements of discursive formations that regulate relations between and within statements and which applied aesthetics locates and recognizes can be classified as 1) particular extenzional or intenzional phenomena as objects of research (differentiation of cultural formations /high art, popular culture, mass culture, everyday culture/ and their inclusion/exclusion in/ from the field of relevant research objects; 2) a corpus of collected knowledge that is related to the object of research that is specific and which a discursive formation does not share with other discursive formations; 3) specific methods aligned with research problems; 4) theories and concepts that organize the statements within a discursive formation; 5) the use of specific terminology and a language adapted to the research object – a linguistic register of a discursive formation; 6) institutional frames – professional associations, institutes, departments, faculties, and universities. Starting from the above classification points and by qualitative analysis, the applied aesthetics theoretically identifies and explains how discursive formations about art accomplish *historical* processes of establishment, evolution, and transformation, as well as the types of discursive formation – scientific, philosophical or theoretical. Since discursive formations about art are always intellectual constructs that arise in a specific context and conditions of that context, the listed classification points are contextualized into the social conditions of a particular discursive formation existence.

Fifth claim

The applied aesthetics could be understood as a **disciplinary transformation** of aesthetics in a wider transformation of the humanities under the influence of the linguistic turn and the time of theory. The applied aesthetics has its methodological and terminological basis in the time of theory – in the poststructuralism and the analytical aesthetics. It is precisely from the analytical aesthetics that the applied aesthetics assumes the thesis that there is no art without interpretation. Applied aesthetics favor the poststructuralist theoretical model of intertextuality as opposed to the typical modernist concepts of

science, philosophy, criticism, history and theory, which implies the autonomy of art from the interpretation of art in its ontological and phenomenological sense, and also the mutual autonomy of differently profiled discourses about art: criticism that follows contemporary art, a history of art that deals with historical art formations, art theory as the application of specific theoretical platforms to the analysis of art, philosophical aesthetics that deals with art as an idealized object of aesthetic experience of beauty, and philosophy of art as a speculative discussion of the general concept of art. All these types of statements about art are seen as a reflection of the Enlightenment imperative for rationality, and the presentation of art as a scientific object liable to be rationally identified, classified and understood. From the focus of the applied aesthetics, the Enlightenment exists as the initial period of disciplinary formatted, scientifically based knowledge about art and the contextual frame of the *conditions* that led to the emergence of the humanities as a typical West European practice. In the comparative chart that followed, certain discursive formations about the art of music were determined in relation to the points of classification of the types of the discursive formation. In the theorization of the history of philosophical, scientific and theoretical discourses about music, applied aesthetics establishes a distinction between *historical* and *prehistorical* times. Baumgarten's identification of the object and goals of the aesthetics, that is, the foundation of the aesthetics as a philosophical discipline concerned with the aesthetic experience of beauty, enabled theoretical identification of the object of aesthetics of music as well as the discursive formation of the scientific platform of musicology as a general science of music. Therefore, for the beginning of the modern, historical time of philosophical, scientific and theoretical representations of music, the moment of the establishment of aesthetics as a philosophical discipline is taken, and the appearance of the other types of the discursive formations about music are interpreted as its consequences.

The Enlightenment →				
(philosophical) aesthetics	philosophy of music	aesthetics of music	musicology	
			as a general science about	new musicology
natural and artificial beauty; disinterested aesthetic experience; autonomy of art ; work of art as an idealized object abstracted form the division of work and everyday life; aesthetic object; aesthetic experience;	philosophical presentation of music as an ideality; ontological and phenomenological questions about music as art;	identification of research object of aesthetics of music; theorization of beauty in music; music as an idealized work of art for disinterested aesthetic experience;	professional composer practice of music; work of music as a theoretical ideality; methodological apparatus of historiography, stylistics and formal analysis (poietic level); history of music as the history of the master composers and master works;	<i>non-autonomous</i> work of music; music text as a symptom or sample of a specific social identity, struggles and powers; without exclusion of cultural formations – all forms of music practices as relevant for theorization; poststructuralist theoretical apparatus;

Sixth claim

I present the **disciplinary profile** of applied aesthetics as a *distinction between applied and philosophical aesthetics*, where this difference is expressed in the way of understanding of the relations between the work of art and its interpretation. Aesthetics as a philosophical discipline and aesthetics as the applied aesthetics have quite different research objects, problems, methodologies, and value distinctions. Aesthetics as a philosophical discipline observes art in relation to the interpretative criteria of philosophical interests. Such aesthetics does not start from the individual theoretical statement or the artistic fact itself, but from a certain philosophical platform in such a way as to represent the views and interests that confirm the status of philosophy as an autonomous discipline. On the contrary, the applied aesthetics as a theoretical discipline starts from the fact that the purpose of a theoretical work is not only the representation of a philosophical knowledge in relation to art but also the possibility of practical and concrete application of knowledge about art in the conditions that are not exclusively philosophical but express the different interests. These interests are related to the specter of practical procedures for determining and identifying both the areas of work of art and the field of discourses about art. In other words, the applied aesthetics deals with the strategies of interpretation that are constituted within the specific discursive formations that all represent, and in certain cases even enable, the practice of art. While in the framework of philosophical aesthetics art is presented in accordance with the criteria and values of a particular philosophical platform, the applied aesthetics is concerned with specific examples of how work of art is meant under particular conditions and how the possibilities of its theoretical representation are embodied, multiplied and disseminated in various types of knowledge about art. Therefore, applied aesthetics is the analytical meta-theoretical practice about the relationship between artistic practice and discourses about arts. As such, applied aesthetics is not developed in the institutional field of philosophy. In the history of the discipline, applied aesthetics treats philosophical aesthetics as a historically ended discipline. It has the potential to establish and develop meta-theory about the relations between art and culture segments (music, film, theater, fine arts, applied art, design, performance, art as a form of life) and particular forms of their mediation and understanding. In this way, the applied aesthetics is consistent with a sum of contemporary aesthetic regimes that exist today as a practice of interpreting the complexity of phenomena of the contemporary world, and as a sum of parallel existence of all its diachronic historical regimes of aesthetics.

Conclusion remarks

Conditions for realizing a discursive formation of applied aesthetics are located within the specific institution of the higher education – the Faculty of Music – as a custodian of certain aesthetics regimes in the distribution of aesthetic knowledge today. Two important conditions were met within this institution: endeavor to introduce interdisciplinarity in the field of science about arts and to adopt philosophical aesthetics to students of artistic and scientific study programs. These conditions were realized within the Department of Musicology with the merits of the professors Miško Švaković and Mirjana Veselinović-Hofman as the main initiators and advocates of interdisciplinarity in the study of music. Thanks to their initiative and efforts, the subject of applied aesthetics was introduced in the musicology study program in the middle '90s of the last century. Professor Švaković conceptually conceived and practically realized the platform of applied aesthetics at the Faculty of Music. In one of his major studies from 2006, the discursive analysis was demonstrated as the main methodological tool of the applied aesthetics.

The context of the institution of the higher education in music – as the place where the discursive formation of the applied aesthetics is practiced – has led to the

transformation of statements and the discursive type of aesthetics. Aesthetics has become the applied aesthetics not only because of the posture about the intertextual nature of the relationship between the work of art and theoretical work, but also because it is applied in a specific institution, and adapted in such a way that the knowledge offered is concerned about the history of aesthetics as a discipline, the history of sciences about arts, philosophy of art, poetics, and art criticism. The aim is to provide students with the understanding of the relationship between the work of art and its interpretation as discursively grounded. However, the structure of the courses of the applied aesthetics includes not only the critical history of the humanities, but also the practical elaboration of the possibility of applying different theoretical platforms to understanding, exploring and presenting of art. In this way, students of scientific study programs could expand the fund of their methodological-theoretical tools and acquire the skills to auto-critically approach the field of their scientific work, and to connect it with the general conditions of social production as a matrix of maintaining a modern society. Capitalist societies have realized the constant potential of multiplying the field of production, including the production of knowledge and institutionalization of knowledge within the universities. The 'traditional' humanities were organized in accordance with the social division of labor and the differentiation of autonomous artistic disciplines. On the contrary, the applied aesthetics represents a platform with which aesthetics is actualized as a discipline beyond the academic disciplinary division of knowledge in favor of an auto-critical theoretical work within the humanities.

Sanela Nikolić (1983) assistant professor of Applied Aesthetics at the Faculty of Music, University of Arts, Belgrade; managing editor of *AM Journal of Art and Media Studies*. In addition to numerous scholarly articles, she is also the author of the two monographs: *Avangardna umetnost kao teorijska praksa – Black Mountain College, Darmštatski internacionalni letnji kursevi za Novu muziku i Tel Quel* [Avant-garde art as a Theoretical Practice – Black Mountain College, Darmstadt International Summer Courses for New Music, and Tel Quel, Belgrade, 2015] and *Bauhaus – primenjena estetika muzike, teatra i plesa* [Bauhaus – Applied Aesthetics of Music, Theater, and Dance, Belgrade, 2016]. Member of the Serbian Musicological Society, Serbian Society for Visual Arts and Architecture and International Association for Aesthetics. Field of interest: avant-gardes (avant-garde art schools); inter-textual relations between art and theory; applied aesthetics (interdisciplinarity and transdisciplinarity in the contemporary humanities).

THE POETIC CONSTRUCTION OF REALITY

Abstract | It makes sense to talk about a moderate poetic construction of segments of reality, perhaps reality in its entirety. ‘Construction’ is used in a wide sense, comprising creation, constitution, decisively shaping and tainting (constitutive rules constitute X, regulative rules can shape X decisively). Our coping with, and cognition of the world, are at least partly permeated with metaphors, stories/narratives and fictions. Mental acts have storied/narrative form, and speech acts are only understandable in narrative contexts, so it makes sense to believe that thinking and using language are at least somewhat tainted, even radically constructed (i.e. created or constituted), by stories/narratives. Our cognition is shaped by mental models and these models have metaphoric structure. Our cognition of the world is soaked with stories/narratives and metaphors in such a manner that the objects cognized become shaped and/or tainted, in some cases even radically constructed by stories/narratives and metaphors. Furthermore, we can learn from the fictionalists that a large chunks of our reality consists of fictional objects, making them fictional creations. For all we know, colors, mathematical numbers, works of art, morality, society, and the individual self might be useful, even necessary fictions. Kendall Walton maintained that we make-believe artworks, some fictionalists think that we make-believe all the objects mentioned here, and even more. Fictional worlds of imaginative literature have in common with numbers of being created by imagination and have acquired a life of its own, outside of particular persons imagination. However different, there is family resemblance between fictional worlds and numbers. Why are stories/narratives, metaphors, and fictions more poetic than anything else, even though they play important roles outside of poetic domain? If we remove metaphors, narrative, stories and fiction from works of imaginative literature (poetic works), then very little, if anything, would remain of imaginative literature, while, say, philosophy and science would survive, albeit in a radically changed and perhaps impoverished fashion. Moreover, a work that consists only of a fictional narrative, replete with metaphors, is a strong candidate for being a work of literature, but hardly a work of philosophy and definitely not a scientific work. Furthermore, metaphors, fictions and narratives are constantly being developed in a multitude of new forms in literature, much less so in other domains. This fact points in the direction of the threesome having more to do with imaginative literature (a part of the poetic domain) than anything else.

Index terms | Reality; construction; constructivism; poetics; metaphors; narratives; fictions; fictionalism.

In this paper, I shall give a sketch of my idea of the poetic construction of reality and try to show how metaphors, stories/narratives, and fictions contribute to the constitution or shaping of segments of reality. Construction is used in a wide sense, comprising both creation, transcendental constitution, constitution by rules, shaping and decisively tainting. Furthermore, I assume for the sake of argument that our cognitive relation to reality is somehow mediated.

The threesome (metaphors, stories/narratives, fictions) are poetic by nature even though they play important roles in domains of reality, which we ordinarily do not call 'poetic'. The whole approach here is experimental; I am toying with ideas, albeit in serious, philosophical manner.

Metaphors

We can learn from Max Black that through metaphors we see one thing in terms of another thing, man in terms of wolf in the metaphor MAN IS A WOLF (Black 1962a: 25-47). We see something as something else, Man as a wolf. Somewhat like we see a Jastrow-picture as a duck or a rabbit. Paul Ricœur maintains that metaphors perform synthesis, Kantian style. The synthesis of the metaphor consists in fusing together apparently disparate concepts. Disparate concepts such as those of wolf and Man acquire an overlapping meaning in the metaphor MAN IS A WOLF (Ricœur 1984: ix-x).¹ By fusing these disparate elements together, a segment of the world is changed, as it were, somehow constructed.

As I see it, Metaphors are transformative symbolic structures (T.S.S.), similar to caricatures. Caricatures twist or warp our ordinary picture of reality, but by doing so often give us a new, even deeper understanding of them. Both caricatures and metaphors, as it were, transform or 'twist' our ordinary picture of reality and thus give us a different, even deeper, understanding of it (Snævarr 2010: 71-87). They are both transformative and informative at the same time. Thus, the metaphor A BATTLE IS A GAME OF CHESS somehow transforms the object, but tells us at the same time something about it. Being transformative means that they somehow construct their objects. But are not these objects just figments of our imagination? Not necessarily. Black thought that a metaphor makes us see both of its subjects in a new way; due to that we need to describe them in a new manner. He further stated that we have an analogical transfer of language usage both in the case of a metaphor and that of a theoretical models. Both in the metaphor THE ATOM IS A SOLAR SYSTEM and Rutherford's corresponding atomic model, we use 'solar system' as an analogy to the atomic structure, using the expression 'solar system' in a new fashion (Black 1962b: 240-241).

Now, Roland Giere has some forceful arguments in favor of theoretical laws describing models, rather than reality. Needless to say, models are important for scientific understanding. He argues convincingly in favor of the contention that the object of science is not reality but models of it. A model is an ideally imagined or imagined representation of reality where certain real factors are emphasized, while other factors are abstracted away. In a model that includes the sun and a planet, for example, the impact of other planets on the planet in question is abstracted away. Scientific laws describe the functional relationship between the various factors that the model contains, but not all the factors that are applicable in reality. These laws thus express relationships in the model that they describe or define (Giere 1988: 82). This is a pretty powerful defense for the idea that models play a necessary role in science. If Giere's analysis is correct, then it is pretty hard to see how we (not only while doing science)

can perceive or understand anything without modelling reality in the way Giere describes. Just making an everyday observation requires emphasizing certain factors and abstract others away. When a hunter is observing a duck, which he wants to shoot, he focuses on the factors that pertain to the possibility of shooting the duck and filters other factors away. The model he makes is very primitive in comparison to a scientific one, but a model all the same. And just like the scientific model/metaphor it is both transformative and informative, thus models/metaphors take part in constructing the objects of our cognition.

Fictions and Fictionalism

What is 'fictionalism'? Fictionalism in a given domain of discourse is the view that this discourse is best served not by aiming for truth, but to regard the objects of the discourse as fictions. Fictionalists among the philosophers of science maintain that the aim of science is not to discover truths about unobservable entities. Such entities are useful fictions, which the scientist make-believes to be real. The aim of science is not truth but empirical adequacy. Mark Eli Kalderon states as follows:

"The distinctive commitment of fictionalism is that acceptance in a given domain of inquiry need not be truth-normed, and that the acceptance of a sentence from the associated region of discourse need not involve belief in the content" (Kalderon 2005: 2).

Roman Frigg maintains that scientific model systems are akin to literary fictions (Frigg 2010: 251-268):

1. Characteristically, there is nothing in the real world of which essential passages of the text of a novel are true descriptions, and the names of fictional persons and objects typically do not denote real people or objects. Competent readers are aware of this and they do not mistakenly think that they are reading descriptions of facts. The same holds for science. Scientific texts abound with passages that appear to be plain descriptions of physical systems, but do not describe actual systems and are not taken to do so by competent people. Frictionless planes, spherical planets, massless strings, perfectly rational agents, and markets without transaction costs, figure prominently in diverse models, but have no counterpart in the real world.
2. In the novel *Changing Places* by David Lodge, the main character is a certain Morris Zapp, and it is true in the world of this novel that he is professor of English literature. It is also true that he has heart and liver, but not that he is a ballet dancer. Only the first part is explicitly said in novel, but the rest is also true in that world, even if it is not explicitly stated. The situation of model systems is the same. The description of the system only specifies a handful of essential properties, but it is understood that the system has properties other than the ones mentioned in the description. No one would spend time studying model systems if all there is known about them was the explicit content of the initial description. It is true that the Newtonian model solar system is stable and that the planets move on elliptic orbits, but none of this is a part of the explicit content of the model system's original specification.
3. A story has content that goes beyond that which is explicitly stated, and the reader has means to learn about this extra content by using usually implicit rules of inference. The same holds for model systems, finding out what is true beyond what is explicitly stated is a crucial aspect of the scientist's

engagement with the system.

4. Even we often only read for pleasure it is the case that when we read serious literature, then we often engage in comparisons between situation in fiction and in real circumstances, and doing so we actually learn about the world. We find parallel in model systems, when the scientists compare features of the model system with features of the target system (that which is being modeled).

Frigg says that these four points can be understood with the aid of Kendall Walton's theorizing, his pretence theory about the representations in arts (Walton 1990). Walton's point of departure is the capacity of humans to imagine things. There are cases when our imagining is prompted by the presence of particular objects, and such objects he calls „props“ („object“ is understood by Walton and Frigg in a wide sense, as anything that can affect our senses can be prop). If someone imagines something because he is encouraged to do so by the presence of the object, then he is engaged in game of make believe, a pretence. Children's play are simple examples of make believe. A stump maybe regarded as a bear, and a rope around the stump might mean that the bear has been lassoed. I want to add that taking part in a game of make believe requires that we see some objects (the props) as something else.

Model systems are presented by way of descriptions, and these descriptions are props in games of make believe. Typically, these descriptions start with „consider“ or „assume“, and by this make clear that they are not descriptions of facts, but invitation to ponder and imagine a particular situation. In elementary particle physics a scenario is often proposed as a suggestion worth considering. Later it is asked whether the scenario has any interesting relation to reality.

Now, if models play a crucial role in science, and even in ordinary perception, while models are somehow fictional, then there must be a fictional moment in the way we view the world. The fictional element in the models must in all likelihood somehow taint the target, somehow construct it.

Stories and Narratives

A story has a beginning, middle and end, and those three are tied together by a plot. Usually, a story has climaxes, very often one decisive climax, and reversals. The climax in the story of Oedipus is when he discovers that he had murdered his father and wed his mother. This is also a reversal of fortunes for him. Louis Mink and Paul Ricœur correctly said that we see things as something else through the lenses of a story or a narrative, just as we can see the Jastrow-figure as a duck, given a certain perspective (notice the similarities with metaphors and fictions/games of make believe). Moreover, Ricœur correctly says that narratives fuse together disparate phenomena, just like metaphors. And I add that they also twist or warp phenomena by changing them in the course of fusing them together (Ricœur 1984, Mink 1987: 35-41, Mink 2001: 211-220).²

It makes sense to say that our mental acts, including those of thinking and observing, have a storied structure. That means that they have a beginning, middle and ending, which is tied together by a theme, working as the plot. If I think about my presentation in Belgrade, then the presentation in Belgrade is the theme of my mental act.

Now, causal explanations are parts of our coping with and cognizing the world. Do they have anything to do with stories and narratives? Yes they do. A causal explanation describes how a state of affairs or an event came about, the cause being its beginning, the process of its coming about its middle, and the event/state of affairs its conclusion.

If the explanation is successful, then it makes sense to say the beginning, middle and end constitute an organic whole. Furthermore, there is a necessity involved in causality; given cause C, then a given effect E must follow. But the same holds for narratives. If Humeans are right, then we have no reason to believe that causal necessity is really out there in nature. Or at least that it is not given unto us to discover it. So maybe the necessity is projected into reality by the purported fact that our mental acts have a storied structure. If this is the case, then narratives take part in the constitution of causation.

Responses to Possible Rejoinders

The first possible rejoinder could be that I am advocating a radical subjectivism and that such a subjectivism is untenable. My response is as follows: Concerning metaphor, they can be judged in terms of how well they fit their target, if battles were entirely chaotic, then the metaphor A MARRIAGE IS A ZERO SUM GAME if all marriages were entirely harmonious. The same holds for models, even if they are fictional, they must fit their targets. Concerning narratives and stories, we can easily discriminate those that somehow fits facts, and those that have no connection with facts, either because they are untrue or pure fiction. Concerning fictional objects, it must be emphasized that they are not necessarily entirely subjective. Mathematical numbers might be fictions, but they have objective properties. There is nothing subjective about the fact that the number seven is a prime number. A fictional world of a novel or a movie can have properties that were not intended by its creators. There might be unintended logical contradictions involved in the plot, and those contradictions are as objective as it gets. It might be the case that nobody will ever discover this contradiction, but it is still an objective fact about the fictional world in question. There are prime numbers that might never be discovered by anybody, nevertheless it remains an objective fact that these numbers are of the prime number kind. Thus fictionalism, as it is understood by me, is not subjectivism, even though fictions necessarily have subjective moments. The second possible rejoinder is that by stressing the importance of stories, narratives, metaphors and fictions in non-poetic domains, I undercut my claim that they are first and foremost poetic. My response is as follows: one reason for me maintaining that metaphors, narrative, stories and fictions are mainly poetic is that if we remove them, then almost nothing would remain of imaginative literature, while philosophy and science might survive, albeit in a radically changed and impoverished fashion. Furthermore, metaphors, fictions and narratives are constantly being developed in a multitude of new forms in literature, much less so in other domains. This fact points in the direction of the threesome having more to do with literature than anything else. Another and more important reason is that when metaphors, narratives and fictions come together and form a whole, then that whole gets the emergent property of being something poetic. A written fictional, narrative text, replete with metaphor is most likely a work of imaginative literature, and by implication a poetic object. Even if it were, say, a religious or philosophical text, the text must be regarded as being very poetical, due to the strong presence of the trinity. In cognition, the threesome form a whole, and this whole must, as it were, be poetic. We can talk about the poetic of cognition.

Conclusion

Metaphors, fictions and stories belong to the realm of the poetic. This trinity has

moments of seeing-as. We cognize the world through models, and models are both metaphoric and fictional. Causal explanation are vital for cognition and they have a narrative structure, with the causal necessity possibly derived from the narrative structure of our mental acts. Thus, the poetic threesome of metaphors, fictions and narratives permeate the world as we see it, constituting, shaping, and tainting segments of it. If it does not make any sense to assume the existence of something that neither actually nor potentially can be comprehended by humans, i.e. if there is no thing in itself, then it makes good sense to say that our world is partly poetically constructed.

Their Interplay and Impact* (2010). His most recent article, published in English, is „Poems as Reportive Avowals“, *Philosophy and Literature* (2017).

MASAKAZU NAKAI AS THE PIONEER OF THE AESTHETICS OF SPORTS

Abstract | Since Wolfgang Iser's lecture in 1998 (or earlier), „sports“ has been recognized as a subject of the (everyday) aesthetics. It may thus be assumed that its history is included in that of „everyday aesthetics.“ However, already in the 1930's a Japanese philosopher discussed sports from the aesthetic point of view: Masakazu Nakai (1900-52). Nakai studied aesthetics under Yasukazu Fukada (1878-1928: the first professor of aesthetics in Kyoto University) and is known for paying early attention to the cinematic beauty. It is, however, rarely known that in several articles he discussed sports from the aesthetic point of view, which occupied considerable part also in his most important work „Introduction to Aesthetics“ (1951). The title of one of his articles on this subject „Structure of Sports Mood“ (1933) suggests the influence of Heidegger. This paper aims to contextualize his „aesthetics of sports“ both in the preceding thought (such as Heidegger and the Kyoto School) and in the contemporary „everyday aesthetics.“

Index terms | *aesthetics of sports; everyday aesthetics; Martin Heidegger; Kyoto School; Masakazu Nakai.*

INTRODUCTION

Since Wolfgang Iser's lecture in 1998¹ (or earlier), "sports" has been recognized as a subject of the (everyday) aesthetics. It has also been discussed in several previous ICA presentations. It may thus be assumed that its history is included in that of "everyday aesthetics." However, as early as the 1930s, a Japanese philosopher, Masakazu Nakai (1900–1952), discussed sports from an aesthetic perspective. So far, his cinema as well as media studies ahead of his time have attracted some attention². It is, however, rarely known that in the 1930s he wrote several essays on sports from the aesthetic point of view. They reveal the insights that seem to anticipate the contemporary "aesthetics of sports" on the one hand, and the interesting connection to the philosophy of the day (within and outside Japan) on the other. This paper aims to clarify these insights.

Before proceeding to the main text I would like to provide a brief overview of Nakai's life because he seems unknown outside of Japan. Born in Hiroshima, Nakai studied philosophy at Kyoto University (then: Kyoto Imperial University), especially aesthetics under Yasukazu Fukada (1878–1928, the first professor of aesthetics in Kyoto University). He simultaneously devoted himself to boat club activities, which influenced his aesthetics. After Fukada died in 1928, Nakai served as the editor in chief of the Collected Works of his teacher. In 1934, he was appointed as a lecturer of Kyoto University but, in 1937, was arrested for violating the Public Security Preservation Law (Chian Iji Hō), that is, for joining the leftist movement. After the end of WWII, he was appointed as the first Vice Librarian of the National Diet Library and made great contributions to the development of librarianship in Japan.

AN OUTLINE OF NAKAI'S AESTHETICS OF SPORTS

Although he mentioned sports in other aesthetic essays, including his most important work *Introduction to Aesthetics (Bigaku Nyūmon: 1951)*, it is mainly in the following two essays that Nakai discussed sports from the aesthetic point of view:

"Aesthetic Elements of Sports (Sports no Biteki Yōso)," in: *Kyoto University Newspaper (Kyōto Teikoku Daigaku Shimbun)*, May 5, 21 and June 5, 1930. (abbr: "Elements." Nakai 1981, 1:407–421)

"Structure of Sports Mood (Sports Kibun no Kōzo)," in: *Shisō (Journal of Humanities)* published by Iwanami Shoten), May 1933. (abbr: "Mood." Ibid., 1:393–406)

In addition, there remains an undated manuscript titled "Structure of Sports Beauty (Sports Bi no Kōzo)," which seems to be a draft of "Elements" (ibid., 1:422–449).

Though these two essays share some similarities, they also reveal some differences. I shall discuss the differences with regard to content in detail later; here, I point out only the methodological difference³. In "Mood" Nakai mentions that "the way by which Heidegger determined the concept of spatiality in the structure of reference of equipment and classified its character of Being into the categorical and the existential meaning provides our present interpretation with a good starting point" (ibid., 1:395f.)⁴. In the end of this essay he notes that "I owe all the translations of the Heideggerian terminologies to Dr. Kuki's lectures in 1931/32 and *Jitsuzon Tetsugaku (Existential Philosophy)*" (ibid., 1:406). This means that "Mood" is Nakai's revised "Elements" in the Heideggerian manner by way of his colleague Shūzō Kuki (1888–1941). However, it must be simultaneously noted that Nakai's "aesthetics of sports" did not necessarily

require instant acceptance of Heideggerian philosophy.

“Elements”

“Elements” is divided into eight sections. Nakai classifies the previous studies on “play” into five types and examines them in the 1st section, and he raises a (hypothetical) question: “Is sports a symbolic use of the inner organizations of Being?” (ibid., 1:409)⁶ in the 2nd section. In the 3rd section itself he reveals the conclusion: the aesthetic elements of sports are “competitiveness” and “operation of muscle.” He discusses the former in the 4th and 5th sections and the latter in the 6th and 7th sections. He argues that “competitiveness” is a quantitative comparison based on homogeneous entities, the quantified blood constitution. If music is the “mathematics of tones” (Leibniz) and architecture is “frozen music,” sports is “flaming dynamics.” In addition, there is, he points out, a feeling produced by competition itself. The structure of the mutual negative judgments “A wins” and “B wins” is nothing but that of “gambling”⁷ and produces the feeling of expectation, that is, “thrill.” On the other hand, he discusses the “operation of muscle” both from the static (in the 6th section) and dynamic (in the 7th section) points of view. He regards this element as the problem of the relationship between “lawfulness” and “aliveness” and argues, referring to the Kantian notion, that “where muscles evaluate their own activity with their inner nerves and deeply reflect on it with considerable comfort, there is a truly pure intuition into the ‘technique of nature’” (ibid., 1:415)⁸. Thus, he locates the beauty of the operation of muscle in between natural and artistic beauty. However, he argues that this is only a one-off and static comfort of the operation of muscle. When it is repeated with exhaustion and becomes, as it were, a “habit,” a higher and dynamic comfort of the operation of muscle emerges. Nakai calls it the “(comfort of) suffering” and regards the “form” of various sports as generated in the height of this suffering. Finally, in the 8th section, he concludes by determining the concept of “form” as integrating lawful order and living impulse.

“Mood”

“Mood” is divided into seven sections. Nakai reveals his task in the 1st section, that is, to elucidate the structure of the “mood,” which is given to and found in sports, a special existence belonging to “play” and based on bodily technique. He declares that he will adopt the Heideggerian framework in the 2nd section, as above mentioned. He then analyses the spatial, communal, and bodily technical characteristics of sports mood respectively. He argues that sports mood has an intermediating characteristic that transfers the categorical characteristics (e.g., distance [Abstand], direction [Richtung]) into existential ones (e.g., deseverance [Entfernung], directionality [Ausrichtung]) (in the 3rd section), “betweenness” (in the 4th), and (not “as-structure [Als-Struktur]” but) “fore-structure (Vor-Struktur)” (in the 5th). On integrating them, he argues in the 6th section that the true sports mood through exhaustion is the special deepening of time in itself, which Heidegger would call “temporalization (Zeitigung).” Finally in the 7th section he mentions that the fan’s or spectator’s sports mood is different from that of the sportsman’s or player’s discussed above⁹. In short, “competitiveness” (alone) matters for fans or spectators. Nakai concludes by issuing a warning that this fan’s or spectator’s sports mood sometimes alienates sportsmanship, with the following critical comments, which are valid even today:

“It is only a distorted development of the fan’s time-mood in the mood character of sports that in the contemporary capitalistic industrial form of culture sports begins

to assume a commercial form. It must be here noted that many sportsmen become more and more subordinate to capitalistic journalism in the Roman way. It is nothing but a sign of enslavement of human beings in this capitalistic form of culture that chronographical time and records become of too much significance.” (ibid., I 405f.)

CONTEXTUALIZATION OF NAKAI’S AESTHETICS OF SPORTS

Historical

It is interesting from historical and comparative perspectives that in “Mood” Nakai applied the Heideggerian analysis of Being-there (Dasein) to space (of sports), earlier than did Tetsurō Watsuji (1889–1969), who attempted the same in the *Climate (Fūdo)*, (1935). This shows how pioneering Nakai was in the application of the Heideggerian analysis of Being-there and that its application into space is one of the tasks shared by the philosophers of the Kyoto School.

Nakai’s reference to Heideggerian philosophy is, however, not essential for his aesthetics of sports, as argued above, because “Elements” was written without reference to Heidegger. What is then essential to or characteristic for Nakai’s aesthetics of sports and common to both “Elements” and “Mood”?¹⁰

I would like to answer this question with the concept of “form.” It was discussed as “a higher and dynamic comfort of operation of muscle” and “integrating lawful order and living impulse” in “Elements,” and as “true sports mood” in “Mood.” Nakai saw in “Elements” the “aesthetic elements of sports” in “competitiveness” and “operation of muscle,” but criticized in “Mood” the former (of fans or spectators) as alienating sportsmanship. This suggests that what Nakai saw genuinely as the “aesthetic element” of sports was (not “competitiveness” but only) the “operation of muscle.”

What matters here is, in my view, Nakai’s critical interpretation of Kantian aesthetics, though explicitly only in “Elements” and not in “Mood.” Because Nakai developed the aesthetics of sports and edited the works of his teacher Fukada, the first (virtual¹¹) translator of Kant’s *Critique of the Power of Judgment* into Japanese, in parallel, it may be natural to regard both activities as closely associated.

Nakai’s critical interpretation of Kantian aesthetics is two-sided, explicit and implicit. It is also the implicit critical interpretation that appears interesting in the context of the time. It is found in his application of the term “aesthetic” in itself into sports. It would be impossible for (the neo-Kantian interpretation of) Kantian aesthetics, according to which the aesthetic judgments must be distinguished from the cognitive ones. It is, however, characteristic of Japanese academism in the first few decades of the twentieth century. As Otabe (2018a) argues, the “aesthetic life” was “a leitmotif in modern Japanese aesthetics,” to which Nakai’s aesthetics of sports can be said to belong.

Contemporary

On the other hand, Nakai’s explicit critical interpretation of Kantian aesthetics concerns the contemporary context. Nakai says that “Kant’s biggest mistake seems to lie in his personal indifference to this ‘inner technique of nature’” (Nakai 1981, 1:415f.). Instead, Nakai proposes to extend the meaning of “nature,” from which “Kant excluded the mundane satisfaction as organic feeling too protestantically,” into the “‘human bodily organisation’ i.e., inner nature” (ibid., 1:415). He thus locates the beauty of sports (or,

to be precise, the operation of muscle) between natural and artistic beauty, between lawfulness and aliveness (or: “purposiveness” in Kantian terms), as it were, according to, but otherwise than, Kantian aesthetics.

Nakai characterizes such beauty (or pleasure) of the operation of muscle as a “feeling of living” (ibid., 1:417f.). Though it might sound paradoxical, this suggests that Nakai is rather faithful to the Kantian position, according to which it is essential to the aesthetic judgment that “the subject feels itself” or, in a word, the “feeling of life (Lebensgefühl)” (*Critique of the Power of Judgment*, §1),¹² whereas the cognitive judgment is always accompanied by the form “I think,” or the “transcendental apperception” (cf. *Critique of Pure Reason*, B131f.).

I argue that this “I feel myself” — “sentio, ergo sum” — which is found in the philosophy of not only Kant but also his student Herder¹³, is the key concept of the contemporary aesthetics of sports or, more broadly, of everyday life. Twice, in pointing out sports’ contemporary shift from the ethical to the aesthetic and while facing the objection that sports cannot be art because it lacks a basic condition of art—being an end in itself—Welsch refers to a new type of training of the Finnish cross-country skier Mika Myllylä, who rejects the usual scientific training and coaching wherein a precise plan is established and has to be followed—which is, in Welsch’s words, “shaped by the ideology of mastering the body” —and relies instead on his own feelings, listening to his body and trying to find out what it wants and needs. Although Myllylä achieved great success with this training, including a gold medal at the Olympic Games in 1998, he insists that “the greatest enjoyment comes from training, not from winning.” Here Welsch finds the change of one of sports’ basic features and the priority of self-purposiveness over competitiveness in sports. These points, which lead Welsch to consider sports as art, were already discussed by Nakai with the notion of the “(pleasure of) operation of muscle.”

CONCLUSION

The contrast between cognitive judgment (accompanied by “I think”) and aesthetic judgment (accompanied by “I feel myself”) does not coincide with that between the everyday and the extraordinary. It seems to me a task of the aesthetics of everyday life to consider whether and how it is possible to judge the everyday aesthetically. Nakai’s attempt was one of the pioneering practices of this sort.

Endnotes

1. Welsch 2005. For a critique of this essay, cf. Higuchi 2009.
2. Cf. e.g. Takashima 2001; Kinoshita 2002; Goto 2005; Lucken 2015; Kaffen 2018.
3. In addition, the media difference should be taken into account (university newspaper vs. academic journal).
4. The word used in the title, “mood,” is in itself Heideggerian terminology (Stimmung).
5. Published by Iwanami Shoten in 1933.
6. Here, Nakai cites Edmund Husserl (1859–1938), who mentioned “play” as an example of the “surrogate function of signs” in *Logical Investigations* (1900–01).
7. Nakai mentions Dostoyevsky’s “Gambler” (1866) as its purest example.
8. To be precise, “technique of nature construed by blood and breath.”
9. Also in the 5th section of “Elements,” Nakai discussed the difference between what “the mutual negative judgments” mean for players and for spectators.

10. Suzuki 2009 is one of the few studies evaluating Nakai's aesthetics of sports correctly in the context of modern Japanese philosophy, but it is only based on "Mood."
11. Fukada died before completing his translation; hence, Yoshinori Onishi (1888–1959: the second professor of aesthetics in the University of Tokyo) successfully finished it.
12. For this point, cf. Otabe 2018b; 2018c.
13. Cf. Sugiyama 2019.

AESTHETICS IN THE AREA OF HUMANITIES

Abstract | The article explores the place of aesthetics in the area of humanitarian knowledge. The nature of aesthetic is revealed as sensual perfection, possessing an expressive form. It emphasizes the universalism and generic significance of aesthetic value, so that aesthetic can be present in any kind of human activity. A new methodology for measuring aesthetic (as well as other cultural phenomena) is proposed - neo-axiology, which postulates the equivalence of aesthetic value and aesthetic evaluation; it is the latter that records the result of any human action. The philosophical nature of aesthetics as a science is substantiated, the aesthetics connections with philosophical sciences and art history, and psychological and pedagogical sciences are revealed.

Index terms | *aesthetic education, aesthetic perception, aesthetic value, art, methodology, paradigm, philosophical science.*

Aesthetics, as a subject, always had a dual nature - on the one hand, "beauty", concentrating in itself the highest aesthetic value, on the other hand "art". Both of them are the main objects of aesthetics; for centuries they had different interpretations. "Beauty", even in ancient times, was interpreted as derived from the "supersensible idea" (Plato) or as perfection in the real world, in the properties of things and their relationships (Aristotle). In the Middle Ages, it was filled with the "divine", in the Renaissance, it was connected with the ideal of the "universal" person, in the era of classicism it was interpreted as "elegant". No less difficult is the interpretation of art, whose initial foundations were measured on a broad scale - from the ancient "mimesis" to the free "self-expression of the artist" (I. Kant).

In terms of methodology, aesthetics during the XIX - early XX centuries develops its own position, retaining the philosophical component (abstracted, generalized thinking) and attracting the capabilities of psychology. Since, by Baumgarten's definition, it is the science of "sensory cognition" and in the XXI century determines human perception of objects, where are present "beauty" and art.

But before exposing the connections of aesthetics with other humanities, it is necessary to reveal, first of all, our own foundations of aesthetics as humanitarian science.

They consist, first of all, in the direction of science towards man, in the active involvement of man as a subject in the structure of the aesthetic attitude. In this regard, aesthetics from the very beginning of its appearance was unsettled from the paradigm of classical scientific knowledge; in terms of the subject's involvement in the process of aesthetic knowledge, aesthetics is comparable, perhaps, only with psychology.

And in aesthetic terms, along with the object, as an equal magnitude, there is a subject, and its role cannot be eliminated.

In the world of aesthetics, everything begins with the human sensory perception of the aesthetic qualities of a particular object, and ends with an aesthetic evaluation, which is the result of the aesthetic comprehension of the personality.

The deep specifics of aesthetic, in our opinion, up to the present time (beginning of the XXI century) are not adequately understood in the philosophical-aesthetic theory. Pointing to the Baumgarten tradition of understanding the essence of the aesthetic, researchers, as a rule, focused on the epistemological interpretation of its nature, leaving aside the ontological aspects of its existence. The twentieth century clearly demonstrated that such a vision of aesthetics is both insufficient and limited. We believe that the achievement of Soviet aesthetics of the definition of aesthetic proposed by A.Losev (Losev A.F., M., 1970), which emphasizes its basis, which represents "sensual and objective being", where everything is "sensual and tangible, the same time, meaningful and expressive".

We share this position with the necessary addition to the complex composition of the aesthetic, which A.F. Losev postulates (the physical, physiological, psychological and social composition) of the human basic quality - the "spiritual" one. We are close to the position of E. Yakovlev, treating the aesthetic as "perfect" (Yakovlev, EG, M., 1995). However, E. Yakovlev understands the aesthetic in the Socratic tradition, interpreting it as "perfect in its own way" and there is a fear that his sensual-emotional substrate is lost in the philosophical reflection about the aesthetic.

The concept of aesthetic as "sensual perfection" that we put forward (Saleyev, V.A., Minsk, 1994) it captured not only the epistemological and epistemological substrate of the essential nature of aesthetic, but also its ontological substrate. The latter is revealed through experience; through the special role of the emotional-sensual world in human existence, which determines the existence of such unique cultural phenomena as aestheticism.

Of course, a more fundamental study of the aesthetic is connected, in our opinion, with the axiological dimension, since the aesthetic area is permeated with axiological value-evaluative links, they are immanently inherent in it. The neo-axiological analysis of aesthetic we have derived (Salejev, V.A., Moscow, Moscow State University, 2006) assumes the existence of a value field where takes place the process of presenting, mastering and evaluating aesthetic value.

Special relationships link aesthetics with pedagogy; This is clearly manifested in the praxeological sphere - in aesthetic education. Aesthetic education, equally with moral, marks the highest manifestation of human spirituality. Since ancient Greek times, only the synthesis of the ethical and aesthetic (*kalokagathia*) is able to ensure the true development of man and society. With all the complexity of the definition of aesthetic education, its basis is human perfection (mainly on a sensual basis) and its realization as a creative subject.

The process of human perfection from our point of view is based on the possibilities of aesthetic value. The aesthetic value is monofunctional, but it is deeply connected with the self-determination of the person essence. The nature of the aesthetic attitude of a person and the world is determined by the measure of the perfection of the aesthetic object and the measure of realization of aesthetic needs, interests, and ideals of the subject in this value-evaluative relation.

The newest dimension of aesthetic — in the neo-axiological key — is unthinkable without inclusion of aesthetic appreciation. Along with aesthetic value, it fills the aesthetic relation with holistic content; synthetic unity, in aesthetic evaluation, expresses both the qualities of the aesthetic object and the aesthetic subject's aesthetic potential (level of aesthetic perception and experience, and level of aesthetic consciousness).

In the neo-axiological construction, value and evaluation are in equal identity, there is an interweaving of value-evaluative links. It is these connections that fill the axiological field, the poles of which are object structures as carriers of value and the person (subject) as a carrier of evaluation. It is modern neo-axiological methodology that most effectively reveals the universal nature of the aesthetic, its striving for perfection and expressiveness. It can be argued that the aesthetic is the dominant of the entire spiritual world of man, taken holistically, in his generic dimension. In reality, it permeates all forms of human existence and is able to act as a criterion for any kind of human activity (which was recorded in the history of culture by eminent scientists A. Einstein, N. Bohr, H. Poincare, etc.)

Aesthetic is in the center of human development. The formation of an individual's emotional culture in a creative direction - the level of perception, productive imagination, fantasy, development of intuition - is mainly connected with the person aesthetic potential. The aesthetic principle largely determines the intellectual (ingenuity, curiosity, observation, understanding) and practical (ability to empathy, co-creation, improvisation) basis of the person individualization as necessary conditions for its self-development and self-improvement.

The universality of aesthetic naturally affects the place of aesthetics in the system of humanities and its links with other humanity sciences.

First of all, aesthetics is organically connected with philosophy: it stood out from philosophy, becoming one of its "daughter" sciences, and also inheriting the philosophical methodology of analyzing the studied phenomena.

Aesthetics is deeply connected with another philosophical science - ethics. Since ancient Greek times, *Kalos kagathos* is known - the system of educating a perfect person, the essence of which consists in interweaving and reciprocally complementing two fundamental principles - aesthetic (ancient Greek *καλός*) and ethical (ancient

Greek κάγαθός).

Aesthetics has a close connection with the sciences of art. It explores various forms of art in the fullness of artistic ways of learning the reality and the spiritual world of man and rises to a high level of generalization inherent in philosophical knowledge. If the history of art explores the concrete historical development of certain types of art, the theory of art - the specific properties and nature of development of each type of art, and art criticism ("moving aesthetics" – V.G. Belinsky) explores the living, modern process of artistic creativity, then aesthetics considers art as a whole, as a type of artistic activity and as a socio-cultural phenomenon, reveals the most general patterns of art development and functioning.

With sociology, aesthetics closes the need to study the recipient of art.

Special relationships associate aesthetics with a conglomerate of psychological and pedagogical sciences.

Entire sections of aesthetics are devoted to the formation of an aesthetic subject, connected with the psychological bases of his individuality.

So aesthetic (artistic) perception is largely based on the psycho-physiological capabilities of the subject, although its spiritual thesaurus plays the determining role. However, it should be remembered that the aesthetic experience is, first of all, the experience of feeling, and only the second – reflection.

Thus, being a specific philosophical science, now in the XXI century, aesthetics also serves as a theory of art and as a methodology for aesthetic perception, education and art criticism: it fills the entire humanities and, in particular, the vast field of cultural science with an "aesthetic substrate". And although cultural theorists, who at the turn of the centuries asserted the paradigm of postmodernism, deny the laws of the existence of aesthetic knowledge, in our opinion there is no alternative to aesthetics, because this science combines the consistency of philosophical logic in comprehending the ideal in the world on the one hand, and comprehending the nature of the artistic (its importance is determined by aesthetic value), the highest manifestation of which is art.

Vadim A.Saleyev. Doctor of Philosophy (Moscow State University, 1992), Full Professor (Minsk, 1994), Honored Culture Worker of the Republic of Belarus (2000), 1st Vice-President of the Belarusian Aesthetic Association (1990), Chief Researcher of the Belarusian State Academy of Arts (2011-2019), chief editor of the magazine "Artefakt" (2013-2019).

Graduated from Belarusian State University (philological faculty with art specialization), postgraduate studies of the Department of Aesthetics, Faculty of Philosophy, Moscow State University. One of the leading East Slavic experts in the field of aesthetics and cultural studies.

In the field of philosophy creates of the concept of neo-axiology and modern understanding of personality.

In the field of aesthetics: concept of ethno-aesthetics, history of Belarusian aesthetics, modern aesthetic education and art education.

In the field of cultural studies: concept of national artistic culture, specifics of Eastern Slavic national cultures, Belarusian national culture.

Author of more than 400 scientific works, 8 monographs.

The most famous are: "Art and its evaluation" (Mn, 1977), "Contemporary aesthetics of Belarus" (Mn, 1979), "National self-consciousness and artistic culture" (Mn, 1990), "Ethnopedagogy and aesthetic development of the personality" (Mn, 1994), "Art. Art and modernity" (Minsk, 2006), "Essays on the theory of the Belarusian theater"(Minsk, 2014), "Problems of the theory of art" (2016).

He is a famous art critic (more than 500 publications), author of 5 fiction books.

ARTISTIC TESTIMONY, REVIVAL OF MEMORIES AND EMPATHY – A CASE OF PAINTER ZORAN MUŠIČ

Abstract | Considering that art has its history, but no progress, it is possible to take the artistic images of violence, torture, suffering and death from the past as a possible horizon of imagination for the present. In my presentation, I would like to take for example the painting of Slovenian-French-Italian painter Zoran Mušič, who became well - known by the portraits of prisoners in a concentration camp Dachau where also the artist had been led captive during the Second World War. Before and immediately after the end of the War, he drew only a few drawings with this motif, while then, during the period of twenty-five years, he painted beautiful and sublime images of nature and towns: Dalmatian, Karstic and Italian motifs of landscape, earths, horses, ponies, boats and nets in Venice. The artist avoided the representations of war atrocities and tilted towards a contemplation of the beauty (later, a photograph S. Salgado passed through a similar experience, as he explained in *The Salt of the Earth*). Mušič needed this internal time to alleviate the sharpness of his memories and to be able to start painting them in the 1970, with the cycle *We are not the last*.

I will try to make understand, first, the reasons of such a long period of silence and then of a revival of memories in the late sixties in the post-war Europe. Mušič's painting represents an important part of collective consciousness, as an artistic testimony and a symbol of extreme torture (like P. Levi, I. Kertész or B. Pahor in literature). It is also due to his painting that we are able to imagine how far a human kind could go in its cruelty. May those images also be helpful to us to imagine some extreme, but not so rare living conditions in the present, too (for ex., in some crisis areas, refugee camps, and in prisons with political prisoners)?

Drawings and pictures of internment made by Mušič are realistic, with an almost documentary value, but not pathetic. The images of withered, dying or dead bodies provoke intense emotions of empathy and compassion, as they were still persons, aware of their misery. In conclusion, I will try to explain, referring to I. Kant and G. Agamben, why the war or other extreme conditions can lead to an apathy or an absence of sympathy among the involved people, even between the prisoners, and why, on the other hand, we can be deeply touched by the images of pain, if we are not involved.

Index terms | *Empathy; G. Agamben; I. Kant; memories; painting; sympathy; testimony; Z. Mušič.*

In the Slovene painting art, which remembers World War II, Zoran Mušič, who portrayed his own experience of concentration camp in Dachau, stands out. Such direct artistic images in painting will not be found elsewhere. But the authenticity of personal historical experience does not in itself guarantee a high level of artistic creativity. Richard Kearney reflects on this subject in his book *Stories*, where he finds that those who have great expectations purely for the ethical and documentary significance of the testimonial memory often reject the possibility of its aesthetic renderings through fanciful historical narrative. Claudio Lanzmann, the author of the Holocaust documentary *Shoah*, in his essay entitled "Holocaust: Impossible Imagination" (1994) expresses a devastating criticism of Spielberg's attempt to portray Auschwitz, the unthinkable and inconceivable, in the film (*Schindler's List*, 1993). For Lanzmann, this film is a kitschy melodrama that trivializes the unique nature of the Holocaust. Spielberg's sin lies in having shown it by means of a non-existent fantasy narrative, where viewers can emotionally emerge in and sympathize with the main hero of the film. It is not necessary, Kearney believes, that historical realism would be more convincing than the fictitious one, nor that it would lead to catharsis, if at all (some witnesses even committed suicide after reliving their camp life). The crudity of realistic narratives and depictions can deter us from empathy; on the other hand, a fictitious approach, such as the *Schindler's List*, can awaken empathy and compassion. Authentic testimonial art can provoke resistance if it is transformed into tragic naturalism. We are more than willing to emerge ourselves into a narrative or an image, if we are not expected to give too much, otherwise empathy could turn into distress and concern for ourselves, not into compassion for the other. In Lanzmann's film *Shoah*, where the survivors of Auschwitz testify themselves, Kearney misses the very possibility of salvation, a salutary or concordant conclusion: "There are no tears to feel with no sensations to orient yourself, no ecstasy, no catharsis, no purgation" (Kearney, 2002, 53).

The artist should also show empathy for the viewer or the reader by choosing exactly the right amount of emotional thrill. But isn't that more a marketing feature than an intimate call of creativity? It may be the case that the artist's image must be credible if it is to convince the viewer. It does not appear that the rendering of the camp motives, which Zoran Mušič shows, goes in this direction: the truth should rather speak for itself.

The life and creation of Zoran Mušič (born in 1909, even before the First World War, 1914) was particularly marked by the internment in the Dachau camp, where he was imprisoned six months, from November 1944 to the end of April 1945 (Zupan, 2016, 49-50). He made his first drawings of the concentration camp prisoners before leaving Dachau.¹ He was not the only one: some other Slovene prisoners were drawing their own experiences, but Mušič's drawings are considered to be the most artistically recognizable. They look more emotionally expressive. It is still a documentary display and a historical testimony, but full of psychological realism. His sketches give us understanding and compassion with the necessary emotional note. If, on the contrary, the image of the captive is as realistic as that of an anatomical study of the skeleton, then it may arouse resistance rather than compassion. This confirms the position of R. Kearney concerning the importance of emotional submerging. Mušič was able to connect both the documentary, narrative image, and, above all, the artistic expression into an unrepeatable whole.

Nadja Zgonik agrees with that, referring to the work *Dachau: photographs and drawings from the concentration camp* with a comment: "The works created by our

painters in the camps did not have the status of independent artworks in professional and wider consciousness. They were mainly used as a documentation of events and received attention in as far as being the bearers of civilizational memory. The work of Zoran Mušič was the exception, since the paintings with images of the dead at his exhibitions and other presentations managed to obtain the status of central artworks "(Zgonik, 2012, 136).² In this, she does not refer only to the sketches drawn by Mušič directly in Dachau, but also to the cycle of works with camp subject matter that he began to create at the end of 1969 and first exhibited in December 1970 in Paris under the name *We are not the last*:³ »Mušič unlike a photographer who tries to capture the image of reality, document it and show it, sets off with the task of creating the image of reality"(138). Even though the purpose of Mušič was not merely documenting a certain historical moment, it is also necessary to affirm Tomaž Brejc's warning that in this cycle "Mušič does not illustrate anything: he revives his own experience" and that "no motive is invented, he saw and relived it all" Brejc, 2012, 72).

After the Second World War, for a quarter of a century, Mušič has been deterred from the war motive, by rendering horses, ponies, donkeys, Dalmatian, Karst and Italian landscapes, from ones made of stone to those with rounded hills. With some of those motives he already dealt with in the pre-war period, but now, these depictions do not look shrill, there are warm tones that darken, the shapes of objects are purified, sometimes impoverished lines gradually pass into abstract forms. According to Brejc, "Mušič's idyll is not a place of refuge, nor an ideal landscape" (62). Even though it seems that in 1970 he surprises with camp motives, Mušič himself said that his painting had visible traces of war and of human devastation: "My way of looking at things changed completely... As far as the shape is concerned, the hills around Siena are like cadavers. They are reduced to the essential" (Peppiatt, 2000, 14).

In Mušič's camp paintings, we are overwhelmed by the fierceness of directly experienced camp scenes, as it shows us a disposition in the midst of dying, agony. But in spite of this, the faces of the prisoners are not impersonal, without emotion, there are traces of anxiety, horror, despair, suffering and general exhaustion in their eyes. Without these features suggesting that personal self-awareness has not yet been completely dead, the images of near-dead people, or even corpses, which preserve post-mortem expression on the face, could not give rise to empathy and compassion. Particular attention is also given to their nakedness, especially genitalia, which emphasizes their helplessness and vulnerability; they allow us to still identify them as people who ultimately maintain their humanity.⁴

Finally, I would like to raise the question of whether we are enriching or impoverishing art by searching for its bigger communicative value ? Are the images of the Holocaust one and the only and therefore unrepeatably, or can we contemplate them as a symbol of war horrors? By evaluating a particular artistic image as symbolic, we reduce its particular value and slightly neglect its basic meaning. Mušič's art is connected with a certain moment in history, with World War II, showing the suffering and pains that it has caused. Through the process of symbolization, his art became exemplary, a source of possible representations of the horrors of other wars, both past and the ones to come, and we are now using it as an analogy.

Therefore, when we do not have access to direct testimonies, we also resort to military images in art. Perhaps this was done with a silent assumption of the admissibility of analogy, according to which these images are symbolically interchangeable or

comparable with other military scenes. But there is a fear that in this way we will even degrade a certain art form, as if the source of depiction is nothing special and exceptional. Searching for the symbolic value of an artwork can be ethically unpredictable. There is also a contrary view: why would some concrete images of extreme suffering from the past (such as drawings from the concentration camp Dachau) have the right to an unrepeatable exceptionality, if, even in modern times, new forms of extreme suffering in war places and refuge camps still exist?

Mušič showed a great measure of modesty when he addressed his camp work *We are not the last* (His modesty must be attributed to pessimism and resignation as well.) Among the prominent researchers of his art there is no uniform opinion as to the extent of the symbolic message of these works. Gojko Zupan believes that the artist who first lived in Venice after the Second World War and then the major part of his active life in Paris was influenced by the year 1968 when the city was stage to one of the worst student riots in Europe. In addition, “the shadows of the war of Biafra and Vietnam at the reading of Celan, Prima Levi, Ismail Kadare or Pahor’s *Necropolis* (published in 1967) are likely to have had an additional impact on the nightmares of the painter at the threshold of his early old age.” (Zupan, 2016, 63). For Zupan »the series *We are not the last* is not only the memory of the suffering in the camps, they are not only a monument to the Holocaust, or new wars. They are a condemnation of moral shallowness, short memory and, above all, a message from a human being, knowingly denying the goals of *l’art pour l’art*“(63).

Tomaž Brejc, on the other hand, is firmly in favor of the position: “The content of this cycle is exclusively the Holocaust. These are not even close to the mortals from the Gulags and Hiroshima, Biafra or Vietnam; this is not a political commentary: here the Dachau memory “has risen from the dead” (Brejc, 2012, 72). He then notes that in the 1960’s, “the rise of commemorative literature began to turn into the ‘holocaust industry’ ... After long silence and denial, the former prisoners spoke out,” and then “the real dam of the memorial literature opened, and then films, exhibitions and research“(73). Referencing Prima Levi, he emphasized how precious witnesses who were authentic, without ideological inspiration, were back then.

Jean Clair, the great French expert of Mušič, considered that “only a few painters who experienced that had the courage, power or time to intervene” (Clair, 2012, 29). He also establishes the influence of Otto Dix and Oskar Kokoschka, whom Mušič got to know during his academic studies in Zagreb. Brejc adds Géricault and Goya, however, with the firm belief that “Mušič paints exclusively his notion of death” (Brejc, 2012, 74). Igor Zidić thinks that the turning point, with which the bodies of the dead turned into the souls of the dead, succeeded with the help of late Tizian and Rembrandt (Zidić, 2012, 34). From all of the above, we can conclude that, despite the exceptional personal experience, the importance of tradition should not be ignored. As Brejc emphasizes referencing Eric Hobsbawm, the tradition is kept alive by the fact that we can adapt it and change it according to the requirements of the present, so that it is actually invented anew, that is, it is not about imitation and eclecticism, but a creative competition with a tradition (Brejc, 2012, 41). Nadja Zgonik thinks that Mušič’s initial profound belief that the concentration camp experience of Dachau could never be repeated, turned out to be illusory in the second half of the sixties (also mentioning Vietnam and Biafra) and that the title *We are not the last* returned as the realization that persecution, violence and killing are still a common occurrence (Zgonik, 2012, 132). She concludes that Mušič with this part of his work passes through from an intimate

observation to a wider validated message. “These are not the images of corpses, but the monuments of the dead - from universalized forms built into a universal mortuary architecture” (132, 139).

Mušič’s painting confirms the dynamic memory theory: tradition and memories are alive as much as we actualize them in the present, with current experiences that can never be exactly the same as the past ones. Remembering is never a pure reproduction of an absent event, but a construction, not a repetition, but a new creation. Let me conclude with the thought of Maurice Halbwachs: “What we see today is placed within the framework of our old memories, but in the opposite direction, these memories also adapt to the array of our present perceptions. It looks like we are confronting more testimonies. It is precisely because, in spite of some divergences, they largely coincide, thus we can reconstruct a set of memories by recognizing it “ (Halbwachs, 2001, 23). We can draw analogy between present and past events and memories, but nothing more than this: it is a minor or greater degree of similarity, but not of identity. Art is to such a degree general that our images can serve as symbols: in this way we can better understand the present, create the present memories and revive those from the past. With the help of art, it is easier to imagine memories that we did not experience ourselves.

Endnotes

1. Nadja Zgonik states, referring to Gojko Zupan, who first compiled an emergency list of all preserved Mušič’s camp paintings, that Mušič recalled that “in Dachau he made about 200 drawings (the information is changing in the literature, sometimes 150 are also mentioned, and 100 elsewhere), of which 80 were reliably preserved. “(Zgonik, 2012, 134).
2. Nadja Zgonik, mentions a sketch by sculptor Božo Pengov, which seems to be an “academic drawing of nudes” ... which Vera Visočnik had already noticed, and mentioned the embarrassment that the viewer feels at this hard, shadowy drawing, which denies all artist’s feelings “(Zgonik, 2012, 136-137).
3. The last Mušič’s work from this cycle was dated in 1987.
4. G. Agamben, referring to camp testimonies, analyzes the concept of a Muslim (*der Muselmann*) in his work *What remains of Auschwitz* (in the original, 1998), according to which prisoners should be in the last stage of exhaustion on the verge or even beyond ethical consciousness, the living dead, who were no longer aware of themselves, who fell into complete indifference and therefore no longer suffered (Agamben, 31-35). This extreme state is not observed in Mušič.

ASTHETIC VALUE AND THE NOTION OF A LIFE

Abstract | Modern formalism can be seen as way of making the aesthetic a well-behaved concept with clear boundaries, corresponding to a social-historical process of “secularisation”: coining of the term was concomitant with the “autonomisation” of art from other spheres of social life, and “aesthetic experience” came to be conceived in strictly perceptual terms. Different theories seek to locate aesthetic value either in external objects (“realism”) or features of experience itself (“subjectivism”). Here I suggest an alternative framework: both objects and experiences must be seen as components of a “life-being-a-certain-way” (a concept I borrow from Jerrold Levinson) so as to properly understand the nature of aesthetic experience. The importance that the notion of being the subject of a life bears to these matters, of course, is not the trivial sense in which one is alive while experience the world aesthetically, but rather our capacity to envisage lives, our own as well as others’, as themselves “things” endowed with properties akin to those we attribute, e.g., artistic statements. A step toward it is to see the continuity between the ethic and aesthetic dimensions of experience, how the aesthetic, in a sense, “grows” or develops with oneself, by contrast, e.g., with our capacity to perceive the blueness of an object. I also draw some suggestions toward the interpretation of the notion of “significant form” and how its application to the idea of a life can illuminate its use in the aesthetic domain, as well as the relation between art and what I call “everyday aesthetic activities”.

Index terms | *aesthetic experience; art; ethics; life; beauty.*

INTRODUCTION

Often words carry more insight than their utterers on a particular occasion may have intended or even suspected. I suspect this to be the case with Joseph Beuys' grandiose statement that "art is life and life is art". Namely, I think the notion of a *life* can be fruitfully used to illuminate issues in aesthetics and the philosophy of art.

THE PERPLEXING NATURE OF BEAUTY

The experience of beauty, or what we generally call "aesthetic experience", is puzzling in many respects. When we think of disparate responses people have to certain objects – take the now classic example of futurist provocation, according to which a roaring car engine is more beautiful than the Victory of Samothrace, as well as examples of one person valuing positively what another aesthetically abhors; these are virtually endless and more akin to what happens in moral descriptions, rather than descriptions of perceptual features – "Where one may see, say, exemplary generosity, another may find only wasteful extravagance."¹ Can a person have the same quality in mind when attributing beauty to such disparate things? It is difficult here to think of beauty like we think of secondary properties, for which disagreements may be explained appealing to "standard conditions of observation". Such move just seems far too stretched in the aesthetic case. We are misled by the etymological overtones of "aesthetics": just as not all elements of a life are experiential, not all elements of our "aesthetic life" are perceptual. Yet, it seems to be a dogma of modern aesthetics that its proper scope is exhausted by the perceptual, and particularly the perceptual experience of *artworks*. As aesthetics became more and more distant from a medieval worldview centred on the notion of the divine and man's relationship to it, the concept of the aesthetic underwent a form of "secularisation" involving a narrowing of its scope, so that to speak of the beauty and gracefulness of a butterfly (in general, things we can *perceive*) constitutes proper "aesthetic talk", whereas to speak of the beauty of thoughts, actions, characters or "souls" is a spurious or figurative use of it. Today's aestheticians inherit a picture of the aesthetic that reverses the relationships of priority (perceptual *versus* non-perceptual) that characterised the enquiry in former epochs. To talk of aesthetics today seems *primarily* to talk about lines, colours and sounds on the surface of artworks – a process not strange to art's being, in a way, made to perform, in a secularised world, functions comparable to those of religion in other periods. Aesthetic formalism is a breviary thinkable only in a world where artists, to a certain extent, acquired a sort of priestly role.

THE AESTHETIC AND THE MORAL

As was recently stressed by some philosophers², one enduring characteristic of modern aesthetics is the clear-cut separation between aesthetic value, on the one side, and ethical or moral value, on the other. One standard kind of criticism facing attempts to connect both dimensions of human valuation is given in Zangwill's reply to Scruton: if there was a substantive connection between aesthetic and moral value, then we should expect moral discrimination to be always concomitant with aesthetic discrimination, but this is not what happens. There are "aesthetically discriminating moral brutes and aesthetically blind moral saints."³

I think this is a wrong way to look at the connection. Scruton is careful enough to state that the continuity between taste and moral sentiment is to be found in regulating our

sense of what is “decent” (the ubiquitous concern for what is fitting or appropriate in everyday matters), not of what is right or wrong⁴. We should resist to read a “moralist” approach into this insight. The point is, rather, that there is a “continuum of normative attitudes” in which both the aesthetic and the moral interests are intelligible as such, so that we cannot have a complete picture of the aesthetic in abstraction of the moral. To understand Scruton’s point, one must read these remarks in connection to the thoughts he develops elsewhere⁵ about the exercise of taste in everyday matters. We forget that there is more to the moral dimension than rules concerning right and wrong, a fact often emphasised by virtue theorists of morality (and I would say the notion of the “virtuous person” is as much an ethical as an aesthetic ideal). A narrow focus on morality as a set of rules for action potentiates a narrow view of the aesthetic as detached from life. To glimpse the continuity of the aesthetic with the moral one must look rather into examples such as the predicate “fustian”⁶, as applied to gestures and to “aesthetic objects”. Considerations of the obscene, the sincere, the ridiculous, the sentimental, the ironic and other such qualities as both appropriate descriptions of actions or mental traits, as well as of artworks. To these we should add McGinn’s addition of “terms of moral appraisal that have a strongly aesthetic flavour”⁷, as well as terms of aesthetic appraisal that have a strongly moral flavour, such as *sincere* or *kitsch*.

WAYS A LIFE AESTHETICALLY IS

In his paper “Intrinsic Value and the Notion of a Life” (to which my title alludes), Jerrold Levinson hypothesises that *a life-being-a-certain-way* is the only feasible object of intrinsic value attributions. The key idea is that both (run-of-the-mill) *objects* in the world and *experiences*, depend, for their value, on their placement in the context of a life being a certain way (two qualitatively indiscernible experiences, for instance, can have widely differing values depending on their placement within a life). The advantage of Levinson’s framework is that it allows us to see the one-sidedness of object-centred and experience-centred approaches to intrinsic value. This is important because we can divide standard theories of aesthetic value in the same way: as object-centred and experience-centred, i.e. realist and subjectivist approaches – ones that place aesthetic value in slices of the external world, and ones that place aesthetic value in features of subjective experience.

One result of Levinson’s treatment is that both aesthetically valuable objects and experiences are seen not to have intrinsic value, for the value of either will depend on their wider context within wider sequences of experiences. However, one aspect Levinson deliberately leaves unexplored is that of the particular ways a life can be that make it intrinsically valuable. Imagine now that we widen the scope of the aesthetic so as to encompass more than isolated objects or experiences; in particular, imagine we take the idea of *a life-being-a-certain-way* as itself object of aesthetic valuation. Moreover, suppose that this is our *primary* object of aesthetic valuation, while other things are so valuable *derivatively*, in light of their contribution to the aesthetic value of a whole life, or, in other terms, and appropriating for our own ends the language of Clive Bell, of their contribution to a life’s having *significant form*. This very idea can provide us with an insightful analysis of what significant form, that much berated concept, is. How? Well, we can conceive possession of significant form by things (e.g. artworks) as standing in a certain relation to *a life* possessing significant form, which amounts to a life having certain aesthetic properties. Consider the idea Levinson quotes from C. I. Lewis, that “a life that begins badly and ends well is better than one that begins

well and ends badly.”⁸—what could be the criterion for this if not an aesthetic one? Of course, it doesn’t mean that it is nothing but aesthetic, but I venture we cannot begin to understand it if we don’t see it also, perhaps primarily so, as an aesthetic assessment. And this is but one of the several (complex) ways in which a life can be so assessed, for what we could call the harmony, proportion, fit and clarity of the way its elements or constituent parts are integrated into an “organic whole”.

Another result of Levinson’s analysis is that the notion of intrinsic value makes sense only from the perspective of beings endowed with richly sentient lives, beings from whom the “shape” of their lives matter, who actively engage in their shaping, and in organising the world around them in a way that is fitting to that purpose. In other words, only for subjects of a life is there such a thing as intrinsic value. And the same holds for how the world is experienced aesthetically. Aesthetics is not a matter of outside, “objective” states of affairs nor of some special mode of attention, a sort of machinery of subjective experience allowing one to perceive aesthetic aspects much in the way wearing special goggles enables one to see in the dark. Aesthetics is a matter of both aspects of the world and features of one’s experience being framed by something wider, endowing them with a certain direction. Only from such a perspective can an assertion about the beauty of a roaring engine *vis-à-vis* the beauty of a winged *nike* be a meaningful focus of discussion. It is not a matter of “standard conditions of observation” nor simply of interpreting appearances of things as affecting desires.⁹

THE OBJECT OF LONGING

Crispin Sartwell ventured that the experience of beauty is open to beings who, like ourselves, are constantly in the process of “losing everything they have, including their own subjectivity”. He sees our finitude as a key component of our ability to experience beauty – “That we can lose things, that in fact we are always in the process of losing everything we have, underlies the longing with which we inhabit the world. And in that longing resides the possibility of beauty.”¹⁰

Quite vaguely, Sartwell defines beauty as “the object of longing”. What he means by this is that the possibility of experiencing beauty is connected to our temporal existence and the fact that, ultimately, in a sense, our desires *can’t* be fulfilled. That enables the experience of longing, an aspiration to fulfil unfulfillable desires. This resonates with Zemach’s idea that beauty is crucially connected with our limitations: between two number sequences, we perceive as “harmonious” that which is more “graspable” in relation to our cognitive powers; the sublime is ineluctably connected to what immensely surpasses our cognitive and physical capacity, and so on. But I am especially interested in the way his formulation resonates with the idea of beauty being open only to beings who are subjects of a life, beings who can imaginatively contemplate the course of a life and assess it for its harmonious character, or lack thereof. We contemplate our existence in time and we realise that our desires must ultimately go unfulfilled. The most we can aspire to is leading *meaningful lives*, and what I suggest here is that the meaningfulness of a life goes beyond transitory satisfactions, the search for pleasure and avoidance of pain, and it cannot either be understood in a rarefied sense of “moral” that merely captures a concern with right and wrong and following rules. The meaningfulness of a life is, at one time, both ethical and aesthetic. In ways that widely vary across culture and historical context, we strive to live our lives as if they make up, in a way, *statements*; a meaningful life has properties akin to those of a statement, so that there is a match between the formal properties of a good statement and the formal properties of a meaningful life. Of course, this implies that the ways in which

one may strive to make one's life meaningful varies considerably.

What we have here is perhaps an apt illustration of the role of art in the process of humans' self-understanding as ethico-aesthetic creatures: a statement is functioning here as a metaphor for a life, or living as an organised activity. But it is not just any statement we are thinking about here; we are thinking of *artistic* statements – and artworks are often thought of as statements of sorts. I think here of Alva Noë's recent characterisation of the arts as "reorganisational activities" – e.g. a choreography not just as another example of dance but something bringing into focus the fact that we are organised by dance¹¹; in other words, the arts not just as another example of our "aesthetic life" but as kinds of investigation or enquiry on our lives' being organised aesthetically *before* we develop any special concept of art.

What we nowadays call "the arts" are an outgrowth of what we may term "everyday aesthetic activities", which are the true ubiquitous expression of human beings' interest in the world around them, as the setting where their lives unfold, so that we seek to organise it in a way that aptly expresses our particular mode of inhabiting the world, of making the world our "home". Art is a late comer in the story – like Kandinsky in 1889, tracing along the shores of the Vychegda river the costumes of the Zyrians, their ornaments, the colours and patterns of the *izba* – already a mode of contemplating the previously existing aesthetic organisation of life.

THE WILDERNESS OF WANG YANSONG'S VERSION FROM THE PERSPECTIVE OF PHENOMENOLOGY

Abstract | Cao yu used a new method in writing the play *The Wilderness*, and he thought that a new form should be adopted for rehearsal. *The Wilderness of Wang yansong's* version completely abandoned the traditional realism of expression, replaced by a new symbolic approach. This is in line with cao yu's idea. This new method of symbolism which is embodied in the stage setting, the rehearsal idea and several imagery scenes, is a breakthrough in the "realistic thinking" of traditional drama. Through the symbolic rehearsal, *The Wilderness of wang's* version entered the horizon of phenomenological aesthetics.

Index terms | *symbolism; realistic thinking; returning to things itself; phenomenological intuition; cogitio.*

Mr. Cao Yu once said that professional troupes must succeed in the rehearsal of thunderstorm, succeed in sunrise and fail in *wilderness*. Different from *thunderstorm* and *sunrise*, Mr. Cao Yu used a new way to write *wilderness*, so it needed a new way to arrange. Wang Yansong's version of the wilderness replaced traditional realism method with a new symbolic one, which was in line with Mr. Cao Yu's expectations.

— Stage design from the perspective of "phenomenological intuition"

"Phenomenological intuition" is an essential intuition method based on the phenomenological suspension method. The suspension method is to treat all the views about the objective existence of the external world as questionable and put them in parentheses. For this is not the point of phenomenology, which is concerned not with perceptual intuition, but with essential intuition, and what it pursues is the essence obtained through essential intuition. According to the phenomenological essential intuition, all things generated by imagination and illusion are real. For example, when I walk, I see a snake from a distance, but when I walk into it, I see a rope. According to the intuitive view of phenomenological nature, snakes are real. This is quite different from the reflection theory of traditional philosophy, which necessarily believes that the snake is an illusion and the rope is the real existence, which is also a challenge posed by phenomenology to the attitude of nature. What remains to be done, after the suspension of all existence in the external world, is to make clear, in the pure intuition, the meaning inherent in the phenomenon. The meaning here "is neither the reality of mentalism nor the setting of metaphysics"¹ But what is it that consciousness itself and the object itself expresses in terms of its intrinsic nature. In the case of the above example, my consciousness points to the snake and gives it meaning. The snake is the real existence without the real object, which has nothing to do with perceptual intuition, nothing to do with the external existence object, and therefore nothing to do with the external world. This "phenomenological intuition" is similar to that of pure aesthetics. In the crisis of phenomenology and philosophy in Europe, Husserl pointed out: "essential intuition does not rely on the accumulation of actual empirical observation at all -- it is fundamentally conceptual."² This means that the feeling is corresponding to the external world and is therefore an external thing that is not me. The essential intuition is purely rational, and its intuitive object is the world of pure idea -- that is, the world of essence. Thus the intuition of the essence of something -- in fact, separated from something as substance. For example, the intuitive nature of the color "red" is separated from the red object. Phenomenology first suspends the red object as an external object, directly referring to the general red,

which exists in pure consciousness. Husserl's intuition is also a kind of imagination, a pure conceptual imagination. In phenomenology, perception is restricted by the senses, and it is difficult to reach the realm of essence. As for aesthetics, it doesn't matter whether the object or scenery in a painting really exists objectively. What matters most is the feeling of beauty caused by it. For example, when people appreciate *Da Vinci's Mona Lisa smile*, no one pays special attention to whether Mona Lisa is a real person. People focus on the unique experience of beauty brought by Mona Lisa, which is real, so Mona Lisa's smile is real. Wang's version of the wilderness expresses the intention of "black forest" and all other stage props by using loess fired ancient pottery figurine instead of stage language, which is similar to the principles followed by phenomenological intuition. Why do I say that? Through the analysis of Wang Yansong's version of the choreography design can be answered. Director Wang is the pursuit of the integrity of choreography design, which requires all departments, namely, choreography, lighting, sound and clothing, change, road must be twisted into a whole. At the same time, the theater should have an overall effect of empty and black, and all the space that the audience can see is painted into empty and black performance space. On the stage, the iron gauze screen with Chinese loess texture is also selected as the screen, symbolizing

the wild land with various life styles, which is in harmony with the ancient pottery fired by loess. In the limits and tension of drama, wang daowrote: “after all, the tension of the play is in the dialogue, not the scene. I used the image of ancient pottery to weaken the so-called set function on the whole, in fact, in order to better perform the tension of dialogue. No other element is more important than the performance of the actor.”³The figure of the ancient pottery figurine is a masterstroke of director wang’s version of the wilderness: “the ancient pottery figurine of loess sintered. It symbolizes a form of life in the wild. This pattern of life has flesh and blood, soul, love, hatred and bitterness. There’s color, sound and dreamland.”⁴It can be seen from this that wang dao did not pursue realistic stage design, and did not move a real “wilderness” onto the stage. Instead, he tried to weaken the background of the stage, and only retained the essence and made artistic processing on it. With the texture of the yellow earth and decorated with some plants iron gauze net, to symbolize the surging of a variety of life styles and love, hate and hatred of the wild earth.

This is similar to the phenomenology of suspending the external world in order to reveal the essence. After “suspending” the real wildness in the original play, director wang completed the second creation of the original play by means of symbolism. Instead of recreating scenes like the railway tracks, jiao’s old house and “black forest” in the play, he devoted himself to creating a performance space with imagery. That is to say, director wang did not restore the scenes in the play one by one like traditional drama, but left a lot of empty and black space for performance. Only with an iron gauze to symbolize the mysterious image of the wild earth, the earth is pregnant with a variety of life styles, performing a variety of love and hate, the pursuit of a symbolic way of expression.

In terms of performance image, director wang also creatively used 7 “pottery figurine made of loess” to symbolize various life styles in the wilderness. Accompanied by a live cello performance of Mozart’s requiem, it creates a mysterious and tranquil atmosphere to match the “pottery figurine made of loess”. This symbolic choreography is a transcendence of traditional and realistic stage design, which, in his own words, “better expresses the tension of dialogue”, thus giving great play to the performance of actors. That is to say, the weakening of the stage design allows the audience to pay more attention to the performance and dialogue of the actors. In the view of phenomenology intuition, it suspends the external world (stage design) and highlights the depiction of human suffering in the drama. Director wang yansong’s symbolic stage design is a breakthrough in the pursuit of realistic thinking in traditional drama. What is its philosophical basis? Professor zou has said in his drama appreciation class: “An artist is not an observer of nature researcher, not an observer who actually observes people, as if he’s trying to do the science of science and human science. When he looks at the world, the world becomes to him a phenomenon (intention), and the existence of the world (external “existential”) is irrelevant to him, as the philosopher (in the critique of reason) does. The difference between the artist and the philosopher is that the purpose of the former is not to demonstrate and grasp the ‘meaning’ of the world phenomenon in the concept, but to possess the phenomenon (image) intuitively, so as to collect abundant images and materials for the creative depiction of aesthetics.” This means that the artist looks at the world in much the same way as the philosopher (in this case, the phenomenologist) looks at the world. It does not matter to him whether the objective world really exists or not. Artists observe the world only to collect rich visual materials for their artistic creation. In other words, when artists observe the world, they do not pursue real knowledge as scientists and natural observers do. Instead, they grab essence of the world and the things, and make artistic creation based on this. Therefore, the artist’s grasp of the world is also a kind of eidetic intuition. He grasps the most direct spiritual core of the world and creates various images in his mind. And the stage design of director wang for the wilderness also follows the creation concept

of symbolism instead of “realism”. This creation of the new approach, firmly grasp the essence of Cao Yu’s original script.

二、The “returning to the thing itself” kind of rehearsal idea

“Returning to the thing itself” is the core spirit of phenomenology, which means to abandon all preconceptions and respect the thing itself in understanding things. It is the method Husserl used to oppose the traditional speculative philosophy of concept to concept. He is usually associated with the phenomenological “suspension method”. The “phenomenological suspension” is the general method of skepticism used by Husserl to replace Descartes. It refers to the “general assumption of the attitude of nature” and all the theories based on it are “bracered” and rendered useless. The purpose of this is to eliminate the disturbance of uncertainty. “We make the useless of the general assumption of the essence of the nature’s attitude, and we put in parentheses all aspects of its existence: therefore we put in parentheses the whole of nature.”⁵ In the process of suspension, Husserl advocated a “no-stand” attitude, that is, not to judge the validity of the existence of suspended objects, in order to face the phenomenological “phenomenon”. A case in point is “to see the sun by putting aside the fog”. Here “to see the sun by putting aside the fog” does not mean to remove the fog, but merely puts it aside. Phenomenological phenomenon is not the appearance used to reveal the essence as traditional philosophy says. In phenomenology, phenomenon is the essence, that is, what things are. What the phenomenological “thing itself” refers to is beyond the scope of this article. It is not discussed here. The “returning to the thing itself” rehearsal method mentioned in this paper needs to be discussed from two aspects: one is to emphasize that Director Wang not only abandoned the previous director’s method of arranging the wilderness, but even abandoned the “realistic” thinking pursued by the traditional drama arrangement. Instead, it uses a kind of expressionistic “new method”. Director Wang uses seven ancient pottery made of loess to carry on the symbolic narration, seven large and small human shape ancient pottery, the face is like the mask, the shape color is weird. They are not only the souls of the characters, externalizing the inner contradictions of the characters, but also the stage props that move freely and even replace the “black forest” image in the third act. This fully shows that the focus of Wang’s version of the wilderness is to show people’s inner life and explore the soul hidden in people’s body. He’s not just telling a story about a peasant’s revenge, he’s exploring human nature. In addition, in the dim light, they seem to be looming ghosts, wandering on the primeval land, creating a solemn and stirring, mysterious dramatic image. And its place renders desolate atmosphere, foil story again from flank.

This kind of symbolism is similar to the phenomenological “returning to the thing itself”, which requires us to suspend the daily attitude and the realistic thinking mode pursued in the past when appreciating Wang’s version of the wilderness, and directly enter the soul of drama. This asks us do not to regard ancient pottery only as the prop that is used to build weird atmosphere, should enter the horizon of Director Wang and understand the role of the terra-cotta figures as the soul or shadow of the characters in the play to achieve the externalization of the inner contradictions of the characters. In this way, the existence of the terracotta figures is not only for the pursuit of a weird and bizarre stage performance, but also a part of the stage content, which serves the dramatic content. The same rehearsal thinking is also reflected in the application of music and “the twins play”. On music, Director Wang moved the cello directly to the stage and performed Mozart’s *requiem* live. The live performance of the cello requiem “reinforces the poetic atmosphere of the theatre and the fate of the characters”.⁶ “The twins play” is mainly reflected in the use of two benches on the stage for many times. In a “twins play” about Mother Jiao and Jiao Daxing, when they were talking about Gold, Mother Jiao beat the wooden bench to the ground with crutches for many times,

and da xing raised the wooden bench again and again and held it tightly in her arms. He holds not only the bench but the love of his heart, and the slut Gold of his mother's eyes. But if only with the daily attitude or traditional realistic thinking to appreciate, it is impossible to understand why the "requiem" live performance, as well as director wang arranged a number of "twins play" good intentions. Director wang yansong presents the drama in a "poetic" form, which is full of connotation and evokes endless aftertaste. However, this artistic conception "focuses on presenting the soul of a person, dramatizing the soul of a person"⁷. This is very similar to the "phenomenon is the essence" pursued by phenomenology. Thus, wang's "the wildness" entered the aesthetic field of phenomenology."

Returning to the thing itself" on the other hand, emphasizes returning to the original play and respecting the script. This requires the director to have a direct insight into the core of the play, and then proceed with artistic creation on this basis. The reason why director wang yansong can arrange and perform such a heavy Shakespearean tragedy effect is that he has his own unique understanding on the basis of respecting the original play: "It is in a little theatre, but it is not a little play, which I am particularly anxious to correct. Because this play has a dream world, very big!"⁸ These words fully shows that director wang's profound interpretation of cao yu's original plays, he wants to do is to through the fields of "evil", showing the evil of humanity, rather than a simple farmer revenge story. In his own words, "what is shocking is not the emity itself, but the inevitability of it."⁹ In addition, Wang Yansong version of the "wilderness" completely loyal to the script and dialogue, director wang through the careful study of the script, already understand Cao Yu's original plays: "The wilderness" represents the dilemma of human nature."¹⁰ The people of "the plain" are bitter, the bondage of humanity to deceit, jealousy and hatred. This kind of bondage will cost the lives of generations of people and even destroy the innocent lives "¹¹After understanding the core meaning of the script, how to accurately and brilliantly express Mr. Cao's original meaning, director wang took a new way to change the story into a symbolic way. He juxtaposed Mozart's *requiem* with the "pottery figurine made of loess" as a symbolic expression. This method is also the form expression of the script content. On the basis of a deep understanding of the original play, director wang presents the essence of the play in a more shocking and beautiful form, giving people a tragic and stirring aesthetic experience.

☐ "Intentionality activity" and the phenomenological aesthetic connotation of the *wildness*

Husserl has almost no works dedicated to the study of aesthetics, but this does not mean that the methods and concepts of husserl's phenomenology cannot be applied to aesthetic analysis. Through the analysis of the basic concept of phenomenology and the artistic conception and overall scenery of wang yansong's version of the wilderness, we make a bold attempt to apply the concept of phenomenology to the aesthetic analysis of the wilderness, so that wang's version of the wilderness gradually enters the aesthetic field of phenomenology. At this point, this paper will make a further aesthetic analysis of wang's "the wildness" with the help of the core idea of phenomenology -- intentional activity.

Phenomenology holds that consciousness is intentional, and people's understanding of things is the manifestation of things in consciousness

through such intentional activities. In the general theory of pure phenomenology, husserl said, "we understand intentionality as a characteristic of experience, namely, consciousness of something."¹² Consciousness always has a certain directivity, that is, pointing to something. The directivity of consciousness is the intentionality of consciousness, but this does not mean that intentionality is the only characteristic

of consciousness."Intentionality is the general experience in the field of the essential features, because all the experience in some way involved in it, although we can't in the same sense, every experience with intentionality, as we might, (for example) the experience of each as an object into a possible reflective vision - even if it is an abstract experience factors - said it has timeliness."¹³The directivity of consciousness means that the object can be included in the category of consciousness, which indicates that phenomenology presupposes the existence of the object.The object of phenomenology is not the pure real object or conceptual object under the naturalistic attitude, but an object that exists in consciousness and is given meaning by conscious activity. Whether such an object exists in reality is not to be set, which echoes the essential intuitions and phenomenological suspensions discussed above.The object of phenomenology is suspended, putting the belief of the existence of the objective world into brackets and leaving it, which is a kind of unsettling.Thus it can be seen that the object of phenomenology is, in the final analysis, the transcendence of the abstract thinking of the dichotomy between subject and object in traditional metaphysics.Under the traditional thinking mode of subject-object dichotomy, the object is either pure objective existence or pure subjective existence, while the object of phenomenology is not purely subjective construction, but is endowed with meaning by the subjective.

The pottery figurine in wang's version of the wildness, the requiem for cello, the "twins play" of striking down a bench and the "black forest" image in the third act are all phenomenological objects.They are not purely objective objects, nor are they purely subjective objects. Their existence is endowed with meaning by the director.This is not to say that the director gives meaning to these objects arbitrarily. In combination with the foregoing, the director creates on the basis of insight into the spiritual core of the play and respect for the spirit of the original play.The pottery figurine represent the souls of the protagonists, as well as those of the wildness.It doesn't matter whether such souls are really objective, but as an image they are alive and can be perceived.The cello live requiem implies the tragic fate of the characters in the play and sets the tone of the whole play.But if we only take it as the objective cello performance, and do not feel it in the whole play , we can not understand the author's intentions, but will feel the existence of the cello is very abrupt.Similarly, in the "twins play" in which mother jiao knocks over the bench three times, if the bench is only understood as a bench and mother jiao knocks over the bench as a simple action, it cannot be realized that this is the treatment of the externalization of dramatic contradictions. That is to say, instead of a stool, the "slut" gold in her heart was what the mother wanted to fight against. What the big star held and protected was also his beloved wife's gold.But the most important "black forest" in the third act, the director did not move the real forest to the stage, but encircle the Chou Hu with branches in their hands, until he was "crushed to death".If there is no understanding of the black forest at this time, is also the enemy tiger "heart of the forest" will surround themselves, then it is impossible to understand why the enemy tiger will finally unbearable inner torture until death.That is to say, in wang's version of the wildness, what the director wants to present to us is not the real "pottery figurine made of loess", the beauty of the live performance of cello and the fact that the mother jiao overturns the bench , let alone the real restoration of some specific scenes in Mr. Cao yu's play.Instead, it allows us to experience a special emotion or a certain meaning, which is endowed by subjective consciousness, while intuitively perceiving these images and scenes.What these convey is also the essence of Mr. Cao yu's original play, but director wang presents it in a form full of beauty. For example, in the prologue of the wilderness, Mr. Cao said: "the earth is gloomy, and life is hidden in it".Then director wang is acted by living person pottery figurine, in the first time, be born again from inside depressed earth, face the audience in theater, mysterious and strange, trigger a variety of conjecture.

The above images and scenes are similar to the meaning of intentional objects. They

are neither pure objective existence nor pure conceptual existence, but the existence of intentionality · it is directed by consciousness and endowed with meaning at the same time, which is also the transcendence of realistic thinking of traditional drama. Realistic thinking pursues a “truth”, that is, a true reflection, which may be affected by the traditional philosophical reflection theory, and is not within the scope of this paper. Under the influence of traditional realistic thinking, all artistic creation is based on the criterion of verisimilitude, that is, the higher the true reflection degree of works, the more beautiful they will be. However, director wang’s pursuit of the rehearsal of the wildness is not true. He does not pursue the consistency with the original scenery on the stage setting, but has his own unique form creation, such as the pottery figurine mentioned many times before and the live performance of the cello requiem. Also give up realistic thinking, the pursuit of formal beauty and Chinese opera art, professor Zou Yuanjiang once said in drama appreciation class: “Chinese drama art is a process of presentation that enables the audience to feel the formal beauty easily, that is, ‘how to do’, while experiential drama is an experience and performance process that enables the audience to feel the character image in the suspense of the plot, that is, ‘what to do.’” The latter focuses on the storyline (the reflection of “truth”). The former focuses on the meaning of form (the creation of “beauty”). Wang yansong’s version of ‘the plain’ replaces ‘black forest’ with clay figurines made of loess, which is a formal beauty in pursuit of presentation. It focuses on “how to do” rather than “what to do”. As tian han said, “we think the most important thing is ‘what to sing’, and the second is how to sing. Because the method of presentation is, after all, determined by what it represents. The means of expression of progress must be compatible with the content of the ideas of progress, or sudden intensification is counterproductive.”¹⁴

We do not care whether the concrete image exists objectively or not, we pay attention to the dramatic meaning it conveys to us, and the beautiful effect it shows at the same time. That is to say, what really makes us feel beautiful is not the objective existence of the pottery figurine, not the scene of cello performance, not the act of the mother jiao overturning the bench. And we feel that beauty is the meaning of independent existence on these objective scenes. For example, in the classic scene of the Wang Yansong’s version of the wilderness, the mother jiao pricked the “little man” to curse Gold with a steel needle : “the mother jiao is excited to shout to need the last one needle, the small black son behind is crying to shout to turn a face to come, the audience has clearly seen that child’s face to keep the blood stain eight steel needle.”¹⁵ If you only understand the scene from the intuitive surface, you will not understand: why does the mother put the needle in her baby grandson’s face? Baby grandson is a person or a ghost? If you have such doubt, it shows that you have not followed the footsteps of the director, still in a realistic way of thinking to understand the Mr Wang’s version of the wilderness. This is also the brilliant point of wang’s symbolic narration with the terracotta figurine: when the mother jiao prigs the needle to curse the Gold, it is actually hatred that sows the seeds of hatred, and the seeds of hatred finally bite the grandson, suggesting that the mother jiao’s hatred will kill her grandson sooner or later. At this time, director wang had already separated from the realistic way of thinking and used exaggerated dramatic expression to make the audience have a shocking experience of watching drama, which is memorable. What really surprised the audience was the meaning wang gave to the scene: “you really want to harm the people, but in the end you do harm to the people you least want to harm.”¹⁵

四、 Conclusion

In terms of the overall artistic conception and expression mode of wang yansong’s version of the wildness, the traditional realistic method was completely abandoned, and all the realistic and specific Settings were deleted. Instead, a new symbolic method was adopted, which better entered the deep heart of the

characters and was in line with Mr. Cao yu's expectation. In the rehearsal, Mr Wang used loess grain iron mesh to symbolize the wild land where lives is born, and "ancient pottery figurines sintered in loess" instead of "black forest", which made the symbolic power of black forest appeared in the third act of cao yu's original text at the very beginning. At the same time, the cello plays Mozart's requiem live to create a mysterious and quiet atmosphere matching the "pottery figurines". The scene collision between requiem and ancient pottery figurine, the formal fusion of classical drama and modern performance, brings a distinctive aesthetic experience.

FURNITURE AS FUSION OF THE AESTHETIC AND THE ETHICAL

Abstract | 1. Contemporary aesthetics as the art of living

Beauty can provide easy access to the ethics open to everyone with ideals about how to live. The index of self-transformation is from aesthetic value. Shusterman says that 'the good life for us -- is not there to be discovered but instead open to be made and shaped -- aesthetically.' This is an ethics conjoined with aesthetics, which means a contemporary version of kalokagathia.

2. Need for an aesthetics of applied art

Art is now transforming itself from art for art to art for real life. While modern aesthetics neglected applied art, we should consider applied art as the first candidate of art for real life. In contrast to environmental art, which is more concerned with process than with product, applied art retains a definite form of artifact. Function accords a cognitive basis to the appreciation of aesthetic qualities embodied in works of applied art. The great merit of applied art is that we can easily overcome postmodern relativism. Immersed in everyday life, applied art has a natural link to commercialism, sociology and ecology. Because applied art lives in a unique tension of moral and aesthetic values, a new style will evolve out of this tension between the union of aesthetics and ethics.

3. Why furniture?

Contemporary life is lived with furniture. The development of our life stage necessitates reconsidering the style and content of interior space. The shaping of interior space depends on money and individual preferences. Furniture can be an everyday commodity and at the same time, a work of art. As Praz observes, furniture and interior space reflect individual aesthetic taste. Furniture is a highly appropriate topic for discussing applied art from an individual perspective for those without expertise in furniture manufacturing. We use Western furniture -- chairs, beds and tables -- in contiguity with our bodies.

The analysis of practical utility embodied in furniture clarifies relations between the form of design products and the human body. Furniture mirrors human interactions as is evident in that the size of the group immediately influences the size of the table. Furniture, thus, represents the relationship of the human body to society. How to live one's own interior life is a contemporary problem of somatic ego.

Index terms | *Applied art; art of living; body; furniture; kalokagathia; somatic ego.*

WHY FURNITURE?

Beauty can provide easy access to the ethics open to everyone with ideals about how to live. The index of self-transformation is from aesthetic value. Richard Shusterman says that 'the good life for us -- is not there to be discovered but instead open to be made and shaped -- aesthetically.'¹ This is an ethics conjoined with aesthetics, which means a contemporary version of *kalokagathia*. We can formulate contemporary aesthetics as the art of living.

Art is transforming itself from art for art to art for real life. While modern aesthetics neglected applied art, we should consider applied art as the first candidate of art for real life. In contrast to environmental art, which is more concerned with process than product,² applied art retains a definite form of artifact. As the authors of *Functional Beauty* emphasize, function accords a cognitive basis to the appreciation of aesthetic qualities embodied in works of applied art. The great merit of applied art is, therefore, that we can easily overcome postmodern relativism. Immersed in everyday life, applied art has a natural link to commercialism, sociology and ecology. Because applied art lives in a unique tension of moral and aesthetic values, a new style will evolve from this tension between the union of aesthetics and ethics.

But philosophers have 'taken little interest' in applied art, especially in design, as Glenn Parsons noted in the third edition of *The Routledge Companion to Aesthetics* published in 2013.³ (A 'design' entry was not included in the second edition (2005) of this book.) This is probably because philosophers have not seriously addressed the problem of utility. Parsons and Carlson note that 'the last major touchstone in this area remains Kant's discussion in his treatise on aesthetics and teleology in 1790.'⁴ The concept of applied art itself shows that the formative principles of pure art are transferable to architecture and design. Applied art remains in substance an unexplored field of aesthetics.

The domain of applied art is vast. Because contemporary crafts in the age of technological environment are mechanically produced industrial crafts, traditional folk crafts cannot be of central importance to design aesthetics. Contemporary design studies that show a marked tendency to history invite scantiness of theoretical studies. Scholars in aesthetics, however, do not usually possess the expertise sufficient for technical discussions about industrial products. While we recognize a national trait even in micro electronic devices, these devices are usually beyond the reach of daily perception. Once industrial products are housed in cases, we have to limit the scope of investigation to their visible surface. The question is if the essential problem of applied art is likely to remain untouched by scholars.

Contemporary life is lived with furniture. The development of our life stage necessitates reconsidering the style and content of interior space, the shaping of which depends on money and individual preferences. Furniture can be an everyday commodity and at the same time, a work of art. As Mario Praz observes,⁵ furniture and interior space reflect individual aesthetic taste. Furniture is a highly appropriate topic for discussing applied art from an individual perspective for those without expertise in furniture manufacturing. We use Western furniture -- chairs, beds and tables -- in contiguity with our bodies, but the bodily discomfort caused by furniture creates serious problems for us. The analysis of practical utility embodied in furniture clarifies relations between the

form of design products and the human body. Furniture mirrors human interactions as is evident in that the size of a group immediately influences the size of the table. Furniture, thus, represents the relationship of the human body to society. How to live one's own interior life is a contemporary problem of *somatic* ego.

USE AS DISTINCT FROM FUNCTION

As the factors to determine the form of design products, functionalism mentioned practical purpose and technique to realize purpose. Chair is a medium to sit and repose. Bed is a medium to recline and sleep. Table is a medium to set something on and gather people around. Manufacturing techniques shape these purposes.

There is, however, a great difference between a long, narrow table in the Middle Ages for those sitting in a row and a round table set in the center of a dining room in the modern age. The style of sitting in a row reflects the linear social order of feudalism. The new demand for a round table symbolizes the advent of a more nuanced role in society. We see another conspicuous difference situated between the throne as the prime indicator of social standing and a purely private chair such as a sofa. The expression of dignity results from a social consideration for one's body looked at by others. Comfort is nothing but a feeling of physiological desire of one's body. Courtesy and pleasure regulated the rules of conduct in the cultural space of the 17th century when typical modern furniture was created. Function and technique alone cannot, therefore, provide a sufficient account of the difference in form among a historical and cultural variety of furniture.

The concept of the 'techniques of the body' developed in 1934 by Marcel Mauss⁶ might afford clues for solving this problem. His technique of the body means a technique to use *one's own body as a tool* for a certain purpose. This concept is concerned with the type of bodily habituated action, which originates from the concept of *habitus* in medieval philosophy. Thinking that the formation of this technique can be achieved most effectively with bodily education, Mauss argues that basic techniques such as walking, swimming, sleeping and reposing vary with time and place. The connection of sleep and bed, for example, is not self-evident because the technique of sleep is also feasible in a standing posture. Sleep on the floor itself can be varied in accordance with the additional use of a pillow, straw mat or fire. Similarly, one can repose not only in a sitting posture but also in a crouching position. The repose in the sitting style offers in history and throughout the world a wide variety of this technique with the supplements of chair or table. Insofar as we perceive sleep and repose as techniques of the body, they do not denote one single type of action. Notwithstanding Mauss' conception of a general theory about techniques of the body, his paper ended with the enumeration and description of concrete examples. My perspective is that this concept offers rich possibilities to enlarge the scope of the treatment of utility.

The concept of body refers not only to the physiological but also to the socio-cultural body. How to use a human body and its instrument is unconsciously regulated in our daily life. This unconscious consideration for the body should be named use as distinguished from function. Function that has sole reference to the instrument is a narrower concept than use. Considering the three terms of the relationship between body, furniture and society tied by use might make more persuasive the aesthetic explanation of the form of furniture. In the following sections, therefore, the problem

of furniture will be treated exclusively with the concept of bodily use.

FURNITURE AND THE OUTCOME OF MODERNIZATION

Except for a small number of people with expertise in production, we derive our knowledge of furniture from use. The essence of the experience of use consists of the daily repeated and casual style of experience with the human body. As Kōji Taki, a Japanese critic of design culture, emphasizes, the accumulated experience of bodily use plays an important part in the formation of culture.⁷

The interaction of body with furniture is conceivable from two perspectives.

1. Body affects furniture. For example, the pursuit of bodily pleasure caused by the secularization of society brought about the invention of the tilt back chair in the 17th century.
2. Furniture affects body. For instance, the influx of Western furniture during the modernization of Japan converted a sitting culture from the floor-seated to the chair-seated style.

While the first type, body affects furniture, has a more fundamental character than the second, furniture affects body, the second provides an interesting illumination of the acquisition of a new style of conduct by the presence of furniture.

Norbert Elias⁸ and Yi-Fu Tuan⁹ noted the importance of the role of civilization, which prescribed the development of the secular society in the early modern ages into the modern bourgeois society. While secularization regarded bodily pleasure as the index of positive value, civilization, stemming from it, assimilated this consideration for body with the sense of shame.¹⁰ This sense of shame in modern society made possible the separation from and priority to the public of the private. Concealment of the private from the eye of others prompted the differentiation and individualization of modern rococo furniture. The end of the state bed as the symbol of the mixture at court of the public and the private is typical of this tendency.

Secularization and civilization as its derivative are now challenged by the postmodern quest for a new style of community. The downsized family scale casts its clear reflection on the form of furniture. Table as the stage of communication becomes smaller with the decreased need for social life in the home. The height of a dining table in Japan is lower than before to adapt to a table set both for reception and for dinner. Tables manufactured only for temporal use such as those we pull down from the back of the seat in front of us on a train or airplane can no longer be termed the exception.

We should not neglect a significant change that is occurring in regards to the established usage of furniture because the use of architecture and interior space is given concrete form by the placement of furniture. Multipurpose furniture may revive in a different style from the Middle Ages with a reversal of the modern differentiation.

HOW TO LIVE A BODILY DOUBLE LIFE

COMPLEX CHARACTER OF MODERNIZATION IN JAPAN

How to surmount the outcome of modernization in Japan is complicated by the delicate problem of non-Western sitting. Because modernization in Japan could not be

separated from westernization, the co-existence of the wide spread use of the chair-seated style and the bodily memory of the traditional floor-seated style has forced the Japanese to live a peculiar double life on a daily basis. Although the urgent need for modernization prompted the implantation of modern furniture in the daily life of the general population, the Japanese have not yet attained the unity of their techniques of the body with the chair. This missing unity is from the short lapse of approximately 50 years after the diffusion of the chair-seated style, which effects no physical change of figure or walking posture appropriate for the floor-sitting culture. Contemporary Japanese are, therefore, more vulnerable than Westerners to bodily pains caused by the use of chairs.¹¹

While Western architecture realizes the very separation of the inside from the outside by wall, Japanese architecture makes distinct the discontinuity between the inside and outside by floor. Seeing that even now the Japanese retain a long-established custom of taking their shoes off when entering a home, their adoption of the chair-sitting culture remains partial. Since the floor-seated life does not need chairs, tables or beds, the main body of the Japanese household furnishings consisted of partition devices and cabinetry. Because the empty space of a traditional Japanese interior was rendered habitable by the arrangement of partition devices, furniture had a general tendency to be closely bound up with and functionally absorbed into the structure of a home. Still fond of this built-in system of furniture, contemporary Japanese who have already established the built-in dressing mirrors and washing stands are likely to make use of built-in beds and tables in the future.

The value of traditional Japanese culture can be fully recognized when appreciated in the floor-seated style. For instance, when viewed from the height of sitting on an open corridor, the panorama of a garden reveals its original beauty, a beauty that we cannot expect to see from the standing position. When sitting on the chair, participants in the tea ceremony cannot create a congenial atmosphere because intimacy derives from a sense of equality unsuited to the formal, public character of the chair. The dominance of the singularly frontal designs of furniture is due to the fact that people seated on the floor see things from a fixed perspective.¹² Now that the unconditional introduction of Western culture has passed, the Japanese should confront themselves with the adaptation of the traditional sense of space to contemporary life.

FUTURE OF THE JAPANESE SITTING CULTURE

During the Nara period (710-94) when the Japanese imperial family eagerly sought to legitimize its authority by importing Chinese codes of law and conduct, all buildings were constructed in the continental fashion. The structure of the Imperial Palace typified the Chinese dichotomy of the home and the office. Chairs enjoyed considerable use among members of the ruling class.¹³ With the coming of the Heian period (794-1185) when Japan shifted to molding its own unique aristocratic culture, the Imperial Palace was rebuilt in the *shinden* style to incorporate the two types of space into one. This new architectural style enabled the easy adaptation of a bare interior space for both public and private use with partition devices. The *shinden* style led chairs to fall into disuse. The official reversal of the sitting style from the chair to the floor is unparalleled in China and Korea.¹⁴ The fact that several trials of reintroduction of chairs in the history of Japan before modernization failed shows, as Kazuko Koizumi observes, that chairs 'remained at best precious toys of the few – decorative items that never found their way into the daily life of the people'.¹⁵ With the modern influx of Western chairs, sitting

in chairs figured significantly for the first time in Japanese life.

As a brief consideration of the physical and cultural merits of floor-sitting shows, an examination of a strong conservatism toward the floor-based culture coupled with an ongoing change of the usage of modern furniture will provide tangible clues for the future style of sitting in Japan.

TRAGEDY AND FARCE IN DUŠAN KOVAČEVIĆ'S POST-YUGOSLAV SCREENPLAYS

Abstract | Commenting on Hegel's remark that all great world-historic facts and personages appear twice, Marx famously appended that they do so the first time as tragedy, and the second time as farce. This paper intends to show how the film scripts by popular Serbian playwright Dušan Kovačević (b. 1948) can be read as a specific post-Yugoslav and post-communist artistic commentary on Marx's claim. In particular, we shine a spotlight on Kovačević's scripts for three well-known post-Yugoslav films, Emir Kusturica's controversial and much-discussed *Underground* (1995), Goran Marković's *The Tragic Burlesque* (1995), and Kovačević's own *The Professional* (2003). Within the larger frame of post-Yugoslav cinema, these three films represent an important segment of the ideological current of self-Balkanization (a term suggested by Croatian writer and film critic Jurica Pavičić), which seemed to be ubiquitous especially in the Serbian cinema of the 1990s, or at least, the most internationally renowned Serbian films of that period belonged to that trend. What these self-Balkanizing films have in common, according to Pavičić, is a perception of the Balkans as a zone of permanent and inveterate chaos, a zone to which occasional wars are actually rather endemic. The three Kovačević's scripts in question are very much in the same vein, yet they are substantially more farcical in nature when compared to self-Balkanizing films that were not written by Kovačević. It is in this specific Balkan mixture of tragedy and farce, exclusive to Kovačević's poetics, that one can detect an aesthetical reply to Marx's aforementioned view of history: tragedy and farce not as consecutive events, rather as two complementary artistic insights of the same event. And, while over the years there have been numerous exegeses on the political message purveyed in *Underground* by Kusturica, a lot less has been said about the effect of Kovačević's publicly known political stance as a royalist (i.e., a supporter of the 1945-deposed Karađorđević royal family) on his scripts. This paper tries to fill that gap by enquiring how this position plays into his post-1990 screenwriting oeuvre.

Index terms | *Dušan Kovačević; Emir Kusturica; farce; post-Yugoslav cinema; royalism; self-Balkanization; tragedy.*

INTRODUCTION

Popular Serbian playwright Dušan Kovačević (b. 1948) has left an indelible mark on the history of Serbian cinema. In the early 1980s, he signed the scripts for two comedies directed by Slobodan Šijan and set in the interwar Kingdom of Yugoslavia, in the Prince Paul regency period, namely *Who's Singing Over There?* (1980) and *The Marathon Family* (1982), both of which acquired cult status in the region, with the former also screening in the Un Certain Regard section at the Cannes Film Festival in 1981 and much later winning some polls for the best Serbian and even Yugoslav film of all time. Later on, after the breakup of Yugoslavia, one of Kovačević's pre-existing plays (as a matter of fact, most of Kovačević's screenplays are updates of his pre-existing plays) was expanded by himself and the celebrated director Emir Kusturica into an exhilarating, controversial, three-hour satire of the Balkans' permanent state of war, *Underground* (1995). This Cannes Palme d'Or winner was a textbook example of a trend in post-Yugoslav cinema that Jurica Pavičić, a Croatian writer and film critic, has labelled "the film of self-Balkanization".¹ Two further well-known examples of this trend, both of which have nothing to do with Kovačević, are Srđan Dragojević's *Pretty Village, Pretty Flame* (1996) and Goran Paskaljević's *Cabaret Balkan* (1998). What these self-Balkanizing films have in common, according to Pavičić, is a perception of the Balkans as a zone of permanent and inveterate chaos, a zone to which occasional tragic conflicts are rather endemic.

I would argue that three of Kovačević's post-Yugoslav screenplays – beside *Underground*, also *The Tragic Burlesque* (1995, directed by Goran Marković) and *The Professional* (2003, directed by Kovačević himself) – fit Pavičić's criteria of "the film of self-Balkanization". Yet these three Kovačević's screenplays seem to be substantially more farcical in nature when compared to self-Balkanizing films that were not written by Kovačević. In these three films, the tragic and the farcical aspects intertwine almost indistinguishably. Obviously, this is also true of both Kovačević's screenplays written for Šijan in the 1980s; a specific Balkan mixture of tragedy and farce has always been Kovačević's brand. But whereas, considering Kovačević's publicly expressed political stance as a royalist (a supporter of the 1945-deposed Karađorđević royal family), the two Šijan's comedies can be read in retrospect as some kind of nostalgia for the pre-socialist Kingdom of Yugoslavia, Kovačević's post-Yugoslav screenwriting work is deeply concerned with Yugoslavia's socialist era and with its remnants in the post-1991 Serbian society. What interests me here is, firstly, the way Kovačević's poetics comment on the related quote by Karl Marx that historic facts appear twice, *first as tragedy, then as farce*, and secondly, how does Kovačević's royalist agenda play into his post-1990 screenwriting oeuvre.

THE NEW WORLD

Underground continues the story where and when Kovačević's script for *Who's Singing Over There?* left off: in Belgrade on 6th April 1941, when the Luftwaffe began bombing the city. There and then catches fire Kovačević's and Kusturica's feral satirical stampede covering a turbulent half century of Yugoslav history, all the way until the 1990s. Which is to say Kovačević's 1977 play was updated (by both Kovačević and Kusturica) in order to include Tito's death in 1980 and the 1990s breakup war.

In the opening scenes of the film, the German "punishment" of the Serbian capital for the *coup d'état* against the accession of the Kingdom of Yugoslavia to the Tripartite Pact is harshly contrasted with archival footage of inhabitants of two other Yugoslav

cities, Slovenia's Maribor and Croatia's Zagreb, emphatically saluting the German occupying forces in April 1941. The film, however, neglects to mention that there were thousands of ethnic Germans living in those two cities and that it was mostly them who saluted the invaders, and that not only Slovenes, Croats and Muslims, but some Serbs, too, collaborated with the Germans. With such pieces of information and lacks thereof, *Underground*, although certainly a pro-Yugoslavist film in a sense, conveys a nationalist message that Serbs were always the victims and never the perpetrators, and that *other* Yugoslav nations bear all the blame for the evils that have befallen the Western Balkans. Such understanding of the meaning of the film has been prevalent in film studies, as well as being quite convincing.² Another possible reading was suggested by philosopher Slavoj Žižek, who contended in a 1997 essay that *Underground* was exactly what the Western gaze wanted to see in the Balkans: that this was a place of an incomprehensible, mythical cycle of passions, of Dionysian forces of nature that were inexplicable in rational terms.³

It was precisely this mystifying simplification that played a major part in the West's reluctance to speed up the resolution of the Yugoslav conflicts in the 1990s,⁴ although, of course, the simplification had already circulated in the West way before Kusturica triumphed with the film in Cannes. *Underground* was therefore, among other things, a translation of such statements into the language of film. And as such, it was not in any way a rare bird. As mentioned, Jurica Pavičić would later label a whole stylistic current of such post-Yugoslav films as "the self-Balkanizing film". But, what interests me most is the specific mixture of tragedy and farce which is very much at work in *Underground* yet considerably less potent in all the other films directed by Kusturica. One should take note that *Underground* is Kusturica's sole film with Kovačević as screenwriter.⁵ Being that other Kusturica's films do not intertwine tragedy and farce to such extent, and since many other Kovačević's film scripts (including the Yugoslav ones) do so to a large degree, one can deduce that in *Underground*, too, this is a feature to be contributed predominantly to Kovačević.

The core of *Underground* is a large cellar somewhere in Belgrade in which, during the Second World War, Serbian resistance fighter Marko hides his friends and family. Yet even after the war has ended, Marko keeps them down there, misleading them into belief that the war still goes on because that just suits his own selfish interests. Meanwhile, he enjoys life above ground as a national hero in the Communist Yugoslavia. The farcical aspects are exaggerated to the point of the film approaching the feel of a cartoon, but tragedy is omnipresent, too. After all, the three chapters of the film are very prosaically titled War, Cold War and War, and Kusturica and Kovačević certainly do not spare us the tragedies of wars. Given this "mythical cycle of passions", it is not difficult to understand why the film has attracted charges of Balkanism, exoticizing the Balkans and complying with the Western gaze. And the screenwriters' indictments of the Communists' corruption are laid down plain and simple. All in all, *Underground* is a very watchable film made expertly and with bursts of unsurpassable creative energy, but it is also a film with a highly dubious nationalist sentiment.

THE MADHOUSE METROPOLIS

Kovačević first wrote the play *The Tragic Burlesque* in 1990. The film version, directed by Goran Marković, is set in 1990s Belgrade but was filmed in Sofia, Bulgaria, in 1994. The story of the film is set in motion when a psychiatric hospital on the outskirts of Belgrade, due to the disintegration of the state and the sanctions imposed, runs out

of medications and other necessary means to function properly. A doctor decides to leave the hospital with his twenty-some patients, escort them to the city by tram, and try to accommodate them with their relatives or even anyone at all who would be willing to accept them. Unsurprisingly, this turns out to be a mission impossible, yet the underlying message of the film is that the Serbian society of the 1990s is already so psychotic in itself – through a chain of effects of wars in the region – that the institutionalized psychiatric patients can meld with the “normal” citizens almost seamlessly. Thus, the commotion the patients cause while cruising the Belgrade streets is not really all that extraordinary. The effect of this approach is deeply bittersweet: that which is funny is at the same time forcibly tragic. The film contains perspicuous accusations of the Communists’ wrongdoings, but, in the end, does not amount to much. The jokes are not hilarious, the characters are not interesting enough, the situations are weakly relatable and the story is thin in comparison to Kovačević’s best works. There is no hook to keep us hooked. *The Tragic Burlesque* could be marked as a minor addition to Kovačević’s screenwriting filmography.

NOTHING EVER CHANGES AND POWER IS EVERYWHERE

The Professional, too, was a play Kovačević first wrote in 1990. For the film version, shot in 2002, he updated the story as to cover the most recent period of Serbian history between 1991 and 2001. The film, whose popularity has only grown over the years and now enjoys a cult following, is a high-concept story if there ever was one: what if one day a stranger walked into your office who knew everything about you? Well, that would be because of his job, which he would have been performing with the highest degree of professionalism. In the autumn of 2001, one year after the fall of Slobodan Milošević, an old man with a large suitcase walks into a publishing house in Belgrade where a strike is taking place on the ground floor, ignores the security guard, ascends a few floors and asks the secretary for a brief appointment with the new manager. The manager, Teodor Teja Kraj, a former literature professor and a dissident from the Milošević years, has no recollection whatsoever of the old man, who keeps calling him by his first name and asking him, “You *really* don’t know who I am?” As it turns out, the old man, Luka Laban, is a retired officer of a national security agency, a dedicated professional whose duties in the previous decade included spying and eavesdropping on dissidents like Teja, and periodically taking action. He seems to be ill, perhaps terminally, and appears to have visited Teja to “confess his sins”. In the next “five minutes” of the appointment, which last for a few hours, Luka tells Teja how he twice came dangerously close to killing him because of his anti-Milošević and anti-communist rhetoric, and how he personally took care that Teja lost his job at a faculty. On the other hand, we get to see how Luka twice saved Teja’s life, the reason being that Luka’s daughter, a college student, was infatuated with her literature professor, Teja. Through these reminiscences, major episodes of Serbian 1990s history are revisited: the March 1991 anti-government protests, the 1995 fall of Knin, the 1996 post-electoral demonstrations and the 1999 NATO attacks. In Luka’s large suitcase, there are countless items from Teja’s life – things he lost or left behind.

The film is incredibly rib-tickling – one of the best jokes concerns the inflation crisis in Serbia’s economy which meant that a copy of a newspaper cost 80 million dinars⁶ – and *at the same time* unbearably sad: lives are shattered and loves destroyed. This is full-time tragedy and full-time farce on a large scale. Comedic attitude is shown to be one of the techniques to keep sanity, possibly in more ways than one: a rather corpulent lady remarks in 2000 that once Milošević is removed, she will be even fatter; now she

at least keeps a tight rein on her weight because of all the worrying.

The ending of *The Professional*, where it is revealed that Teja is still being monitored by the secret service even after the fall of Milošević and the retirement of Luka Laban, is all the more hurtful, the point being that on the level of politics, nothing ever *really* changes, the changes are nominal rather than real. The new power continues to spy, and it unscrupulously spies upon “its own” people. In other insights, *The Professional* shows what ubiquitous power, power that has no outside (the concept stems from Michel Foucault), means in a totalitarian society such as Milošević’s Serbia: in a society such as that, justice is unreachable because the perpetrators and the investigators of crimes are often one and the same; if one has access to enough power, one can arrange every political murder to come out as a suicide or an accident. The Foucauldian solution to the ubiquitous power, the resistance which must – and does – come from within the power itself (as there is nothing outside of it and the power pervades everything), comes, according to *The Professional*, from the personal ties that bind us. Every one of us has the capability to put personal above the political. And it is precisely at this point that *The Professional*, sad and tragic as it is, offers at least *some* faith in humanity: when all has been said and done, and before leaving to check himself into a hospital, Luka asks Teja to make a phone call to his daughter in Canada and tell her that they have met up – and *parted amicably*. Is this a right-wing agenda? Should putting personal matters above the political ones be considered a rightist attitude? I am tempted to say that at least in a totalitarian society, this is not a matter of left or right; rather, it is a matter of *resistance to the power*, which has shown time and again to be the real spiritus agens, the real creator of the world’s history, and a rectifier of at least *some* historical mistakes and injustices.

CONCLUSION

An oft-quoted saying attributed to Charlie Chaplin declared that *life is a tragedy when seen in close-up, but a comedy in long-shot*. Similarly, the three films discussed above have shown that tragedy and farce are not consecutive events as in the Marx statement; rather, they are two complementary artistic insights of the same event. Life can be, and often is, at the same time profoundly tragic and hysterically funny. It could even be argued that tragedy roughly corresponds to the Freudian principle of reality, whereas farce (or comedy in general) could be connoted to the principle of pleasure. And from a more cynical viewpoint, if we were to take it, comedy could be understood as humanity’s self-deceit to make the tragedy of life more bearable. The Western Balkans, famous both for their lengthy history of tragedies and excellent sense of humor, seem to be confirming this perspective.

480

Regarding the other task I have taken on in the introduction of this paper, my conclusion would be that the three Kovačević’s scripts in question do not deal explicitly with the Karađorđević royal family, but they do exhibit a clear dislike for the Communist regime and its continuation into Milošević’s Serbia, which, combined with Kovačević’s soft spot for pre-socialist Serbia as shown in some of his other works, can be interpreted as fully consistent with his political stance as a royalist.

THE “MUNDI” ON THE “MAPPAE”, OR HOW A RETROACTIVE UNDERSTANDING OF MIEVEAL CARTOGRAPHY RECONFIGURES OUR NOTION OF LANDSCAPE

Abstract | The presentation attempts a reevaluation of the cartographic curiosities of the mappaemundi. By emphasizing their temporal openness, mappaemundi become chronicles of the world’s transformation, acquiring a critical position in a proposed genealogy of narrative-sensitive mapping technologies. We will showcase ways in which these peculiar cartographies reformulate error and inaccuracy in the design of synthetic environments of decentralized intelligence – environments where time and space resonate equally. By assuming such a chrono-geographic perspective, an overall displacement of the corpus of medieval spatial understanding is attempted and through that, a transformative lens over the entirety of the period is cast. Drawing from both geographical treatise and travel memoir, mappaemundi are seen as “sedimentary” cartographies whose flow of recordable information stems from specialized observation as well as oral transmission, thus abructing the epistemological distinction between writing and speaking. Such an oblique examination of cartographic representation is called forth in an attempt to revise our understanding of the terms Landscape, World and Earth – entities made static in service of their modern scientific description. Philosophical understanding of Landscape persists on conceptualizing it as a part extracted from a whole. The “mundi” on the “mappae” are, of course, incomplete but their image suggests a totality. It is from that propositional wholeness that a regenerative approach in the direction of overcoming such epistemological caesurae is drawn. Deleuze and Guattari describe landscapification as the rendering of the extracted part under a signifying regime of faciality. Looking for more liberating somatic analogies while distancing ourselves from such face-obsessed semiotic regimes, we revisit a form of body metaphor that latently resides within the mappaemundi, usually superimposed over their very surface. The dispersed, fragmented body seemingly rearranging the Earth, displaces the somatic analogy from its modern conception of unity and reterritorializes it in a universal horizon of expectation. To that opening-up towards the Earth, Reza Negarestani suggests a “landscape” of Thought, addressing the epistemological caesura in the form of Freudian Trauma, a trauma whose topological essence allows for a liberating synthesis of interiority and closedness. It is to that topological folding of inside and outside, the bottom(less)-up reformulation of the Earth, that we escape in order to retrieve a conceptualization that doesn’t rest in the assemblage of similar entities, but – through its containing of differences, intensities and ruptures – attempts to restore the Self-World continuum.

Index terms | *mappaemundi, chrono-geography, Middle Ages, geophilosophy, Earth, Landscape, Traum*

How can the supposedly modern notion of landscape be linked to the medieval cartographic curiosities of the *mappaemundi*? The following text will attempt to restore medieval conceptions of space to a historic continuum that overcomes the caesura between the Middle Ages and Modernity, suggesting that an immersion into medieval formulations of Landscape, Earth and Cosmos can have a profound effect on modern concerns of spatiality¹. Landscape, as a category, is inextricably bound with an understanding that is of an aesthetic order, usually formulated through concepts originating from the area of aesthetic philosophy or through a visualizing practice of representation². Those conditions are usually detected in a specific historic time that makes landscape seem as a privilege of the modern world, such a distinction however cannot be self-evidently valid. In an epistemological level, landscape is put forward through ruptures or caesura. The idea of an entity subtracted from nature is therefore situated or correspondent with a historical rupture of pre-modern and modern. Such an epistemological distinction takes different shapes in the context of differing sciences that all have to do with the study of nature in parts. Through such a survey of landscape's appearances, the ideas of Earth and Cosmos also begin to appear as separated from it. Both those entities are extremely critical in our problematic correlation with the natural environment in a way that such a relation cannot afford to be strictly aesthetic anymore³. Bringing landscape, Earth and Cosmos together through the lenses of

1 . Yi-Fu Tuan describes the transition from the one era into the other as an axial shift. In such an understanding the Middle Ages are thought to be vertically organized with all ontological hierarchy and ontological significance being attributed around a vertical axis mundi. Such a conceptualization is evident in all forms of lived experience and is viewed as a guarantee of existential security. In Yi-Fu Tuan's schema, the axial shift occurs with systematic sea travel and the perfecting of navigation technologies that seem to create a horizontal, planimetric understanding of the world, which is now unbound from rigid cosmographical models and open to extensive exploration and charting.

Yi-Fu Tuan, *Topophilia, A Study of Environmental Perceptions, Attitudes and Values*, New York, Columbia University Press, 1974

2 . What is being debated here is the possibility of landscape existing beyond mediated representations of the Earth or the natural environment. Descola's latest contribution to the matter revolves around two basic modes of understanding and conceptualizing landscape. The first is called extensionist and attempts to view landscape in a context wider than that of an aesthetically mediated representation, understanding it either through the lenses of human labor, meaning every piece of humanly conditioned land, or by calling landscape every subjective experience of the natural environment. The second mode is called comprehensional and works through specialization and systematic description of landscape under precise classification. Descola links it with the primary tradition of writers in the history of art, like Ernst Gombrich and Kenneth Clark but such a mode is also evident in scientific description as well. Both manners are considered to be problematic by Descola who instead proposes an understanding of landscape not as an object but landscape as transfiguration, meaning through the very process that produces it. Descola Philippe, *Landscape as Transfiguration*, Edward Westermarck Memorial Lecture, October 2015

3 . Latour describes the contemporary questioning regarding the earth in what he calls the terrestrial node, a new node to be added next to his diagrammatic understanding of the global-local continuum, that attempts to reformulate the possible connections and contingencies the human collective can develop with the Earth. This has to do with a newfound situation in which the Earth responds to humanity's triggering, what could be put under the, rather prob-

the formerly isolated Middle ages could trigger a reconfiguration of epistemological ruptures in that direction⁴. Our attempt seeks to draw from the *mappaemundi* an expanded landscape that is, however, still produced through representation⁵. Our observations cannot of course be valid for all those *sui generis* cartographic objects since only naming and registering all of them would constitute a considerable task. Without wanting to underestimate the variety and contradictions of such a difficult to summarize corpus, our attempt will make some general observations before focusing on the map of Ebstorf.

The first point one should emphasize is how *mappaemundi* can be connected to what

lematic when used in the context of the humanities, term Anthropocene. Regarding the notion of Cosmos, Koyre's classic observations regarding the changes from a closed perception of the world to the realization of the open universe are still relevant today in their basic formulations. Sloterdijk's account is also useful, since it describes the same process in term of notions that connect cosmic perception with microscopic, human intimacy, as theorized in his "Spheres" project. see Latour Bruno, *Down To Earth, Politic in the New Climatic Regime*, Cambridge, UK, Polity Press, 2018, Koyre Alexandre, *From the Closed World To The Infinite Universe*, Baltimore, The John Hopkins Press, 1957. For an elaboration of Sloterdijk's project that is shorter than the "Spheres" series, see Sloterdijk Peter, (2005) *In The World Interior of Capital, For a Philosophical Theory of Globalization*, Cambridge, Polity Press, 2013

4 Our understanding of the reconnection of those three areas through a process of reconfiguring the importance of caesurae, finds a perfect voice in Reza Negarestani and his elaborate theorization of trauma as an ontological factor of co-existing with the Earth. The trauma of the modern man qua citizen, he says is not only expandable to traumas of man and the earth but also extendable to traumas which plunge its putative verity into cosmic depths. It is for this reason that for the post-Copernican revolutionary subject who is determined to deepen the geophilosophical synthesis of its regional horizon along the geocosmic continuum through traumatic binding of the universal absolute, the traumatized figure of the citizen or the modern man appears as the here-and-now feld for local unbinding of universal synthesis. In Negarestani's elaboration, extraction equals new contingencies in a way that is particularly useful when thinking about our mediated relationship with The Earth. When The Earth is viewed as being traumatically extracted from the cosmic continuum, a consonance of almost analogical order also occurs in the microcosm of human perception. Negarestani later notes: In the same vein, the deepening of the geophilosophical synthesis of the modern man – that is, its relation to the territory, the state, the polis and the contingent natural history of the earth – through remobilizing the mediating function of traumas harbours a certain anti-axiomatic surprise or a vertiginous effect. This, as argued, is an expression of the non-local turn from the axiomatic (indexed by the territorializing system or the state) to the non-axiomatic (inherent to the universal synthesis of the open). Earth, territory, State, the modern. We can assume that this trauma-centric, transformative perspective can also apply to our understanding of landscape as a piece of land epistemologically subtracted from the natural continuum. Negarestani Reza, *Globe of Revolution, An Afterthought on Geophilosophical Realism, Identities*, issue: 17/2011: "Heretical Realisms", pp. 25-54

5 That is a landscape that, in Descola's terms is produced through *in visu* transfiguration. Having established his understanding of the "landscape as transfiguration" assumption, the anthropologist goes further in describing the modes by which such a transfiguration is possible. He discerns between two modes, transfiguration *in situ* and *in visu*. The first has a formal, European garden as a paradigmatic case, while the second is mostly established through landscape depictions in European painting. Descola implies that in order to extend the notion of landscape, we should look for counter-examples or alternatives to such highly canonized examples in landscape theory. *Mappaemundi* could be seen as such an alternative to stadardized *in visu* depictions of landscape. Descola 2015

can be described as a synthetic geography, a term that is derived from the synthetic tradition of travel writers⁶. This refers to the composition of travel narratives through recollection of the journey after the traveler has returned and after having combined the experience he collected with already existing sources and knowledge in order to confirm or readjust it. This knowledge was to be exploited by the next travelers but also by non-travelers in a process of virtual or imaginary travel. In order for them to reassemble their memories or to visualize a landscape they have never seen before, writer and readers respectively were supposed to channel spatio-mnemonic techniques that were inherited to them through the rhetoric tradition of classical antiquity and that connect mnemonic or visualizing faculties with the conceptualization of imaginary loci⁷. Such a geography that goes from lived experience to schematic understanding and from personal to communal level suggests that we view the Middle Ages as a period of decentralized intelligence and the mappaemundi as a diagrammatic aid to such a contemplation of Earth and Cosmos through the communal experience of travel⁸. Assuming that the very vocabulary of the mappaemundi's graphic conventions

6 . This tradition, as described by Shayne Aaron Legassie in his evaluation of medieval travel culture, could be seen as a rather interesting and original way of describing and conceptualizing landscape or the natural environment. According to Legassie, works belonging to the synthetic tradition exhibit the following traits: 1. A statement to the effect that the text is an image painted with words, designed to enable readers who have not been to the Holy Land to "picture" it in their minds. 2. A discussion or dramatization of the difficulty involved in creating such a verbal map. 3. An insistence that the finished book is the result of writing undertaken after the author returned home from his journey, sometimes with the help of library research and/or notes taken during the travels. 4. A tendency to equate the endurance of the journey's discomforts and the resistance of its temptations with the subsequent labor involved in composing the account. In many cases, this entails associating – or even conflating – the writing with the memory work of pilgrimage.

This requires a parallel to be drawn between book writing and the meditative practice of pilgrimage. From both the travel accounts of pilgrims and the unique medieval tradition of documentation, Legassie draws an interesting variation on the theme of travel and recollection. Memory, and more precise the memory of a place, he notes, had a strong effect on a pilgrim's perception of what a successful journey was supposed to be. Legassie, Shayne Aaron, *The Medieval Invention of Travel*, Chicago and London, The University of Chicago press, 2017

7 We can confidently assume that maps are part of a spatio-mnemonic pedagogic tradition and thus also part of libraries and pedagogical institutions. Going back to systematic research done regarding theoretical evaluations of mnemonic techniques like those by Mary Carruthers and Frances Yates, we can trace commentary that implies the possibility of a spatiality of memory. For those writers, memory is something that can be charted through a system of localization or loci that are part of wider mental constructions formed in the faculty of imagination. In such mental models, those specific loci are organized and kept discreet from one another in a way that seems to conduct a vocabulary not very far from a cartographic one, that could also have some sort iconic relation with objects of the real world.. see Carruthers Mary, (1990), *The Book of Memory, A Study of Memory in Medieval Culture*, Cambridge, UK, Cambridge University Press, 2008 and Yates Frances, (1966), *The Art of Memory*, New York, Routledge, 1999

8 Yates specifically refers to the semantic correlation that can develop between places or architectural elements and memory, while also outlining a possible range of objects that can sufficiently act in such systems. This range includes monuments, cathedrals and amphitheatres and, in the context of this discussion regarding the mnemonic registry of travel, roads and cities. Yates 1999

is formed considering such paradigmatic examples of mnemonic loci, such an elaboration could also explain the very spectrum of what is considered eligible for cartographic representation.. The symbolic code of medieval cartography, the element that is to take the shape of the well-known map-legend in modern maps, descends from an intellectual tradition of precise memory and recollection that border on an almost abstract, rational thinking⁹. In order to support the general validity of this spatio-mnemonic organization of the world, one need to go no further as to return to books themselves, whose pages were also organized into loci throughout the medieval period. The fabric of things is not supposed to be static during the Middle Ages since it is constantly vibrating by a fluid mobility of meaning. The material world is constantly transformed or viewed as text¹⁰. Past present and future are organized in a logic of layering of different levels of interpretation not very far from modern conceptions of layering. In such formulations the physical journey acquires the same significance as it's subsequent synthesis and rearrangement in memory or the virtual meeting space between memory and other cognitive activities that succeed it. That "after the journey" is culturally or socially formulated and it is absolutely embedded in medieval thinking. Besides the understanding of the work of the individual in accordance with the social continuum or the specialized, theological and scientific context surrounding it, that "after the journey" validates the very receiver of such an attempt, thus presupposing the dynamic engagement of the reader¹¹.

The map's distance from the viewer or interpreter, in any possible context that such a map may appear, either in big physical form like the Ebstorf map or in printed form inside

9 It is worth noting that in the level of the mappaemundi's cartographic conventions, cities are usually depicted as towers or architectural elements and entities and not as miniature versions of the actual city. The optimization of a city's mnemonic registry requires a high level of diagrammatic abstraction that reduces the city to a building and the building to a cartographic module that is visible on the map.

10 Interestingly, the word used through the Middle Ages to denote what we today call continents, was "partes," the term also used to describe the structural organization of texts and books in the context of a "divisio". Geography is thought of as text. Even other instances like cities and monuments or existing landscapes are being turned into "text" through hybrid models that do not discern between topographical description, historical analysis and eschatological commentary. Legassie 2017

11 The reader, probably mobilized by the repressed desire of realizing the pilgrimage to the Holy Land himself/herself, is constantly encouraged through those writings to revoke the mnemonic techniques of his/her rhetorical education in order to mentally construct the biblical scenery actually experienced by the pilgrims. The relevance to memory is not to be found solely in rhetorical education but also in the realization that these «scenes» are often composed through representations of actual, lived experiences. *ibid*

books, seems to construct the condition of a suspended observing subject gazing over a minimized object, fulfilling the impression of a world to be perceived panoramically. Through such an understanding of a dominant distant gaze, the mappaemundi serve as functional instruments to the monastic practice of speculation by inscribing the open-ended process of Christian expansion inside an “economy of salvation.” We can therefore draw the conclusion, that a contemplating position of visual superiority and control over an environment, one that is usually regarded as modern, does also apply to medieval cartography. In the Ebstorf map, Christ’s body is severed in parts, bringing to mind the metaphorical presence of his body in holy communion, but acquiring spatial dimensions in the Ecumene’s scale. The members that were dispersed and fragmented tend towards a higher unity, that in contrast to the additive macrocosm that takes over the map, remains introverted, towards the center and the glorious event of the resurrection being represented in the supposed position of Jerusalem. As a hybrid representation between cartography and christological imagery, a mappa mundi thus depicts the Ecumene’s surrender into the Christ’s embrace not as rhetoric analogy or the virtual space of members organized around the head, but having as it’s material milieu the very flesh of the Saviour. Since the twelfth century, the micro and macro-cosmos dichotomy is taken as a part of the wider conflict between the possibility of a human nature of god and the possibility of a divine essence within humans¹². God takes man’s place and the terrestrial globe takes over the world. The virtual journey the map offers is not only structured through imagination or speculation. It is entangled in the economy and everyday life of a monastic community, as emphasized by its name in the case of the Ebstorf map¹³. The Middle Ages can therefore be conceptualized as a network and the mappaemundi could be seen as diagrammatic depictions of that network-world. The centers or shall we say nodes it depicts, local, peripheral or

12 The Saviour’s body organizes the entire surface of the map by defining the world’s boundaries and signifying the cardinal directions. His face dominates the east axis. The map is thus seen as physical argument in favor of God’s omnipresence as well as his emergence from the Earth itself. The most interesting point, however, is the possibility that the map somehow addresses the ecumenical community that constitutes the church. Kupfer implies that the map’s cartographic agenda is inextricably linked to the function binding it to the community. This community may not necessarily identify with the entire globalized world, but perhaps concerns a smaller monastic unit that could manage and «use» the map on a daily basis. Kupfer Marcia, *Traveling the Mappa Mundi: Readerly Transport from Cassiodorus to Petrarch*, στο Baumgartner Ingrid, Debby Nirit Ben-Aryeh, Kogman-Apel Katrin., (ed), *Maps and Travel in the Middle Ages and the Early Modern Period*, Berlin, Boston, Walter de Gruyter, 2018

13 Drawing from the work of Jeffrey Hamburger, Kupfer links mappaemundi with mental practices that were practiced in monastic environments during meditation. Until the late Middle Ages, icons or objects of human construction could function as vehicles with which the soul emerged from its physical being approaching the divine vision. (visio dei) Mappaemundi are therefore economic or ideological perpetrators of the daily practices and routine of a monastic community, while at a second, less obvious level, they participate in the constellations formed by such communities, first with the rest of other similar societies and then with the wider world, as far as the daily practice of the nuns is concerned. *ibid*

metropolitan, acquire a special position within the spectrum of information that is eligible for documentation. It is through the identification with a distant center that the microcosm of the convent and its associated environments are assimilated to the macrocosm of the globalized Church. Put in christological terms, the microcosm and macrocosm dichotomy renders the spiritual agreement through which the chronicle of the Christian Salvation of Humanity unravel through geographical space.

Despite any divergent interpretive modes and an abundance of possible descriptions, the map of Ebstorf certainly describes a symbolic equation between body and Earth. Such a theme seems at first to be solely dependent on the deleuzian conception of faciality and the signifying regime that goes with it, through a reduction of the whole body to the face¹⁴. What such an understanding does not take under consideration is a dichotomy between body and flesh, that is central to the medieval conception of corporeality.¹⁵ This tension can be retrieved through a deepening into the epistemological mechanisms that define the medieval imaginary regarding the body and its various appearances. Such an divergent appearance in our case, can be found in the cartographic monster depicted on the mappa. Those monsters seem to be mapped as the “other” of Christianity. It is not by chance that this divergent bodies present a fluidity of form that is usually attributed to a dissolution of the face and a displacement of those organs that have an immediate connection with the senses, specifically vision. They are characterized by anomalies in their physiology that attest to their marginal positioning within the cosmic plan. The juxtaposition of flesh and body allows us the daring assumption that there happens a grounding of the body in the mappamundi.

14 Deleuze and Guattari’s commentary of the concept of faciality has a lot to offer on the subject of a signifying regime that derives from the face of Christ and its dominating influence, specifically in the visual arts. In the writers’ own words, “on the brighter side, painting has exploited all the resources of the Christ-face. Painting has taken the abstract white wall/black hole machine of faciality in all directions, using the face of Christ to produce every kind of facial unit and every degree of deviance. In this respect, there is an exultation in the painting of the Middle Ages to the Renaissance, like an unbridled freedom. Not only did Christ preside over the facialization of the entire body (his own) and the landscapification of all milieus (his own), but he composed all of the elementary faces and had every divergence at his disposal: Christ-athlete at the fair, Christ-Mannerist queer, Christ-Negro, or at least a Black Virgin at the edge of the wall. The most prodigious strokes of madness appear on canvas under the auspices of the Catholic code.” Deleuze Gilles, Guattari Felix, *A Thousand Plateaus. Capitalism and Schizophrenia*. The University of Minnesota Press, 1987

15 Alan of Lille describes flesh as a cloud that obfuscates vision. The body in the Middle Ages is characterized by a fluidity that is most likely understood as a dangerous instability. What sets man apart from the world of the nonhumans is not the ability to think but to perceive the difference between the senses and the mind, or to distinguish the physical-material background of his/her action from the psychic or spiritual one. In Suzannah Biernoff’s work, distinctions between body and flesh seem to move away from a more restrictive understanding of duality as a dichotomy between body and soul, the physical and the corporeal, thus attributing a wider range of signification to corporeality itself. Biernoff Suzannah, *Sight and Embodiment in the Middle Ages*, Basingstoke, UK, Palgrave Macmillan, 2002

They can now be seen as inventories of all kinds of bodies or indicators of a bodily spectrum that showcases the possible levels of proximity those bodies can possess towards the cosmic realization of Christianity or a desired communion with the Earth.¹⁶

The hypothesis of a geo-somatic imaginary cannot be sufficiently described by analogical thinking and micro-macro interactions. Those modes act through similitude when in such a case, another mode is needed, that is able to support similarities between non similar entities like the earth and the body. In the context of the Middle Ages, it is allegory that provides a symbolic way of thinking that is able to transform the natural world into symbol¹⁷. Scholastic tradition starts off in continuation of Aristotelian philosophy but then succumbs to the iconographical tendency of the allegorical turn, absorbing the compulsion of turning every object or relationship, into iconic symbols. The contingencies between terrestrial and somatic thinking that we try to bring to the fore would benefit from more paradigmatic cases. Such an example can be located to the cartographic experiments and curiosities of the priest and mystic Opinicus de Canistris, in whose work the formal union of body and geography not only supports our assumption of a geo-somatic mode of imaginary thinking, but also puts forward a sui generis articulation of the allegorical depiction in a hybrid boundary zone between painting and cartography¹⁸. What is interesting in Canistris' oeuvre is the different ways

16 Biernoff describes vision as the truest and at the same time most false of the senses, the one with the greatest ability to reveal the truth and the greatest potential to deceive. The flesh is identified with a loss of humanity or degeneration and physical illness is usually seen as a fluidity or instability of form that is primarily visual. The word "body" possesses a series of positive meanings. One can even mention today's multiple uses of the word "corpus". The body gives shape and renders abstract structures meaningful. The flesh seems to be a notion much less beneficial, sometimes even repellent and harmful. From Augustine on, the presence of Flesh marks the absence of meaning and the bafflement of thought, while after the Fall, it is flesh that is seen as a perpetual carrier of sin. *ibid*

17 The word allegory seems to have replaced the initial word *Hyponia* (ὑπόνοια) that referred to a concealing function of language. The genetic material of allegorical discourse presupposes the existence of a hidden meaning or a semantic barrier that the reader must overcome in order to reach the mystic knowledge. Medieval thinkers describe such knowledge in visual terms, as enlightenment or an uncovering of the truth and their approach is characterized by an anxiety regarding its oscillation between truth and deception. Angus Fletcher further notes that in the Middle Ages a tendency towards imposing global, religious or secular, boundaries in a literal and metaphorical sense, has led to the rise and establishment of an allegorical way of thinking. That is evident in every area of life where some sort of tendency towards achieving a totality exists. «Political dreams of a globalized brotherhood, collective desire for the creation of a totally organized body of knowledge, the religious expectation of a theological souma,» all these claims of universality formed the framework for the development of allegorical language and writing. In this context, Fletcher argues that the stabilized position of man in the world and the complete delimitation of his/her world are factors that counterbalance the medieval mind's volatile tendencies to overcome bodily restraint and approach a state of divinity. The fixed and enclosed world of the Middle Ages is therefore seen as essentially a launching field for spiritual aspirations. Fletcher Angus, (1964), *Allegory: The Theory of a Symbolic Mode*, Princeton, New Jersey, Princeton University Press, 2012

18 Karl Whittington refers to the works of Opinicus de Canistris with the term *Body-Worlds*. The priest's peculiar work consists of experimental projects which are supposed to be

the designer articulates the allegorical bodily forms on top of geographical backdrops that seem to be connected to the portolan charts of the same period. Those are techniques of doubling, reflecting and superimposition of different layers, combined with marginal notes and smaller diagrammatic formations that make the result feel dense and complicated, difficult to read or decipher. In the most simple cases however it is self-evident that those body-worlds are based on actual depictions of geography.¹⁹ Even though allegory in literature and painting usually isolates elements, Opinicus distances himself from such an approach by putting his figures on top of maps that can be viewed as navigable and cohesive.

The portolan charts are rather precise depictions of the natural environment that in the medieval man's mind is of divine creation. Those charts may appear in Canistris' mind as hybrid objects between cartographic accuracy and transcendental creation, not like hidden truths behind the mask of an imaginary narrative but in the form of allegorical meanings that are assimilated inside empirical evidence. As newly discovered relics of the original creation of the world that is made tangible for the first time, the portolan charts seem to carry an inherent meaning that is at the same time symbolic, theological and perhaps even somatic. The somatic dimension is evident in those examples of Canistris' experimentation that introduce allegorical somatic forms in geographical complexes that seem to articulate some sort of cryptic geopolitical commentary²⁰. The detour we took through Opinicus de Canistris supports our geo-somatic assumption and adds depth to our existing understandings of allegory and

designed as a response to an unsettling, revelatory vision that he reportedly received in bed during a night of severe illness. This gives the drawings the dimension of theological exegesis and interpretation expressed in the representational terms of cartographic practice. Whittington Karl, *Body-Worlds, Opinicus de Canistris and the Medieval Cartographic Imagination*, Toronto, Ontario, Pontifical Institute of Medieval Studies, 2014

19 Whittington thinks that Opinicus de Canistris uses the portolan charts, contemporary examples of actual cartography, as backgrounds for the composition of his geographical forms. Whittington 2014. The portolan charts are surprisingly accurate depictions of the Mediterranean coastline, most likely intended to be used in navigation. These maps are traversed by lines in radial formations, implying routes that resemble the Rhumb lines of Mercator's sailing system and mapping projection, where a straight line between two points is equivalent to a loxodrome, an arc that crosses all meridians at the same angle, therefore without having to change course. Contemporary study of portolan charts undermines the established view of the "modern" world as being the only one to have access to technologies that bend physical space, making it more accessible and receptive of human mobility. Contemporary to the highly symbolic or graphic word-maps we are dealing with, portolan charts prove that a precise understanding and regulation of space did exist during the Middle Ages therefore removing such a privilege attributed only to the post-medieval period.

20 Canistris' geopolitical commentary are often disproportionately reactionary and conservative in our modern eyes and sensibilities, especially in relation to their imaginative representational solutions and achievements in terms of graphic design. For example, Africa's body is depicted as female, unclean, inferior and overtly "earthy", while that of Europe is usually male, almost transparent, white and airy. *ibid*

writing. Instead of depicting those themes that were usual in allegorical representation, Opinicus allegorizes the empiric shapes of this new, chartable world and, in extension to that, the ways that those geographical shapes are graphically connected with each other when techniques of embodiment, layering and doubling take place. In that way, polysemy and constant displacement of meaning define an interpretive approach of the very shape of the Earth with all its antithesis and contradiction²¹.

Our effort began by acknowledging a strong spatio-mnemonic tendency located in medieval landscape description and narration where memory takes on an important and defining role. It firstly denotes the recollection of an existing landscape in memory. Mnemonic metaphor is afterwards considered as a formation in memory of existing landscapes without ever having to visit them, reassuring us of the strong cultural factor in shaping such tendencies. What was also stressed is that mnemonic metaphor of landscape is methodologically of the same order with the cognitive formation of imaginary and non-existent spaces that have been drawn from the pedagogical background of rhetoric training. Mappaemundi may not contribute to the refinement of cartographic history but are indicative of a body of cultural practices that strongly present the idea that a landscape can be narrated and read²². Finally, our effort established the hypothesis of a geo-somatic imaginary that seems to predispose the use of the somatic model in design culture of the upcoming centuries while at the same time undermining its regulatory dimension. Our central point was that catering back to the Middle Ages in search of spatial models is valid but many of the points made or insights acquired would not have been possible without a very first strong assumption of historic rupture. Though the process of questioning such an absolute distinction, we have a chance to draw repressed sides of the existing material in a way that pushes our existing preconceptions out of their well-established locations. In that

21 Suzanne Akbari distinguishes between vertical and horizontal allegory, establishing a possible range of allegorical speech. Vertical allegory refers to hidden meanings - transcendental truths not able to be expressed in language, while horizontal allegories explore the multiplicity of words and things, praising the unstable nature of meaning.

Akbari Suzanne Conklin, *Seeing Through the Veil: Optical Theory and Medieval Allegory*, Toronto, Buffalo, London, University of Toronto Press, 2004 Whittington estimates that Opinicus' Body-Worlds are situated exactly between the serious, revealing allegory of the first category and its counterweight found in the second. **Whittington 2014.**

22 What is important in this spatio-mnemonic logic is precisely the way it underlines the idea of a readability of everything. In many such descriptions, landscape is equated with text, and is therefore readable, and text is regulated though geographical metaphor provided as a tool of rhetorical, spatio-mnemonic education. All these elements underline a vocabulary of organization that is both monumental, textual and geographic. Legassie traces it back to a medieval tradition of commentary on Aristotle in whose thinking experience is to be interrelated with remembrance. It is such a tradition of thinking that allows Aquinas to assert that events occurring in a person's lifetime are not yet experiences, since for him the formulation of experience occurs when many discreet things come together and are perceived in memory (*ex multis memoriis unius rei accipit homo experimentum aliquo* «). **Legassie 2017**

context, the isolation of the middle ages from the modern period is not so much in need of radical destruction but most probably asks for a rejuvenating approach. The idea of rupture is not self-evidently good or harmful. Our final position is, that firstly through its acceptance and secondly through negotiation only, are we in a position to claim that we can make short and small contributions into a demanding environment of scientific ambivalence and polysemy.

Christos Montsenigos studied architecture at the National Technical University of Athens (NTUA) and currently studies Architectural History & Theory at the same institution's Postgraduate programme, "Research in Architecture: Architectural Design – Space – Culture." He is interested in design work that questions conventional distinctions between the built and natural environment and has pursued such an approach in his own individual research and design projects. In the context of his postgraduate research, he is developing an understanding of the contemporary status of the Symbol in cartographic representation and architectural design. During his undergraduate studies he has worked as an intern in architectural practices around Athens and has participated in international workshops and conferences. He is currently working as a teaching assistant in the NTUA's School of Architecture Graduate studies programme.

THE AESTHETIC EXPERIENCE OF CHINESE PAINTING:A ERP STUDY ¹

Abstract | This study uses behavioural and ERP techniques to investigate the aesthetic experience of the Chinese people on the traditional form of Chinese painting (selecting Chinese freehand landscape painting); and the two experimental forms of Chinese painting (realistic landscape painting and abstract ink painting).The popular sample is composed of 10 executives, 12 white-collar workers and 13 ordinary workers, a total of 35 people.Among them, there are 20 people who have studied art in the system, 15 people have not studied art;There were 18 males and 17 females.Before the experiment, the author found that most people usually think that realistic landscape can see what the painting is; freehand landscape painting gives people a similar feeling and abstract works are puzzling. Therefore, the experimental materials used freehand landscape painting; and abstract ink painting with/without the title of the artwork hint and realistic landscape altogether five categories.The first is to compare the cognitive and emotional responses of the public after the presentation of freehand landscape painting abstract ink painting and realistic landscape painting works, in order to know which forms of Chinese painting are most sensitive to the public;Second, We want to see what the public know about the traditional freehand landscape painting and the contemporary abstract ink painting, just like after it has clearly described what the realistic landscape painting is.Whether Its view of traditional freehand landscape painting, contemporary abstract ink cognitive processing, emotional response, emotional evaluation and aesthetic judgment will be different from no hint.

The conclusion shows that The public's aesthetic experience of Chinese painting is

1 This paper is one of the achievements of the 2015 National Social Science Foundation project "the study of the popular Cognition approach and understanding Model of Chinese Contemporary Art" (15XSH001). Introduction to first author Ding Yuehua:Doctor, professor, master tutor.Contact telephone:13883722759 ; Email:dyh9812@163.com

embodied in realistic taste. The subjects showed more interest in abstract ink than in freehand Chinese landscape painting but had difficulties in understanding abstract ink painting. Title-hinted abstract ink painting brings about a significantly lower aesthetic and pleasure than the no-title abstract ink painting on a personal sense of beauty and pleasure. The public have the desire to understand the traditional Chinese painting, the value judgment is high, but the aesthetic appreciation of the freehand landscape painting is lack of excitement, it is difficult to understand the freehand landscape painting. The beauty and pleasure of title-hinted freehand landscape painting are significantly higher than those of the no-title landscape. The traditional Chinese painting needs to let more people know through aesthetic education.

1. The Origin of the popular Aesthetic experience Research on the traditional and Experimental forms of Chinese painting

It is advocated at the national level in the report of the 19th National Congress of the Communist Party of China to dig into the ideology, humanistic spirit and moral standard contained in the excellent Chinese traditional culture, and to inherit and innovate according to the requirements of the times.

The traditional painting form of Han nationality is to draw on silk or paper with brush dipping in water, ink and color. This kind of painting is called "Chinese painting". Chinese traditional painting subject matter can be divided into figures, mountains and rivers, flowers and birds, techniques can be divided into meticulous style and expressive style, the essence of the spirit is "pen and ink". Chinese painting condenses the wisdom, character, psychology and temperament of the Chinese nation. It is based on the humanities subject and is not restricted by the European scientific painting. It has been developing according to the standards of vividness, enjoyed and expressiveness.

With regard to the innovation of Chinese painting, many art creators at present learn from the modelling and realism of Western painting to transform Chinese painting. One of the experimental forms is the one that tends to create very realistic Chinese painting, and the other is an experimental form. For example, the artists' creative tools can be rice paper, ink and brush, or rice paper, incense, vegetable juice, smoke marks, non-brush, etc.

The concept of "ink and wash" is transformed into a subjective feeling similar to that of ink, in the art of "ten ink," the combination of presupposition and occasional occurrence, the combination of behavior, installation, and painting, in a space field. The narration begins with the preconceived conception of behavior and ends with the completion of the act.

At present, there are many artists trying to reform the traditional techniques of Chinese painting, trying to find their own artistic language. As a Chinese, it is not known how the traditional forms of Chinese painting (such as freehand Chinese landscape painting) and experimental forms (such as contemporary abstract experimental ink painting and realistic modern Chinese painting) of the cognitive and emotional reaction. The purpose of this article is to explain what Chinese people will be most sensitive to the form of Chinese painting creation, that is, what kind of visual form characteristics will affect the aesthetic experience of Chinese painting today. In a sense, it is the standard of artistic adaptability embodied in the Chinese people that has been deposited in culture and history during the long process of evolution. This is helpful to understand the current Chinese painting of the traditional form and experimental aesthetic characteristics of the cognition and emotional response, based on this, can better guide the public to understand the way of Chinese culture and art and spiritual connotation.

2. The Experimental Research Feasibility of the Aesthetic experience of Chinese painting “Visual Forms-Perceptual reflection”

2.1 the experiment of “visual form-perceptual reflection” can be used in today’s “creation-acceptance” study of Chinese painting.

The importance of Chinese painting, not only the picture itself, but also lies in the picture and even the cultural spirit behind it. This is difficult to carry out accurate experiments. Lin Mu (2008) pointed out that to use formalism to interpret “pen and ink” is to swallow jujube without regard to the difference of cultural system. We have a way of experiencing the “pure heart to the taste of image”. [1] However, today’s artists are influenced by Western artistic creation, and the times they live in are intertwined with the era of industry and the information age, and the expression of the traditional Chinese painting literati’s freehand mind and hermit spirit has been greatly impacted. Yu Yang (2019) pointed out that the new values and the circumstances of the times have given the ink-painting art more room to expand. The value status of ink is more and more controversial. Many art creators are constantly experimenting with ink and water, trying to develop their own unique styles. [2] Painting is not necessarily painted with pen and ink, but probably with ink and other tools. In a relatively short period of time, various forms of experimental features lead to the disappearance of the content. This paper intends to use the concept of “visual form” from the perspective of psychological research.

2.2 Analysis of the experimental method of “visual form-perceptual reflection”

Since Fichina (1871) and Wundt (1874), the experimental study of the aesthetic experience presented the subjects with the stimulating visual characteristics of the works of art. Gestalt psychologists pointed out that people organize our perceptions based on the simplest or most concise explanations, so their research revolves around how people organize visual scenes, rather than the elements that make up the scene itself. Clive Bell (1914) once asked the question, “what qualities do all the objects that inspire our aesthetic feelings have in common?” his answer sums up his formalistic art theory: in every art, lines and colors are combined in a particular way, and the

relationship between certain forms and forms arouses our aesthetic feelings.[3]The aesthetic experiment must first have some kind of sensory stimulus or an emotional stimulus (C.W. Valentine 1962).[4]The research paradigm of these researchers is “visual form-perceptual reflection”.Perceptual psychologist James Jerome Gibson (1950) compared the perceptual differences between two-dimensional and three-dimensional visual perception. Daniel E.Berlyn developed a theory of arousal of emotion in the 1960s and pointed out that art has three characteristics related to arousal and the most important is formal characteristics.[5]When analyzing a work of art (painting or sculpture), most of the psychological research related to the work of art focuses on the perceptual characteristics of the work of art (Berlyne,1974;Ramadchandran & Hirstein,1999;Solso,1994;Zeki,1999) ,pointed out that advocates who use experiments for aesthetic research advocate that information can be conveyed in work by examining the artist’s production strategy (for example, visual artists develop and use certain techniques).

Noël Carroll, Margaret Moore, and William p. Seeley (2012) :the way to understand how the sensing system works.Visual artworks are intentional design stimuli designed to trigger the audience’s general perceptions, emotions, and cognitive reactions. Therefore, Visual artworks are stimuli intentionally designed to trigger ordinary perceptual, affective, and cognitive responses in spectators. Questions about the understanding and appreciation of visual artworks are, as a result, questions about the way viewers acquire, represent, and manipulate information embedded in the formal and compositional structure of artworks in order to recognize and evaluate their content.[6]

Blake Gopnik (2012) argues that, “in some deep sense, the ‘pure’ perceptual and affective stimuli presented by works of art—and most likely to be facilitated by single skills and techniques— may have least to do with how works function as art, or with what they are as art objects. It may simply be false to imagine that “visual art is largely, though not exclusively, the product of the activity of the visual brain.”[7]Blake Gopnik is actually talking about the aesthetic .of experimental research, not just “formal stimulus-response”, The inspiration from Gopnik is that experimental research should consider “formal stimulation + content” as an experimental hint. The purpose is not to let the subject only pay attention to the form and technique, because the experimental process is the process of artistic picture appreciation, so it is “visual form” Perception reflects “experiment.

Today’s people, except for some people, will go to the exhibition to see the works. Most people come into contact with works of art through the Internet, magazines and television. Before the experiment, the author investigated 196 people to understand artistic works, including senior executives, white-collar workers, ordinary workers, students and so on.The result of the investigation is that 53.06% of the works of art are known through the network. Through art galleries and other works of art to understand the proportion of 30.61%. Through books, newspapers and periodicals to understand the proportion of art works 9.69%. The proportion of works of art through television is 4.59%. Other ways to understand the proportion of works of art are 2.04%. From

this, we can see that most people still appreciate the works of art through the form of pictures rather than by going to the exhibition site to see the original works, so, The appreciation experiment of Chinese painting can show different forms of expression of the works to the viewer to carry out, through the different forms of artistic expression of the work picture presentation to see what the first reaction of the subjects.

Li Miaoli, Chen Jing and Wu Yang (2015) unified the three types of artistic styles of Chinese painting, Western painting and photographic work with positive, neutral and negative emotional potency into a 400-pixel picture with a long side and a total of 360 works. The subjects were randomly presented with the E-prime software together with the experimental guidance, and the subjects were asked to observe the stimulus pictures and then evaluate the emotional response.[8]

Jane E. Else, Jason Ellis and Elizabeth Orme (2015) apply ERP technology to aesthetic research.

According to the change of electrode point and amplitude, the process of information processing in aesthetic activity is accurately determined. In the process of visual, cognitive and emotional response, the ERP components of the visual, cognitive and emotional responses of professionals and non-professionals were studied when they viewed three types of paintings: figurative painting, hazy painting and abstract painting. [9] These experimental studies provide a paradigm for the experiments in this paper.

2.3 the dimension analysis of aesthetic experience

As a nominal phrase, aesthetic experience is a combination of intentionality between the creator or the existential and the object world, which can be obtained by personal experience, or by the use of broad cultural experience or comparative cultural vision. E.H.Gombrich emphasize the critical role of aesthetic experience (that is, relevant knowledge related to aesthetics) in a person's appreciation and understanding of works of art.

If "experience" in "aesthetic experience" is regarded as a verb, "Teng Shouyao's "description of Aesthetic Psychology" (Teng Shouyao, 1998). begins with an overview of aesthetic experience. Aristotle summed up the characteristics of aesthetic experience in 《Ethics》 as an extremely strong, intoxicated, cognitive, intuitive and pleasant experience in watching and listening. [10] In aesthetics, "aesthetic experience", "beauty", "beauty experience" and the words like are referred frequently. Aesthetics is not aesthetic if it is not aesthetically pleasing. Ding Yuehua and Zhao Linli 's research Aesthetics is not called aesthetics if there is no feeling of beauty (2008) pointed out that the process of aesthetic experience includes cognitive process, emotional process and will process. Intuition (direct perception) is often the beginning of this process and may be accompanied by and mixed with rational cognition and emotion. The implicit

concept of aesthetic feeling mainly includes 8 aspects, such as internal force, acuity, abstractness, curiosity, meticulous, integration, pleasure and formality. [11]Helmut Leder, Benno Belke, Andries Oeberst and Dorothee Augustin (2004) put forward an information processing stage model for the aesthetic experience of visual art in the study of the individual aesthetic experience of modern art. According to the model, aesthetic experience consists of five stages: Perception, dominant classification, implicit classification, cognitive mastery and evaluation. The model divides aesthetic emotion and aesthetic judgment into two output types. [12]Rowold (2008) used factor analysis to obtain the "Survey of Aesthetic perception Evaluation" (SAAP), which consists of 16 items including emotion, cognition and self-harmony. [13]Leder, Belke, Oeberst and Augustin, 2004; Silvia & Brown, 2007; Zentner, Grandjean, & Scherer, 2008 uses a common self-reporting approach, mainly from the aspects of "beautiful-not beautiful", "pleasant-unpleasant", "dislike-like". [14]Marieke Hager, Dirk Hagemann, Daniel Danner, and Andrea Schankin (2012) uses the multidimensional method to analyze the Art Reception Survey, from what aspects, and finally obtained several dimensions of painting aesthetic experience is cognitive motivation. Such as "this picture makes me curious"; Negative emotions such as "this painting scares me"; Expertise or skill, such as "I can relate this painting to its art historical background", self-referencing, such as "painting reminds me of my life history", artistry, etc." the composition of this painting is good "; positive attraction, such as "this painting is pleasant" "I will consider to buy". [15]Arthur P. Shimamura (2012) pointed out that the aesthetic experience of a viewer's works of art includes: (1) the way in which the work of art is imitated (How good is the portrayal of the real scene?) (2) Expressionist methods (to what extent do works of art drive emotional experience?) (3) A formalistic approach (to what extent does art enhance the feeling?) (4) Conceptual approach (how good is it for a work of art to convey a meaningful statement?).

The viewer can experience art through any of these methods or combinations. The three psychological components of experiential art, (mental components), are sensation (sensation), knowledge (knowledge) and emotional (emotion). [16]Chatterjee and Vartanian (2014) reviews neuropsychology and neuroimaging studies and points out that aesthetic experience arises from the interaction of the nervous system associated with sensory movement, emotional evaluation and knowledge of meaning. [17]Alex Coburn, Oshin Vartanian and Anjan Chatterjee (2017) used the three frameworks of sensorimotor system, knowledge meaning system and emotion evaluation system to discuss and analyze how to carry out the neuroscience research of architectural experience. [18]

Gerald C. Cupchik (1994) explores William James's primary and secondary emotional responses to aesthetic stimuli. The first layer is composed of "subtle feeling" and "pure and simple" happiness caused by the harmonious combination of lines, colors and sounds, which is related to personal aesthetic preference. When memories and associations triggered by aesthetic stimuli "echo" in muscles and organs, secondary sensations occur. [19]Cupchik (2012) pointed out in a speech "the Aesthetic experience from the Surface to the inside" that there are epistemic surface and deep reactions to the aesthetic induction of the works of art. [20]The measurement of aesthetic emotion, Hagtvedt, & Patric (2008), determines two dimensions, that is, psychological potency

and arousal. These two dimensions constitute four factors (high negative arousal, low negative arousal, high positive arousal and low positive arousal) that describe the emotional response to art. In addition, four cognitive factors are identified to describe the perceptual attributes of art (creativity, aesthetic attraction, formal execution and curiosity attraction). Only the visual stimuli with high positive and negative valence can cause psychophysiological excitement, while the visual stimuli with close to neutral valence have low arousal degree. [21] Ines Schindler, Georg Hosoya, Winfried Menninghaus, Ursula Beermann, Valentin Wagner, Michael Eid, Klaus R. Schere (2017) thinks that the two dimensions of titer and arousal cannot measure the aesthetic emotion well, and try to establish the aesthetic emotion evaluation scale. Contains seven dimensions of negative emotions, respectively, negative emotions, prototypical aesthetic emotions, epistemic emotions, animation, nostalgia / relaxation, sadness and amusement. [22] The measurement of aesthetic emotion of people who watch Chinese painting pictures, as long as they come into contact with the work, will inevitably cause the emotional reaction, but this is not the aesthetic emotion in the strict sense, the aesthetic emotion and the aesthetic judgment are sometimes intertwined together.

In summary and combined with the practice of this experiment, the measurement of "aesthetic experience" is mainly based on three aspects: aesthetic perception, aesthetic emotion and aesthetic judgment (point to the meaning of the work).

The so-called aesthetic perception is mainly to examine the subjects' formal sensitivity to the presented works.

The measurement of aesthetic emotion is mainly through brainwave data to analyze emotion. In addition, the subjects' emotional reaction to the pictures presented (including the evaluation of pleasure) is also investigated by means of self-report and rating.

The aesthetic judgment of Chinese painting mainly refers to the aesthetic feeling evaluation and value cognition of different forms of Chinese painting.

3. This experiment

3.1 the Experimental Design of ERP Research on the popular Aesthetic experience of Chinese painting

At the beginning of the experimental design, the single factor element experiment design with only the creative form (contemporary abstract, traditional freehand landscape painting and contemporary realism) as the independent variable was originally used. The aim is to investigate the effects of exogenous component N1 (150-200ms) and stimulation-induced P3 (200-400ms) on emotion and the average amplitude of LPC (400-600ms), a measure of whether people have more resources to pay attention to in the processing of their brains. It aims to explore the public view the traditional freehand

Chinese painting, contemporary abstract ink painting, contemporary realistic Chinese painting, in the same environment, in which form they reflect most sensitively. It aims to understand the general public about the Chinese painting technique expression form preference, the cognition processing and the mood reaction situation. As the theme of traditional Chinese painting has characters, landscape, flowers and birds, there have been selected materials to avoid face and eyes and other pictures, so this experiment did not choose figure painting and flower-bird painting, the options are landscape painting and abstract ink painting.

Before the experiment, the author found that most people can usually see the content of realistic landscape painting at first glance, Chinese freehand landscape painting gives people a similar feeling and abstract ink is most puzzling. In order to let the public understand the content of traditional freehand landscape painting and contemporary abstract ink as well as they understand the content of realistic landscape painting, two groups of pictures are added to the traditional freehand landscape painting and contemporary abstract ink works for the name of the title-hinted pictures (a common way an artwork shown in a gallery).

Therefore, the whole experimental design for the single-factor subjects within five paralleling levels, 5 levels are realistic landscape, no-title freehand landscape painting, title-hinted freehand landscape painting, no-title abstract ink, title-hinted abstract ink.

3.2 Selection and presentation of experimental materials

When choosing materials for experiment, the basic principle is to exclude personal bias. The pictures are downloaded from the Yachang Art Book Center's (<http://yts.artron.net/>) online collection or obtained with an artist's permits. While collecting the pictures, we collected the author information, the name of the work, the size and pictures of vertical composition: 40 abstract and freehand landscape painting types of no-title and title-hinted and 40 realistic works of no-title, 200 pictures in total. (200 out of 600, after 5-round selections of 20 people in art profession)

"No title" means that the work is presented only in the form of image, and there is no information about the name of the work. "Title-hinted" means that the work is presented in the form of image, and the information of the name of the work is also presented.

Traditional freehand landscape painting in the form of figure 1, figure 2, mainly selected from Tang Yin, Qiu Ying, Shen Zhou, Wang Jian, Wu Wei, Gong Xian, Shen Zhou, Dai Jin, Wen Boren, Huang Binhong, Fu Baoshi, Guan Shanyue, He Jialin, Fu Baoshi, and the following works: Tang Yin, Qian Ying, Shen Zhou, Wang Jian, Wu Wei, Gong Xian, Shen Zhou, Dai Jin, Wen Boren, Huang Binhong Shi Lu and the current active Cui Ruzhuo, Fan Yang, Mo Bangcai, Liu Guosong and other works. Contemporary abstract ink, in the

form of figure 3, figure 4, The contemporary abstract ink works have selected the works of Gu Wenda, Zhang Chaohui, Qin Feng, Chen Guangwu, Qiu Deshu, Chen Xinmao, Xuan Yongsheng, Deng Guoyuan, Lu Zongping, Wu Guoquan, and Yongsheng, Fang Tu, Zhang Yu, Liang Quan, etc.. Contemporary realistic works, in the form of figures 5 and 6, there are mainly works by Liu Liang Jing, Shi Yunxiang, Liu Guozhi, Zeng Gang, Li Zhe and the like.

In ERP studies, the N1 component is usually associated with the stimulative properties of the picture and is susceptible to the characteristics of the image itself [for example: The effects are: clarity, size, color and colorlessness (these are all experimental independent variables that need to be controlled by keeping the feature dimension of the picture basically consistent when choosing a picture). The selected works have black and white, color, mixed appearance, excluded colored one as it is a variable; The size of the ruler is large, small and mixed, which excludes the size of the ruler as a variable, and avoids the appearance of characters and faces when selecting materials.

3.3 the public's Aesthetic experience of Chinese painting: a case study of ERP

The word "public" contains the meaning of "mass" or "popular" in the English context. In the Chinese context, "popular" refers to the majority of social members, who are composed of different occupations, strata, regions, lifestyles and so on. Because the artistic creation is distinguished by fine art and the folk art, this shows that the artistic creation object is stratified. This paper draws upon the theories of sociology scholars Lu Xueyi, Zheng Hangsheng, Li Lulu and Wu Xiaogang, and further merges the social stratum subdivided by sociology researchers into three types. There are three types: senior executives (including government officials, business owners, who can exercise leadership in a unit), white-collar workers (professional and technical personnel, general managers, office personnel, etc.), normal workers (skilled workers, unskilled workers and peasants, who are basically performing tasks according to the instructions of their superiors and do not have administrative authority) only within a certain scope of work. In order to facilitate the follow-up experiment and investigation of the subject selection.

As to the quantity of question selected in the (ERP) study of event-related potentials, referring to previous studies, Yue Guanghui, Hou Chunping, Shen Lili and others selected 9 subjects in the ERP study on the effect of dimensional deviation on stereoscopic viewing comfort. [23] In Jane E. Else, Jason Ellis and Elizabeth Orme's research (2015), two groups of subjects were selected, 36 testees in total. 19 were non-artists (5 males) and 17 were artists (5 males).

The composition of the public sample is as follows: A quilt consisting of 10 executives, 12 white-collar workers and 13 ordinary workers.

The total number of people was 35. Among them, there are 20 students who have studied art in the system, and 15 people who have not studied art; 18 males, 17 females; The age ranged from 20 to 29 years (15 persons), 30-39 years (12 persons) and 40-49 persons (8 persons).

3.4 the experimental flow of ERP research on the public's aesthetic experience of Chinese painting

3.5 the Experimental process of ERP Research on the public's aesthetic experience of Chinese painting

Participants came to the EEG laboratory, the main test for them to wear an electrode cap and to explain the experiment task.

The elements of experimental control include: Presentation time (including fixed time, change time, and infinite time), presentation mode, presentation format, response mode, data collection.

In the formal experiment, all the tasks were carried out on the computer E-prime program, first presenting the "+" of the 800ms fixation point, then the image stimulation appeared, and the subjects were asked to look at the picture 1500ms. After each picture is presented, the participants are asked to make a 7-point button on the following questions:

1. Do you think the picture just presented is beautiful? 1 = very unaesthetic; 7 = very aesthetic
2. How much pleasure the picture just presented brings you? 1 = very unpleasant; 7 = very pleasant
3. What is the value and significance of the picture you just presented? 1 = very worthless and not meaningful; 7 = very valuable and meaningful

For each question, the subjects click the button and jump to the next question. After the above three questions are answered, the next picture is appreciated. The 200 pictures were divided into 5 groups with 40 pictures in each group. The subjects had 10 s rest time for each task. After the EEG experiment was completed, the subjects should fill out the questionnaire and explain the overall feeling of the experiment.

4. Experimental results of this ERP study

The EEG equipment used in the experiment is the BrainCap64 conductive Ag/AgCl electrode cap produced by Brain Products Company of Germany. The electrodeposition is set by the international 10-20 expansion system. The reference point for the data signal is set to FCz, but the offline reference is set to the average of the mastoid signal behind both ears. The vertical eye electrical reference is located below the right eye, while the horizontal reference is located outside the right eye. The scalp resistance of the electrode is lower than 5k Ω . The filter bandpass is 0.01-100 Hz and the sampling frequency is 500Hz.

The data are analyzed offline by EEGLab Toolkit (Delorme & Makeig, 2004) in Matlab 2012 (MathWorks, USA) environment. The EEG data are filtered by 30 HZ low-pass filter using Butterworth method, and the mean value of left and right mastoid is used as a substantial reference electrode. ICA (independent component analysis) method was used to eliminate the artifacts such as blink, eye movement and electromyography. The artifacts whose amplitude is higher than $\pm 100 \mu V$ are automatically excluded. The time course of the analysis was from the first 200 ms (as the baseline) to 800 ms after the stimulus presentation. According to the purpose of this study, on the average amplitude of N1, P3 and LPC components, we carry out artistic work types (realistic landscape, no-title freehand landscape, title-hinted freehand landscape, no-title abstract ink, title-hinted abstract ink) \times the repeated measurement variance analysis of the electrode point. The statistical results were corrected by the Greenhouse-Geisser method.

According to Cherniawsky and Holroyd (2013), [24] Total mean Waveform Map and brain Topographic Map, N1 (80-120 ms), The frontal F3, Fz, F4, FC3, FCz, FC4 electrode points were selected, and P3 (220-320ms) components were selected at the top of CP3, CPz, CP4, P3, Pz, P4 electrode points, LPC (450-600 ms.) Fz, FCz, Cz, Cpz, Pz electrode points were selected for analysis.

4.1. The differences between N1 components in the cognition of different techniques of Chinese painting.

For the amplitude of N1 component (Fig. 7, figure 8), it conducts repeated measurements to analysis of variance of 5 (art works type: realistic landscape, no-title freehand landscape, title-hinted freehand landscape, no-title abstract ink, title-hinted abstract ink) \times 6 (electrode point: of F3, Fz, F4, FC3, FCz, FC4).

The results of the variance analysis showed that the main effect of artworks was significant ($F(4, 31) = 2.49$, $p < 0.05$, $\eta^2 p = 0.07$, respectively). That is, the

N1 amplitude induced by no-title freehand landscape and no-title abstract ink was significantly larger than that induced by the title-hinted freehand landscape (M no-title freehand landscape = -1.19 ± 0.24 V; M no-title abstract ink = -1.15 ± 0.20 μ V; M title-hinted freehand landscape painting = -0.48 ± 0.29 μ V); The main effect of the electric pole is not significant, $F(5,30) = 0.46$, $p > 0.05$. The voltage topographic map shows (Fig. 9),

N1 is located at the top of the frontal part of the brain. The bluer the color is, the greater the influence on N1 is. The interaction between the type of artistic work and the electrode point was not significant ($F(20,15) = 1.19$, $p > 0.05$).

N1 reflects the early ERP attention effect of individual stimulation, and it is very sensitive to the identification of stimulus characteristics that require high attention resources [25]. The results showed that the N1 amplitude induced by the individual perception of no-title freehand landscape painting and no-title abstract ink was significantly larger than title-hinted freehand landscape. The public is more sensitive to the perception of no-title freehand landscape painting and abstract ink works, and will occupy more attention resources, but the less difference between the others.

4.2 The differences between P3 components in the cognition of different technical forms of Chinese painting.

For the amplitude of P3 component (Fig. 10, figure 11) 5 (artworks type: Realistic landscape, no-title freehand landscape, title-hinted freehand landscape, no-title abstract ink, title-hinted abstract ink) \times 6 (electrode point: CP3、CPz、CP4、P3、Pz、P4) Repeated measurement variance analysis.

The results of the variance analysis show that the main effect edge of artworks is significant ($F(4,31) = 2.34$, $p = 0.058$, $\eta^2 p = 0.06$), that is, the amplitude of P3 induced by title-hinted abstract ink is significantly larger than that of the no-title freehand landscape and the no-title abstract ink (M title-hinted abstract ink = 3.65 ± 0.43 μ V); M no hint freehand landscape = 3.03 ± 0.48 μ V; M No hint abstract ink = 3.06 ± 0.42 μ V); The main effect of the electric pole is significant, $F(5,30) = 22.15$, $p < 0.001$, $\eta^2 p = 0.40$, voltage topographic map shown (Fig. 12) that P3 is located at the top of the occipital, and the redder the color is, the greater the influence on P3 is, that is, the amplitude of P3 at P3 is significantly larger than that at other electrode points. The interaction between the type of artistic work and the electrode point was significant, $F(20,15) = 1.69$, $p < 0.05$, $\eta^2 p = 0.05$. On the point of CP3 and CP4, the amplitude of P3 induced by the title-hinted abstract ink was significantly larger than that of realistic landscape, no-title freehand landscape and no-title abstract ink ($p < 0.05$). At P3 point, the amplitude of P3 induced by the title-hinted freehand landscape is significantly larger than that of the no-title freehand landscape and the no-title abstract ink, $p < 0.05$; On the P4 point, the amplitude of P3 induced by the title of abstract ink was significantly higher than that of no-title freehand brushwork and no-title abstract ink, $p < 0.05$.

P3 is produced in the top and occipital part and is regulated by top-down processing, which is usually related to emotional experience and regulation. The stronger the emotion is, the more mental resources are occupied and the larger the amplitude of P3 is induced.[26]The results of this study showed that the amplitude of P3 induced by the title-hinted abstract ink was significantly larger than that of the freehand landscape and the abstract ink without the hint, which indicated that the individual had a stronger emotional experience when working with the the title-hinted abstract ink. More psychological resources are invoked.It is worth noting that P3 is also related to the difficulty of the task, that is, compared with no-title freehand landscape and no-title abstract ink, it is more difficult for the individual to appreciate the title-hinted abstract ink.

4.3 The differences in the LPC components of the subjects' cognition of different techniques and forms of Chinese painting

For the amplitude of the LPC component (Fig. 13, Fig. 14), 5 (artistic works type:Realistic landscape, no-title freehand landscape, title-hinted freehand landscape, no-title abstract ink, title-hinted abstract ink) \times 5 (electrode point:Fz 、 Cz 、 Cz 、 Cpz 、 Pz) to analyse of variance of repeated measurements.

The results of variance analysis showed that the main effect of artworks was significant (, $F(4C,31) = 3.15$, $p < 0.05$, $\eta^2 p = 0.09$. That is to say, the amplitude of LPC induced by the title-hinted abstract ink is significantly larger than that of the realistic landscape, the no-title landscape and the title-hinted freehand landscape (M title-hinted abstract ink = $1.44 \pm 0.42 \mu V$);M realistic landscape = $0.66 \pm 0.45 \mu V$;M no-title freehand landscape was $0.65 \pm 0.37 \mu V$;The title of the works was $0.55 \pm 0.44 \mu V$), The amplitude of LPC induced by the no-title abstract ink condition was significantly higher than that of the no-title freehand landscape (M = $1.04 \pm 0.37 \mu V$). and the amplitude of LPC was significantly higher than that of the no-title freehand landscape (M = $1.04 \pm 0.37 \mu V$).The main effect of the electric pole is significant, $F(4, 31) = 13.04$ $p < 0.001$, $\eta^2 p = 0.28$. The voltage topographic map (Fig. 15) shows that the LPC component is located at the top of the brain area, and the redder the color, the greater the influence on the LPC composition, that is, at the Fz and FCz points. The amplitude of LPC wave induced by title-hinted abstract ink was significantly larger than that of realistic landscape, no-title freehand landscape and title-hinted freehand landscape ($p < 0.05$).On the FCz point, the amplitude of LPC induced by the condition of no-title abstract ink was significantly higher than that of the no-title freehand landscape and title-hinted freehand landscape ($p < 0.05$).At the point of Cz, the amplitude of LPC induced by title-hinted abstract ink is significantly higher than that of the other four kinds of works of art ($p < 0.05$).On the point of Cpz and Pz, the amplitude of LPC induced by the title-hinted abstract ink is significantly larger than that of realistic landscape, no-title freehand landscape and no-title abstract ink, $p < 0.05$.

LPC is a typical ERP component involved in advanced cognitive processing (such as emotional processing). Some researchers have pointed out that in emotional studies,

the LPC component represents the degree of fineness in the processing of stimulus meaning, and the stronger the emotion induced by stimulation, The finer the processing of a stimulus is , the greater the amplitude of LPC reflects.[27]According to the above results, we can know that compared with realistic landscape, no-title freehand landscape and title-hinted freehand landscape, individuals have more LPC waves when they perceive the title-hinted abstract ink artworks. Therefore, in the process to percept of the title-hinted abstract ink artworks , the individual processes of the artworks in a more refined way. In addition, the subjects were more sensitive to the no-title abstract ink painting than the no-title freehand landscape, and the emotional reaction was also stronger. The LPC amplitude increases when the individual induced in the perception of the no-title abstract ink painting. This indicates that the individual pays more attention to the details of the work when he perceives the abstract ink without a hint.

5. The differences of the popular subjects’ cognition of different forms of Chinese painting in aesthetic judgment

5.1 The popular subjects’ evaluation of different forms of aesthetic sense of Chinese painting

In the five levels design of single factor subjects, the results of variance analysis of repeated measurements showed that there were differences in the mean value of aesthetic feeling rating among different artwork types ($F=37.78, df=4, P=0.000$), and there were differences in the mean value of aesthetic reaction time ($F=18.65, df=4, P=0.000$). By paired sample t-test (Table 1, Table 2), Aesthetic feeling ratings of different forms of Chinese painting, Realistic landscape > title-hinted freehand landscape > no hint abstract ink > title-hinted abstract ink, the difference is significant. In the aspect of aesthetic reaction time, realistic landscape < title-hinted freehand landscape < no-title freehand landscape < title-hinted abstract ink and no-title abstract ink, the difference is significant, among them, The results of the variance analysis show that the main effect edge of artworks is significant between no-title freehand brushwork and title-hinted abstract ink ($P=0.068$).

Table 1 subjects’ rating and reaction time for different forms of Aesthetic feeling of Chinese painting (M ±SD)

	realistic landscape painting	title-hinted freehand landscape	no-title freehand landscape	title-hinted abstract ink	no-title abstract ink
Aesthetic feeling rating	5.30±0.94	4.98±0.88	4.66±0.76	3.38±1.26	3.51±1.29
Aesthetic reaction time (ms)	1097.86±560.66	1530.20±419.45	1640.48±794.36	1778.23±943.0046	1944.30±1250.76

Table 2 T-test of different types of aesthetic ratings and reaction time of Chinese painting by popular subjects (t value)

	realistic landscape	title-hinted freehand landscape	no-title freehand landscape	title-hinted abstract ink
title-hinted freehand landscape	3.62***			
	-5.01***			
no-title freehand landscape	5.36***	-4.62***		
	-6.33***	-2.69*		
title-hinted abstract ink	7.01***	6.24***	6.04***	
	-6.63***	-3.25**	-1.89	
no-title abstract ink	6.51***	5.69***	5.387***	-2.41*
	-4.74***	-3.64***	2.76**	-1.38

*** indicate $P < 0.001$; ** indicate $P < 0.01$; * indicate $P < 0.05$, the following table are the same.

5.2 The participants' evaluation of different forms of pleasure in Chinese painting

	realistic landscape	title-hinted freehand landscape	no-title freehand landscape	title-hinted abstract ink	no-title abstract ink
Pleasure rating	5.10±0.89	4.84±0.79	4.48±0.74	3.17±1.10	3.31±1.15
Pleasure response time (ms)	815.24±626.28	1115.78±751.38	1079.76±650.88	1254.92±747.10	1151.77±701.58

Table 3 VW subjects' rating and response time for different forms of pleasure in Chinese painting (M ±SD)

The results according to variance analysis of repeated measurements showed that there were differences in the mean values of the different types of works ($F=47.85$, $df=4$, $P=0.000$), there was a significant difference in the mean value of response time in the evaluation of pleasure ($F=13.20$, $df=4$, $P=0.000$).

By paired sample t-test (Table 3, Table 4), in terms of popular ratings of different forms of pleasure in Chinese painting, realistic landscape > title-hinted freehand landscape > no-title freehand landscape > no-title abstract ink > title-hinted abstract ink, The difference is significant. according to judging the reaction time of pleasure degree, there were significant differences. realistic landscape < no title freehand landscape, title-hinted freehand landscape and no-title abstract ink < title-hinted abstract ink, There is no significant difference in the response of pleasure judgment between the no-title freehand brushwork, the title of the work and the no-title abstract ink.

Table 4 t-test of different forms of pleasure rating and reaction time of VW subjects on Chinese paintings(t value)

		realistic landscape	title-hinted freehand landscape	no-title freehand landscape	title-hinted abstract ink
title-hinted freehand landscape	happiness rating	2.76**			
	happiness reaction time	-4.17***			

no-title freehand landscape	happiness rating	5.48***	5.60***		
	happiness reaction time	-4.77***	0.97

no-title abstract ink	happiness rating	7.16***	6.49***	6.21***	-3.09**
	happiness reaction time	-4.37***	-0.76	-1.62	2.03*

5.3 The value judgment of different forms of Chinese painting

	realistic landscape	title-hinted freehand landscape	no-title freehand landscape	title-hinted abstract ink	no-title abstract ink
value judgment	4.95±1.00	4.87±0.78	4.50±0.77	3.12±1.13	3.23±1.17
Value judgment response time (ms)	795.23±674.24	1152.92±794.71	1112.73±755.00	1115.69±673.15	1092.59±678.84

Table 6 the value judgment and reaction time matched t-test of VW subjects on different forms of Chinese paintings(t value)

		realistic landscape	title-hinted freehand landscape	no-title freehand landscape	title-hinted abstract ink
title-hinted freehand landscape	valuejudgment rating	0.71			
	valuejudgment reaction time	-5.99***			
no-title freehand landscape	valuejudgment rating	3.32**	5.69***		
	valuejudgment reaction time	-4.53***	0.85		
title-hinted abstract ink	valuejudgment rating	7.04***	7.59***	7.18***	
	valuejudgment reaction time	-4.22***	0.56	-0.07	
no-title abstract ink	valuejudgment rating	6.94***	7.10***	6.71***	-2.12*
	valuejudgment reaction time	-3.79***	0.82	0.39	0.66

The results according to variance analysis of repeated measurements show there was a difference in the means of artwork type judgment ($F=45.24$, $df=4$, $P=0.000$), and the mean value of the reaction time ($F=11.18$, $df=4$, $P=0.000$).

By paired sample t-test (Table 5, Table 6), it is found that in terms of the value judgment of different forms of Chinese painting, the realistic landscape and title-hinted freehand landscape > no-title freehand landscape > title-hinted abstract ink > no-title abstract ink. The difference is significant. The value judgment reaction time aspect, realistic landscape < other several forms, the other several forms between the difference is not remarkable.

6. Conclusion and discussion on ERP experiment of popular Aesthetic experience in Chinese painting

6.1 The popular subjects' aesthetic preference for Chinese painting is shown as realistic taste.

From the popular subjects' aesthetic evaluation, pleasure evaluation and response time survey of the works of different technical forms, we can see that the aesthetic feeling, the pleasant feeling and the value evaluation of the realistic form of landscape painting are the highest, and the evaluation time is the shortest. These can prove the real interest of Chinese landscape painting.

6.2 The popular subjects showed more interest in abstract ink than in freehand landscape, but they have difficulties in understanding abstract ink

P3 amplitude results show that, without a hint, the form of abstract ink and freehand landscape are very sensitive, occupying more attention resources. The amplitude of LPC of abstract ink is significantly larger than that of freehand brushwork, which indicates that even though both freehand brushwork and abstract ink occupy more attention resources, the processing of no-title abstract ink is more delicate. The results of P3 amplitude showed that the work's name suggested that the abstract ink stimulated more emotional experience, and the result of LPC amplitude also showed that the subjects' emotional reaction was stronger when the work's name suggested the abstract ink painting. The possessing of work is more refined. This indicates that the subjects are more interested in the abstract ink works indicated by the names of the works.

Judging from the evaluation of aesthetic feeling and pleasure degree of artistic works, the aesthetic feeling and pleasure degree of the works indicated by the popular subjects were significantly lower than that of the no-title abstract ink painting were not as good as the other forms of evaluation. This shows that the popular subjects show a high interest in abstract ink through the name of the product, but it is possible that the name of the work and the understanding of the subjects have come into being, understanding or not will affect the aesthetic sense of the subjects and the sense of pleasure judgment.

6.3 The popular have the desire to understand the traditional Chinese painting and show approval in degree, but lack of excitement and hardly understand freehand landscape

N1 amplitudes showed that the subjects were more sensitive to the expressive form of freehand brushwork in the absence of cues, but the P3 amplitude showed that the emotional response of the subjects to the expression form of no-title freehand brushwork was not as strong as that of the abstract ink. The amplitude of LPC showed that the public lacked fine processing against the stimulus. But the emotional response

of the freehand brushwork with the title of the work was stronger, and the psychological resources were more used. To some extent, this reflects the understanding of freehand brushwork and the difficulty of understanding.

The evaluation of the aesthetic feeling and the sense of pleasure of the popular subjects to the title of the works was significantly higher than that of the no-title freehand landscape and the no-title abstract works, except that the evaluation of the realistic landscape was lower than that of the other forms of works. The value judgment of freehand landscape and realistic landscape is the highest, but the difference between the two is not significant, and it is different from other forms. The public holds a positive attitude towards the beauty, pleasure and value of freehand landscape.

After the experiment, we also investigated whether we should understand traditional Chinese painting and the willingness to gain self-growth through understanding Chinese painting. The subjects had a strong willingness to understand traditional Chinese painting and gain self-growth, with a score of 4.24 and 4.07, respectively.

The suggestions of public aesthetic education in Chinese painting are as follows: it is necessary for the public to appreciate freehand brushwork in order to let them understand the aesthetic way of meditation, technique and ability in daily work and life; It is necessary to strengthen the public's consciousness of Mountain and water, and then guide the public to comprehend the spirit of Chinese traditional freehand brushwork; It is necessary to develop social aesthetic education courses to promote the community dissemination of the spirit of freehand brushwork in Chinese traditional art.

6.4. Discussion

6.4.1 Discussion on the favourite Experimental Chinese painting forms for the popular

The popular subjects' aesthetic interest in the form of contemporary realistic art of landscape painting is a reflection of the creation interest of some Chinese landscape painting creators and the change of popular interest. This kind of change is different from our traditional landscape painting creation interest or appreciation interest.

Huang Binhong pointed out: "the national character of traditional Chinese painting is seen in the pen and ink.[28] Therefore, in the process of aesthetic cognition of Chinese painting, pen and ink are one of the most important cognitive contents. Chinese landscape painting often with the help of landscape painting and ink to create the screen gives people a sense of emptiness, wonder, which emphasizing the combination of reality and vanity. It seems true and not true, pay attention to the overall atmosphere of contrast and artistic conception of the artwork, hoping to leave the audience with the space of imagination. Chinese cultural and philosophical views guide the development of Chinese painting and form a complete system from an aesthetic level to technical level. The traditional evaluation standard of Chinese landscape painting, "Shen", "Miao", "Yi" (Chinese spelling)... It is a description of the emotional state of a person. It usually does not stick to realism, does not advocate the objective portrayal

of the external world as it is, advocates the tradition and taste of freehand brushwork, and explores the spiritual world by means of such carriers as pen ink and Xuan paper, and pays attention to style types. A chapping method is a style type.[29]Therefore, the appreciation of traditional Chinese landscape painting is mainly based on freehand brushwork. Today, some artistic creators pay attention to realism in their landscape painting creation, rather than including Taoist reflections and clear and fragrant images. In view of the correspond between limited objects (appreciable landscapes) and limited objects (realistic landscapes), the creators still consciously use the theory of “mirror” to dominate their creative behavior, in a sense, The creator is not free, is restricted by concrete, is a passive observer, can also be said to still have a daily attitude, rather than the aesthetic attitude of the daily objective observer, the realm of painting is only daily imitation only. Then from the public interest, the aesthetic appreciation of Chinese landscape painting only the objective description of the image and not like aesthetic judgment, which shows that the aesthetic realm of popular interest has yet to be further improved. The aesthetic consciousness of Chinese landscape painting should have the continuity, accumulation and variety of history.[30]In the field of Chinese landscape painting, this kind of change is mainly the change of form, is the change of stroke, ink, etc., but the Chinese painting characteristic of transcending the likeness of form and pursuing vivid spirit has continuity, because the Chinese people pursue the spiritual realm of the unity of nature and man will not change. In Chinese landscape painting, especially in literati painting, the study and cultivation of dialogue with heaven and earth landscape are very important. Landscape, clouds and smoke often have symbolic significance, so, the popular experimental forms of Chinese painting, such as the realistic form of recognition is high, indicating that the traditional freehand Chinese painting appreciation education needs to be strengthened.

6.4.2 Discussion on the Public’s interest in Abstract Ink and its difficulty in understanding

According to the needs of self-expression, some of today’s artistic creators choose to experiment with ink and wash according to their own methods. Using ink as a language medium, only exploring the possibility of the combination of water and ink to form various forms, the appreciation of abstract ink is the appreciation of the artistic creators’ exploration forms of the formation of water and ink itself. It is also the composition of water and ink rhyme and aesthetic appreciation. The So-called “Today’s Ink is the ink of World”[31]As far as the creators’ understanding is concerned, today’s creators, such as the members of the Juelan group, taking Western modern art as a reference in Chinese painting, so they think their works are ink of worldwide.

ERP experiments show that: In the case of no hint, the subjects’ interest in abstract ink is higher than that the title-hinted works. It may be related to the concrete and abstract of the works. Abstract works emphasize the composition of water and ink, which conform to the rules of formal beauty. Formal beauty and pleasure are often positively related. However, in aesthetic activities, They always try to reflect on and adjust their own understanding of abstract works through experience. Because abstract art does not point to concrete object, title made people are used to asking what the picture is, which relate to the object image different in their experiences. So it is possible that this cause of abstract ink on the understanding of difficulty to some degree.

6.4.3 A discussion on the present situation of the aesthetic experience of the popular subjects in freehand landscape

There are poems in ancient Chinese landscape paintings, which require the creators to have relatively high cultivation. The mountains and rivers are often linked to the noble virtues of the gentleman and the benevolent people are based on the world outlook of Laozhuang philosophy. The form in the traditional technique of landscape painting is the human quality or the “common principle” behind the “conformal” as Su Dongpo said, which is philosophical thinking, and philosophy is the highest form of thinking abstract, so, for the public, To understand the traditional freehand landscape painting must be difficult. Cai Yuanpei once said, at the beginning of life, ploughing fields to eat, sinking wells to drink, the matter of making a living is hard, no time for noble ideas. When a man is no longer tired by the mouth, but dedicated to spiritual self-cultivation.[32] The concepts of Chinese landscape painting, such as “heaven and earth”, are often mysterious, vast and magnificent, reflecting the feelings of Chinese literati, which in China are such a group of people who care about the people when they have a status and pay attention to themselves when they are in obscurity. The mind and the magnanimity are inseparable from the cultivation of the person, but for the public who are tired only for the sake of the mouth, it is difficult to understand the mind and magnanimity of the Chinese literati if it is not for the sake of others or for the enhancement of humanistic cultivation. What’s more, the Chinese landscape painting, which contains the thoughts and feelings of the literati, is more implicit?

7. The public aesthetic education of Chinese traditional freehand brushwork spirit from the public aesthetic experience analysis of Chinese painting

7.1 In the daily working and life, we can realize the spirit of freehand brushwork in Chinese painting

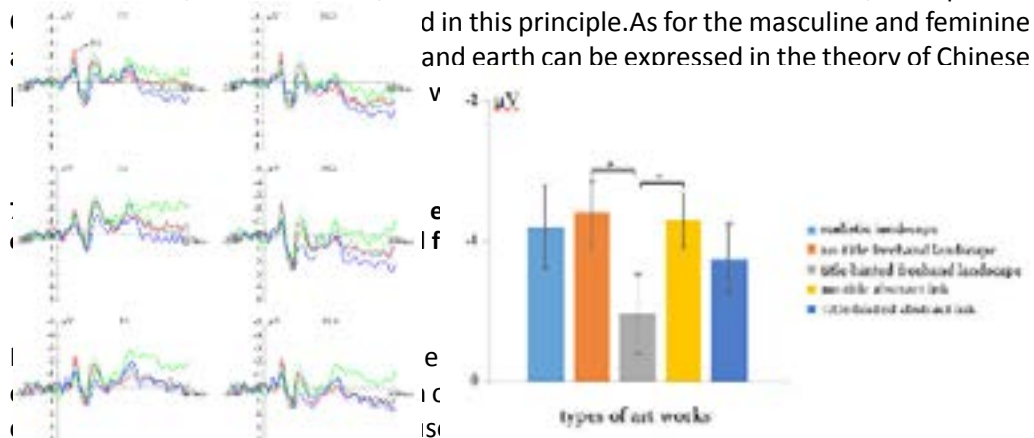

In “Zhuangzi”, Confucius asked a hunched old man how to practice cicada skills. What the old man said to Confucius probably meant putting two projectiles on a bamboo pole and practising for five or six months to not fall off. Put three pellets again practice not to fall down; Continue to practice, practice to add five pellets cannot fall down, until practice although the heaven and earth, all things, although many, only detected cicada wings. Raise your arms when you hunt for cicadas, like a dead branch on a dead tree. Even everything cannot be used to exchange cicada wings, so how can not stick to the cicada?” it can thus be seen that meditation and concentration are the only way to advance the art and the aesthetic, and this is the result of the nature of the Dharma. The original concept of art is the emphasis on art, with its distinct labor characteristics and all involuntary behavior is distinguished. [33] Art is a conscious and creative spiritual production activity. What is commonly said about labour is often conscious and creative material production, from material production to spiritual material production, during which the labourer has to meditate and contemplate. To raise the attitude towards daily working from the business of earning a living to that of contemplation and detachment (as a bystander). If one is able to devote one’s whole body and mind to labor (such as a skill that is so skilled that one is the same), one can also feel the hardship and joy in the

process of labor, be satisfied with one's heart, and be satisfied with one's nature. Then we can understand the true meaning of "Taoism and nature" in the spirit of Chinese traditional culture and art. Just like the hunchback cicadas recorded in Zhuangzi, they grope for their own methods (Tao) and practice hard. In the end, the techniques are so clever that they only notice the wings of the cicadas during the cicada hunt and raise their arms when they catch the cicadas. (this is the acquisition of the Tao.) Like the dead branches of a dead tree, they catch cicadas at last. During long-term skill training, when a person perceives the objects around them (the cicadas know that the cicadas are around them) and wants to acquire the objects (sticky cicadas), they are not aware of the whole object (not the cicadas). It is the most important message of the object (cicada wing). From this story, we can understand the meaning of the micro-knowledge in Chinese culture. Song Dynasty Su Xun's "on the argument of hypocrisy": "he who is quiet in the world can see the light and know it." what he says is that he can only get the Tao through meditation. Since ancient times connoisseurs have divided Chinese painting into three parts: Tang Dynasty Zhu Jingxuan wrote "A record of the paintings of the tang dynasty", in addition to the three products, the more elegant (free and unrestrained) products, and then Huang TiFu wrote "Yizhou famous paintings (record)" pointed out: "YI GE" is the best, "Yi Ge" means a painting which following the law but exceeding the law and can let appreciators imaging floating in the air, free and unrestrained, and the secondary "Shen Ge" is a painting to depict the charm of a person or thing, "Miao Ge" refers to the characteristics that can accurately reflect the object and let appreciator s feeling that's the only way to get the picture right, "Neng Ge" refers to a painting reflect the skilful writing and ink techniques.[34] Emperor huizong of song dynasty fixed the four levels of traditional Chinese paintings. Su Dongpo mentioned in a poem that "If you measure a artwork by its likeness, live next door to children". Therefore, we should really understand the Chinese tradition of freehand brushwork. Also really must in the daily life diligently studies, the skill, only then understands the Chinese painting product high and low the reason.

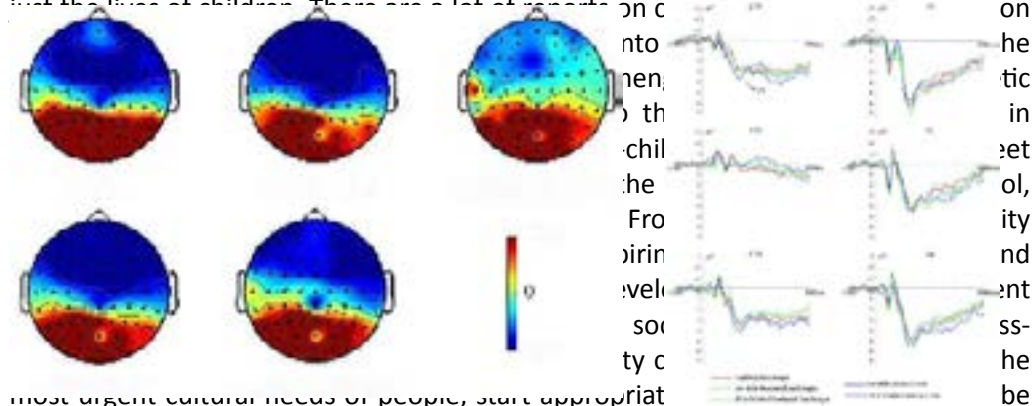

7.2 Strengthen the people's consciousness of landscape, and then guide the public to understand the spirit of Chinese traditional freehand brushwork.

Taking Chinese landscape painting as an example, landscape painting is not only a subject matter, but also the expression of nature itself, the relationship between man and nature, and the embodiment of landscape consciousness, which permeates the cultural structure of our nation.[35] From the ancestors' view of the mountains and rivers as the sacrifice of the gods, from the ancient Chinese monarch's ceremony of closing the retreat, from the site selection of the Taoist holy sites, From the development concept of "Green Water and Green Mountain is Jinshan Silver Mountain" advocated by General Secretary Xi Jinping today, we can see that the consciousness of mountains and rivers is a deep-rooted collective unconscious in our country. Up to the highest leader, down to the people, they all regard the mountains and rivers as the spiritual homeland. In his speech at the forum on literature and art in Yan'an, Mao Zedong pointed out that "the basic starting point of literature and art is love, which is the love of mankind." "there will be true human love, after the whole world has wiped out its classes." [36] from which we can see that literature and art have something to do with attitude and stand. The basic starting point of our literature and art today is still love, love of mankind, love of nature. It includes man's love for man, man's reverence for nature, man's understanding of society and his love for himself. Chinese traditional

culture and art emphasize the cultivation and art of virtue, such as Chinese painting stresses all the elements of the picture combined into a whole, bringing people the vivid, meaning and artistic conception, is standing in the ecological macro point of view to think about the reality of the problem, is the embodiment of heaven and earth in landscape painting. Chinese painters usually focus on real life and express their ideal of life and self-transcendence through pen and ink, postscript and so on. To evaluate Chinese painting, we should understand the traditional Chinese aesthetic theory, such as aesthetic feeling and feeling expression, "Things and I are one", "natural landscape and physical and mental correspondence", the Chinese view of heaven and earth, and so on. [37] The Chinese people's consciousness of the landscape contains a unique understanding of the beauty of the landscape, which corresponds to the virtual stillness of the heaven and earth with the virtual static of the heart, the rhythm and the rhythm formed by the form and momentum of the landscape corresponding to the feelings and magnanimity of the heart. Each landscape painting is a reflection of the new atmosphere in the painting after my blending. So if we understand the expression of landscape consciousness and landscape consciousness in Chinese painting, we will really understand the diversity of scenes in Chinese painting. Mountain is not a mountain, water is not water, flowers are not flowers, trees are not trees, mountains are mountains, water is water, flowers are flowers. The tree is a tree, the spirit of

ports of schools, communities and art institutions to cultivate children's generation of art appreciators and aesthetic appreciators of daily life. Our problem is how to reasonably and scientifically integrate social resources and integrate the spirit of Chinese traditional art freehand brushwork into public life, not just the lives of children. There are a lot of reports on c

most urgent cultural needs of people, start appropriate art education courses that can be accepted by the public. To promote the community communication of the freehand brushwork spirit in Chinese traditional art, it is necessary for aspiring people to develop relevant social aesthetic education courses for different groups in the community. There

must be social work professional tasks and goals, social aesthetic education curriculum items, community residents' learning needs and feedback, curriculum analysis and demonstration.

8. Conclusion

At present, many artists are trying hard to reform the traditional technical forms of Chinese painting. The public have the highest aesthetic sense, sense of pleasure and value rating of realistic forms of Chinese painting, and are interested in appreciating abstract ink works. However, there are some difficulties in understanding abstract ink, and it indicates that the aesthetic feeling and the sense of pleasure brought by the title-hinted abstract ink artworks are significantly lower than those brought by the abstract ink without any hint. There is a desire to understand the traditional Chinese painting, the value of freehand brushwork is high, but the emotional response to the form of freehand brushwork is not strong, it is difficult to understand the freehand brushwork. It indicates that the beauty and pleasure brought by the title-hinted freehand landscape artworks are significantly higher than that brought by the no-title freehand brushwork artworks. The traditional Chinese painting needs to let more people know through aesthetic education.

The suggestions of public aesthetic education in Chinese painting are as follows: it is necessary for the public to appreciate freehand brushwork in order to let them understand the aesthetic way of meditation, technique and ability in daily work and life; it is necessary to strengthen the public's consciousness of Mountain and water, and then guide the public to comprehend the spirit of Chinese traditional freehand brushwork; it is necessary to develop social aesthetic education courses to promote the community dissemination of the spirit of freehand brushwork in Chinese traditional art.

A STUDY ON THE PROTOTYPES AND TRANSFORMATION OF HUMAN EMOTION IN ZHANG-ZI'S TEXT - FOCUSING ON THE QI-WU-LUN CHAPTER

Abstract | This research is aiming to reveal how Zhuang-Zi 庄子 comprehend issues regarding the relationship between the human mind and the world, furthermore, how he intended to overcome the contradictions between them. All this, by examining discussions about the prototype of human emotion and its transformation.

In the inner chapters of Zhuangzi's text, "Xin/心" represents the place where the human mind is located, at the same time, is where, by utilizing the content that we already sensed from the world, the first cognition about the world is developed. However, at the moment when this process of mind moves from "Xin" and develops into "Cheng-Xin 成心(Completed mind)", the content that we recognized from the world turns into a fixed permanent fact. The former "Xin" is the specific way how saints (Sheng-Ren 圣人) are communicating with the world. For them "Xin" is the space where humans interact with the world utilizing all the contents that they perceived or sensed from the world, thus without any reason or comparison "Xin" is valuable in itself. However, once the "Cheng-Xin" system begins to function, in substance, "Xin" has already transmuted into "Ren-Xin 人心 (mind of ordinary people)". Through "Ren-Xin", people start to judge values such as right or wrong, and this leads to personal feelings about the object that are recognized. As a result, it modifies the contents of consciousness about recognition itself. This transformation of the human mind results in unstable and transient emotions such as obsession and aversion, from Zhuang-Zi's point of view, due to these myriad feelings, people lost the possibilities to engage in genuine interaction with the world. Therefore, emotions are absent in the saints (Sheng-Ren 圣人)' minds, who interact with the world without any obstacles. To reach the spiritual realm of saints, one must complete the doctrine of "Qi-Wu 齐物 (making things equal)".

Index terms | *Zhuang-Zi; Emotion; Xin/心; Cheng-Xin 成心; Qi-Wu 齐物.*

1. DISCUSSION ON MIND (XIN 心) IN THE PRE-QIN PERIOD

On the issue of Mind, I agreed with Zhang dainian's thought that neither Confucius 孔子, Mozi 墨子 nor Laozi 老子 seriously talked about the mind, and the issue only got treated by Mencius and people after him. Mencius believes that the mind is a sensory organ, which can be treated in the same way as the eyes and ears. And Zhuangzi has the same idea.

"Mind" in *Zhuangzi* text indeed contains some core ideas, but they are difficult to be generalized, because there are quite different types of mind appear in the same *Zhuangzi* text: ex. "sage's mind" (*sheng renzhixin* 圣人之心)¹, "constant mind" (*changxin* 常心), and "perfect man's mind."

Here on the essay, I analyzed these examples in the *Zhuangzi* text, and they can be approximatively come down to three basic concepts: One, an organ of the body; Two, human mind: the heart is unique among all body organs. It rests at the center of the body. Because of this, the word *xin* develops other connotations, since then, the word *Xin*'s meaning gradually turns abstract. One emphasizes "center" and the other emphasizes "mind."; Three, "constant mind" (*changxin* 常心). This is another type of "mind" that Laozi wanted to dismiss too. Laozi said, "The sages do not have a constant mind and take the men's mind as their minds." (圣人无常心 · 以百姓心为心) In the same way as *Zhuangzi*'s critique of the secular world (*renjianshi* 人间世), exemplified by his criticism of the commoners' "men's mind" (*renxin* 人心)² and "people's mind," (*minxin* 民心). Although Starting from *Zhuangzi* and *Mencius*, the traditional arguments about *Xin* changes, But both proposed that to achieve their ultimate goals, spiritual practice is necessary.

2. TWO POSITIONS ON "MIND" IN ZHUANGZI: "SAGE'S MIND" AND "MEN'S MIND."

The issue lies not in the multiple meanings of *Xin* in *Zhuangzi*, but in the two opposite attitudes adopted by *Zhuangzi* when he looks at the "minds" at various levels. The top level is the "sage's mind" (*sheng renzhixin* 圣人之心) and the "perfect man's mind" (*zhirenhixin* 至人之心)³. These "minds" represent the ideal spiritual state that *Zhuangzi* desires. However, in most cases, "mind" is used with an air of dismissal. In addition to the "opinionated mind" (*chengxin* 成心) that will get discussed in this chapter, the book also talks about "men's mind" (*renxin* 人心), "mechanical mind" (*jixin* 机心), as well as "minds with too much underbrush" (*you pengzhixin* 有蓬之心), "many men's mind," "thief's mind" (*zeixin* 贼心), and "constant mind" (*changxin* 常心).

On the contrary, the "perfect man's mind" in "the Perfect Man can put them in their rightful place" (至人之心有所定矣)⁴ is the representative ideal personality in *Zhuangzi*. It is like a mirror that is not blocked by anything. The ideal state of "mind" that receives approval should be "stable" and "silent." In *Zhuangzi*, the mirror is used often as a metaphor to describe the state of the ideal "mind," because the mirror directly reflects the world's original form with no distortion. When such "men's mind" and "mechanical mind" guide men's thoughts and behaviors, becoming the driving force of human behavior, people lose their original and pure nature, and ultimately the mind and nature cannot be at rest. Therefore, the most basic meaning of *Xin* is one of the body organs, as it is the organ responsible for carrying out various mental activities and form knowledge.

Apart from the mind, *Zhuangzi* discusses the sensory organs, including the eyes, ears, nose, and mouth. What needs to be noted here is that when *Zhuangzi* makes this discussion, he does not compare the mind with some other organs, especially not

with internal organs, but to the sensory organs. Zhuangzi finds that the essence of the eyes from the visual sense, that of the ears from the hearing sense, that of the nose from the smell, and that of the mouth from the taste. The nature of the eyes, ears, nose, and mouth is determined by the external phenomena that each sensory organ accommodates. By analogy, the mind has the same essence as the sensory organs.

In other words, for Zhuangzi, human mind has one other function, which is accommodating external elements or information. Here, Although “mind” (*xin*心) and “knowledge” (*zhi*知) are closely related, the mind is not different from other sensory organs, because it can sense the external world’s various elements. Therefore, this function of the mind, which is to perceive the external world to derive “knowledge,” is an instinct of the sensory organ, and therefore is natural, not artificial.

According to Zhuangzi, mind accepts “things” (*wu*物) from the outside world and develops them into “knowledge.” But this does not mean that the activities in the mind are fully compatible with all cognitive processes. Therefore, it cannot be certain that the mind is also distinguishing, analyzing, and judging objects. The only thing we could say is that just as the four sensory organs mentioned above play their essential roles, in the sense that they procure information from the outside world that makes perception and reflection possible, the “mind” here carries out a similar function providing information which allows for “knowledge.”

According to Zhuangzi, such “knowledge” formed by the “mind” is things which make someone human; only after people fully exercise the “knowledge” at this level, they can obtain “virtue” (*de*德). Therefore, the “mind” and “knowledge” mentioned here should be understood at the fundamental level as “non-artificial understanding of the outside world”.

Furthermore, “mind” and “knowledge” have not played their essential roles but developed something else other than the “virtue.” Zhuangzi finds the reason in the “fixed mind” (*chengxin*成心). The fixed mind is the most direct reason that the “mind” does not play its essential role, fails to produce real understanding, and leads to all things deviating from their natural places. Then how *Chengxin* is operating and makes human mind fail to truly understand the world?

3. THE APPEARANCE OF TRUTH IN THE CONCEPT OF “成心CHENGXIN”

The “xin” Zhuangzi is speaking about is a universal and natural psychological function, whereas “Cheng-Xin” means the act of achieving this kind of “Xin” somewhere above its pure and unadulterated level, and the process of transforming it into a fact that is immutable and incessant.

526

Zhuangzi says further: He shows the obvious differences of the cognitive content emerging from the transitional process of “xin” developing into “cheng-xin”: “before(前 Qian)” and “after(后 Hou)” represent the idea of time, “to exist(有 you)” and “nothing(无 Wu)” stand for the conception of space.

“Xin” is the initial stage of recognition. And the substance of the complex consciousness in the “xin” is different from the knowledge in our imagination, as it starts, ends and changes in a moment. But if the “xin” doesn’t develop the essential function of the “xin” well, in the “xin” that is initially attached to things the “nian” begins to accumulate with it and the functions of the “xin” directly develop into the stage of “cheng-xin”, but the substance in these kinds of “xin” will get consolidated into one integrated knowledge. At the same time, the genuine meaning of the perceived content that was originally

realized through “xin”, loses the possibility to develop into true “knowledge(知zhi)” and “virtue(德 de)”.

Zhuangzi believed that there actually was no problem with the content that was perceived through the cognitive function of the natural, universal “xin”, but that the problem would lie in the process of transforming these naturally formed cognitive contents into a self-evident true “cheng-xin”.

4. THE EMERGENCE OF “PERSONAL EMOTION(私 SI-SIDE EFFECT)” AND “FAVORITISM(爱 AI-EVIL EFFECT)”

Within the *Qiwulun* Chapter, during the process in the mind when “things (物 Wu)” are transformed into “uneven things (不齐之物)”, through the recognition methodology of “chengxin成心”, the first thing that emerges are many different types of emotional phenomena that were targeting on such “things”. In addition to the different kinds of personal emotion aforementioned, for example pleasure, anger, sadness and joy, in more relative senses, human emotion also contains complex feelings such as preference and persistence. However, these diversion and separation phenomena of human feelings are ultimately caused by personal feelings and preferences that appeared through different ways of augmentation about “things”.

In *Zhuangzi* text, even though he did not directly pointed out the nature of emotion or related topics, but the examples of certain human emotions that he mentioned rather convey more plentiful information. Here, through Zhuangzi’s thought, first of all, we can know that emotions do not emerge independently, but manifest their own state through the relationships with other emotions. In other words, when emotions are expressed in a structure with opposite meanings such as “Pleasure-Anger(喜-怒)”, “Sadness-Joy(哀-乐)”, “Concern-Sigh (relief)(虑-叹)”, “Change of mind-Obsession(变-热),” people compare a certain emotional state with other emotional states, the innate nature of each emotion can be strongly expressed. And second, it is clear that human feelings are not real substantial existence, therefore there is no method to seek out the origin of human feelings. However, human emotion is merely a superficial phenomenon, thus, it is temporary and empty. Not only that, different emotions which are accompanied by that judgmental thinking regarding “things(物 Wu)” causes people to be obsessed with certain “things”, eventually it makes people unable to insight into “things” themselves.

Due to the temporary emotions, people start to develop preferences or to be obsessed with only one aspect of “things”, and the phenomenon incurs on the failure of people to achieve the truth. In the fable of “Three every morning and four every evening(朝三暮四)”, *Zhuangzi* is mainly discussing about who is the real subject which is leading the actual behavior. Here he is trying to prove that the real subject guiding the human behavior is “Zhen-Zai真宰”, that based on the role of “emotion (情 Qing)”. Because this “emotion(情 Qing)” have no form, thus it cannot be confirmed by any human experience, but we still can notice that it has an active function, therefore it can be clearly judged that “emotion(情 Qing)” exists. “That as ‘way’ it can be walked is true enough, but we do not see its shape; it has ‘情Qing’ but no shape(可行己信·而不见其形·有情而无形)”. Here “emotion (情 Qing)” is the basis for guiding and deciding human behavior in the first place. In this sense, Cheng Xuan-Ying成玄英 interpreted this “emotion (情 Qing)” as “emotional wisdom (情智)”, and said “If you have sensibility and wisdom to do so, do not believe in your body”⁵. Wang-fang王雱 also regards “情 Qing” as something unrelated to human emotions or feelings, but as a kind of will to induce behavior.⁶ Therefore, he said “even if you seek for a certain feeling but could not get it, there would not be benefit or loss in truth”. Here “情 Qing” is also something

that is not related to emotions, but has the meaning of matter, affair or fact itself. From this discussion, it can be judged that the term “情 Qing” in Zhuangzi’s text is actually utilized as the meaning of actual facts or affairs that practically occurred. Furthermore, in Zhuangzi’s text, “情 Qing” has other meaning which is: the idea or willingness caused by our understanding about these facts (情 Qing) or certain behavior that is guided by our understanding about facts. Due to these features of “emotional state of mind(情 Qing)”, once people are stimulated by external factors and begin to be agitated, then all complex feelings, that the front part discussed about, “Pleasure in things and anger against them, sadness and joy, forethought and regret, change and immobility (喜怒哀乐 · 虑叹变愁 · 姚佚启态)” will appear. Eventually, all “things(物 Wu) in people’s mind become uneven. Thus, in this sense, the two terms of Zhuangzi, “私情 Si-Qing: personal emotions in a very private sense” and “(偏爱 Pian-Ai: Preference”, show the phenomenon of extreme individualization or privatization that is fundamentally caused by human emotion. **5. Conclusion** All Human emotions, including personal and private emotions, are one of the processes of human understanding about the world, or one of the byproducts of this process. Therefore, the issue of human emotions for Zhuangzi should be considered on the stage of human-world relationships.

Regarding her academic experience, she joined a documentary research project at China Research Institute SKKU(Korea) · a comparative research project between Japanese and Korean philosophy at Institute of Asian Cultural Studies ICU Japan · at School of philosophy _ Fudan university(China), here she led her own research project "The Establishment and Development of Chinese Aesthetics as a modern study". Dr.SEO is a distinguished graduate of the department of philosophy at Peking University where she had earned her Ph.D. diploma. Before that, she earned her M.A. and B.A. degree both at the same department of East Asian Philosophy at SKKU.

VISUAL EPISTEMOLOGY IN CONTEMPORARY IMPERIAL MONUMENTAL ART (ON THE EXAMPLE OF SCULPTURES, MONUMENTS AND BAS-RELIEFS “TYUMEN - TO THE VICTORS” IN THE CITY OF TYUMEN, RUSSIA)

Abstract | Art is one of the means of communication. The process of knowledge transfer using the language of visual arts is called by Daniela Bleichmar visual epistemology. Visual images of the imperial past form the samples of cultural memory is estimated by the researcher as elements of imperial consciousness. In the context of the analysis of the phenomenon of imperial culture, such art can be called imperial. I would like to apply the Bleichmar’s methodology to the analysis of the Great Patriotic War memorials of Tyumen. For example, in 2008, a Siberian cat park was created in the city. It consists of rows with granite thumbs and sculptures of gilded cast iron cats, designed by M. Alchibayeva. Sculptures symbolize the help to besieged Leningrad in the fight against rats. In 2010 the Monument to home front workers in the 1941-1945 was installed. The authors of the monument are the masters S. Savin, A. Medvedev and S. Titlinov, who depicted the composition of the bronze figures of a boy, an engineer, a worker and a war invalid. In 2015 a monument to the “Railwaymen of the front and rear” (the sculptors A. Medvedev, S. Titlinov) was built. The monument is an arch (symbolic Victory Bridge) with a bell. The bas-relief “Tyumen to the Victors” is part of the Eternal Flame memorial. The authors of this monument: S. Titlinov, A. Medvedev and S. Savin. The bas-relief has dimensions of 21.0 x 3.6 meters and tells about all the most basic moments of the war: the attack by the fascists, the Battle of Stalingrad, the Battle of Kursk, the Leningrad blockade and its breakthrough, the hard work in the rear, Red Square’s the Victory Parade of 1945. The monument includes lines from popular songs, poems, the most important orders of the command of the Red Army. Original historical artifacts of the past war, for example, a rifle, shells from shells, a model of blockade rations of bread, are fused into the relief. Due to the vivid image of the past history, the monumental art of the city of Tyumen can be attributed to the imperial art, since in the course of his perception, a modern image of a powerful country is created, where the power of the historical past of ancestors is inherited by the now living descendants. The monumental appropriation by modern generations of the feats of bygone days makes this art imperial.

Traditionally, art is recognized as a multifunctional system. In the visual epistemology's approach we would take in addition first of all a cognitive and epistemological function of art. Art's ability to reflect social processes and structures is actively used by politicians of different countries in its domestic policy. We have hypothesis that the artistic imaginary geography is closely connected with "imaginary political community" as nation (B. Anderson, 1991). A nation is imaginary, as each member of the nation has an image of the community in his head, but he does not know all of the other members. For example, Russia at different historical stages created imaginary geographies. During the period of the Russian Empire, Catherine II specially ordered paintings, graphics with images of different regions of the Russian Empire with inhabitants, so that ordinary residents of the empire could see all power, the vast expanses of their country could learn about those new territories and peoples that were attached.

In other side, art in the modern world is one of the most effectively instrument of communication. Communication can be between the author and the viewer, between the viewer and the meaning of the work of art in the visual art. Art carries information encoded in the language of a particular art form intended for the viewer. When interacting with a work of art, the viewer reads the information that he is able to decode, perceive and interpret, based on his experience with art.

Also, art is a memory mechanism. Yu. M. Lotman noted that art is an example of creative memory. In his text, culture is "a supra-individual mechanism for storing and transmitting certain messages (texts) and developing new ones" (Yu.M. Lotman, 1992), i.e. the mechanism of cultural memory within generations and between them. Thus, "memory" is contained in all artifacts of culture: household items and works of art, etc. The memory of cultural epochs and their events, which comes to us, is not an "objective memory". Yu. M. Lotman explains this by the fact that "each culture defines its own paradigm of what should be remembered (i.e. stored) and what should be forgotten" (Yu.M. Lotman, 1992). The elements to be remembered are emphasized and cultivated, while the latter is deleted from the cultural memory or their memory is minimized. Yu.M. Lotman called it the memory-oblivion paradigm. This is due to the fact that the source text is decrypted by different cultural codes that correspond to different sociocultural attitudes of society. Gradually, the meanings of culture are transformed and increase. Yu. M. Lotman notes that the collective cultural memory consists of "shared memory" (Yu.M. Lotman, 1992). With the help of this memory, the collective decrypts cultural texts that have been accumulated by society in the process of cultural and historical development. According to Yu.M Lotman. it remain possible, because in society there are constant texts and common cultural codes that are naturally transformed.

When we deal with elements of cultural memory imposed by ideology, we can speak about the formation of a myth. Such a myth also characterizes the culture that creates it. The myth of the cultural epoch is formed on the basis of the corresponding paradigm of memory-oblivion.

Following E.M.Meletynsky, we can speak about the processes of demythologization and remythologization of memory. The change in the memory-oblivion paradigm goes along with the process of the formation of the myth and is associated with the processes of demythologization and remythologization (E.M. Meletynsky, 2000). What should be forgotten is demythologized, and what needs to be remembered is remythologized. The process of knowledge transfer through the language of visual arts is called visual epistemology by Daniel Bleichmar. According to her concept, a visual image is a form of communication, in which viewers, when they perceive works of art, can cognize, conceptualize and enter the information they receive into the everyday picture of the world (D. Bleichmar, 2012, 2015).

Information reported by an official work of art, i.e. the system of images-contexts-meanings aimed at legitimizing the ruling power, the dominant interpretation of historical events and the glorification of the country's tragic past, creating positive images of rulers and their deeds, is evaluated by the researcher as serving to design elements

of the imperial consciousness. In the context of the analysis of the phenomenon of imperial culture, such art can be called imperial, since it serves to create a visual image of the imperial past, forms the imperial samples of cultural memory.

I would like to apply the methodology developed by Daniela Bleichmar to the analysis of the monumental design of the Tyumen (one of the most important Siberian cities), its monuments, and bas-reliefs.

For example, in 2008, a Siberian cat park was created in the city. It consists of rows with granite thumbs and sculptures of gilded cast iron cats, designed by M. Alchibayeva. Sculptures symbolize the help to besieged Leningrad in the fight against rats after breaking the blockade of Leningrad in 1943 during the Great Patriotic War for Russia in 1941-1945. Nearly 5 thousand cats were transported from the Siberian region to the northern capital, at least 238 individuals from Tyumen.

In 2010 (65 years since Victory Day) the Monument to Labor Front Workers in the Great Patriotic War of 1941-1945 was installed. The authors of the monument are the masters S. Savin, A. Medvedev, and S. Titlinov, who depicted the composition of the bronze figures of a boy, a designer, an employee of an enterprise and a war invalid. The statues hold the plate with the words "Everything for victory!" and "Everything for the front." In 2015 (70 years since Victory Day) a monument to the "Railway-men of the front and rear" was erected. The monument is dedicated to the feat of railway workers and is made of rails of the railway during the Second World War (the Great Patriotic War for Russia, 1941-1945). The monument is an arch (symbolic Victory Bridge) with a bell. The bas-reliefs depict railroad soldiers, women and children. The sculptors A. Medvedev, S. Titlinov became the authors of the monument.

The bas-relief "Tyumen to the Victors" is part of the Eternal Flame memorial and is dedicated to the Second World War (the Great Patriotic War for Russia). The authors of this monument: S. Titlinov, A. Medvedev and S. Savin. The bas-relief has dimensions of 21.0 x 3.6 meters and tells about the participation of the USSR in this war. It covers all the most basic moments of the war: the attack of the fascists, the Battle of Stalingrad, the Battle of Kursk, the Leningrad blockade and its breakthrough, the hard work of the workers of the rear, the Victory Parade of 1945 on Red Square. The monument includes lines from popular songs, poems, the most important orders of the command of the Red Army. Original historical artifacts of the past war, for example, a rifle, shells from shells, a model of blockade rations of bread, are fused into the relief.

The victorious events of the Great Patriotic War are the pride of the country, because it is considered a symbol of strength, will and rallying of the Soviet, and hence the Russian people. The Tyumen monuments to the heroes of the Great Patriotic War convey both grief and glory. The fixation of the sorrowful memory of the war, of its victims and sorrows is combined with the glorification of the heroism of the people, committed both in front and in the rear, during the war and in the post-war time, and the glorification of the victorious people, its unity, strength of mind and will.

The representation of such an idea in the visual and monumental forms of art speaks about the persistent enlightenment and introduction of the idea of the power and historical correctness of the winners into the consciousness of people. The art of modern Russia, dedicated to the Great Patriotic War, underlines the insuperable power of the Russian people and the enormous significance of its feat in international history. Thanks to the vivid image of the past history, the monumental art of the city of Tyumen can be attributed to the imperial art, since in the course of his perception, a modern image of a powerful country is created, where the power of the historical past of ancestors is inherited by the now living descendants. The monumental appropriation by modern generations of the feats of bygone days makes this art imperial.

WYNDHAM LEWIS' ENGLISHNESS AGAINST FASCISM: THE SIGNIFICANCE OF HIS METAPHOR OF 'WAVES' TOWARDS A BATTERY SHELLLED (1919)

Abstract | Wyndham Lewis (1882-1957) was known as the co-founder of Vorticism (1914-15), the only avant-garde art movement in the UK at the beginning of the 20th century. Since Lewis' father was American, mother British, and he, Canadian by birth, he moved among these three countries during his life. In this presentation, I will address what 'Englishness' was for Lewis, who had plural roots. I will focus on the emotional attachment he had for 'the sea' or 'waves' as the metaphor represented in his paintings and writings.

The metaphor of waves appeared as early as in his essay titled 'The New Egos' in the Vorticist journal *Blast* no.1(1914). In the essay, Lewis suggested that ego was pervasive 'like a wave', and went beyond the bounds of individual figures in modern times. He argued that new egos overlapped each other as though they were Siamese twins. He linked the new egos with 'dehumanisation'. His idea of 'dehumanisation' was his criticism of machine civilisation, and yet has been considered as the warship of the machine following Italian Futurism. This was because of the inhuman figures in his paintings, such as matchstick men or insects reminiscent of Umberto Boccioni's robotic sculpture. As a result, he was often called a fascist. However, considering his painting 'A Battery Shelled' (1919) which was completed after his service as the official war artist for both the Canadian and British governments during WW1, we see another possible interpretation for this subject. In this painting, the expression of the mud setting for the matchstick men and weapons might be inspired by the waves design that the great Japanese artist, Ogata Korin (1658-1716) used in his painting. If this is so, is it possible to consider that Lewis might have attempted to express different thoughts of fascism in his paintings?

In this study, first, we will refer to Lewis' later pamphlet titled 'Anglosaxony: A League that Works' (1941) where he frequently mentioned 'waves' or 'the sea'. It is very possibly that the waves represented Englishness or Universalism countering Fascism in it. Next, we will examine his painting 'A Battery Shelled' ,referring to Korin's design and his later pamphlet shown before. Consequently, this study will clarify Wyndham Lewis' Englishness, investigating what these words meant.

Index terms | *A Battery Shelled; Englishness; universalism; metaphor; the sea; the waves; Wyndham Lewis.*

INTRODUCTION

Canadian-born British artist Wyndham Lewis (1882–1957) was known as a co-founder of Vorticism (1914–1915), the only avant-garde art movement in the United Kingdom at the beginning of the twentieth century. His ideas and activities had an impact on many people, including the Russian designer El Lissitzky (1890–1941) and the first major communications theorist Marshall McLuhan (1911–1980). Lewis's father was American, his mother was British, and he was born on a yacht off Nova Scotia shore, Canada. Thus he moved between these three countries during his life. In this presentation, I will portray what 'Englishness' meant for Lewis, who had plural roots, focusing on his emotional attachment of 'the sea' or 'waves' as a metaphor represented in his paintings and writings.

In this study, first, we will refer to Lewis's painting *A Battery Shelled* (1919), produced after the end of the First World War, in relation to 'waves' or 'the sea'. Next, we will examine his later pamphlet *Anglosaxony: A League that Works* (1941), in which he frequently mentioned 'waves' or 'the sea'. Finally, this study will clarify Lewis's Englishness, investigating the significance of these words.

WYNDHAM LEWIS AS AN OFFICIAL WAR ARTIST

Firstly, looking at the centre of Lewis's painting *A Battery Shelled* (Fig. 1), we find soldiers running around in an area, trying to return to base after an explosion. The soldiers are shaped like stick people or insects, or small mechanical robots; they are far from brave soldiers. In contrast with these robotic soldiers, in the foreground on the left, three officers are portrayed large-scale. Each has a different gesture. One officer takes a cigarette in his hand, another officer with a moustache looks off-screen, and the last one level-headedly watches over the chaos in the centre. Diagonally from lower right to upper left, there are disposed-of shells and vertical posts that evoke military-barrack tent poles or burned-out trunks. From there to the upper background, an abstract ochre structure represents smoke rising in a zigzag manner because of the land in the painting.

A Battery Shelled was first exhibited in December 1919 at the Royal Academy of Art in London. At that time, art critics' interpretations of this painting differed sharply, leading to long disagreements.¹ For example, the *Connoisseur's* editor lambasted Lewis's painting style as 'particularly distasteful and inappropriate' because of the Cubistic abstract form of the soldiers involved in the explosion and the realistic forms of the three officers. On the other hand, the critic of the *Times* defended Lewis's style, saying that the artist has not submitted to any convention of design. Unfortunately, the view of the *Connoisseur's* editor prevailed, casting a shadow on Lewis's career. Why did Lewis use a style that perplexed people and that they found 'distasteful and inappropriate'?

A Battery Shelled was commissioned by the British War Memorial Committee to commemorate dead and wounded soldiers in the First World War. The work was required to be a specified size – 182 x 320 centimetres – based on Uccello's *Battle of San Romano* in the National Gallery. In the heroic-sized canvas, Lewis incorporated an avant-garde expression that he practiced in his Vorticist paintings. The 'distasteful and inappropriate' style, in which realism and abstraction coexisted, came about as a natural consequence.

Here it should be noted that the style of *A Battery Shelled* demonstrated not the failure

of the eclectic style that he made in response to the committee but the results of his long-term attempts to reconcile realism and abstraction. In *Blast* no.1(1914), Lewis compared the property of drawing to organic nature:

Fine and god-like lines are not for us but, rather, a powerful but remote suggestion of finality, or a momentary organization of a dark insect swarming, like the passing of a cloud's shadow or the path of a wind.²

Lewis required dynamic lines to depict nature, rejecting the graceful lines of classic paintings. If someone has some knowledge of Japanese art, it may evoke the clouds and waves painted all over the folding screens or panels. Indeed, it is possible that Lewis had Japanese screens in mind when he wrote this part in *Blast*.

KORIN'S SCREEN AS A SOURCE OF A BATTERY SHELLLED

Korin's screen appeared in a guidebook for the Arthur Morrison Collection in 1914, and it was known as one of the reserve items of the collection in the British Museum.³ In the collection kept open to the public during the war, works of Korin are shown as well as those of Koetsu, Sotatsu, and Rimpa. Interestingly, in the 'Bless list' of *Blast* no.2 of 1915, three artists' names, 'Koyetzu | Rotatzu | Korin,' appear at the top like artworks on display.⁴ Was it just a coincidence?

The furrows of churned-up mud in the centre of *A Battery Shelled* make clear the resemblance between this painting and Korin's *Matsushima* (Fig. 2). Tree stumps or artillery shells standing upright in the mud reveal the influence of Korin's depiction of the striations of the rocks projecting from the sea. While Lewis used Cubist language, he was fascinated by the robust dynamic structure of Japanese art, even in his Vorticist time.

However, Lewis was inspired not only by Korin's technique but also by his expression of dynamic energy extending vertically and distally through the technique. Korin's dynamism was mentioned in a passage of *Flight of the Dragon* by Laurence Binyon: 'You may say that the waves of Korin's famous screen are not like real waves, but they move, they have form and volume'.⁵ The key feature of *A Battery Shelled* is not each individual motif, such as the tree stumps, soldiers' bodies, crinkled iron, and smoke billowing over destroyed territory, but the dynamic energy created by the continuity of these motifs. The dynamism we sense is due to the work's forceful lines – not to Cubist composition or the Japanese colour design of Ukiyo-e. His bold lines visualise the dynamism underlying a battlefield through the composition of motifs on the picture plane. Indeed, Lewis insisted on the importance of lines emphasising dynamic structure and the drawback of oil painting in his 1930s essay 'The Role of Line in Art'.⁶ He thought that drawing (with burin, pen, brush, or pencil) showed an artist's tension or skills, while oil paint obscured the picture plane by overpainting. Therefore, oil paint occasionally deceives the viewer's eyes.

As described, Lewis's emphasis on lines differs greatly from nineteenth-century Japonism, which discovered decorativeness combined with Realism and an extraordinary vision in Japanese art such as Hokusai's Ukiyo-e. Likewise, it is different from Italian Futurism, which attempted to visualise the passage of time as serially connected. In the past, Vorticism has been regarded as an avant-garde movement strongly influenced by Futurism, specifically in terms of its visual appearance. Therefore, the 'dynamism' he tried to express might seem at first glance to be affected by Futurism.

If it is neither the Futurists' expression of speed nor movement within time, what is Lewis's 'dynamism'?

A Battery Shelled is often discussed as 'a complex painting with many layers of meaning'.⁷ Lewis would probably place a kind of Eastern mysticism into modern machinery in the context of the Western tradition. He must have been attempting to portray the destructive energy of machines that distorted nature's form. In the pamphlet *The Caliph's Design* (1919), Lewis insisted that a big gun would change in function and should be 'absorbed into the aesthetic consciousness' and then 'its meaning would be transformed. It is of exactly the same importance [...] as a wave upon a screen by Korin'.⁸

For Lewis, the vital power that is behind all of life and nature, and it unfolds by using the imagery of 'waves'. This was already shown in *Blast* no.2.

The moment the Plastic is impoverished for the Idea, we get out of contact these intuitive waves of power, that only play on the rich surfaces where life is crowded and abundant.⁹

'Waves' are 'the Plastic' as well as a rhetorical expression. In *A Battery Shelled*, 'waves' that have transformed into the ridged furrows of churned-up mud expose the power using concentrated lines. To complicate matters, the 'power' behind external reality is sometimes benign, but sometimes it is evil. Changing the interpretation of *A Battery Shelled* affects not only the function of the guns but also the whole landscape of the painting, transforming its function into a revelation of the perversion of nature. If it is true, *A Battery Shelled* expresses neither a pastoral scene nor the romantic sublime. It depicts the evil energy of war and serves as an anti-war metaphor. This painting is a rare example of a Lewis landscape, while it shows humanised nature in a 'distasteful and inappropriate' manner.

ENGLISHNESS AND GLOBALISM

As we have seen in earlier chapters, *A Battery Shelled* included various elements, including Korin's screen, nature, and criticism of the modern world. Moreover, Lewis's own career was complicated, and he had multiple roots. In this section, we interpret his Englishness through his metaphor of 'waves'.

'Waves' first appeared in his work in his essay 'The New Egos' (1914). Lewis wrote, 'The human form still runs, like a wave, through the texture or body of existence, and therefore of art.'¹⁰ In other words, egos prevail throughout the world beyond the individual. He called the situation reminiscent of totalitarianism as 'dehumanisation'. Lewis symbolically expressed dehumanisation through non-human and characterless figures in *The Crowd* (Fig. 3), grounded in architectural frames such as skyscrapers, with a chain-like structure from above to below. There are stick-like human beings with flags, who look more like a rioting crowd than like combatants in a war. The crowd is reduced to a small grid, as if they are marching on a curve, like part of a gear wheel, in the upper right. A very large person who looks upon the crowd's confusion is standing in front of the flag of France on the left. One working title for this painting was *Revolution*.

AESTHETIC EXPERIENCE IN THE INTERCULTURAL CONTEXT

Abstract | When an artwork involves cultural properties, the controversy such as cultural appropriation could arise. To facilitate the process of organizing and understanding the controversy, this paper examines how the cultural identity of the artist and the viewer could affect the appreciation of such artworks. I will examine multiple criteria that must be delineated in order to analyze such a process of appreciation. The first one is the 'qualification' necessary for an artist to handle the cultural properties within his/her artworks. Some artists succeed in the international art scene by reflecting their cultural identity onto their artworks, when exhibiting in the cultural environments that are different from their own. The reason that they are permitted to handle the cultural property is that the viewers have approved that they are the insiders of the culture, and have given such qualification to them. On the contrary, when the artist is thought to be the outsider of the culture presented within the artwork, the "aesthetic handicap thesis" applies. This thesis argues not only that the outsiders ought to produce visually inferior creation but also that it is morally objectionable when the outsiders handle the cultural properties. That being said, the problem arises; how do we determine whether the artist is an insider or an outsider of the culture? It is difficult to make such decision based on the objectively-set criteria, and the act of dividing people into such two poles itself can be problematic as it could fall into the claim of cultural essentialism. To solve this, I will argue that the artists' 'qualification' to handle the cultural property, or artists' 'insiderness' is determined by the viewer's subjective judgment; that is, if the artist's insiderness is higher (or equal, if the viewer considers him/herself as an insider) compared to the viewer's, then the artist is an insider from the point of view of that particular viewer. Another key criterion is whether the cultural properties are handled 'appropriately' or not. I will touch upon three levels of inappropriateness; (1) the artist is an 'outsider' and thus does not have the 'qualification'; (2) the cultural property is handled in the way that brings disadvantage or discomfort to the 'insider' of the culture; (3) the artwork does not fulfill the evaluation criterion of the category which the viewer perceive the work to be in.

INTRODUCTION

One of the motivations behind this study has emerged from the ambiguity and confusion that seem to cover the controversy of cultural appropriation. Many of the preceding research seem to argue upon how cultural appropriation is a harmful act against minority culture, and emphasize moral inappropriateness. However, many of the controversies of cultural appropriation are accompanied by such opinions as, “I do not see what is wrong with this”, revealing people’s inconsistent understanding of the problem and the ambiguous distinction of what is ‘inappropriate’. The purpose of this study is to point out the criteria that must be realized in order to discuss the appreciation of artworks that contain ‘cultural properties’, or the properties that the viewers associate with certain cultures. While many of the studies dealing with subjects such as “cultural appropriation”, “Eurocentrism”, and “cultural essentialism” tend to assert their position on what is right and wrong, this paper aims to avoid such stance and rather objectively analyze the criteria that influence the intercultural appreciation. Note that when I use the terms such as ‘insider/outsider’, ‘qualification’, and ‘inappropriate’ in this paper, the intention is not to assert the cultural essentialist view, but rather to shed the light onto the reality that such view tends to be taken by the viewers, and reveal how such tendency could affect the process of appreciation.

THE PRECONCEPTION TIED TO ‘INSIDER’ AND ‘OUTSIDER’

The ‘Qualification’ of ‘Insider’

When viewers find cultural properties in artwork, whether the presented culture and the cultural identity of the artist are consistent or not can be an important factor in the process of appreciation. This is because whether the artist is the insider of the culture or not determines whether the artist has the ‘qualification’ to handle the cultural property or not. The reason why such ‘qualification’ as an insider is necessary to handle the cultural properties is that the viewers expect the insider of the culture to be equipped with the culture-specific ideas and aesthetic sensitivities (hereinafter referred to as ‘cultural sensibility’), which outsiders do not possess.

The advantages and disadvantages of the ‘Qualification’

Depending on the artist, this ‘qualification’ can act as both advantage and disadvantage. First, one of the reasons why ‘qualification’ can act as a disadvantage is that it could cause the viewers to interpret the work in connection to the cultural background of the artist, which tend to make them ignore the personal genius and intention of the individual artist. In other words, the viewers are to appreciate the work with the preconception that “because the artist is Japanese, this work must be containing something of Japanese nature”, and whatever elements appearing in the work is going to be attached to Japanese culture in the process of interpretation. For some artists, such tendency could be an obstacle for their artistic activity, as they want their works to be valued or interpreted for their individual act of creation, and not in connection with their cultural background. In such a case, the artist is passive to the ‘qualification’, and the ‘qualification’ acts as a disadvantage towards the artist.

On the other hand, there are also artists who intentionally reflect their cultural backgrounds onto their artworks. This could be a useful method for the artists with a minority background to make their works stand out from the rest, as cultural properties can be a means of directing individuality and differentiating works. This kind of artists is active upon 'qualification', and 'qualification' acts as an advantage towards the artists.

The 'Aesthetic Handicap' of 'Outsider'

On the other hand, the viewers tend to think that the 'outsiders' lack cultural sensitivity as well as the technical ability to handle the cultural properties well. Such preconception toward outsiders is supported by "The Aesthetic Handicap Thesis" (Young 2008, p. 32). In other words, if the preconception toward insiders to have the ability to handle cultural properties well is the 'qualification', then the preconception toward outsiders to lack the ability to handle cultural properties well is the 'aesthetic handicap'. The aesthetic handicap thesis not only argues that the outsiders lack the technical skills to handle the cultural properties, but also the fact that the artist is an outsider alone is a negative aesthetic quality of the artwork. When viewers hold such perspective, the potentially valuable artworks made by 'outsiders' could be overlooked.

THE DISTINCTION OF 'INSIDER' AND 'OUTSIDER'

When cultural appropriation is being discussed, the distinction of insider and outsider seems indispensable. However, it is difficult to judge whether a person is an insider or an outsider of a certain culture based on the objective factors. The objective facts that determine insiderness can include factors such as the number of years lived within the culture, the degree of contact with the culture, and ethnicity. However, it is not a realistic method to determine a person's insiderness, for example, by setting concrete numerical criteria for each factor and by digitizing individual experience. For example, if someone lived in Japan for 20 years, but because he never interacts with Japanese society and thus does not speak a word of Japanese, it would be inappropriate to judge blindly based on the number of years he has lived in Japan. Also, the quality and type of experience of culture are diverse and it is difficult to decide which experience to put weight on. Therefore, one way of distinction that I would like to suggest is the following: the 'qualification' or the 'insiderness' of an artist is determined in comparison with the viewer's 'insiderness'. This judgment would be based upon the subjective perspective of the viewer since we are trying to focus on the process of appreciation. That is, if the viewer thinks that the artist's insiderness exceeds viewer's, then the artist is an insider (for that particular viewer), and conversely if the insiderness of the artist is lower than the viewer's, then the artist is an outsider (for that particular viewer). Moreover, if the viewer thinks that the artist's insiderness or outsidership is equal to his, then such relation as both are insiders or both are outsiders could happen. In other words, the insiderness of the artist is determined by the subjective judgment of the individual viewers, meaning that the artist is not necessarily always granted the same position. While Erich Hatala Matthes warns that the distinction of insider and outsider itself could fall into cultural essentialism and that it could promote stereotypes that are harmful for cultures (Matthes, 2016), here I am trying to hypothesize the possible

perception that different viewers could have rather than trying to establish the fixed definition of 'insider' or 'outsider', which I believe would not be problematic in the sense that Matthes is concerned.

THE 'INAPPROPRIATE' WAYS TO HANDLE CULTURAL PROPERTIES

Another important criterion when an artwork involving cultural properties is being appreciated is whether the cultural properties are treated 'appropriately' or not. There are different levels that the cultural properties could be treated 'inappropriately'. First, some viewers might sense the inappropriateness simply from the fact that the artist is an 'outsider'. This, for example, is when the evaluation of an artwork drastically drops after the artist is known to be the outsider of the culture presented in the artwork. Sometimes, artists are blamed just because they are the outsiders of the culture they present. The second level of inappropriateness is when the cultural property is treated in the ways that bring disadvantages to the insiders. For example, some might think that to misrepresent a culture in a negative way could harm the minority culture and its insiders, as it promotes to form the distorted stereotype of the culture. On the third level, artwork could be considered inappropriate when it does not fulfill the evaluation criterion of the category that the viewer perceives the work to be in. In other words, it is the matter of whether the viewer is placing the artwork within the context of a culture which the cultural property is 'originated from', or within the context of a culture which the cultural property is 'appropriated to'. The inappropriateness presented here seems to be based on the technical problem, rather than the moral problems, which the first two levels seemed to be based on.

While insiders would not be applicable to the first level of inappropriateness because of their 'qualification', it is possible that they commit the second and third level of inappropriateness by treating cultural property in the way that is harmful to the insiders, or by lacking the technical skill valued in the category of the artwork. What I have pointed out in this paragraph are the possible criteria that the viewers employ when making the decision of work's inappropriateness. Note that each viewer could have different weight on each criterion.

CONCLUSION

In this paper, I have examined the criteria that could possibly affect the process of appreciating the artworks that involve cultural properties.

In most part, it is the preconception that the viewers hold toward the artists' cultural identity that significantly affects the appreciation. This preconception includes the 'qualification' given to the insider and the 'aesthetic handicap' given to the outsider, and I have mentioned that such distinction of 'insider' and 'outsider' is made as the result of the viewer's subjective judgment in comparing the artist's 'insiderness' with that of the viewer's. I have also mentioned that when these preconceptions are active in the process of appreciation, it can cause results as follows. First, the artworks can be interpreted in association with the culture even when the artists did not intend to. Second, the artworks can be overvalued for its cultural uniqueness. Lastly, the potentially valuable artworks created by the 'outsider' can be overlooked.

Another point made is that there are different levels of inappropriateness that the viewers possibly sense; the first is when the artist is an 'outsider' and thus does not have the 'qualification'; the second is when the cultural property is handled in the way that brings disadvantage or discomfort to the insider of the culture; the third is when the artwork does not fulfill the evaluation criterion of the category which the viewer perceives the work to be in.

When controversy like cultural appropriation is being discussed, different opinions arise from various cultural positions. To argue upon what is right and wrong in such a situation can only confuse the issue further. What must be recognized are the factors that are affecting to form all the different views on the same topic, so that it would be possible to visualize the point where the misunderstandings and the confusion are.

THE MILIEU OF THE PICTURESQUE.

EARLY TOURIST MEDIA AND IMAGINATIVE GEOGRAPHIES IN THE MEDITERRANEAN

Abstract | This paper discusses the formation of the modern image of the Mediterranean cityscape through the study of a powerful, yet neglected in literature, genre of print media: the travel guide. It aims to address the politics of representation and the influence of the *external* tourist gaze in our ways of perceiving space and aestheticizing place. The Mediterranean is a sea of myths; dense layers of descriptions and depictions contribute to the formation of its collective image. White houses, the bright sunlight, an ever-present antiquity and the exoticism of the Orient are among the subjects that outline the construction of the Mediterranean imaginary, which deeply intervenes in our cognition and recognition of space. The Mediterranean constitutes thus an ideal research framework for the understanding of popular place aesthetics as products -or accelerators- of historical geopolitical processes. In this context, this paper illuminates the formation of Mediterranean aesthetics as reflected in an early modern tourist medium of 1882: the first published guide to cover the entire region, *Murray's Handbook to the Mediterranean*. Its creation coincides with the rise of mass tourism; targeting a wide audience, it is assumed to be indicative of the 19th-century British image of the sea, and, simultaneously, decisive in dynamically shaping the traveler's perception. Attempting an understanding of these two processes, the narratives constructed and reflected in the handbook's pages are recorded in overlapping mappings of the presented places, in a hybrid representational approach which includes textual elements, icons, and analytic diagrams. Thus, systems of similitude, grouping, and comparison in the description of Mediterranean places are revealed. What this method illustrates is the creation of the flattened image of a multi-leveled heterogeneous space, an image through which primary experience is essentially filtered. At the same time, the alleged aesthetic and cultural continuity of the Mediterranean milieu is particularly questioned, highlighting the tensions between the imaginative geographies of East and West, development and backwardness, physical and representational space.

Index terms | *geopolitical aesthetics; imaginative geography; Mediterraneanism; modernization; Murray's handbook; Orientalism; place aesthetics; tourist media.*

For the great historian of the Mediterranean Fernand Braudel “The history of the Mediterranean constitutes a mass of knowledge that defies all reasonable synthesis”¹. Indeed, it seems impossible to meaningfully study such a broad –both geographically and historically- region. The use of the adjective *mediterranean* seems then excessively frequent, in the descriptions of characters, practices, objects; the word lost long ago its strictly geographical meaning and was gradually incorporated into a mechanism of (self) stereotyping for the people of the sea². Similarly, descriptions of the mediterranean landscape seem to be inextricably linked to a fixed set of elements: the Mediterranean is the bright light; the whiteness of its houses; the birthplace of the first civilizations; the locus of myths; a holiday paradise. As Predgar Matvejević perfectly illustrates, it is a sea of representations:

We do not discover the sea ourselves, nor do we view it exclusively through our own eyes. We see it as others have seen it- in the pictures they draw, the stories they tell. We cognize and recognize it simultaneously. We are familiar with seas we have never laid eyes on or bathed in. No view of the Mediterranean is completely autonomous³

The creation of such mythologies is not irrelevant to the discourse on mediterranean unity. The Mediterranean is an eternal circulation system⁴, consisting of networks of goods, people, ideas, which bond together diverse economies, cultures, and religions.⁵ It is the close observation of this condition that led Braudel to declare the Mediterranean a unified world. However, the claim of this historical unity is not always politically neutral. Contemporary scholars⁶ describe European Mediterranean countries –with the exception of France- as semi-peripheral within the processes of the globalized economy, while the countries of the eastern and southern Mediterranean shores are positioned further towards the world- periphery. Following Said’s *Orientalism*⁷, Herzfeld creates the term *Mediterraneanism*⁸, to explain today’s Mediterranean as an epistemological area the construction of which is not irrelevant to the global power hierarchies. The Mediterranean can then be understood as another imaginative geography; just like the western invention of the Orient, the collective experience that the western world acquired of the Mediterranean is attached to popular representations: the travel, the fable, the stereotype function both as products and as accelerators of this process⁹.

This mythological construction was then completed through the diffusion of media, among which the travel guide represents an interesting synthesis of the historical and the scientific with the popular: its genealogy as a genre in the Mediterranean goes back to 16th and 17th century travelogues¹⁰, but also to the scientific cartographic missions of the 18th century¹¹. It was born with the rise of mass tourism in the 19th century¹², and permits a wide diffusion of place representations. It can then be assumed that, as a medium, it contributed to the establishment of the most potent mediterranean mythologies. A close reading of a 19th century guide, focusing on descriptions of the urban landscape, reveals the complex interrelations between external place representation and geopolitical hierarchies of the era.

MATERIAL AND METHODOLOGY

Murray's Handbook to Mediterranean: its cities, coasts, and islands was published in London in 1882, and it will be the main source cited in the following paragraphs. There are multiple reasons for the selection of this specific medium: its publication in the rise of mass tourism, its –then innovatory- approach to the Mediterranean as a unified milieu, the role of the visitor as an external observer, and, finally, its utility in illuminating today's mediterranean tensions. In the introduction we read

A desire now becoming general to visit these sunny shores and islands where winter is shorn of half its importance; and the facilities of moving from place to place afforded by French, Italian, Spanish and Austrian steam companies, have produced a want for this Handbook which these pages have been prepared to supply¹³

The handbook includes information on transport between big ports, the navigation along the coasts, accommodation, and exchange rates; also, descriptions of cities, anthropological characterizations of local populations, extracts from older travelogues, archaeological studies, etc.

A structural reading of the text will be performed, critically producing five layered mappings: the first one presents the author's selection of sites; the second one addresses the portrayal of place as a picturesque landscape, highlighting the appeal of the sea; the third one examines the stereotypical attribution of aesthetic qualities to place; the fourth one explores the tension between locality and modernization; the fifth one investigates the concept of insularity. In every map different combinations of places are marked, using icons, colors or extracts from the text. In the next paragraphs, the parallel processes of text reading and map creation are described, focusing on their relation to wider historiographical, geographical or anthropological approaches.

MAPPINGS: FIVE LAYERS OF INTERPRETATION

One: The route

The first mapping (Fig.1) attempts to mark the necessary mediterranean destinations, as suggested by the handbook's author, resulting in a simulation of the 1882 journey. The tour is presented as a continuous narration, which departs from Morocco and moves parallelly to the coasts, surrounding the sea from West to East and from East to West, before arriving in Spain. Special attention is paid to the western part of the north African coast, as its ports offer easy access to Spain and France. There is also an extreme interest in Greece, where the author urges readers to explore coastal cities, ancient sights, and islands. Places in Sicily, Sardegnna, Corsica, Malta, and the Balearics are also presented in detail.

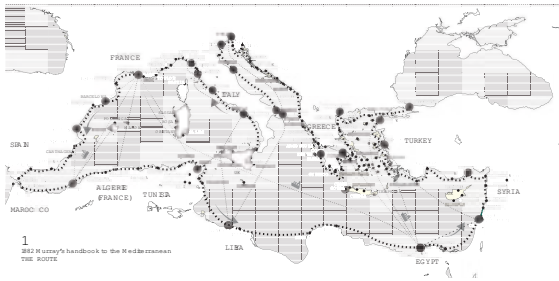

Figure 1: Map indicating the Mediterranean tour, as suggested in the 1882 handbook, departing from Tangiers and arriving in Gibraltar.

Two: Image of the city

The second map (Fig. 2) includes all cities the image of which is described as pleasant. Cities, transformed into aesthetic objects, are described as (*very, exceedingly, extremely, truly*) *picturesque, striking, magnificent, fine, lovely, pleasing, prosperous, remarkable, imposing, dazzling, beautiful*. The landscape is seemingly reduced to its visual effect to the visitor: it is a *scenery, a scene, a view*. Thus, this mapping permits a simultaneous geographical understanding of the architectural landscapes that have already been aestheticized by the end of the 19th century; it also shows which are the desired elements of urban space. These include: the whiteness of the buildings and the variety of the skyline (in Algiers, Oran, Tangiers); the amphitheatrical situation of the settlement in a *picturesque bay* (as in Zadar, Reggio, Mentone); the medieval architecture of walls and towers (in Dubrovnik, Beirut, Chania, Valetta); finally, the overall wealth reflected, as in the *magnificent* urban landscapes of Venice, Istanbul, Naples, Genoa. The importance attributed to the view of the city from the sea reminds that up to the 20th century, the coastal one was the main face of the Mediterranean city, inspiring a series of diffused depictions; today, as we mainly approach cities by plane, we rarely view this face, neglecting the historical creation of this archetypical image of the city.

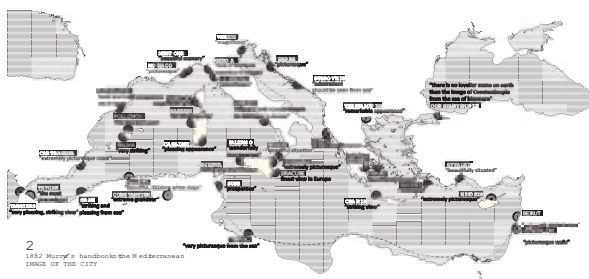

Figure 2: Map marking all the cities described as picturesque, striking, magnificent, fine, lovely, pleasing, prosperous, remarkable, imposing, dazzling, beautiful in the handbook. Quotes indicate the aestheticized urban elements.

Three: Attraction paradigms

The third mapping (Fig. 3) refers to the ‘character’ of the presented cities, when this functions as an attraction for the visitors. This is the realm of stereotypes: three-dimensional places are presented from single perspectives, permitting the observation of geographical aesthetic patterns, and thus revealing fantastic geographies of what is considered *interesting, charming, pleasant or exotic*. Four main groups of patterns are discovered. The first one consists of places with *oriental character*; those are situated almost exclusively in the western part of North Africa. The second one, which is by far the biggest, includes all areas which *must be visited* because of their *archaeological interest*: the coasts of Egypt, Lebanon, Syria and Asia Minor, Greece- with an emphasis on Peloponnese- Southern Italy and Sicily are thoroughly explored. Next, a small group of cities are admired because of the *Venetian style* of their built environment: Nicosia, Chania, Valetta, Dubrovnik, and, of course, Venice, feature big walls, pretty piazzas and picturesque ports. The last group consists of the cities of the French and Italian Riviera, Corsica, the Balearics; these places *should be frequented* by those searching for sun and rest. They are described as already functioning in two speeds: one for locals, and one for long-term tourists.

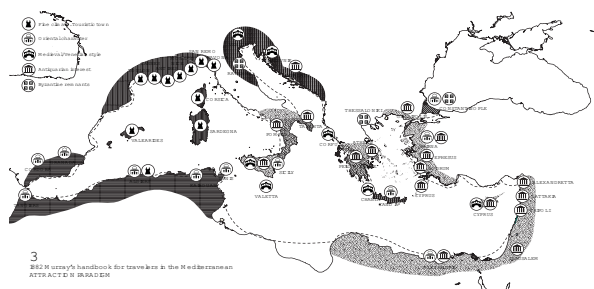

Figure 3: Map of the four main attraction paradigms, as related to city character: Oriental, Archaeological, Venetian, Resort

Four: Awaiting modernity

The fourth layer (Fig. 4) maps dichotomies of development and backwardness, internationality and localism, modernity and tradition, as related to the contradiction between West and Orient. These are reflected in the descriptions for the interior of the city, the urban tissue and the walker’s experience, shaped by the size, configuration, smell and materiality of the streets¹⁴. Existing local characteristics are in some cases praised as picturesque and in others rejected as signs of degradation, following an apparent geographical division: in cities of the *Orient* (North Africa, Middle East, Turkey, and Greece) the organic structure of the urban tissue is *crooked, tortuous, narrow, dirty*, and when the author finds virtues in their urban web, it is either because they are *unexpectedly clean for a native city* (such as Tunis), or because large scale modernizing –or *westernizing* projects are being carried out- in most cases sponsored by France or England (such examples are Alexandria and Nicosia). However, in cities of the northwestern Mediterranean coast, narrow streets are considered to be *picturesque* and characteristic of the local spirit (in Genoa, Syracuse, Cordoba). This double standard in the description and perception of almost identical urban landscapes,

which were created through the parallel layering of civilizations in both opposing shores of the sea, is representative of a still insisting tension between East and West: it indicates western attempts to reinvent eastern cities, following the sovereign narrative of a singular path for progress within the globalized world.¹⁵

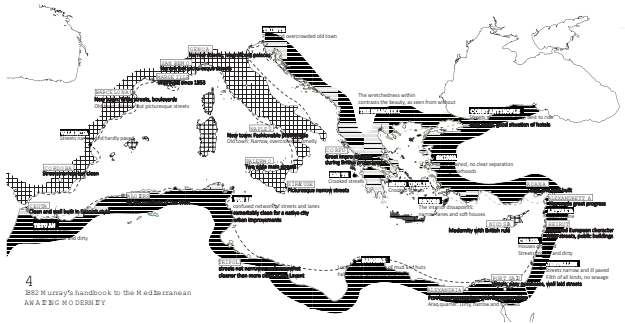

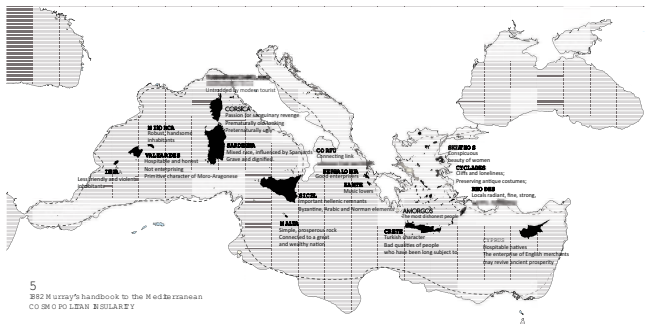

Figure 4: Map exploring the West- Orient dichotomy, as reflected in the author’s description of the urban web of various cities

Five: Cosmopolitan insularity

The last focus (Fig.5) is on the islands, to which the handbook’s author devotes multipage descriptions. The island, as a minimum entity of cartographical space, favors aestheticizations and mythopoetical abstractions.¹⁶ In the handbook, however, these are often transformed into offensive anthropological stereotypes - for example, locals of Rhodes are described as *radiant, handsome, strong*, those of Amorgos as *dishonest*, and Corsicans as *prematurely old looking*. What is interesting is that for other islands, such as Sicily or Corfu, such abstractions are avoided; these are described as *connecting links*¹⁷ between East and West. In order to view this distinction within a wider historiographical context, it is worth discussing the concept of insularity, as introduced in 1949 by Fernand Braudel. The main principle is that an island can function either in a state of absolute isolation or in one of dense connectivity, with the two states alternating depending on the geopolitical conditions. In other words, the sea can separate islands, but also connect them in multiple routes. Braudel states that this concept can be extended to contribute to a new understanding of topos:

This may make it easier to understand how it is that each Mediterranean province has been able to preserve its own irreducible character, its own violently regional flavor in the midst of such an extraordinary mixture of races, religions, customs, and civilizations¹⁸

Missing the necessity of this double-faced insularity, the handbook's author seems to match one of these two alternate states to each place, presenting some as vernacular stereotypes, while others as miniature worlds.

Figure 6: Diagram illustrating objects, practices, events, that compose the Mediterranean, according to Predrag Matvejević's *Mediterranean: A cultural landscape*.

EPILOGUE: THALASSOLOGIES

This neglected, almost insignificant historical stereotype of 1882, was examined in a search for the painted image of the Mediterranean city. It has been already assumed that such a medium can be studied both as an influence to its contemporary audience and as a reflection of the dominant narrative of its era. Furthermore, it seems to participate in a discourse about the Mediterranean which is scientifically constituted more than fifty years later, embracing as its central theme the unity of the sea. This unity, however, threatens to demolish the tensions, inequalities and multiplicities of real space. But space is not a text, nor a unique narration; it is exactly the sum of its places, agents and practices. And it is an inclusive expression of this multiplicity that we ought to design and communicate, in order to fight the challenges of a single, dominant narration. In such an approach, Iain Chambers suggests that we read the sea as a fluid archive, not of the ways things were, fixated by a scientific 'objectivity', but of the way things are, survive, and keep living: documents, oral histories, music, food can serve as the objects of this archive. After all, 'History is always now', he concludes, quoting Walter Benjamin.¹⁹

This eternal, vivid and alive history of the sea has been beautifully captured by Predrag Matvejević, who turned this passionate collector into his life project. What he produced is not a coherent history, but a breviary, an index of the collection of objects he discovered into this sea he kept returning to (Figure 6). As a true thalassologist, he knows the importance of a node for fishermen, and its variations in different places; he can distinguish the various forms of the sea foam; he is capable of reading the subtle mutation in the view, the shape, the size and the direction of a cloud.²⁰ He knows that

some histories remain out of time and out of reason. Our attempts to map a single journey that took place in 1882 can then be interpreted exactly as a tiny contribution to this archive. Not as a coherent history, but as the visualization or a snapshot of how the complexity of the mediterranean milieu was once communicated; as a moment in the multiple histories that constitute our sea.

ANOTHER 'DISCOVERY' OF AFRICAN TRIBAL ART IN THE CONTEXT OF CHILDREN'S ART EDUCATION AROUND THE TURN OF THE 19TH CENTURY TO THE 20TH CENTURY

Abstract | After analysing 'primitive' art in comparison with children's drawings, English art critic Roger Fry ended 'The Art of the Bushmen' (published in 1910) with the following words: 'The gratitude of all students of art is due to Miss Tongue and Miss Bleek, by whose zeal and industry these remains of a most curious phase of primitive art have been adequately recorded'. 'Miss Tongue' is Helen Tongue, a teacher at Rockland Girls High School in the Eastern Cape, South Africa, during the 1890s and 1900s. She published copies of the San people's rock-paintings that she had found in the region as a book, titled 'Bushman Paintings' in 1909. 'Miss Bleek' was Dorothea Bleek, the daughter of famous ethnographer Wilhelm Bleek. She travelled to several rock-painting sites around South Africa with Helen Tongue.

In the period when Helen Tongue was engaged in teaching, the British Empire systematised and intensified its repression of 'coloured people' or 'tribal natives' especially after the end of the Second Boer War in 1902. My concern, however, is not so much with the political problems of the British colony in South Africa, but relates to the supposed aesthetic bias in the 'discovery of tribal art' by white female colonists, such as Tongue and Dorothea Bleek. Another example is Lucy Lloyd, who was trained to be a teacher and, later, dedicated herself to deciphering the drawings by the San people and published a book titled 'Specimens of Bushman Folklore' in 1911 with Dorothea's father. Under the Social Darwinist view of colonial policy in the beginning of the 20th century, 'tribal natives' had still been considered 'children' when compared to European 'adults.' At the same time, European understanding and education of children's art were on their way towards undergoing a radical change. Fröbelians like Susan Blow tried to find a 'divinity of children' in their naive symbolism and Dorothea Beale began Ruskinian drawing education at the Cheltenham Ladies' College, instead of traditional artistic training for girls. In addition, as Fry remarked, the San people's paintings showed a more realistic aspect than most other 'primitive' art and they were in danger of being lost forever even at that time.

By looking at this 'discovery' and its results closer, this presentation traces another route towards modern art which runs parallel to the 'découverte de art nègre' by French artists in Paris.

Index terms | *Helen Tongue; Children's art; San people's painting; British colony in South Africa; Modern Art.*

Instead of many discussions held in these years, the discovery of *art nègro* by French artists in the early twentieth century maintains its mythic status in the history of modern art. The myth tells us that, around 1905, some modern painters found African sculptures and recognised their artistic value. Fauvist painter Maurice de Vlaminck is said to have found a sculpture from Dahomey at a bistro in Argenteuil and brought it home in 1905. Soon after that, he got from his father another African sculpture belonging to the Fang that impressed Matisse and Picasso. Additionally, Georges Braque remembered that he bought a mask, presumably from the Congo, from a friend of his father in 1905.

Needless to say, the introduction of African artefacts into Europe did not start in the early twentieth century. In the mid-nineteenth century, a British officer, Augustus Pitt Rivers, began collecting items he regarded as ‘primitive’ from around the world, including Africa, during his overseas service. His collection developed into a museum bearing his name in 1884 and now belongs to the University of Oxford. In 1859, the collection was given its definition by the publication of Darwin’s *On the Origin of Species*. Pitt Rivers soon became one of Darwin’s admirers and arranged his collection according to the theory of evolution. In a preface to his book published in 1900, Pitt Rivers wrote: ‘[B]ut their real value consists in their representing a phase of art – and rather an advanced stage – of which there is no actual record.’¹ Here, he certainly seems to have appreciated their artistic value. But my point is not to accuse the French modern artists of cultural appropriation by emphasising this earlier evaluation of ‘primitive’ art in the anthropological field. Rather, I want to present another story of ‘discovery’ which may provide the history of modern art with a broader perspective.

Although elaborate research in anthropology and archaeology classifies African artefacts into proper regions and periods, the idea still prevails that they should all be identified with products of early human history under the same adjective ‘primitive’. This identification between phylogeny and ontogeny was scientifically reinforced by a German biologist, Ernst Haeckel. We can see another example of its scientific reinforcement in James Sully’s book *Studies of Childhood* (1895). Sully, who was one of the founders of the British Psychological Society, explained the development of children’s drawing by comparing them with ‘drawings by savages and others collected by General Pitt Rivers, one, executed by an adult negro of Uganda’.² He wrote: ‘In carrying out our investigation of children’s drawings we shall need to make a somewhat full reference to the related phenomena, the drawings of modern savages and those of early art’.³ Here the comparison seems to be more complex, as it encompasses children’s drawing, the tribal art of contemporary but ‘savage’ people, and artworks made at the dawn of humanity. Again, the adjective ‘primitive’ connects these three, but what exactly did it mean in those days?

556

In 1870, an English banker, John Lubbock, who was also an archaeologist and ethnographer, wrote in his book *The Origin of Civilisation and the Primitive Condition of Man*: ‘Central and Southern Africa seem, indeed, to be very backward in matters of art.... Their idols cannot be called, indeed, works of art.’⁴ Therefore, it seems that the myth of discovery of *art nègro* also means that these African artefacts, which had already been collected for anthropological purposes, was described as ‘art’ but in a different sense of the word, and so the notion persists that it was French modern artists of the early twentieth century who first regarded African artefacts as genuine art rather than childish bric-a-brac.

It is interesting that, in Sully’s comparison of three kinds of drawings, he initially

showed two scribbles by an English child, images that had already been published in an article by Ebenezer Cooke. At the end of the nineteenth century, when Sully's book was published, English art education for children was undergoing a reform, of which Cooke was one of the promoters. After attending Ruskin's drawing class at the Working Men's College in 1855, he became known as his successor.⁵ During this period, James Fitzjames Stephen, elder brother of Leslie Stephen, took classes at this college, and Leslie also supported it by funding.⁶ This was perhaps the reason that Cooke gave drawing lessons to Vanessa Stephen at her home until 1896. In addition, Cooke was one of the first interpreters of Heinrich Pestalozzi's and Friedrich Froebel's educational theories in England.

However, Cooke was not a mere follower of either Ruskin or the German educators. He extended Ruskin's motto 'Go to Nature' by interpreting 'nature' as not only the nature found outdoors but also that within each child. In a two-part article in the *Journal of Education* in 1888, Cooke insisted it was unnatural to teach children drawing without understanding their physical movements which arise within them. Therefore, if it is true that Sully was the first to use the expression 'child as artist'⁷ and, as Sully himself wrote, he wished to express his debt to Cooke 'for many valuable facts and suggestions bearing on children's modes of drawing',⁸ we must reconsider the meaning of the 'discovery of primitive art', not only in the history of modern art but also in the history of art education, and examine their intersection.

At first, a lecture held at Felstead House in Oxford tells us what was expected of art teachers in the late 1860s, particularly female teachers. The speaker was Richard St John Tyrwhitt, a vicar of St. Mary Magdalen's Church at Oxford who wrote several books on primary art education. The lecture was published as a chapter of his book, *A Handbook of Pictorial Art*, in 1868 and thus gained a broader readership. In the lecture, addressed to 'ladies who are preparing to instruct other ladies, or to take general charge of female schools',⁹ Tyrwhitt insisted that female teachers had an indispensable role, saying, '[W]omen teachers at least, are still for the most part called on to educate, not merely to inform.'¹⁰ Tyrwhitt also argued for the educational merits of studying drawing: '[T]hat is a reason for beginning drawing early with children, that you can insist on elementary work, teach your geniuses honesty of labour in the first instance...'¹¹ We can easily detect a Victorian moralism in Tyrwhitt's words. He was, in fact, an enthusiastic follower of Ruskin, and this moralism encouraged him to assert another virtue of drawing: 'Nobody expects that the whole of the working-classes will at once take to drawing and entirely renounce strong liquor: what is hoped is that a fair per-centage of them may be partly secured from temptation to excess by having a finer mental stimulus put in their reach, instead of the coarser physical one.'¹²

About twenty years later, in 1889, Thomas Ablett, a founder of the Royal Drawing Society, published a guide for art teachers entitled *How to Teach Drawing in Elementary Schools*. Ablett wrote: 'The individual who can draw with ease and accuracy, can gain skill in any kind of manual industry much more quickly than would be possible without such power.'¹³ These efficacies of art education were naturally thought suitable for the edification of children and also of adults in the British colonies. In fact, in 1905, the South African Native Affairs Commission repeatedly proposed '[t]he prohibition of the sale of liquor to Natives' and said, 'The many thousands of Natives constantly employed... are inevitably being brought under what is, in the wider sense of the word, an educational influence, and are thereby becoming more useful and productive members of the community.'¹⁴ But more important for my purposes is how, with these

utilitarian views, the African artefacts were considered by European colonists. We can find one example of this in South Africa at the beginning of the twentieth century.

In 1905, an important book on the art of the San people, formerly known as the 'Bushmen', was published in London and New York. Its title was *The Native Race of South Africa*, and its author was George William Stow, a geologist and ethnologist living in the Orange Free State of South Africa. The book contained three colour reproductions of the Bushmen's paintings, copied by Stow himself. While these reproductions were only for the purpose of explaining the ancient customs of the Bushmen, the author obviously recognised a certain artistic value in their paintings: 'The most ancient paintings preserved depict a group of elands, beautifully and artistically finished, showing that the artist had both time and leisure at his command to finish them with an amount of care which is admirable...'¹⁵ In fact, one of Stow's reproductions showed the original brushstrokes more vividly than other copies that merely drew their outlines, such as in Siegfried Passarge's book *Die Buschmänner der Kalahari* (1907).

Fortunately, while Stow's manuscript went unpublished for twenty years after his death in 1882, it had been purchased from Stow's widow by Lucy Lloyd,¹⁶ the sister-in-law of a famous San linguist, Wilhelm Bleek. Because Lucy worked with Bleek and lived in his house in Cape Town, his daughter Dorothea Bleek, who later became an anthropologist, might have seen the manuscript, especially the copies of Bushman paintings, in her childhood. In 1905, Dorothea Bleek took a teaching post at Rockland Girls' High School in Cradock in the Eastern Cape and there met Helen Tongue, who 'had already begun copying paintings from rock art sites to north of Cradock when Dorothea arrived'.¹⁷

Much remains unknown about Tongue, except that she also was a teacher at Rockland Girls' High School from the late 1890s to the early 1900s. However, many authors have noted that, in early 1906, Tongue and Bleek made an expedition to rock art sites in the Orange Free State in order to copy and decipher Bushman paintings. By 1907 they had made three trips in all. In 1908, a selection of Tongue's copies was exhibited at the South African Public Library in Cape Town, and then at the Royal Anthropological Institute in London. And the following year, the reproductions were published in a book that contained Bleek's essay 'Notes on the Bushmen' and a preface by Henry Balfour, who was the first curator of the Pitt Rivers Museum. The exhibition and the book, entitled *Bushman Paintings*, were praised not only by anthropologists but also by Roger Fry.

Owing to Tongue's copies, whose '[c]olours were carefully matched with the originals, so as to secure the utmost possible exactitude in the reproductions, which are all of the actual size',¹⁸ all of its reviewers noticed that the Bushman paintings had an unexpected level of realism. As Balfour had already remarked: 'The paintings are remarkable not only for the realism exhibited by so many, but also for a freedom from the limitation to delineation in profile which characterizes for the most part the drawings of primitive peoples...',¹⁹ and '[t]he practice of endeavouring to represent more than could be seen at one time, a habit so characteristic of the graphic art of primitive peoples as also of civilized children, is far less noticeable in Bushman art than might have been expected...'²⁰ While this seemingly anticipated realism puzzled not only anthropologists but also art educators, it gave Fry what he was waiting for.

In 1908, in a letter to the editor of *Burlington Magazine*, Fry wrote: 'Impressionism accepts the totality of appearance and shows how to render that; but thus to say

everything amounts to saying nothing...'²¹ He was searching for the path from Impressionism's mere representation of phenomena not towards neo-Impressionism but towards more 'intelligible' paintings. In this letter, Fry compared Impressionism to 'the Roman art of the Empire'.²² In his review of Tongue's book, which was published in March 1910, he makes another comparison, between Impressionists and Bushmen, who were then considered 'as an almost extinct aboriginal race'²³: '...[T]hey [Impressionists] deliberately sought to de-conceptualize art. The artist of to-day has therefore to some extent a choice before him of whether he will think of form like the early artists of European races or merely see it like the Bushmen.'²⁴ Perhaps it was at the same time that he decided to entitle the famous exhibition, to be launched in November 1910, not 'Expressionists' but 'Post-Impressionists.'

INTRODUCING THE FIRST BOOK ON TECHNIQUES AND PRINCIPLES OF CLASSIC IRANIAN PAINTING (MINIATURE); GHANOON AL-SOVAR

Abstract | On traditional Iranian painting, opposite the Eastern Asia, we rarely find any texts on how to practice art. Most knowledge and skills were spoken from masters to apprentices, and upto late 16th century we can't find any text in Persian explaining the principles of aesthetics, materials of painting, and skills involved. Ignoring the texts on calligraphy that is regarded a holy art for Muslims and enjoyed many texts describing the principles, Ghanoon Al-Sovar is the only educational text up to 16th century that includes discussions on aesthetics principles, artist's experience as a painter, technical terms, and general guidelines for young apprentices. This book, by Sadeghi Beig, was originally written for practitioners and gives us invaluable information on different topics. In fact, the book has two major parts; the first part explains the reasons for writing the book and also talk about good manner and disciples needed for learning art. The second part of the book has some general ideas on what the aesthetics and art are, and then starts the main part that involves detailed description on paintings' techniques like how to hold the brush, how to make colors, how to wash, how to use gold and silver, how painting is defined, how to draw animals, how to express feelings with color, etc. This book, written in rhythmic poems, gives us historic information on technical terms, materials used for painting, norms and conventions of painting in 16th century and also on their conception of painting and beauty.

Index terms | *Ghanoon Al Sovar; Sadeghi Beig; Persian Painting; Miniature; Aesthetics.*

Unlike other oriental traditions, the Iranian painting, due to its special conditions of development, does not have much theoretical knowledge about its principles and history. If we forget the many treatises written in the field of calligraphy, which is the sacred art of Muslims, there are few cases in Iranian painting that none directly relate to the technical and aesthetic aspects of art. Of course, this was not the case at all historical levels, but the dominant aspect of our art education was dedicated to oral quotes. In this regard, the text of the "Ghanoon Al Sovar" as the first educational and aesthetic text in the field of painting is an important source. Therefore, this paper seeks to mention a report on the importance and content of this thesis, but in order to enter this discussion, it first deals with a brief description of the writings of its author, Sadeghi Beig Afshar.

Sadeghi Beig afshar

The Ghanoon Al Sovar treatise was written by Sadeghi Beig Afshar during the Safavi period, which was named (Sadegh, Sadeghi, Sadeghi Beig, Sadeghi Librarian), and was a brave man and a warrior.¹ Shila Kenbay knows his birthday in 940 AH / 1533 AD². Anthony Welch considers him one of the most important literary figures of the 10th Century / 16th Century and one of the most valuable painters of this period.³ Sadeghi has been open in poetry and has numerous works. In prose-writing, both Turkish and Persian, is an elite of the times. In music, too, he has a unique vocabulary and singularity⁴. but his most famous is painting. Sadeghi learned this exquisite art from one of the Safavi mastery painters, Muzaffer Ali, son of Mulana Heidar Torbati and nephew of Kamal al-Din Behzad. At the beginning of the system, Ghanoon Al Sovar Sadeghi refers to Muzaffer Ali as his master and calls him "chief master"⁵

Sadeghi Big's artistic workshop is located in two schools in Qazvin and Isfahan. He worked there until Qazvin was the capital, then moved to Isfahan, and took over the chair of Abbas's court, and applied artists to various artistic projects. He, along with Reza Abbasi, formed the Isfahan doctrine. In his works, he was influenced by Reza, and also influenced him. "The important thing is that in the works of Sadeghi it is possible to see is traces of Iranian modern art.⁶ His dynamic pictures are full of moves Shows a kind of realism in them, indicating that Indian naturalism of the eleventh century AH is limited to the true paintings of sadegh beig Afshar.⁷

In general, Sadeghi's character is such that he shows two different views in his personal life. At the same time, as a young father in the service of sultans and swordfriends who belongs to the aristocracy of the Turks, he also enters the field of the art of Tajik art and brings a new combination of sword and pen. At the same time, he is full of passionate and passionate artistic expression, he also manifests his anger and militant violence in his behavior and deeds.⁸ Sadeghi over stated from library management at 1005 AH / 1597 AD, but in the years remaining, he was continually trying to be one of the artists on the court.⁹ Mir-Allahi Hamedani considered the death of Sadeghi in 1017, and determined with rime (other than that which is the true morning of our night).¹⁰

Typology of Ghanoon Al Sovar

The text of the original Ghanoon Al Sovar was published in Moscow (1963). Then Mohammad Taghi Daneshpazhoh published his poem in the People's and Arts magazine, No. 90 (March 1970) on page 13. After that, the deceased Ahmad Soheili Khansari on the sidelines of Golestan Art (1352) on page 153. Then by Mr. Najib Mayel-Heravi in a book titled "A Book on Islamic Civilization" (Mashhad, 1372- Pages 345-354) and also by Mr. Hamid Reza Ghulichkhani in the book "References in Calligraphy and related Arts" (Tehran, 1994, p. 111). -122) has been reprinted.

There are three versions of this system in Iran:

The first edition is donated to Mohammad Nakhjewani's donation library to the Tabriz National Educational Library, number 3616. / Second edition, a copy to the Nastaliq line, number 6325 at the National Library of Malek. / Third edition, a copy to the Nastaliq line, numbered 7395 at the Central Library of Tehran University, edited by Adil Ghaziyev and modified by Abdolkarim Alizadeh in 1305 in Baku. "The original version of this book is from the personal library of Ajder Ali Asgharzadeh."

Context of Ghanoon Al Sovar

Among the works of art, the "Law of the Picture" is an invaluable poem on the weight of Khosrow and Shirin of nezami, containing sincere views on the design, painting, clutter and tools of painting, which provides useful information on the techniques of painting the tenth century / sixteenth century in Iran.¹¹ He completed this treatise about the year 1006 AH / 1597 AD, after the removal from the Royal Library.¹² And according to the evidence before him, he did not write such a monograph in the field of painting, in this regard, he could be considered the first person to bring the painting of Iran from orally to evident and public.¹³ Therefore, Ghanoon Al Sovar is the only educational text up to the 16th century that discusses the principles of aesthetics, the artist's experience as a painter, and general guidelines for young apprentices.

This versatile essay has 250 bits and includes two general sections:

A) *The first section includes the cases in which the author describes his life, his teachers and theoretical discussions.*

B) *The second part includes topics related to aesthetics and technology and painting skills*

A) In relation to the first section, which includes the preamble, leads to the child's order and counseling, it can be said that the author, in the first place, gives a brief account of his own circumstances. According to Sadeghi Beig in the first 35 bits, it turns out that he spent his youth on the orders of his fathers in the service of the sultans, but he did not like the job very much, and he even heard a voice calling from the valley of the servants of the cloth and Go to the art world that is in line with its writing.¹⁴ He then points out that, as he entered the art world, he was seeking a master to learn the painting for perfection, a professor who had the name of Kamal al-Din Behzad, because Behzad, for Sadeghi Beig Eswah and the pattern of painting Iran was And he

finds this sign in the presence of Behzad's nephew, Mozafar-Ali, who has continued the Behzad art traditions and, in some stages, has gone on to make more elaborate and sophisticated works.¹⁵

In the description of his teacher in the *Ghanoon Al-Sovar*, Sadeghi describes him firstly with characteristics such as "good temperament and goodness", and then he considers him the rare and unique masters of that era and one of the heirs of Behzad. And admires his teacher's style of painting. And his book also puts him on. During these vowels, he mentions concepts of the educational and spiritual qualities of painters and, in other words, the truth of art, which includes the objects of art and its pursuit of being (reaching the degree of perfection and grace and knowledge), pleasure (desire and aptitude) and tendencies. The essence of the artist and the achievement of the face means (escape from appearance to the inner side and emphasis on the spiritual dimension in art).¹⁶

The next important point is Sadeghi Beig's emphasis on "The need for a master." The characteristics of the teacher and student and the rights of these two are one of the most important of Sadeghi Beig's essay. He regards the respect for the position of the teacher and the unconditional adherence of the student to a full and complete mastery.¹⁷ In his advice to the child he says that do not look at the professors of painting, teaching or learning this technique because they even do this. Discourage their child. Here, "Sadeghi Beig refers to a fact that was not only in Iran, but also in Europe, which was not only amongst the class of creators and artists of their time, but also simply did not enter anyone into their arts classes, and did not teach anyone their techniques, except in special condition".¹⁸ He emphasizes that if you want to succeed in learning this technique, do not lose sight of learning the techniques, and ask for the professors to guide you. And if you do not find such an academic professor, come up with the *Ghanoon Alsovar*, the best and most worthy teacher. For you will be. He authored the compilation of this poem by encouraging one of his loyal friends, who had the passion for painting, and did not go out of drama day and night. Until a night arrived, after reciting his skills and proficiency in the painting world, he asked him to decorate him and arrange the art of painting law.¹⁹ To clarify these customs and concerns of today's painters. These are essential because, unquestionably, the past painting of this marvelous canvas with that magnificence is the bearer of the privilege used to educate painters.

B) In relation to the second part, which includes topics related to the aesthetics and techniques of painting, it can be said that Sadeghi Beig takes the utmost care in setting up his theoretical content so that nothing can be written out. He continues to set the following content:

Painting and brushing / getting pen / Painting / In the trap of washing / Solving gold and silver / Defining the face / Animation / Expression of color and oil / By making the color of the body / In silver / Paints / paste coloring/ In Making Bleach and Sorgh / Pouring / Shamping Baking / Making Lal / Cooking Oil.

According to this process, Sadegh Beig first speaks in the painting industry and closes the brush and is the first step in painting the pen and recommends that the painter himself do this because a painter is not like a scribe who does not deserve to make a pen someone else. He then learns how to make brushes. "According to Sadeghi, the hair of a squirrel tail is more than any other material suitable for painters' brush".²⁰ The second step after the stylus is the sightseeing point, and it accurately points out how

the pen is hand-written and how it is written to the paper.

In the next step, Sadeghi learns the seven principles of aesthetics of painting for each student, and notes that he himself learned these principles from his teacher Mozafar-Ali. "In this context, Sadeghi Beig divides the painting into seven principles: Eslami (motifs and nodules with numerous twists and turns), khatayi (an abbreviated form of a shrub of flowers, leaves, or buds), cloud (abstract ornaments), Vagh (ivy consisting of human or animal horns), Niloufar (nichrome ions and their motifs), Farangi (European motifs), Roman band (Anatolian knitted motifs).²¹ The principles of Seven, an essential ring in the chain of circles of the Safavi arts, became regular and well-documented, especially in the schools of Tabriz and Qazvin, with rigorous rules.²²

Sadeghi describes the next steps of painting in coloring (stained with refined complementary colors), washing (washing the role of the painted and lamination of it), describing the gold and silver decomposition with microbiology. Painting(miniature), Animal design (painting animals and animals with specific methods and shapes), oil and color (covering the field with whitening and oil), making physical paints (dark, non-transparent colors), silver covering the flatness of the thin sheet of silver, creating a variety of colors and Kaman oil (oil from the combination of sandwich with seed oil used in the soldering and making of grease and padding) is well described.²³

Thus, Sadeghi Beig, one of the rare books in the history of painting, draws on Iran's artistic poetry, which has limited it to the description and explanation of this technique. Of course, with this he generalizes the art of painting and makes powerful one. This law treatise contains some of the most valuable aesthetic and technical aesthetics for the teaching of painting skills, which, in addition to providing us with useful information about the techniques of painting the 16th century in Iran, can be applied to modern painters and Reviving traditional Persian painting practices. And this treatise can be considered as an introduction to learning painting without referring to the professor.

Somaye Mahru (1984) An Art teacher for 15 years, Mashhad, Iran. She has Bachelor in Visual Arts from Samen Al Hojaj University and Masters of Islamic Art from Ferdows Institute of Higher Education. She wrote her thesis in her Master degree under Majid Heidari's supervision, the head of Visual Communication Department at Ferdows Institute of Higher Education, in the case of "introducing and analyzing Ghanoon-al-Sovar, a Book by Sadeghi Beik on Persian Painting". She is experienced in Iranian traditional art including (Tazhib and Gol o Morgh) as an artist and has participated in several exhibitions. In this regard, she won the third place in 21st international Quran and Etrat exhibition held in Tehran and the first place in 28th national Quran and Etrat festival among students.

Majid Heidari (1980) is assistant professor at Ferdows Institute of Higher Education, Mashhad, Iran. He is the Head of Visual Communication Department. He has PhD in Philosophy of Art and writes on Aesthetics with focus on Islamic art. As a researcher he has several papers on Iran's Aesthetics, the Tension between Islamic Mysticism and Scholastic Theology in Aesthetics, the Role of Rhetoric in Islamic Aesthetics, Persian Painting and Narrative, and Visual Metaphors. He normally finds the theoretical framework of his papers in Pragmatism and Philosophical Hermeneutics, and puts especial emphasis on narrative truth and narrative identity in research projects. As a writer he published one collection of short stories "*The Infrastructure of the City*" and believes stories are one of the main ways to reach the truth.

Reza Mahdavi (1972) Professor of Persian painting, 33 years of record, Mashhad/ Iran

He has the bachelor degree of General Biology and MA of Persian painting from the ministry of Culture and Art, Iran. Scientifically he has published 12 articles about history of Persian painting and two books: "An Overview of Iranian painting techniques", "Teacher's guide to Persian Painting"; which the second one has won the special prize for educational books from the ministry of Education in Iran. Also he has received the Professor degree in Business from the Economist Organization, London, 2017. In the field of Artistic activity he has won the 5th and 8th award of Persian painting biennial in Iran; Also he was the jury member of five periods of Quranic illuminations biennials and the artistic secretary of the 6th Quranic illuminations biennial, Mashhad, Iran. He has received the bronze medal of International Union of Artists for Peace in Bishkek from Mr. Sooronbai Zheenbekov, the President of Kyrgyzstan, 2018. He has joined more than 50 exhibitions all around the world (Canada, USA, Germany, Spain, China, Australia,)

AESTHETIC-ETHICAL APPROACH

Abstract | Taking into consideration Immanuel Wallerstein's prognosis of the current state of the world-system on one hand, and complex, diluted contemporary cultural arrangements on the other hand, the question of the next step arises - what is the next possible concept(s) that would bring about the necessary cultural change?

The paper shows, through thorough analysis and comparison of seemingly incompatible texts that such a concept can be found through art. What is more, this concept, the aesthetic-ethical approach, is the need, as Erich Fromm would say, that stems from the nature of man, making the concept universal no matter its different particular applications.

In short, the paper:

1. Introduces and presents the views of Friedrich Schiller, Arthur Schopenhauer and the evolutionary aesthetics on art and human nature.
2. Compares above presented views with the presented views and ideas of the aesthetics of everyday life, especially the dichotomy between routine and charisma.
3. Emphasizes the need for a permanent, deliberate interplay between routine and charisma, thus creating charismatic-routine and routine-charisma.
4. Creates an argument for an aesthetic-ethical approach, which is a direct answer to the above stated question of the next step.

Index terms | *art; beauty; change; charisma; human nature; routine; sublime.*

INTRODUCTION

World-systems analysis shows that “systems have lives. They come into existence at some point in time and space, for reasons and in ways that we can analyze”¹, but they also experience crisis and bifurcate, something that is now happening to the modern world-system. Immanuel Wallerstein says that the “crisis [of the modern world-system] may go on another twenty-five to fifty years”² and it is in this time that “a new order will emerge (...), and that this new order will be shaped as a function of what everyone does in the interval”³. The question that arises is thus: Which concept is the concept that can lead to the change in contemporary society?

What this paper shows, through thorough analysis and comparison of seemingly incompatible texts, is that such concept can be found through art. What is more, this concept, *aesthetic-ethical approach*, is the need, as Erich Fromm says in his book *The Sane Society*, that stems from the nature of man.

In short, the paper:

1. Introduces and presents the views of Friedrich Schiller, Arthur Schopenhauer and evolutionary aesthetics on art and human nature.
2. Compares above-mentioned views with the presented views and ideas of everyday aesthetics, especially the dichotomy between routine and charisma.
3. Emphasizes the need for permanent, deliberate interplay between routine and charisma.
4. Creates an argument for *aesthetic-ethical approach* – a direct answer to the above stated question.

The dichotomy of human nature and play drive

Friedrich Schiller’s book *On the Aesthetic Education of Man* deals with art and its role in society. The work is especially interesting, because it does not only talk about the art’s necessity in our life, but also points out the difference aesthetic approach to life can make.

At the time when Schiller wrote his letters and developed his view on art, the situation of the society was very similar to the one today – it was in the need of change. However, although Schiller’s interest, the state of the society of the time, and his arguments about art’s importance are very similar to the ideas that build this paper, there is a fundamental difference in the approach taken.

Yes, Schiller, precisely because of his concern for the society, and especially because of its extremely bad condition, sees art as a solution to the question of nature, culture and

freedom of man. Yes, he sees art as a medium of progress, of both humankind in general and each individual separately, but he bases such conclusions on a predetermined dichotomy of human nature.

Schiller, arising from the consequences of the French Revolution, concludes that there is more than an obvious imbalance between reason and sentiment, resulting in the lack of moral possibility and slow but sure collapse of society. The answer to this imbalance can be found in art, more specifically, play drive.

According to Schiller, there are two fundamental drives – sense and form drive. These two opposing drives never meet. Because of this, the imbalance often arises, resulting in domination of one drive. To overcome this, a third drive, the drive that unites in balance otherwise imbalanced dichotomy, has to be introduced – play drive.

By doing so, Schiller emphasizes art's important and crucial role in gaining knowledge and influencing social change. The knowledge that art (play drive) gives us is an insight into the pure concept of humanity, because only with play drive's effect can we realize our highest potential and adequate societal change can take place.

Escaping the Will – beautiful and sublime

In his work, *The World as Will and Representation*, Arthur Schopenhauer develops his philosophy of the Will. To him, the Will is the source of everything that exists, of nature, of individuals, and of suffering. This suffering can be stopped, although only for a moment, by becoming a pure will-less subject through aesthetic contemplation.

However, if stopping of the suffering through aesthetic contemplation is far from universal or permanent nature, the question that arises is – is there a way to stop the suffering for a longer period, if not permanently? The possible answer to this lies in the difference between beautiful and sublime – two versions of aesthetic contemplation.

Beautiful has a very special, easy attitude towards knowledge. Through beautiful, through its contemplation, we naturally and unconsciously escape the Will and stop the suffering. But such stopping is only temporary. In certain cases, it is so short that it goes by unnoticed. Therefore, stopping of the suffering for a longer period only by the means of beautiful would be impossible.

On the other hand, sublime does not have an easy attitude towards knowledge. Far from it. The relationship sublime has towards knowledge is one of a more targeted, persistent repetition of the lessons learned from the easy attitude of beautiful towards knowledge. It is conscious stopping of the suffering, and as such has to be maintained. Only by conscious maintenance of sublime state and the pure knowledge associated

with it, can we escape the Will and stop the suffering for a longer period.

Evolutionary aesthetics and spontaneous-general-knowledge

Taking into account the long history of art-knowledge-human nature trinity, the rise in tendency to gain certain knowledge through art does not surprise. The knowledge we get comes in all shapes and sizes. Fiction, as Denis Dutton mentions in his book *The Art Instinct*, is one of them. Through fiction, that is, through art, we get an interesting and detailed knowledge of how it is to be someone else. We are immersed in various roles, we feel different emotions, and consequently gain certain knowledge. It could be said that art shapes and teaches us without directly putting us in danger.

Of course, the knowledge we gain from art is mostly either sought-after-knowledge or spontaneous-individual-knowledge. The exception is spontaneous-general-knowledge about human nature we gain through evolutionary aesthetics without even seeking it.

For example, Dutton is interested in where beauty comes from and how it is that we can trace the universality of beauty and art throughout such a wide range of different cultures. Through the process of seeking this knowledge, Dutton not only gains sought-after-knowledge about why universalism arises in art, but also spontaneous-general-knowledge about human nature.

Precisely this opposite approach to one taken by Shiller and even Schopenhauer, focusing on the question of art and not human nature, is essential to evolutionary aesthetics. It is this approach that enables us to gain knowledge about human nature through art. Without art and its questions, innate and inseparable nature of beauty in relation to human nature would not be discovered.

Everydayness vs. non-everyday-like

In her book, *Everyday Aesthetics*, Katya Mandoki explores how different everyday cultural practices constitute play, and advocates the importance of extending aesthetics into the field of everyday life, and she is not alone in her endeavor. In her book, *Everyday Aesthetics*, Yuriko Saito studies our daily aesthetic experiences and their strong impact on the state of the world and quality of our life. She discusses the inadequacy of aesthetics focused on art, the aesthetic evaluation of the distinctive signs of objects or phenomena, responses to various manifestations of transience and aesthetic expression of moral values, and she examines the moral, political, existential and environmental consequences of these and other issues.

Yet, unlike Mandoki and Saito, in his article "What is 'Everyday' in Everyday Aesthetics?", Ossi Naukkarinen is primarily interested in what is everyday, and not so much in expanding the field of aesthetics from the study of art and beauty to other areas, one being everyday life. It is thus not surprising that for Naukkarinen everyday life is

“the unavoidable basis on which everything else is built. Life without everydayness is practically impossible, and it is difficult to even imagine a life that would be completely non-everyday-like”⁴.

Later in the article, he develops his scheme and highlights routine and non-routine, or everydayness and non-everyday-like in our lives, and gives art as an example of a positive interruption of routine, surpassing of the typical. However, he does point out that while art works can produce extraordinary experiences in certain people, they are something completely known, everyday-like, to others. He thus concludes that “everyday aesthetics cannot be defined by saying that it is the aesthetics of non-art (or non-nature), or that art-related aesthetics is necessarily something that is unsuited for the everyday contexts”⁵.

It is obvious that Naukkarinen tackles the question of defining everyday aesthetics in his own way and says that “art and art-relatedness can be an essential part of one’s everyday life”⁶ and that “there is no single best definition of what the aesthetic is; instead, there are several intertwining interpretations”⁷ all of them relevant to everyday aesthetics. However, what is interesting to us, more than Naukkarinen’s view on defining everyday aesthetics, are two concepts that reappear repeatedly – routine and non-routine, or as Weber would say, charisma.

Our everyday life consists of routine things, patterns that repeat themselves from day to day. But our life also consists of charismatic moments - events, things that act as an interruption of routine. Such interruptions can be planned or they just happen. In any case, they change our everyday life.

ArtoHaapala, in his article “On the Aesthetics of the Everyday: Familiarity, Strangeness, and the Meaning of Place”, tackles the concepts of routine and charisma from the point of view of place, and calls them familiarity and strangeness. He says that the existential structure of man is such “that we create familiarity around ourselves”⁸, unlike art which “is presented in contexts that create strangeness”⁹, and that the tendency of aesthetics is to “maximize strangeness and to minimize familiarity”¹⁰.

572

Such view on familiarity and strangeness, otherwise called routine and charisma, is perfectly in line with Naukkarinen and Saito’s view. All three defend the importance of routine and not charisma. Saito distinguishes two ways in which we value everyday. The first approach is ‘normative’ approach, the search for extraordinary in the ordinary. The second approach is ‘descriptive’ approach, the approach that emphasizes the ordinary in the ordinary, the approach that Saito, through her efforts to emphasize the moral dimension of everyday aesthetics, takes.

However, if we consider everything discussed above, and not just aesthetic approach to everyday life, we quickly realize that a preference for one of the two possible modes

of operation is not the best way to go. Routine may be more calm and manageable than charisma is, but both play a crucial role in one's life. The question that arises is how to make routine charismatic and charisma routine-like.

Routine-charisma and charismatic-routine

In his book, Schiller showed that the dichotomy of human nature can only be resolved by the introduction of a third path, a unique bridge that does not only merge the properties of the two opposing drives, but goes beyond them. Doing so, he does not only resolve the dichotomy of human nature, but also points out a crucial view on the dichotomy in general, pointing out the role art plays in the formation and transformation of society and moral possibility.

Even Schopenhauer demonstrates the importance of art when it comes to change. According to him, art is the only way to stop the suffering, the only way to escape the Will. He thus recognizes two levels - beautiful and sublime. Beautiful and sublime are in the effect quite similar to their effect of routine and charisma. Of course, just as routine transitions to charisma and charisma to routine, so does beautiful transition to sublime and vice versa. The key question is how to make these transitions permanent, without preferring one over the other; how to permanently stop the suffering; or better yet, how to solve the dichotomy of aesthetics as Schiller solved the dichotomy of human nature.

It seems that only every individual for himself can find an answer to this, since the notion of routine and charisma differs from individual to individual. Still, the common ground all people have is a constant, deliberate interplay between routine and charisma. Schopenhauer showed that beautiful and sublime can stop the suffering, but it can be stopped ever so long before the Will catches up with us. In order to avoid this, it is necessary to continuously transition from routine to charisma and vice versa.

Aesthetic-ethical approach

Evolutionary aesthetics does not study the direct connection between art and change, and it certainly does not study the dichotomy of human nature. Nevertheless, it gives us the essential knowledge about the inseparability of human nature and aesthetics. Naukkarinen wrote: "We cannot avoid producing aesthetic objects and events of some kind even if we ourselves don't always intend it or notice the outcome"¹¹, and the same goes for evolutionary aesthetics.

Precisely this aesthetic part, studied indirectly or directly, in relation to society or individual, is crucial for change. If we recall Fromm's words, change is possible only if it stems from the nature of man. One of the needs that stems from human nature, from aesthetic part of human nature, is the above mentioned and presented constant interplay between routine and charisma. This interplay thus forms the aesthetic part

of *aesthetic-ethical approach*.

The second part of the approach is the ethical part. The word ethical is used because both Schiller and Mandoki, Saito and Naukkarinen emphasize in their works the interweaving of aesthetics and moral. Of course, the question of interweaving aesthetics and moral is very broad and, like Naukkarinen says, study of this question is a field of study on its own, but what is essential is that by continuous interplay between routine and charisma we also act ethically.

CARTOGRAPHIC IMAGINATION: BETWEEN INTERMEDIALITY AND TRANSMEDI- ALITY. A GEO-AESTHETIC PERSPECTIVE

Abstract | One particularly telling dimension of recent interest in the history of globalization has been the reduction of the globe to a cartographic image. Indeed, while in the last few decades social sciences and cultural studies, influenced by the multiple inflections of the *spatial turn*, have come to regard geography and the cognitive resources of mapping as the gravitational centre of their critical discourse, a media turn has become evident in geography and philosophy. The former consider that space is “not simply a passive reflection of social and cultural trends, but an active participant” (WARF and ARIAS 2009), while the latter, argue that “technology *is* society, and society cannot be represented without technology” (CASTELLS 1996). Weaving together these two lines of discourse, my research aims at framing the connection between the production of world-maps and the development of the “Earthly vision” (LAZIER 2011), a pictorial imagination characterized by the view of the Earth as a whole. As a theoretical framework, the paper favours a genealogical account, considering maps as media in which our mythical geographies are incarnated and translated across different media, and, at the same time, as a source of a history of cultural representations that encode subjects and produce identities. Its concern is twofold: On the one hand, I plan to situate the *Whole-Earth’s* image within the cultural and historical context of Western imagination, pointing out how the formation of spatial environments connected with the Earth’s medialization has extended our sensitive capacities toward interactive forms of orientation. In this respect, the comparison with Pietro Montani’s techno-aesthetic approach, which analyses humans’ spontaneous tendency to extend sensibility in to inorganic artefacts, is particularly promising. Focusing on those cases where technical exteriorization follows the “logic of an interactive imagination” (MONTANI 2014), the theoretical perspective proposed by Montani is suitable for framing the historical relation between mapping and the emergence of the global vision. On the other hand, I will focus my attention on the concept of transcalarity, pointing out its connection with Google’s cartographic devices.

Index terms | *Cartographic imagination; Cartographic writing; Cultural techniques; Earthly vision; Geo-Aesthetic; Interactive Imagination; Mythical geographies; Transmediality.*

We live in a «*cartographic present*»¹, in an age in which maps of all sorts have deeply penetrated our everyday life. Nowadays, it is almost impossible to imagine to socialize with our local environment, to travel around and move through our cities, or to deal with the huge flow of information coming from all-over the world, without recurring to the representative powers of a map. The emergence of a widespread cartographic culture is a direct consequence of the global diffusion of geo-media like *Google Maps* and *Google Earth*, which opened the practice of mapping to people of all walks of life. Without any specialisation or formal training, we all consume, produce and share maps of all sorts: maps of our own city, maps of the places we visited, maps of distant conflicts, of diseases and epidemics, weather maps, subway plans, road atlases, polling maps and so on. The explosion of interest in mapping tools among regular people and map amateur radically challenges the way in which cartography has long been practiced. «Cartography is dead (Thank God)», as Denis Wood has written², to celebrate the end of the exclusive rights on map-making and map use held by sovereigns and official institutions of cartography. As common as it may seem today the consumption and production of digital maps, the planetary success of Google's geo-spatial applications is not free of consequences. Indeed, their popularization represents a development of epochal significance, comparable, in its implications to the invention of the telescope and the printing press. Similar to Galileo's perspective tube Google's cartographic devices opened up a new perceptual horizon, and similar to the shift from oral to printed language, they allowed for the birth of a new people-powered control of information. It turns out that cartography – to rephrase what Walter Benjamin wrote one century ago about cinema – proves to be the most important subject matter, at present, for the «theory of perception which the Greeks called aesthetics»³.

As it has been widely remarked by anthropologist and historians of cartography the development of a certain cartographic impulse constitutes the first and most primitive aspect of human consciousness, both in a phylogenetic and an ontogenetic sense. While assuming that the making and the reading of maps is a cognitive universal, I shall examine the history of map's technological empowerment, and Google's digitalization of spatial consciousness in particular, using a geographical based concept of aesthetics.

Indeed, since the very beginning of geography there has been a way of approaching the world geographically which seems complementary to the bodily basis, by virtue of which we move around and perceive things that are outside ourselves. It is on the basis of an analogous bodily logic that the capacity to locate oneself on the map transforms its space of representation into a space of action and intellectual activity, extending the self's inhabitation of place through a particular form of technical empowerment. As an attempt to secure and experiment our spatial knowledge through a graphic register, the creative act of mapping establishes a symbolic space of correspondence, in which appear things that are not directly accessible to people embedded in their living environment. By adopting an external non-human standpoint, the bird's-eye-view, of the map-maker make the invisible enter into the cognitive world of the map's user. This is an act of imagination, which is technically and symbolically connected with the reality it represents. A map, says Nelson Goodman is «schematic, selective, conventional, condensed and uniform»⁴. This indicates that it cannot be reduced to a mirror of territorial reality. The map is a constructive system, and the selection of information and the schematisation of representations are inherent to its materialisation as an index. It is by means of map's indexicality that a user can transform her physical inheritance to

place into a virtual point on the map. Only when this latter condition is fulfilled does the map's figurative structure become a movement-space, and its graphic arrangement a space of intellectual activity. As Deleuze and Guattari have observed, the map is not a mere copy of reality, but has to do with experimentation and performances⁵. The question then is not how accurate a map is, but what techniques of representation and epistemic orders have been used and how the very experience of space and place is related to those cultural techniques.

Following this path, what I want to do in the following pages, is suggest some of the technical conditions that defined and allowed contemporary Earthly vision, a «pictorial imagination characterized by the view of the Earth as a whole»⁶. This will entail sketching crucial ways in which the cartographic image of the *Whole-Earth* has been reworked by Google's geo-media, displacing earthbound horizons with 'horizons' that are planetary in scope, and transforming our planet into an immersive and interactive «Space-to-your-Face»⁷.

II

In January 1998, the American vice president Al Gore delivered a talk at the California Science Center in Los Angeles entitled: *The Digital Earth: Understanding our Planet in the 21st Century*. In his speech, Gore emphasized the urgency of developing «a digital map of the world at one meter resolution» that would allow us «to capture, store, process and display an unprecedented amount of information about our planet and a wide variety of environmental and cultural phenomena»⁸. At the time, this project sounded like science fiction – à la Borges of *Del rigor en la ciencia* so to speak – but Gore believed that its realization could have positive global ramifications. Only twenty years have passed since Gore introduced the concept of the Digital Earth, and although his vision was not correct in its details, the idea of an interactive map of geo-referenced data – data that refers to a specific place on the Earth – has quickly come true. Nowadays everything in the information world is location-aware, getting tracked, tagged, and mapped.

Mapping has long been an absolute metaphor for encyclopaedias and archives, best exemplified by Diderot and d'Alembert's *Mappemonde de science*. It is therefore hardly surprising that in the 1990s, the World Wide Web, the largest information database humans had ever invented, was represented as a map, and a large repertoire of spatial metaphors were commonly used to describe information superhighways, websites, chat rooms, internet cafés etc. These metaphors gave no indication that this non-space of the mind could ever be assimilated with the physicality of the world we inhabit. As soon as «placidity»⁹ becomes a leading principle for organizing information, and physical location becomes an integrated part of the web's internal logic, the map passes from being a «representation of an external digital network to a tool for internally navigating the same network»¹⁰. Michael T. Jones, Google's Chief Advocate, successfully surmises the Copernican sense of Google's revolution, arguing that: «the vision for Google Earth inverts the roles of Web browser as application and map as content, resulting in an experience where the planet itself is the browser»¹¹. This is to say that the map, previously used as an abstract metaphor for the network, an empty container divorced from the materiality of the physical space, has become perfectly integrated into our lived space, transforming it into a subjectively designed interactive space that influences how people socialize with their local environment.

As we have seen, the symbolic overlap between the picture of the unitary globe and

the map has become increasingly possible and accessible in the last few decades thanks to the formalization and diffusion of computer generated imagery, Geographical Information Systems (GIS), and clip-map textures. Aside from reorganizing the world of internet with a navigational platform bounded to physical territoriality, the «medialization of the Earth» initiated by Google, has triggered a radical «socio-technological reconfiguration»¹² of the way we perceive and represent space to ourselves. To a large extent, this has been possible because – as Walter Ong notes – human intelligence is «relentlessly reflexive, so that even the external tools that it uses to implement its workings become ‘internalized’, that is, part of its own reflexive process»¹³.

Technologies are not mere exterior aids, but also interior transformations of consciousness emerging in specific historical practices, and this very transformative process is what makes a simple instrument become a medium. In this respect, the comparison with Pietro Montani’s techno-aesthetic approach, which analyses humans’ spontaneous tendency to extend sensibility in to inorganic artefacts, is particularly promising. Focusing on those cases where technical exteriorization follows the «logic of an interactive imagination»¹⁴, the theoretical perspective proposed by Montani is suitable for framing how the geo-media have extended the sensorial capacities of their users, transferring their sense of orientation to a new and medialized form of «a-whereeness»¹⁵.

Practically, in Google Earth’s vision, data are displayed naturalistically on the display, as on a planet seen from space. The display is interactive, and the world can be zoomed, panned and rotated. Imaginatively, the technique of zooming down on the Earth from a seemingly transcendental position, allows for the creation of a potentially infinite cartographic archive. As Gore forewarned, the digital globe becomes the medium through which data are collected and displayed, «presenting information visually» and providing an «interactive, exploring-oriented user modality»¹⁶. Indeed, while traditional atlases were based on fixed scaling models, Google allows users to reconfigure and re-territorialize their relation as needed. Its geo-media work thanks to the principle of transcalarity, producing a hybrid landscape that combines both global and human scales.

III

The reduction of the Earth to a cartographic image was already at the core of Ptolemy’s geographical project. Technically, cartography operates as the art of projection, that is to say as the practice through which the complexity and totality of the globe is broken down into a multiplicity of representations that flatten the curves of the sphere into planes. Thus, maps are not *specula mundi* but visual and material objects that performatively define the lines and points of our «geo-coded world»¹⁷. Foucault’s insistence on the relation between knowledge and power has been crucial for the critical discourse on the performativity of mapping in particular, and geography in general. Yet, the approach of the kind Denis Cosgrove developed in *Apollo’s Eye. A Cartographic Genealogy of the Earth in Western Imagination* highlights the aesthetic and epistemological implications of conceiving and representing the Earth as a unitary, regular body of spherical form. Cosgrove’s entire investigation on the history of Western globalization is built on a simple observation:

for humans, the earth's globality cannot be experienced from its surface. To grasp the spherical form of the earth requires an act of imagination. The globe is made visible to us by means of three, or more commonly two, dimensional representations: globes and maps. This remained absolutely until December 1968, when the Apollo mission approached the Moon... if the globe is experienced solely through graphic representations we should pay special attention to the construction of global images and the meanings attached to them¹⁸.

Cosgrove's example helps us to situate the *Whole-Earth's* image within the cultural and historical context of Western imagination. Moreover, it allows us to follow the evolution of Western spatiality, by taking in serious account the imaginative construction of our geographical consciousness.

Indeed, to use an expression that the American geographer Yi-Fu Tuan borrows from Cassirer, every human experience is rooted in the local conditions of its happening, and at the same time, immersed in an holistic dimension. The latter is a *mythical* image of the world-space, which is not restricted to the level of actual action and perceptual experience, but which is necessary to qualify our sense of orientation. In this respect, Hans Blumenberg has theorized that the image with which we represent the unconceptuality of the world, refers to totalizing horizons that transcend the restricted field of the visible. Strictly speaking, through the World-picture we imagine what is impossible to see. And it is by way of this creative and projective power, that its construction determines, as an orientation term, the assumption of a geographical model of behaviour and thought. The totality of the globe, it turns out, is a powerful «icon» representing «the essence of our holistic existence»¹⁹.

Following this path, it may be argued that the map of the terrestrial sphere emerges the socially constituted document of our imaginative geographies. It is the technological matrix of our historically localized World-picture, i.e. the complex, negotiated, and ideological inscription on a plane surface of how we represent and manipulate the globality of the world. Thus, if we consider maps as media in which our mythical geographies are incarnated, and, at the same time, as a source of a history of cultural representation that encodes subjects, then the technological transition undergone by the cartographic gaze can be seen as the part of a sweeping reconfiguration of view of Earth that involves both the way people perceive and organize space, and the relation between the observing subject and its modes of representation.

It may be argued in conclusion, that in an epoch of rampant globalization, in which our way of conceiving the connection between central and peripheral areas, local and global scalings has radically changed, and in which locating has become a prerequisite for organizing, managing and exploring the ever-expanding world of information, the bodily basis of our orientation and the cartographic construction of our earth-bounded imaginative geographies have given the way to a new and medialized form of location-awareness. The digital map has naturally become the space of representation on which the heterogeneous dynamics of globalism are inscribed. It emerges then as a creative practice of orientation, i. e. a technological strategy wherein one can represent one's position in the world, and personally build up a sharable archive, based on an interactive and multiscalar form of location-awareness.

THE MODERNIZATION OF SPECIFICALLY PREMODERN AESTHETIC FORMS IN THE MEDIUM OF FILMS – A CASE STUDY IN EASTERN-ASIAN CINEMA

Abstract | Film is generally regarded as a prototypically modern aesthetic medium. This is partly due to the history of the medium, the birth and development of which took place in the wake of the industrial revolution. But there is also a stronger argument for the specific modernity of film. According to this argument, the general form of the aesthetic organization of film is itself particularly modern in its nature. Narrative structures and cinematic patterns are shaped as to fit the life of the modern individual and consequently mirror the rationalized organization of modern societies. According to this common idea, the modernity of film is closely connected to the general character of its aesthetic form.

This view, however, runs into problems, when we want to understand why films, while indeed universally understandable to modern viewers in some respects, do still differ quite significantly according to their social and cultural background and are thus differently experienced. How can it both be true that films, due to their aesthetic organization, are readily understandable for modern subjects and are at the same time profoundly different – and thus differently experienced – according to their social-cultural backgrounds?

This question is the specific shape that a wider concern about the nature of modernity takes when applied to the medium of film. That is the concern of how to understand modernity as characterized by certain overarching tendencies of rationalization and economic integration and yet not to describe it as a homogeneous phenomenon but as something that exhibits very specific shapes in the different cultures in which it is actualized. In my talk I want to approach this question through the concrete analysis of the film *Late Spring* by Yasujiro Ozu (1949). My aim is to show how the cultural specificity of this film does not only lie in its subject matter but, more importantly, in the specific way this subject matter is organized in film. I show that this way of aesthetic organization, while being specific to film, can best be understood as a way of adopting and, through the process of adoption, transforming traditional Eastern Asian aesthetic rules of the organization of pictorial art. By bringing to the fore this process of aesthetic transformation I aim to show that the specific modernity of film is nothing that can be approached in the abstract but must rather be regarded as a concrete process of modernization of pre-modern aesthetic practices.

Index terms | *aesthetic modernity; aesthetic modernization of pre-modern practices; aesthetic transformation; cultural specificity of modernity; eastern-asian cinema; film; multiplicity of modernity; traditional eastern-asian painting; Yasujiro Ozu Song Xiaochen.*

I'd like to begin with a brief introduction of the wider research-project of which I want to present some material in this paper. In this project I seek to understand the inner plurality of aesthetic modernity. The basic idea is that aesthetic modernity should best not be understood as a relatively homogeneous general tendency, but that it rather must be grasped in its cultural plurality, which is produced through on-going processes of transformative modernizations of culturally diverse pre-modern aesthetic elements. I try to understand better how these transformations of premodern aesthetic forms into modern aesthetic practices work. And I do that by looking at a concrete phenomenon. This phenomenon is a family of cinematic expression in East Asian cinema. I tentatively call it the „widened view“, indicating the specific way in which it motivates reflection.

In this paper, I will introduce instances of the „widened view“ and show that its cinematic function can be understood better when viewed against its cultural background in East Asian traditional painting. This paper-presentation consists of two parts: 1. I show two clips from the film *Late Spring* and I explain how the role of these scenes within the context of the film can be regarded as the widening of a view. 2. I introduce my thesis, namely: The “widened view” is a modernized version of a form of reflection that was practiced in the traditional East Asian painting, making it an example of the process of aesthetic modernization.

1.THE “WIDENDED VIEW”: A CINEMATIC FORM OF REFLECTION THROUGH THE TEMPORAL AND FIGURATIVE ORGANIZATION OF IMAGES

As I said, I would like to draw your attention to a kind of cinematic expression that I regard as a distinctive instance of the transformation of a premodern aesthetic form – in this case of an East Asian tradition of painting. I claim that this kind of cinematic expression must be understood against this specific cultural background, because the full character of the widened view with its specific temporal and pictorial pattern is missed when regarded from a culturally general and formal viewpoint.

As an example I will show you two short clips from the film *Late Spring*, a film of the Japanese film artist Yasujiro Ozu.¹ This film is especially conspicuous in that it is full of scenes that show Japanese cultural icons. What makes this film particularly significant, however, are not just the objects the film displays, but rather the specific way in which the film represents these motifs. The film has extremely many shots of architecture, landscape, natural objects which are edited again and again into the scenes in which the story develops, but this without any direct contribution to the narrative development. Both of the two clips that I will show you are instances of this kind of montage-shot. The film is about a daughter, Noriko (Setsuko Hara), and her widowed father, Somiya (Chishu Ryu), who live together. Noriko has long reached wedding-age, but she does not want to marry, but to stay with her father. Somiya lies to her that he himself plans to remarry in order to ease Noriko's decision for marriage.

The first clip is the scene in which the tension between Somiya and Noriko reaches its climax: They are visiting a performance of No-theatre together, where they encounter the widow who was already discussed between them as the future second wife of Somiya. After having seen her, Noriko sinks into internal tension and later when having left the theatre Noriko dissociates herself abruptly from Somiya saying she will go to a friend of hers. Here is the first clip:

One shot in this clip which deserves special attention is the shot of the tree (figure 1). What kind of function does this shot have in this part of the narrative development? It does not have any diegetic function because it makes no difference for the narrative development of film, whether this shot exists or not. It also does not function in such a way as to help the spectator follow a change in the film more easily like a change of space, rhythm, or mood. In this clip, rhythm and mood stay unchanged and a wide angle shot with Noriko and Somiya in it would function better to inform the spectator about the ending of the theater and the returning home of the two protagonists. What the shot of the tree effects is, by contrast, the prolongation of Noriko's mood from within the theater, rather than a smooth transition into a new situation. But still: What is this shot? What's the meaning of prolonging Noriko's mood particularly with this image of a tree?

In the second clip the strong tension between Noriko and Somiya has already passed. Noriko is by now engaged to marry a man and Noriko and Somiya make a last common journey before the wedding. They rest in a room of a pension, Noriko mentions briefly her uncle, but then notices that Somiya is already asleep. Here is the clip:

In this clip the shot of a porcelain vase against a background of shadows of bamboo on a shoji, a paper window (figure 2) is crucial. This shot is showed twice between shots of Noriko who seems still not to feel free or happy with her decision about her marriage. What kind of function does this shot have in this part? It does not have a diegetic function as well. It is not a point-of-view-shot of Noriko. As we saw, she looking at the ceiling, thinking, and the vase is set a little behind her head on her left site. So, we do not perceive these two shots from Noriko's perspective as if an accidental glance of hers at the vase gave a new motif to her pondering about her decision and her relation to Somiya. They are rather shots for the spectator. They allow us to leave Noriko's perspective for a moment and see her problems from outside it. And this very character of Ozu's montage-shots is what we must pay attention to. These shots, the shot of the tree and the shots of the vase, function as a short break in the narrative development. By releasing us from the perspective of the character they give us the chance to observe the respective situation within the progress of the unfolding story from a relative distance. That is, they function, as many critics have observed, as a moment of reflection. But western critics tend to describe this moment of reflection in a general formal way, according to which the montage-shots function mainly as a kind of empty temporal space which in itself bears almost no concrete meaning.¹ That is, they describe how these moments, through being unharnessed from story development as the images of the shots do not really contribute to the diegesis of the film, give the viewer time to reflect freely on the happenings of the film. And certainly these moments of reflection can be given such a formal temporal analysis. In fact, because film, as a temporal art form, is in part defined by its handling of time, the temporal perspective is one that is readily available to any modern spectator regardless of her cultural background. But I would like to add that this formal temporal analysis does not give us a full understanding of the specific kind of reflection that Ozu's technique enables. And I believe that this is obvious to me because of the cultural background that I share with the Japanese director. Let me elaborate on this.

Figure 1

Figure 2

THE TRANSFORMATION OF A PREMODERN FORM OF REFLEXIVITY IN EAST ASIAN TRADITIONAL PAINTING

I want to propose that we understand the montage-shots of *Late Spring* against the background of traditional East Asian painting. By that I do not want to deny that Ozu's shots are possibly even more deeply understood when regarded from a specifically Japanese cultural viewpoint.¹ What I want to show is merely the difference between a viewpoint that embodies a concrete cultural background, in this case an East-Asian one, and a general, that is culturally neutral, formal viewpoint. The East Asian viewpoint seems to me compelling in this case because an analysis focusing only on the temporal structure of the shots does not explain why Ozu decided to show the specific object he shows and places it in this specifically composed image.² We cannot really be satisfied with an account that ends up with the claim that these shots merely stretch time and effectively form an empty space in the film-experience. If that is to be of greater significance than that we experience the story more slowly and freely than usual, one must be capable to explain the difference between a in this reflective way experienced story and a story that is experienced in a usual rhythm. This lack of explanation is particularly conspicuous for me, a Korean spectator, because for me it seems clear that not just any shot that intermittently halted the progressive pace of the film would be of the same importance for the way to perceive and understand the film. There is something specific about the tree and the shadow images of bamboo. These images are to a certain degree familiar to me and laden with cultural connotation, as I know them from images of traditional painting. Ozu's montage-shots very strongly invoke traditionally painted images of nature both through their contents and their self-contained painting-like pictorial structure. Ozu's camera repeatedly seizes images of landscapes, of natural objects during the narrative progression but on a parallel plane to this progression. These images stay in close relation to the progress of the story, but they are complete in themselves through their independence from the narrative context and through the temporal duration that Ozu grants them. The effect of these images is, therefore, not just to produce a pause within the film-experience but rather a specific mode of reflection that is peculiar to a particular composition of images and the tradition it stems from.

You can see here a few instances of Japanese painting especially in the literati-style which was developed in the 18th century (figure 3, figure 4, figure 5, figure 6).³ The concept of literati-painting⁴ was originally born in china during the time of the Song-dynasty in the 11th century in a Confucian background.⁵ It was then, through mixing with Taoistic and Buddhist ideas, developed differently in different regions of East Asia and I will speak of Confucianism in this broad sense in the following. The concept of literati-painting is important because it manifests the Confucian idea of images as a medium to reflect on one's basic ethical stance towards life and the world as a whole.

Painting is not only regarded as a medium of representation of the world. The ideal role of painting is rather to motivate a universal Confucian worldview according to which an individual is seen in its basic relation to the principle of motion of the world as a whole. For this it is especially important that literati-painting was meant to be practiced not by professional artists but by literati, that is the learned elite: amateur painters. Literati painting therefore is a particularly clear manifestation of the traditional idea that art should be a medium of practical reflection. It was meant to inform every practical dealing of the literati by inducing a wider perspective on their actions that was free of everyday particularity.

Figure 3: Ikeno Taiga Lake-Beyond the Forest

Figure 4: Yanagisawa-Kien Bamboo

Figure 5: Yosa Buson-Cuckoo Over Springtime Forest

Figure 6: Sakaki Hyakusen-Plum Branch Under a Cold Wintry Moon

What can we achieve by linking Ozu's montage-shots to this tradition of painting? We get a more specific, so not merely formal understanding of the function of these shots in the film. They repeatedly lead us to see the story of Noriko within the wider context of life rather than from the perspective of Noriko herself that is situated in the here and now.¹ More specifically this wider context is that of the general motion of the world according to the Confucian idea. The world, after this conception, is always in motion and is not seizable as a fixed thing. This is also the direction of Somiya's answer to Noriko's question, why they cannot stay the same way as they have been before: He says that he approaches the end of life, while Noriko is in the age in which one makes a new start in life. That is the way how history goes naturally forward. For this speaking of Somiya we are already well prepared through encountering the many montage-shots which suppose this Confucian understanding of life. And more importantly: we are not just prepared to passively understand Somiya's words, but rather through the montage shots, we involve ourselves actively in reflection on the story and by doing this, we supplement and expand the meaning of Somiya's words as well. Thus, Ozu's montage-shots function so as to widen our view which, even if stays situated in the concrete context of an individual protagonist, sees this particular event as one with a more general meaning within the context of life as such.

This cinematic phenomenon of the "widened view" has its basis in a form of reflection which was mainly established through the practice of an East Asian tradition of painting. For this reason I characterize it as a succession-phenomenon of that tradition. Nevertheless, the Widened View is a modernized version of this tradition and doesn't embody the same form of reflection as the one of traditional painting. We see this, firstly, in that function and meaning of the montage-shots are framed to a considerable extent according to the concrete places the shots take in the development of the film. Unlike a tree in a historical painting, for instance, the shot of the tree cannot be interpreted freely according to the individual and historical situation of the appreciator. The tree-shot has a particular connotation and function as a shot which is set during the emotional tension of Noriko. Secondly, we become aware of the modern character of the Widened View when we recognize that a Confucian frame of reflection does not function smoothly for this story of a modern family. Reflecting on its central conflict on the basis of the traditional view of the natural movement of the world does not lead us to a clear answer. It rather leaves us with the question, what meaning this traditional view should have and has in modern times and for a modern lifestyle. The traditional view is no more *the* fixed ground on that we can stand securely in our judgement of difficult questions. It is rather at the most just one possible standpoint beside others from which we understand our everyday problems. More plausibly, the actual meaning and importance of the Confucian view itself should be drawn into critical reflection, as the sorrowful and lonely mood of Somiya in the last scene very strongly asks us to do.

ENDNOTES

1. Yasujiro Ozu, *Banshun/Late Spring* (Shochiku, 1949).
2. For examples of this kind of formal characterizing of the mode of reflection which Ozu's montage-shots motivate, see: Michael Pigott, "The continuous present in Ozu Yasujiro's *Late Spring*" , *Kronoscope* 8.1 (2008): 13-28; Andrew Klevan, "Disclosure of the everyday: the undramatic achievements in narrative film" (PhD diss, University of Warwick, 1996), 195-198; Kristin Thompson and David Bordwell, "Space and narrative in the films of Ozu", *Screen* 17:2 (Summer 1976), 46; Noel Burch, *To the distant observer* (London: Scolar Press, 1979).
3. For an interpetation of Ozu's montage-shots from a distinctive Japanese cultural viewpoint, see: Donald J. Konshak, "Space and Narrative in *Tokyo Story*", *Film Criticism*, Vol.IV, No. 3 (Spring 1980); Donald Richie, *Ozu* (Berkeley: University of California Press, 1974), 173-75. Richie describes the reflective character of the shot of the vase by framing it with the japanese concepts of *mu* and *mono no aware*. Although I agree with him in his general point that the shot of the vase motivates a distinctive kind of reflection through the distinctive cultural connotation which comes with the pictorial composition of the shot, Richie's concrete analysis about how the shot of the vase is percieved does not seem to be appropriate to me: Richie claims, that the shot represents a moment of sudden apprehension of life and what significance what has been shown has for both Noriko and spectator (ibid. 174). However, the shot does not really present a complete positive meaning of the film, but functions merely as one moment within the process of the film which as a moment serves to widen the significance of the shown developments from that of a particular story to a more general view of life.
4. For example, David Bordwell analyzes the function of the „remarkable shot“ of the tree only with regard to its particular sequential place and not with regard to its specific image: For him, the shot functions so as to transit out of the No theatre and to privilege the No scene within the phase of the narrative that develops Noriko's emotional tension (David Bordwell, *Ozu and the poetics of cinema* (Princeton: Princeton University Press, 1988), 310).
5. For the history and features of Japanese painting in the literati-style, see: Yoshiho Yonezawa and Chu Yoshizawa, *Japanese Painting in the Literati Style* (New York: John Wetherhill, 1974).
6. Literati painting or scholars' painting is the usual translation of 文人畫, pronounced *wen-jen-hua* in Chinese, *mun-in-hwa* in Korean and *bunjinga* in Japanese.
7. For a definition and theoretical exploration of the art of literati painting, see: Susan Bush, *The chinese literati on painting: Su Shih (1037-1101) to Tung Ch'i-ch'ang (1555-1636)* (Cambridge: Harvard University Press, 1971).
8. In this respect David Bordwell's indication that Ozu's devious usage of optical point-of-view-shots causes "the 'decentering' of classical subjectivity" and with this, "creates a more unrestricted range of access" to the narration is, in a general formal sense, quite appropriate (Bordwell, *Ozu and the poetics of cinema*, 118). The specific character of the reflection which this widening of a subjective view enables, cannot, nevertheless, be fully illuminated through this kind of general formal analysis.

Wonho Lee received her doctoral degree from the Freie Universität Berlin in 2016 with a thesis on the concept of aesthetic truth in Adorno's *Aesthetic Theory*. Before, she had been a graduate student in philosophy and aesthetics at the Department of Aesthetics at Seoul National University and at Rheinische Friedrich-Wilhelms-Universität Bonn. Currently, she is developing a research-project oriented around the question of how traditional East Asian practices of pictorial art are being transformed within the modern medium of film.

KANDINSKY'S COMPOSITION AND ZHENG XIE'S BAMBOO: AN AESTHETIC DIALOGUE BETWEEN WESTERN AND EASTERN ABSTRACTIONISM

Abstract | As one of the most important theorists and practitioners of the Western abstractionism, Wassily Kandinsky divided the creation of art into three categories based on the difference of their formal sources – “Impression” (external nature), “Improvisation” (internal nature) and “Composition” (conscious artistic expression). Analysing this discourse from the renowned treatise *On the Spiritual in Art*, this essay discovered that Kandinsky's classification is strikingly similar and comparable with the principle of Chinese traditional literati painting, namely the classical statement of “bamboo in the eyes” (眼中之竹), “bamboo in the mind” (胸中之竹) and “bamboo in the brush” (手中之竹) in the *Inscriptions on Painting - Bamboo* (《板桥题画·竹》) written by Zheng Xie (郑燮, 1693-1765). The notion of “Composition” which refuses to imitate the external nature and embodies the inner spiritual needs that Western art started to pursue only at the beginning of the 20th century is actually the creative principle that traditional Chinese literati painting has followed for hundreds of years. Besides, this essay attempts to clarify the core in Kandinsky's strategy of abstraction, i.e. the transformation from “painting” to “writing”, by comparing it to the evolution of Chinese hieroglyphs and connecting with the theory of “plastic movement” and “organic growth” in the aesthetics of Chinese calligraphy, which is also in accord with Kandinsky's idea of exploring the “inner nature” and the spirit in art. Through this aesthetic dialogue across time and space, this essay aims to bring a new dimension to understand the Western abstractionism from the perspective of the oriental philosophy of culture.

Index terms | *Abstractionism; Aesthetics of Chinese literati painting and calligraphy; The Spiritual in Art; Wassily Kandinsky; Zheng Xie; Philosophy of Culture.*

From 1909 to 1911, Wassily Kandinsky created five paintings entitled “Composition” series, which reflect the maturity of his theory of abstractionism. In the concluding section of his 1912 theoretical article *On the Spiritual in Art*, he explained the concept of “Composition” and classified the creation of “spiritual art” as three categories based on the difference of their formal sources. The first is the direct impression of “external nature”, expressed in the linear-painterly form, and these pictures are called “Impressions”. The second is from the unconscious, which is the suddenly arising expressions of inner psychological events, namely the impressions of “internal nature”. This type is called “Improvisations”. The third is the expression of feelings that have been forming in a slow inner brewing. This type of picture is only completed after preliminary drafts are carefully processed and modified, and it is called “Compositions”. These three series are progressive and gradually internalized artistic creation stages, in which the third series “Compositions” is the most advanced in Kandinsky’s view – “Here, reason, the conscious, the deliberate, and the purposeful play a preponderant role. Except that I always decide in favor of feeling rather than calculation [...] we are approaching the time when a conscious, reasoned system of composition will be possible, when the painter will be proud to be able to explain his works in constructional terms.”¹

Kandinsky’s classification of “Impression”, “Improvisation”, and “Composition” seems highly original, but is strikingly similar and comparable with the classical statement of “bamboo in the eyes” (竹在眼), “bamboo in the mind” (竹在心) and “bamboo in the brush” (竹在笔) in *Inscriptions on Painting. Bamboo* (竹在眼·竹在心·竹在笔) written by Zheng Xie (郑洁, 1693-1765), a well-known Chinese painter and art theorist in the Qing Dynasty. Zheng Xie said:

Once, while lodging at a riverside hostel in early autumn, I got up in the morning to look at the bamboos and saw the mist, sunlight and shadows floating amongst their sparse branches and dense leaves. Greatly inspired, I wanted to paint them. However, the bamboos in my mind went not the same as those I had seen in the eyes. After preparing my ink and laying out my paper, I lifted the brush to paint. Suddenly the bamboos had changed. They did not resemble the bamboos I pictured in my mind. Having a conception before starting to paint is a guiding principle; however, the potential for variation outside that principle is what is interesting, and this does not apply to painting alone.²

In Zheng Xie’s point of view, the “bamboo in the eyes” is the natural form of bamboo, and it is an objective reality that is perceived visually. It “floats” in natural light and shadow, giving the viewer a direct, external impression. Next, the artist is inspired, creating an impulse of creation and beginning to conceive an artwork. The natural image that has previously been visually captured gradually internalizes as an experience, feeling and imagination of the mind, forming an artistic imagery. At this point, bamboo is no longer an objective natural matter but is an embodiment of individual mental state and personality. Then, the “bamboo in the mind” intends to jump out at the artist’s further thoughts and brewing, and so he “lifted the brush to paint” and the “bamboo in the mind” finally becomes the “bamboo in the brush”. The ultimate painterly bamboo has changed significantly and opened a huge gap compared to natural bamboo – after the artist’s inner awareness, refinement and processing, the bamboo on the paper should be a personified, artistic bamboo. It is by no means a dumb imitation of natural objects but a highly spiritual aesthetic imagery. Zhang Shaokang (张绍康) points out that

the transformation process of Zheng Xie’s “bamboo in the eyes” to “bamboo in the mind” equals the saying of “emotion is exposed by materiality” (情由物出) mentioned by Liu Xie (刘勰, 465-520) in his *The Literary Mind and the Carving of Dragons* (文心雕龙), which can be understood as the spontaneous care or response of the artist’s mind for natural impressions. The metamorphosis from “bamboo in the mind” to “bamboo in the brush” often involves the artist’s continuous polishing and revision of the artistic imagery, because no material means can represent the idealized image perfectly – only a certain aspect of it can be highlighted according to the characteristics of different art forms such as painting and music.³

Now, let’s come back to the classification of Kandinsky. His primary “Impression” series conveys the artist’s observation and impression of “external nature”. This is precisely what Zheng Xie said about “the bamboo in the eyes.” The second stage of “Improvisation” reflects the “inner nature” that is hidden in the depth of mind. The natural image observed by the naked eye at this time has transmuted into the inner subconscious, constantly precipitating and fermenting in the artist’s heart and can suddenly become a perceivable consciousness at an unpredictable moment, bringing impulses of expression to the artist. This phase of internalization of natural and prelude for rational processing resembles what Zheng Xie called the “bamboo in the mind.” In the “Composition” series of the third level, the previous images of the subconscious that incorporated into artist’s personal emotions are finally transmitted onto the painterly plane under the guidance of rationality and consciousness and through the artist’s skill-trained hand, the paintbrushes in his hand, and the paint of the brush tip – this is just the concept of “the bamboo in brush” in the context of Zheng Xie. The artist can put down his brush in his hand and announces the completion of the painting only after he has constantly revised and polished the preliminary draft and believes that the image of the picture matches the image he wants to express. Compared with the previous two phases, “Composition” is the most sensible and the most spiritual. It has experienced the “streamline” processing of eyes, emotions, subconsciousness and hands, and possesses a more advanced “humanity” that greatly exceeds the “semi-finished artistic products” of “Impression” and “Improvisation”, hence it is a complete and highly artistic creation that integrates nature and personality.

It can be seen from the above that Kandinsky’s “Impression”, “Improvisation”, “Composition” and Zheng Xie’s theory of “bamboo in the eyes”, “bamboo in the mind”, and “bamboo in the brush” are corresponding and identical with one another in their connotation. What’s more, both of them eventually pursue the “interest outside the principle” (物我两忘) – the taste beyond the painting techniques, and show a “potential for variation” – artistic ideas that full of inspiration. The notion of “Composition” which refuses to imitate the external nature and embodies the inner spiritual needs that Western art started to pursue only at the beginning of the 20th century is actually the creative principle that traditional Chinese literati painting has followed for hundreds of years.

FROM PAINTING TO WRITING

John Golding states that in terms of form, Kandinsky hereby further abstracted the lines on the basis of breaking perspective principles and highlighting the “inner weight” of color, trying to make lines achieve the same level of abstraction as color.⁴ The artist cancelled the function of lines in sketching and limiting the specific figurative image, leaving only the ideographic function similar to hieroglyphics and writing.

Therefore, the lines here are in the “intermediate state” that not only depict the appearance of the object (as painting) but also convey the meaning of the object (as writing).

We have found that the image of the horse has permeated Kandinsky’s *Composition* series from the very beginning. In many works of Kandinsky in 1910-11 we can clearly see the change of the lines of horses: the contour line is gradually separated from the specific image of the horse without creating a sense of depth. The lines are extremely simplified, and only some of the most horse-featured parts are retained – the long triangle-shaped head, slender neck, limbs, and mane. Kandinsky’s strategy of abstracting painterly lines is very similar to the evolution of Chinese hieroglyphic characters from Oracle Bone Script (甲骨文) to Small Seal Script (小篆). We use the following table to make an intuitive comparison: (Figure 1)

The Chinese-character “马” (Horse) in the period of the Oracle Bone Script depicts the horse’s general outline, and it still looks like “painterly horse”. In the Seal Script, the horse’s head, trunk, limbs, mane, and tail have all changed into smooth strokes, which is more conducive to the writing of this pictogram, so the “painterly horse” that is close to nature transformed into the “calligraphic horse”. The hieroglyphs that had a direct association with natural objects thus turned into imagery symbols with certain meanings. In this process, the status of the image is gradually surpassed by the status of meaning until it finally develops into a logogram. The abstraction of Kandinsky’s horse image is quite similar to the transformation of the ancient Chinese hieroglyphs from “painting” to “writing”. If we say that the contour line of the horse in *Composition II* of 1909 still defines the range of color blocks that are unique to the horse, then in *The Rider* and *Composition IV* of 1911, the color of the horse body and its surrounding does not have any difference. Outlines can be drawn in an extremely simplified and smooth manner, just like writing a hieroglyph, and the image of the entire horse tends to be symbolized.

We have also seen that when “writing” the horse image in *Composition IV*, Kandinsky’s brushstrokes are different from the past, having the trend of movement and a certain sense of direction. All the lines are created in one shot and do not need to be improved repeatedly. The effect of this approach is that each part of the horse looks more dynamic and has more motivation to expand outwards, making it appear more vibrant and lively. This is also similar to the aesthetics of Chinese calligraphy that emphasizes the “common origins of calligraphy and painting” (书画同源). As Chiang Yee (1903-1977) said: “The beauty of Chinese calligraphy is essentially the beauty of plastic movement, not of designed and motionless shape.”⁵ In conveying the movement, writing also needs to take into account the balance of the image (character), and this balance “is achieved by instinct, and derives from the writer’s aesthetic vision”.⁶ In Kandinsky’s case, the purpose of abstracting lines and depicting images by “writing” instead of by “painting” is also to achieve the balance between the painterly form, content and the inner spirit of the artist. This balance is not a fixed state, but is like music, constantly changing and flowing. Therefore, lines also have start and end points like musical phrases, and there is also a certain movement trend in it. Chiang Yee divided the movement of Chinese calligraphy into two kinds: one is “activity in stillness” (静中见动) and the other is “activity in action” (动中见静). There is no strict boundary between the two, which usually complement each other. The former is the direction, shape, and composition of the strokes. Without destroying the recognition of the characters, the strokes contain the trend of “organic growth”; the latter is the movement of the brush

during writing.⁷ We can see that Kandinsky's "writing" of all lines in *Composition IV* is also presented in the form of "organic growth" – they freely spread over the canvas, loosely depicting horses, mountains, and human figures. As a result, the "inner nature" breaks through the shackles of "external nature" and continues to grow in the painting through "calligraphic nature".

EPILOGUE

In the construction of cultural philosophy and modern art theory, the production of culture and the symbolic form are closely linked. Interpreting the symbolic features of any regional culture seems to be the golden key to understanding the way in which the culture exists. In the current era of globalization, symbolic forms also play an important role in intercultural communication – through symbols, we can see the basic form and aesthetic commonality in different cultures, providing a possibility for a comparative study of culture.

For Ernst Cassirer, the overall mind and consciousness of human beings are symbolic. As a form of symbolism, artistic creation is the process that the subject (artist) regards the object as a pure form, thereby producing aesthetic value. He admits: "The artist's vision is not passively accepting and recording the impression of things, but constructively, and only by constructing activities, we can discover the beauty of natural things."⁸ On the basis of Cassirer, Susanne Langer expresses the symbolic form of art as an emotional symbol, or the "presentational symbol", which does not refer to specific things, but rather symbolizes the internal emotions and subjective experiences and represents them objectively. Correspondingly, the important aesthetic-sociological goal of the Western abstract art movement in the early 20th century was to abandon the reproduction and imitation of the real world, to get rid of the gap between specific cultural traditions, and to emphasize the artistic language symbol itself. In the context of the spirit of artistic self-discipline, the metaphysical meaning and the individualized interpretation dimension given by abstract artists to the form of painting, on the one hand, make the abstract symbolic form reveal its strong plasticity, on the other hand, make the artworks possess some universal characters in cultural significance.

Wassily Kandinsky is a very representative figure in the Western abstract art movement in the early 20th century. The evolution of "pure abstraction" in his artistic practice was synchronized with the maturity of his abstractionist theory. In the self-construction of his "intentional forms", Kandinsky used the concept of "composition" to make the universal, eternal inner emotion of art, the so-called "inner necessity" of art¹, expressed within specific abstract symbols, and his theoretical expression has many similarities with the traditional Chinese aesthetics that also pursue non-figurativeness. Perhaps Kandinsky's example can reveal the common symbolic mechanism behind the creation of different artistic cultures, and bring about an aesthetic dialogue that spans different geo-cultures between the East and the West.

SUSANNE K. LANGER'S AND POSSIBLE OVERLAPPING CENTRAL-EUROPEAN (SLOVAK AND CZECH) AESTHETIC CONCEPTION OF ART

Abstract | In our article we will try to reflect these days aesthetic practises in Central Europe, comparing them with those of the past and trying to find the unity and diverseness overlapping with out-of-Europe aesthetics, namely the american one. Just because Susanne Langer's philosophical conception of art and the Slovak and Czech philosophical conception of art have still enabled to ask questions about art, we will try to prove that there has been a bridge being formed not only among the aesthetics of these two continents, but even among the past and the present state of art. The possible result of this connection for today is that we still keep aesthetics being philosophical in S. K. Langer's as well in our Slovak and Czech conception and at the same time we still can overlap it with outer spheres of interest – as they all are spheres of life and because of that of our mind (keeping the central position in Langers's work) too - and that is what shows us the meaning we are constantly looking for in the art as well.

Index terms | *overlapping possibilities of the past and present; similarities and differences; Slovak and Czech Aesthetics of Art; Susanne K. Langer; the actual state of art.*

INTRODUCTION

Reflection unity and diverseness of apparently two different aesthetic conceptions, their communication way and thus asking questions about art, is what will show or deny the existence of a conceivable bridge not only among the aesthetics of two continents, but also among the past and the present state of art.

REVIEW STAGE

The first philosopher and aesthetician reflected is Susanne Langer, who was copious for more than 50 years (from about 1930 to 1982). Because there has still been existing some questionability of her specific philosophical system fitting, to a greater extent, it is also possible to reflect those non-European and European chronological reflections of her work and compare with two possibly overlapping central-European aesthetic conceptions of the 60's and 70's by Tomáš Štrauss and Václav Zykmond. Finally, a reflection of the actual aesthetic thoughts and tendencies of 2017 will show the way to see all these aesthetic conceptions perspective. Nevertheless, this paper is only a possible basis, not the presentation of any finalised position. The way it is and could be implies a partial result of ongoing research typical of failure and thus being an inevitable step of improvement and correctness.

SUSANNE K. LANGER'S POSITION IN THE WORLD AND CENTRAL EUROPE

Although Langer's work remains trapped in the mutually dependant mass of texts and terms, we still continue reading it. Her central, so to say global American position directed towards our peripheral European one has been mirrored probably also by her rather peripheral academic career. For the period of 12 years she was living an obliged, so called "nomadic life" – as Cornelia Richter termed in 2007 (it started with the publication of her most famous *Philosophy in A New Key: A Study in the Symbolism of Reason, Rite and Art* and lasted until 1954) – and two years later (1956), she "...continued her research... on a grant from the Edgar J. Kaufmann Charitable Trust of Pittsburgh."¹ It lasted almost for the rest of her life and was connected with isolation of the whole-time student working alone in the silent woods of her childhood – as Hope Stoddard introduced in 1970 (*Famous American Women*, 259). Donald Dryden considers it enabling her to end up official teaching affiliation in 1962 and devote the next 25 years to research and writing ("Susanne K. Langer," 197; 198-199).

Chronological comparison with a deeper view of American and especially Slovak and Czech aesthetic academic field contexts, presented already in the previous years of research,² has portrayed the later one typical of being delayed, random and poor in translation of Langer's original works (thus, probably, insufficient nature for understanding connotations). Just in 1998, Jozef Cseres offered the 8th and 9th chapter of *Philosophy in A New Key (On Significance in Music; The Genesis of Artistic Import)* translation in Slovakia (Langerová, *O významovosti v hudbe; Genéza umeleckého zmyslu*. 204-265.).³

It surely isn't possible to include all the Langer references here, so let the perspective

continuing open. At first, it is the time, when, as Richter said: "Langer started to work on the big question of the natural basis of feeling and thus of mind around 1954." (*The body of Susanne K. Langer's Mind*, 113.) keeping it till her death in 1985. Some positive evaluations of her work appeared then in the USA.⁴ On the other side, there is the very first mention about S. Langer in Czech translation of *A History of Aesthetics* (1939) by Katharina Gilbert and Helmut Kuhn in 1965 (*Dějiny estetiky*, 209-214).

In the late 70's Ranjan K. Ghosh published his Langer-dedicated study (*Aesthetic Theory and Art (A Study in Susanne K. Langer)*); in the early 80's even the Eight-first Annual Meeting of American Philosophical Association on the Philosophy of Susanne K. Langer with co-symposiasts Stefan Morawski, Arthur Coleman Danto and Ronald Bon de Sousa Pernes (Philosophy Documentation Center, "The Journal of Philosophy (Volume 81, Issue 11, November 1984).") took place. In the late 80's, Langer's evaluation as "perhaps the second major female semiotician in history" (Sebeok, "Ernst Cassirer, Jacques Maritain and Susanne Langer," 393) followed.⁵ At that time, somewhat ambiguous Langer's portrait was presented in Czechoslovakia by Marta Zágorská (*Estetické konfrontácie*) who was trying to sustain Marxism-Leninism philosophy of art in 1985 (33; 45). In 1989, Langer's work was even the one provoking the storm of criticism here.⁶

The year 1994 is surprising for our Czecho-Slovak context, because in more details analysing reference about S. Langer by prof. Jana Sošková in the 2nd Anthology of the History of Aesthetics appears in Prešov (14-16). Along with the 1985 Czech translation of Italian aesthetics historian Guido Morpurgo-Tagliabue's work *Esthétique contemporaine* (1960), which is the most analytical and complex evaluation of Langer's contribution in our Czecho-Slovak academic field, prof. Sošková's contribution remains the most beneficial reference.⁷

Only a year after Cseres's translation of two Langer's chapters, there appear an immediate reaction in 1999 by Július Fújak in Slovakia ("Význam (ovost) Susanne Langerovej (nielen) v hudbe," 94). Anyway, the Polish academic field translated the whole *Philosophy in A New Key* 24 years ahead of the Slovaks (*Nowy Sens Filozofii, rozważanie o symbolach myśli, obrzędu i sztuki*, 1976) and the Czech Milan Lukeš offered three Langer's chapter translation and an analysis of her work *Feeling and Form* in the magazine titled *Iluminace* in 1996 ("Susanne K. Langerová," 69-87) – i.e. two years ahead.

The millennia turn in the world is already connected with exclusively Langer's philosophy-dedicated works by Rolf Lachmann and William Schultz.⁸ Although Langer is in *The Blackwell Guide to American Philosophy* by Marsoobian and Ryder as well as in Levinson's *The Oxford Handbook of Aesthetics*⁹ in 2003 presented in the perspective of feminism, the crucial is her progressive tendency because "Her writings in aesthetics... are a powerful example of... a 'key change'." (Marsoobian and Ryder, *The Blackwell Guide to American Philosophy (Blackwell Philosophy Guides – Volume 29)*, 241)¹⁰ and inspirational spirit because of her yet undiscovered sphere of influence questioned about here (Ibid., 241). In 2009, Robert E. Innis introduces his full-scaled work *Susanne Langer in Focus* but it's also worth acknowledging his work *Semiotics: An Introductory Anthology* from 1985 with a chapter dedicated to Langer's discursive and presentational forms (GoogleBooks, "Semiotics, An Introductory Anthology," 87-107)¹¹ and his guidance of the Symposium on Susanne K. Langer in 2007 (the first one mentioned above took place in 1984). This event- an introductory to later book

-was commemorating the 40th anniversary of Langer's *Mind: An Essay on Human Feeling* publication and trying to place her work and compare it with the one of her inspirational sources, including John Dewey.¹² Innis's next contributions involve the paper on Susanne Langer's Aesthetic Model of Minding published in 2012 (Innis, "Signs of Feeling: Susanne Langer's Aesthetic Model of Minding," 43-61). Donald Dryden's contributions involve a peculiar Langer's biography ("Susanne K. Langer." 189-199) and papers from 1997 ("Susanne K. Langer and American Philosophic Naturalism in the Twentieth Century," 161-82) 2001 ("Susanne Langer and William James: Art and the Dynamics of the Stream of Consciousness," 272-85) 2004 ("Memory, imagination, and the cognitive value of the arts," 254-267) and 2007 (symposium), when here reflected her even as a visionary for the subsequent development in the science. He said: "The recent rise of consciousness studies provides what is perhaps the most dramatic vindication of Langer's prophetic vision." ("The Philosopher as Prophet and Visionary: Susanne Langer's Essay on Human Feeling in the Light of Subsequent Developments in the Sciences," 33).

The relevance of Langer's reflection about human mind processes and arts and their complex analysis brings her to the fore in the 21st century as well. In 2006, it is the paper Neuroscience and imagination: the relevance of Susanne Langer's work to psychoanalytic theory (especially Langer's widespread study of human mind processes) (Taylor & Francis Online. "Margaret M. Browning (2006) Neuroscience and Imagination: the Relevance of Susanne Langer's Work to Psychoanalytic Theory.") and only a year later, it's Richter's approval especially in connection with the work of neuroscientist Antonio Damasio (other neuropsychological works including) (*The body of Susanne K. Langer's Mind*, 115). Finally, in 2013, the Rediscovery Susanne Langer's Relevance for Contemporary Aesthetics and Theory of Art section at the 19th International Congress of Aesthetics in Kraków took place.¹³

S. LANGER'S AND POSSIBLE OVERLAPPING SLOVAK AND CZECH AESTHETIC CONCEPTIONS OF ART

It has already been shown that while the 50's and 60's of the 20th century were typical of positive American Langer references, the first half of the 60's in Czechoslovakia was restricted only to Gilbert's and Kuhn's note. Anyway, with the Langer's conception of art, its philosophy and aesthetics, one can approach two possibly overlapping Slovak and Czech aesthetic conceptions of that time, that may form a possible simultaneous connection.

The first one is given by Tomáš Štrauss - "a Slovak art historian" - who "From 1955... has published almost 700 expert studies, reviews and articles in journals."¹⁴ In his book *Umenie dnes: pokus o kritickú esej* (*Art Today: An Attempt for an Artistic Essay*) published in 1967, he took a critical view on the 2nd half of the 20th century art. Štrauss considers the characteristic feature of the 20th century modern art excessive rationalisation as well as its total opposite and just because of it, on a par with S. Langer, the main task of this art for him is to "Create some arbitrary islands of order and system... ." (Štrauss, *Umenie dnes: pokus o kritickú esej*, 27).¹⁵ Štrauss, similarly to e.g. Gillo Dorfles's work *Il divenire delle arti* Czech translation from 1976 (*Proměny umění II.*),¹⁶ writes about the so called continuity (linkage) of art - where there are differences within individual types of art vanished (Ibid., 64). This is overlapping with Langer's unity of arts in her work *Problems of Art (Ten Philosophical Lectures)*, when she says: "the several arts are

just so many aspects of one and the same human adventure.” (Susanne K. Langer, *Problems of Art (Ten Philosophical Lectures)*(New York: Charles Scribner’s Sons, 1957), 76) and it transforms itself into her principle of assimilation in the work *Feeling and Form*.¹⁷ Štrauss claims that we may understand the second half of the 20th century turn from nature towards an analysis of an individual and a society appearing in art in two ways: pessimistically – that is to say as an emphasis paid to individualised and industrialised society (Štrauss, *Umenie dnes: pokus o kritickú esej*, 20-74); but also optimistically – as the inclination towards a life, which points to an “artist’s and art’s identification with the life surrounding him.” (Ibid., 78). Let’s remember Langer’s unity of arts with her explanation of the continuity of art interrelated to, but not identical with a life (pattern) and explained through her term vital rhythms.¹⁸ And due to her thought about an apparent opposites linking through the way of their understanding, which art is for a human being too, this would seem to call for description of the evolution of human mind and its ability for symbolic conception presented in her work *Mind: an Essay on Human Feeling* (1982) as well.¹⁹ Let’s reflect three Štrauss’s statements: the first one is about art of modernism being striving to achieve man’s direct, not mediated self-understanding process (Štrauss, *Umenie dnes: pokus o kritickú esej*, 96); the second one is thus raising a question about the very existence or non-existence of art itself (Ibid., 152); the third one is about art which is constantly joining with the whole world thanks to keeping its role in a society (Ibid., 152). A related implication has to do with Langer’s *Mind: an Essay on Human Feeling* (1982), where she took a critical look on a mankind faced with “the challenge of its own technical and economic construction of a world-wide civilized society.” (Susanne K. Langer, *Mind: an Essay on Human Feeling (Volume III)*(Baltimore, Maryland: The John Hopkins University Press, 1982), 154). Only it seems that the issue concerning the future of a human society and its art was developed by Langer about 20 years earlier. That is to say that in *Philosophical Sketches* in 1962, she explained her understanding of symbol and the Homo sapiens existence unity overlapping with a cause-effect principle within the relation of social problems resulting from our over-individuation.²⁰ She writes:

The arts objectify subjective reality, and subjectify outward experience of nature. Art education is the education of feeling, and a society that neglects it gives itself up to formless emotion. Bad art is corruption of feeling. This is a large factor in the irrationalism which dictators and demagogues exploit. (Langer, *Philosophical Sketches*, 94).

Let’s take the other example now: in 1964, Václav Zykmond - an important Czech visual artist, art critic, photographer and graphic artist, who was interested also in the works of e.g. Ernst Cassirer, S. Langer²¹ published his anti-capitalistic and anti-bourgeois, thus pro-socialistic and classless oriented book *Moderné umenie a dnešok (Modern Art and To-day)*. This is coeval with the main idea about a necessary condition for an existence of art, based on a connection of man with the society they live in. Zykmond’s thought about unity is transformed into subjectivity – we can reflect it e.g. in his statement about a perception of an art work not being connected only with an imagination. On the contrary, he says:

Only unity of sensory/sensational and rational (imagination-based) enables a man to perceive a work of art actively. If this is about to have an effect on a perceiver, they has to find themselves in this work, still in the parallel unity of both basic levels of the cognitive process. A perceiver has to find themselves...that means they has to find their feelings...their sensibility. (Zykmond, *Moderné umenie a dnešok*, 35).

Zykmunddenies terms “comprehensibility” or “incomprehensibility” of an art work and replaces them with “acceptance” or “unacceptance”²²– this way, he underlines its subjective part. This would seem to call for Langer’s paper in 1926 (*Form and Content: a Study in Paradox*),²³ which presents non-existence of the absolute truth and because of that of a truthful or untruthful art either and thus one can speak only about a good or a badart. Langercontinued this conception also in 1930 (*The Practice of Philosophy*)²⁴ and in 1942 (*Philosophy in a New Key*)²⁵. Let’s take some other exemplar: Zykmundunderstands symbolic abstraction whereby there doesn’t exist an absolutely unfamiliar artistic experience for both an artist and a perceiver, as “It is...to be to some extent inherent not only in an artist, but also in a perceiver.” (*Moderné umenie a dnešok*, 40). Langer took a similar crucial position of abstraction in the process of understanding in her work*The Practice of Philosophy*(1930) when she defines it as:“the ingredient that must color our knowledge in order to make it apparent at all...factor which is always operative in reason, and perhaps never in intuition.” (46).Zykmund writes also about a form and content unity concerning an organic process of creative artist’s work,²⁶ what overlaps with Langer’s terminology of an organic form, a significant form and an art symbol, that create her mutually conditioned life-art line.²⁷ Zykmund defined an “abstract emotional rational process”²⁸ - the one through which a reality of an art work is linked with the actual reality - and spoke about imagination not identical with the terminological-logical thinking, what one may find a similar way to Langer’s continuity of art interrelated to, but not identical with a life (pattern).

POSSIBLE PERSPECTIVES OF AMERICAN AND CENTRAL EUROPEAN OVERLAPPING AESTHETIC TENDENCIES

Langerremains on a ‘crossroad’ position. Rather than prevailing one tendency of thought over the other, she seems to join them upon the basis of the meaning looking process asRichteralso reflected her effort to intertwine two philosophical attitudes and form “the combination of phenomenological approach with transcendental philosophy”(The body of Susanne K. Langer’s Mind, 110).So, because one can continue a dialogue among Langer’s as well as Slovak and Czechaesthetic theories of art, these representatives of two continentscould form a bridgewithin the past and the present art as well.The relevance of Langer’s theory kept aliveas relieved in Krakow byAdrienne Dengerink Chaplin, PhD²⁹, whohad been paying attention to her for more than 30 years then.³⁰Although among the least attentiveKrakow’s topics were environmental aesthetics and neuroaesthetics,³¹the neuroscientist Daniel S. Levine (with other neuroscientists’ supportive options), suggests modeling the instinctive-emotional-thoughtful mind rather than having mind based on“Two-process notions of the mental function...dichotomy between intuition (or emotion) and reason (or deliberation).”³² in 2017.Through Langer’s philosophical conception of art, one can join emotion and reason and see it two-dimensional part of mind andthus keep everybody in more cooperative society equal. Levine applies his verified results about “integration” of reason and non-rational processes³³gained“Between the 1960s and 1990s”³⁴ to the society saying:

“Emotion versus reason” is both wrong and harmful...Lerner (2006) has described our over-rationalized society as having a crisis of meaning, in which people feel they are valued only for their measurable contributions and not...as individuals...people who feel devalued are easy prey for demagogic leaders who promise them meaning.

This accounts for much of the appeal of dictatorial leaders in Western countries and terroristic organizations in the Third World...if reason is considered superior to emotion, this can provide an excuse for various prejudices by ranking one group described as "more rational" above another...as "more emotional"...men over women, whites over people of color, and heterosexuals over homosexuals. A belief in the cooperation of instinct, emotion, and reason is much more compatible with a cooperative society where everyone is treated with equal dignity." (Levine, "Modeling the instinctive-emotional-thoughtful mind," 115)

Although Langer's, Štrauss's and Zykmund's thoughts were only instances from the past, reading their works intertwines the past, which is reminding itself, thus verifying its existence and at the same time meeting, influencing and changing, and the present³⁵—as we ask for something from the next world too. Continuously, we lead a vivid dialogue and thereafter look for interpreting the complexity of phenomena of the contemporary world. Still we look for a meaning to understand and thus the way to cooperate...Alike Levine, there is a hope that this article will be a contribution to such a cooperative outlook.

ENDNOTES

1. Hope Stoddard talked about Langer „...trying...to come to grips with basic concepts.” (HopeStoddard, *Famous American Women* (New York: The United States of America: Thomas Y. Crowell Company, 1970), 258) and seeing “The greatest security in this tumultuous world...faith in your own mind.” (Ibid., 261)
2. See: Ibid., 148-57. For the complete comparison, see: Agáta Košičanová, “Susanne Langer a periféria,” in *Metamorfózy, transformácie a vektory posunu centra a periférie v priestoroch umenia a kultúry (vedecký zborník)*, ed. Jana Migašová and Lukáš Makky (Prešov: Prešovská univerzita v Prešove, 2015), 132-42. <http://www.pulib.sk/web/kniznica/elpub/dokument/Migasova2>; Agáta Košičanová, “Susanne Langerová v koncepte európskej a americkej estetiky 20. a 21. storočia,” in *Studia Aesthetica XVII*, eds. Slávka Kopčáková, Adrián Kvokačka (Prešov: Prešovská univerzita v Prešove, Súradnice estetiky, umenia a kultúry III. (Európske estetické myslenie a umelecká tvorba: pramene, metamorfózy a ich relevancia), 2018), 55-62. <http://www.pulib.sk/web/kniznica/elpub/dokument/Kopcakova2/subor/Kosicanova.pdf>
3. Cseres used Langer’s *Mind: An Essay on Human Feeling* also in 2001 to help him with some modern musical tendencies and the 20th and 21st century thoughts analysis (see: Agáta Košičanová, “Reflexia S. K. K. Langerovej v slovenskej a českej estetike,” in *Studia Aesthetica XIV. Kapitoly k dejinám estetiky na Slovensku IV.*, ed. by Jana Sošková (Prešov: Prešovská univerzita v Prešove, 2012), 148).
4. For a more detailed overview see: Agáta Košičanová, “Aktuálnosť Susanne Langerovej aj v postmodernom filozoficko-estetickom myslení?,” in *10. Študentská vedecká a umelecká konferencia: zborník plných príspevkov* (Prešov: FF PU, 2015b): 21– 24, <http://www.pulib.sk/web/kniznica/elpub/dokument/Olostiak7>.
5. Semiotician Thomas A. Sebeok characterised Langer this way in spite of her nonacceptation by such semioticians as e.g. Charles Morris.
6. Miloš Jůzl and Dušan Prokop went through Richards and Pierce’s differentiation of signs and ended up by Langer, being Cassirer’s very follower, whose theory “activated the whole serie of semantically and semiologically-dedicated aesthetic works of music” but her “opinions being so much fuzzy” (Miloš Jůzl and Dušan Prokop, *Úvod do estetiky*. (Praha, 1989), 165) that they just provoked a storm of criticism.
7. The overall review includes two Cseres’s notes about Langer’s work and two comments of Cseres’s translation by Milan Lukeš and Július Fújak. ^{Sošková’s} Langer is explained through Richard as well as Pierce, linguistic and psychological trends in art and aesthetics of the 20th century, through SYNAESTHESIS (distinction) of Richards, semiotic way of Ch. Morris and, eventually, through “the Ernst Cassirer’s symbolic conception (A.K. adjustment) of art who was...H. Cohen’s (the leading personality of neo-Kantian Marburg’s school) student.” (Jana Sošková, *Dejiny estetiky II (Antológia)* (Prešov: Filozofická fakulta v Prešove Univerzity P. J. Šafárika v Košiciach, 1994), 15.).
8. In 1998, it is Michael Kelly in *Encyclopedia of Aesthetics* who wrote about Langer: “In the middle of the twentieth century...was perhaps the most influential aesthetician in American academia and the one most read by the general public.” (Michael Kelly, *Encyclopedia of Aesthetics – Volume 3*. (New York: Oxford University Press, 1998), 105.) For a note about Rolf

Lachmann's and William Schultz's books published in 2000 see also: Robert E. Innis, *Susanne Langer in Focus. The Symbolic Mind*. (Bloomington and Indianapolis: Indiana University Press, 2009), xi.

9. Mary Devereux designates Langer in the chapter *Feminist Aesthetics* as the one rather indirectly belonging to feminism of the 20th century. Devereux concludes Langer being among those women who "...have played a distinguished role in the aesthetics of the second half of the twentieth century...a role worthy of further investigation." (Mary Devereux, "Feminist Aesthetics," in *The Oxford Handbook of Aesthetics*, ed. Jerrold Levinson (New York: Oxford University Press, 2003), 663.)

10. Richard E. Hart in *The Blackwell Guide to American Philosophy* writes about "...her impassioned argument that philosophy needed a "new key," a new generative idea, one that "changes the questions of philosophy." (Armen T. Marsoobian and John Ryder, eds., *The Blackwell Guide to American Philosophy* (Blackwell Philosophy Guides – Volume 29) (United Kingdom (Cornwall): Blackwell Publishing Ltd.) John Wiley & Sons, 2004), 241, GoogleBooks.) (quoted from: Langer, *Philosophy in a New Key* (Cambridge, MA: Harvard University Press; 3rd edn. 1957), p. xiii, *Ibid.*, 245)

11. According to B. K. Nelson, T. Sebeok said in 1991 that Robert E. Innis was the only one among the other authors commented Langer's "semiotic project" even in 1985 in his work *Semiotics: An Introductory Anthology* (Beatrice K. Nelson, "Susanne Langer's Conception of 'Symbol' - Making Connections through Ambiguity," *The Journal of Speculative Philosophy*, Vol. VIII, no. 4 (1994): 280)

12. Three papers are mentioned (the first one is written by Innis himself and is especially about his Langer – Dewey parallels and differences): "Placing Langer's Philosophical Project," "Vital Rhythm and Temporal Form in Langer and Dewey," and "The Philosopher as Prophet and Visionary." (Robert E. Innis, "Symposium on Susanne K. Langer (Introduction)," *Journal of Speculative Philosophy* 21, no. 1 (2007): 2).

13. See: Agáta Košičanová, "Aktuálnosť Susanne Langerovej aj v postmodernom filozoficko-estetickom myslení?," in *10. Študentská vedecká a umelecká konferencia: zborník plných príspevkov* (Prešov: FF PU, 2015b): 21– 24, <http://www.pulib.sk/web/kniznica/elpub/dokument/Olostiak7>.

14. "Tomáš Štrauss (1931-2013)...studied at the College of Political and Economic Sciences and at the Faculty of Philosophy and History at Charles University in Prague. After 1968, his pedagogical and publishing activities were restricted, while he actively worked in the alternative culture. Upon the invitation of DuMont publishing house in 1980, he moved to Germany. He lectured at several universities abroad." ("Tomáš Štrauss," Monoskop, accessed January 14, 2017, https://monoskop.org/Tom%C3%A1%C5%A1_%C5%A0trauss). For his works, see: "Tomáš Štrauss: životopis," Databaze knih, accessed December 27, 2018, <https://www.databazeknih.cz/zivotopis/tomas-strauss-54610>.

15. S. Langer was suggesting the 'New-Key' logical-philosophical conception of art enabling her to create the theory of art understanding based on truly well-balanced and systematic philosophical bases typical of a possibility to ask questions and thus to continue in finding a meaning, not stopping down in some doctrine - what she presented in her work since 1930 (in *The Practice of Philosophy* she explains also the confusing position of a philosopher – beginner (Susanne K. Langer, *The Practice of Philosophy* (New York: Henry Holt and Company, 1930), ix.; 8.; 21.; 36.)), ongoing in 1948 (in the preface to *Philosophy in A New Key* she continues 'New

Key' transformation way (Susanne K. Langer, *Philosophy in A New Key: A Study in the Symbolism of Reason, Rite and Art (A Mentor Book)*(New York: The New American Library, 1948), preface, https://monoskop.org/images/6/6c/Langer_Susanne_K_Philosophy_in_a_New_Key.pdf)as well as in 1953 (in *Feeling and Form* (based upon *Philosophy in A New Key*) she says at the beginning: "Yet the arts themselves exhibit a striking unity and logic, and seem to present a fair field for systematic thought. Why the confusion? Why the disconnected theories, the constantly alleged danger of losing touch with reality...?...The reason is, I think, that the central issues in the appreciation and understanding of art however clear they may be in practice, have not been philosophically sifted and recognized for what they are." (Susanne K. Langer, *Feeling and Form (A Theory of Art Developed from Philosophy in A New Key)*(New York: Charles Scribners's Sons, 1953), 4).

16. Dorfler in the chapter "*Painting as the art of colour*" (Gillo Dorfler, *Proměny umění II.*, transl. Libuše Macková (Praha: Odeon, 1976), 66), for example, continuously goes through "*Chromatic harmony*" (Ibid., 67), where he explains the connection of music and a visual art.

17. S. Langer in the 10th chapter (The principle of Assimilation) of *Feeling and Form* (1953) explains her theory of art on a base of pointing on the differences of its kinds and keeping their unity at the same time (Susanne K. Langer, *Feeling and Form (A Theory of Art Developed from Philosophy in A New Key)*(New York: Charles Scribners's Sons, 1953), 150). This way Langer explains how we add a music language to the words of a poem, because all elements getting into the music happen to be a part of its primary illusion – a virtual time. In the Magic circle, Langer adds the differentiation of art and a life based on her usage of a term virtual assimilation (describing the process of symbol's creation in the art of dance) - art is just a virtual apparition of a life, not a life itself (Ibid., 204).

18. These are presented to an art recipient and this way abstracted by him by the so called 'primary illusion' (in a possible secondary illusion existence) of the specific art through nondiscursive art symbol (see: Susanne K. Langer, *Problems of Art (Ten Philosophical Lectures)* (New York: Charles Scribner's Sons, 1957), 80; 93; 109; see also: Susanne K. Langer, *Feeling and Form (A Theory of Art Developed from Philosophy in A New Key)*(New York: Charles Scribners's Sons, 1953), 62.

19. See: Susanne K. Langer, *Mind: an Essay on Human Feeling (Volume III)*(Baltimore, Maryland: The John Hopkins University Press, 1982), 90; 91; 155; 210-211; see also: Susanne K. Langer, *Feeling and Form (A Theory of Art Developed from Philosophy in A New Key)*(New York: Charles Scribners's Sons, 1953), 207.

20. "The loss of emotional security with the shattering of our natural symbols – hurried by the two wars which have uprooted millions of people – is patent. And any reintegration of life on new lines...will be long before it provides forms which can take on deep social significance and become our symbols of humanity and its place in nature." (Susanne K. Langer, *Philosophical Sketches*(London: Oxford University Press, 1962), 142).

21. About his life, it is written that he was born in 1914 (Praha) and died in 1984 (Brno); he was a secondary-school and an university pedagogue, the founder of the literary edition *Ra* in Rakovník and the surrealist group *Ra* and his work "describes an unbelievably lively picture of the 20th century." See: "Václav Zykmond," artist, accessed January 25, 2019, <https://www.artist.cz/vaclav-zykmond-108625/>. He was interested also in the works of W. Worringer, H. Hausenstein, H. Sedlmayr and was famous for translation of French poetry "and...several books of poetry (...Salomé, Salomé, Salomé; Antilegenda, Pastýřský orloj or Dvanáct slovanských

tanců).” (“Václav Zykmond,” wikipedia, accessed December 16, 2018, https://cs.wikipedia.org/wiki/V%C3%A1clav_Zykmond).

22. See: Václav Zykmond, *Moderné umenie a dnešok*, transl. Svetozár Kresák (Bratislava: Slovenské vydavateľstvo krásnej literatúry, 1964), 116.

23. S. Langer was solving the problem of the form and content paradox relation in the philosophy of the 20th century (1926) and fully developed these ideas in the book *The Practice of Philosophy* (1930). In 1926, she stated the most primary a logical-philosophical thinking and herewith a production of hypothesis (not doctrines) asking questions and paradoxes too, whereby Langer said that art is always about its artist and its perceiver at the same time (Susanne K. K. Langer, “Form and Content: a Study in Paradox,” *The Journal of Philosophy*, 23, n. 16 (1926): 435-38). Through the solution of the existence of paradoxes only in our discursive system, Langer presented her innovative point of view on the art symbol.

24. See: Susanne K. Langer, *The Practice of Philosophy* (New York: Henry Holt and Company, 1930), 64 (endnote n. 5); 66; 67; 136 (endnote n. 1: Langer’s paper from 1926: Form and Content. a Study in Paradox, *The Journal of Philosophy*, 23, n. 16 (1926): 435-38); see also Chapter VI.: Understanding and Truth: 128-151.

25. See. Susanne K. Langer, *Philosophy in A New Key: A Study in the Symbolism of Reason, Rite and Art (A Mentor Book)* (New York: The New American Library, 1948), 46-47; 49, https://monoskop.org/images/6/6c/Langer_Susanne_K_Philosophy_in_a_New_Key.pdf.

26. See: Václav Zykmond, *Moderné umenie a dnešok*, transl. Svetozár Kresák (Bratislava: Slovenské vydavateľstvo krásnej literatúry, 1964), 43-44; 45).

27. Exactly this point is overlapping of both authors conceptions because they keep a belief in the establishment of some spiritual order based upon the belief in the reasonable, thoughtful man’s power. See: Susanne K. Langer, *The Practice of Philosophy* (New York: Henry Holt and Company, 1930), 87; 124; 217; Susanne K. Langer, *Philosophy in A New Key: A Study in the Symbolism of Reason, Rite and Art (A Mentor Book)* (New York: The New American Library, 1948), 166, https://monoskop.org/images/6/6c/Langer_Susanne_K_Philosophy_in_a_New_Key.pdf; Susanne K. Langer, *Problems of Art (Ten Philosophical Lectures)* (New York: Charles Scribner’s Sons, 1957), 59. In Langer’s art, the term “significant form”, expressed especially through music and affirming Langer’s philosophical looking for a meaning/import process, is one of the most central. S. Langer in her *Philosophy in A New Key* (1942) expressed her view on the actual state of a human mind, her understanding of art and on the actual state of art itself, thus provided some perspective for the following development of arts and their aesthetics conception.

THE EXCESS OF AESTHETICS IN JACQUES RANCIÈRE AND MARIO PERNIOLA

Abstract | According to Jacques Rancière, the contemporary anti-aesthetic consensus has denounced aesthetics “as the perverse discourse which bars this encounter and which subjects works, or our appreciation thereof, to a machine of thought conceived for other ends: the philosophical absolute, the religion of the poem or the dream of social emancipation”. However, what seems to be the most problematic trait of aesthetics is its excessive confusion of “pure thought, sensible affects and artistic practices”. But for both Rancière and Mario Perniola, the excess of aesthetics, that is, its confusion and obliteration of the borders between the arts, between high art and popular art, as well as between art and life – a commixture not to be mistaken for some postmodern transgression of modernist boundaries, for both Rancière and Perniola keep critical distance to the notions of modernism and postmodernism – constitutes the very knot “by which thoughts, practices and affects are instituted and assigned a territory or a ‘specific’ object”. This paper will demonstrate that aesthetics in Rancière and Perniola represents neither simply a general art theory nor a theory defining art by means of its effects on the senses, but rather a specific order of the identification and thinking of art. Moreover, it will argue that Rancière’s and Perniola’s respective elaborations of the relationship between aesthetics and art occur in the larger context of a “primary aesthetics” associated with the topographical analysis of the means in which the sensible, common world is constructed, parceled out and contested. It will also be shown that primary aesthetics, for both Rancière and Perniola, includes non-artistic realms and practices such as politics, culture, education, science, and economy in that all these realms and practices presuppose the sensible configuration of a specific world. Thus, primary aesthetics is ultimately to be grasped as distribution of the sensible (Rancière) or as sensology (Perniola) that determines not only that which is given in a common manner, but also - and more specifically - that which can be seen, felt, said or done and at the same time modes of seeing, feeling, saying or doing that are excluded from that which is given in a common manner.

Index terms | *Jacques Rancière; Mario Perniola; excess of aesthetics; distribution of the sensible; sensology; remainder.*

PAPER According to Jacques Rancière, contemporary philosophical thinking about art is characterized by a “great anti-aesthetic consensus” shared by rather diverse thinkers such as Pierre Bourdieu, Terry Eagleton, Gianni Vattimo, Jean-François Lyotard, Jean-Marie Schaeffer, or Alain Badiou.¹ In addition to claims that aesthetics represents an ideological discourse occluding the social, current celebrations of “the pure encounter with the unconditioned event of the artwork” characterize aesthetics “as the perverse discourse which bars this encounter and which subjects works, or our appreciation thereof, to a machine of thought conceived for other ends: the philosophical absolute, the religion of the poem or the dream of social emancipation”.² What seems to be the most problematic trait of aesthetics is that it constitutes an excess that is charged with overflowing not only the decorous borders between the arts, between high art and popular art, but also those between art and life.³ In contrast, both Rancière and Mario Perniola affirm the very aesthetic excess that “formed two centuries ago between the sublimities of art and the noise of a water pump, between a veiled timbre of chords and the promise of a new humanity”.⁴

Their respective aesthetic accounts of art are elaborated in the larger context of a “primary aesthetics” tasked with the topographical analysis of the means through which the sensible world is constructed, distributed and contested.⁵ In short, primary aesthetics designates a distribution of the sensible, of that which can be seen, felt, said, and done. Although primary aesthetics as distribution of the sensible means the distributions of forms capable of structuring common experience and is therefore reminiscent of Kant’s transcendental aesthetics, it signifies rather a system of historical-apriori forms of sensible experience. Primary aesthetics in Rancière and Perniola is thus not reducible to some pure theory of sensible experience or feeling; rather, sensible experience and feeling have to be grasped not only in conjunction with their historical-apriori forms, but also in relation to the specific distribution of the sensible, that is, the regime of norms determining the sensible experience and feeling of the common status quo. Again, Rancière’s and Perniola’s respective elaborations of a primary aesthetics are not exhausted by (epistemological) accounts of the subjective capacity for sensible experience and feeling, but rather refer to collective practices that are conditioned in the socio-political, economic, and cultural constitution of sensible experience and feeling. They examine the way in which the distribution of the sensible exceeding any narrow epistemological account of aesthetics determines simultaneously that which is given in a common manner and practices of distinction separating that which can be seen, felt, said, and done from that which cannot be seen, felt, said, and done.

Perniola defines the status quo distribution and partition of the sensible in western societies as “sensology”.⁶ According to his analysis of the contemporary western sensible world, an experience has made its presence felt since the 1960s that bears upon the fundamental inversion of the relation between humans and things, the organic and the inorganic world, and this inversion has deeply affected the status of sensible experience and feeling.⁷ Sensibility has been seized by a radical reification that undermines not only the dualisms of subject-object and activity-passivity, but also points to a collective and socialized external horizon of sense regarding which status quo feeling reveals itself as already-felt functioning as the historical-apriori formal condition of sensible experience and feeling. Sensology thus designates a kind of schematism of the already-felt underlying the existing sensible world with its already-felt styles of experience. These different styles of the already-felt that Perniola identifies

in the different realms of popular culture, politics, economy, and art testify not only to the excessive character of sensology as primary aesthetics, but also have in common their reference to an experience that functions as their general equivalent and makes tangible that the different styles of the already-felt exhibit commodity character and belong to a “world market of feeling”.⁸

It is not possible here to examine sensology and the ways in which it has conditioned the (im-)possibility of sentient experience today, nor is it possible here to outline Perniola’s brilliant and comprehensive phenomenology of the multiple contemporary styles of feeling sharing in the condition of the already-felt and issuing forth from culture, politics, economics, and art – styles of feeling such as counter-culture, fundamentalism, neo-cynicism, performativity, political correctness, neo-Faustism, neoclassicism, primitivism, the postmodern, the neo-ethnic, and extreme realism.⁹ However, in the face of the near-totalist nature of sensology, one could raise the question whether sensology might contain within itself excessive moments that allow for a battle to be waged precisely at the level of sensology, that is, at the very external and reified level that is constitutive of the impersonal, post-subjective sentient experience of contemporary sensology with its quasi-public space of the already-felt and the privatism of mass communication.¹⁰ Perniola identifies “neo-ancient” sensibility as one of these excessive moments, which are characterized by an indistinctness of thinking and feeling in which not only the metaphysical dualism of thinking/activity and feeling/receptivity is neutralized, but in which making oneself feel becomes the very condition of experiencing difference that manifests itself as/in the world. Neo-ancient sensibility sketches therefore an anonymous, non-subjective and indifferent or disinterested feeling that contains the possibility for a new distribution of the sensible produced via the neutralization of the hierarchical dualisms of thinking/feeling, organic/inorganic, activity/receptivity, subject/world that are characteristic of sensology, which, after all, is nothing else but the fully realized figure of metaphysical activism and its attendant insensibility.¹¹ Moreover, the suspension of the distinction between the organic and the inorganic operative in the neo-ancient feeling of difference is crucial for any attempt to reinstate the symbolic order against the reified public realm and its shadow of imaginary communication. In other words, the excess of primary aesthetics allowing for the transformation of the sensological-communicative distribution of the sensible into a genuine symbolic order is to be sought in “habitus, forms, rituals”: that is, in those “dimensions that represent an inorganic corporeality”.¹² Ultimately, only forms and rituals “with their relative opacity and inexpressiveness” can re-open a symbolic space for sentient experiences and behaviors that might no longer be overwritten by either the already-felt or privatized, individualized sentiment.

Inorganic corporeality and opaque and inexpressive forms are, however, also central characteristics of Perniola’s aesthetic account of the artwork. That is to say, if the artwork’s difference to the sensological stasis and communicative flows prescribing homogenization, conformity, and consensus is to be properly appreciated, one has to insist precisely on its work character: “In fact, if there is a difficulty in art, it must not be sought in the subject, in the artist, or in his desire to express himself and communicate, but in the work, in its radical extraneity, in its irreducibility to a single identity, in its essential enigmatic character”.¹³ In other words, the artwork contains “an incommunicable nucleus which is the source of interpretations”.¹⁴ This excess of the artwork over any of its interpretations constitutes its remainder in terms of “stability, steadiness, resistance.”¹⁵ Incidentally, Perniola insists that the notion of remainder must be freed from those negative connotations ascribed to it by both situationists

and conceptual artists who are taken in by vitalist and subjectivist misconceptions. Perniola's account of the artwork as remainder is explicitly directed against conceptions of art and the artwork defining the essence of the artwork in terms of the activity of the artist, thereby ascribing to the artwork the status of a physical residue occluding the activity of the artist. This conception of the artwork can be found in conceptual artists such as Joseph Kosuth who reduces the artwork to the presentation and tautological attestation of the respective artistic intention. And institutional art theory would be another example for a conception of the artwork problematically asserting an identity of the artwork that would be without remainder and that would also have tautological character. That is to say: While the tautological operation of conceptual art is based on the ideal of transparency, the tautology inherent to institutional art theory does not consist in "a will to annul ties between art and reality, but, on the contrary, from a tendency to level art on the existent, conferring upon it an institutional character".¹⁶ While conceptual art is characterized by a logical tautology, institutional art theory features a different kind of tautology, that is, "a social circularity between art, artists and the world of art, each referring to the other. Even in this case there is no residue!"¹⁷

Moreover, the artwork as remainder must not be conceived of in terms of reconciliation or harmony, but rather in the anti-monumental and anti-classical and anti-classicist terms of internal conflicts and antagonisms. The artwork as remainder means "that the whole does not hold, does not stand, but breaks up in asymmetrical elements, deeply discordant among each other".¹⁸ This aesthetic conception of the artwork as remainder exceeds both a modernist aesthetics of autonomy that recognizes in the form of the artwork an unbridgeable distance to the forms of social life, and an aesthetics aiming at the abolition of the separation of the artwork from social life in that it preserves the tension between the two.

Rancière conceives of the existing socio-political distribution of the sensible as "police", that is, as a consensual distribution resulting from and relying on operations that delimit the borders of the perceptible, the thinkable, and the possible through attempts to monopolize the interpretations of sense within the status quo via the enactment of a logic of "naturally given" inequality that creates forms of inclusion and exclusion through the distribution of bodies and voices in such a way so as to ensure the closure of the common sensible world.¹⁹ However, recourse to "nature" as justification for the given social inequality and hierarchy carries within an – always disavowed – excess that has the potential of interrupting the existing social partition and distribution of roles. Rancière identifies this excess underlying the policed community as the fundamental equality of speaking beings, and he explores the latter primarily in terms of mute speech that de-classifies representative speech and suspends social distinctions.²⁰ However, this mute, "democratic" speech does not reject the existing socio-political distribution of the sensible in order to make it more inclusive, but rather to transform it in such a manner to render visible the excess of equality underlying the policed distribution of the sensible.²¹

The excess of equality underlies, however, not only any consensual distribution of the sensible, but is also at the core of the aesthetic identification of art. In contrast to both the ethical identification and the representative identification of art that reduce art either to a technique of maintaining the *ethos*, that is, the ethical status quo or to a decorous representative form, the identification of art within the aesthetic regime suspends any type of representative regime of norms that mandates the clear distinction between art and non-art, the classification of genres, the dignity and

decorum of *sujets* and forms, and the persistence and cultivation of proper taste.²² What is more, the aesthetic regime installs a specific conception of sensibility in which all things and objects are saturated with aesthetic sense. That is to say: “It strictly refers to the specific mode of being of whatever falls within the domain of art, to the mode of being of the objects of art”.²³ At the same time, it establishes an equality between any subject matter whatsoever, thereby not only rendering art in its singularity, but also rendering untenable any separation between aesthetic and non-aesthetic objects, between art and non-art untenable: “The aesthetic regime of the arts is the regime that strictly identifies art in the singular and frees it from any specific rule, from any hierarchy of the arts, subject matter, and genres”.²⁴ But the aesthetic identification of art destroys at the same time “the mimetic barrier that distinguished ways of doing and making affiliated with art from other ways of doing and making, a barrier that separated its rules from the order of social occupations. The aesthetic regime asserts the absolute singularity of art and, at the same time, destroys any pragmatic criterion for isolating this singularity”.²⁵ In other words, art in the aesthetic regime simultaneously asserts its autonomy and the indistinctness between its form and the forms of (political) life.

Rancière preferably elaborates this paradoxical and excessive being of art by reference to modern literature, for the *literarity* of modern literature is tantamount to a democratization of words that allows modern literature to speak about prosaic and mundane things in styles indifferent to their subject matters;²⁶ that is, everything in life can become a literary *sujet*, can become eloquent through literature. The democratic literarity in/of modern literature is thus the very excess that renders modern literature and life indistinct. At the same time, modern literature must be grasped as a defensive operation in so far as it attempts to protect and render pure the specificity of literature against the consequences of democratic literarity, that is, against its appropriation by anyone.²⁷ But neither modernism’s attempt to purify art from (political) life nor the Hegelian reduction of art to something that has become historically inessential are sufficient responses to the paradoxical indistinction of art and (political) life. And not even directly equating them can capture the excessive indistinctness of art and (political) life produced by the aesthetic revolution.²⁸ Finally, their excessive indistinctness characteristic of the aesthetic regime renders the relationship between democratic literarity of modern literature and politics neither simply transitive nor simply intransitive; rather, one encounters at this point an excessive reduplication of terms into a politics of literature/aesthetics on the one hand, and a literature/aesthetics of politics on the other hand. For although literarity establishes grounds as a “non-hierarchical regime of art and writing” that, by opening up the possibility to “appropriate words freely”, figures as “a condition of the political capacity” in that it “gives new forms to the capacity of words to freely take hold of bodies, and of bodies to appropriate this hold and make it their own”, its capacity to reconfigure “forms of experience through which political subjectivities take hold” is not to be confused with politics understood as “the construction of collectives of enunciation and collective demonstration”.²⁹ Hence Rancière’s proposition to preserve the tension between politics and art/literature as divergent, yet intersecting products of a logic of excess.³⁰

- 20 Rancière conceptualizes this type of speech as writing characterized by an enunciative excess that cannot be regulated by a system of legitimation intent on defining the proper relationship between author and reader, speaker and receiver – see Jacques Rancière, *The Philosopher and His Poor* (Durham and London: Duke University Press, 2003), 39 – 42.
- 21 See Molly Anne Rothenberg, “Rancière’s Aesthetic Regime: Modernism, Politics, and the Logic of Excess.” In *A Handbook of Modernism Studies*, ed. by Jean-Michel Rabaté (Wiley &

Sons: 2013), 431 – 444. I owe to this essay some fundamental insights into the logic of excess in Rancière. Regarding the excess of the underlying equality, Rothenberg points out that this excess must be subjectivized; this subjectivization brings to light the “supernumerary subject of politics”, which is to be grasped as a “singular universal” – see Rothenberg, “Rancière’s Aesthetic Regime”, 434.

22 For Rancière’s differentiation of the three regimes of identifying art see Jacques Rancière, *The Politics of Aesthetics* (London and New York: Continuum, 2004), 20 – 30.

26 Regarding the notion of literarity, see Jacques Rancière, *The Politics of Literature* (Cambridge and Malden: Polity Press, 2011), 13. The following brief account of literarity is indebted to Alison Ross, “Expressivity, literarity, mute speech.” In *Jacques Rancière: Key Concepts*, ed. by Jean-Philippe Deranty (Durham: Acumen, 2010), 133 – 150; 139 – 142.

27 Rancière’s favorite illustration for this move that ultimately attempts to protect art/literature from life is Gustave Flaubert’s *Madame Bovary*.

28 See Rancière, *The Politics of Aesthetics*, 22 – 27.

29 Jacques Rancière, “Losing Too Is Still Ours: An Interview About the Thwarted Politics of Literature.” In *Dissenting Words: Interviews with Jacques Rancière*, ed. and trans. Emiliano Battista (London, Oxford, New York, New Delhi, Sydney: Bloomsbury, 2017), 191 – 203; 195. Rancière adds immediately another reason in that “literature itself strives to exceed literarity, both by recreating forms that allow words to stick to bodies while suppressing the gap between them, and modes of reading the common that tend to hollow out the scene of political speech in favor of the interpretation of signs borne by silent things. In this sense, its politics is a metapolitics” – Rancière, “Losing Too Is Still Ours”, 195.

30 The following passage speaking of the “divergence of the paths taken by political disagreement and literary misunderstanding” nicely captures this tension: “Literary dissensus works on changes in the scale and nature of individualities, on deconstruction of the relationships between things and meanings. In this, it differentiates itself from the work of political subjectification which configures new collectives by means of words. Political dissensus operates in the form of subjectification procedures that identify the declaration by the anonymous that they are a collective, an *us*, with reconfiguration of the field of political objects and actors. Literature goes in the opposite direction to this organization of the perceptual field around a subject of utterance. It dissolves the subjects of utterance in the fabric of the percepts and the affects of anonymous life” – Rancière, *The Politics of Literature*, 43.

FOR THE AESTHETICS OF RESISTANCE

Abstract | The problem addressed by this paper is the „anaesthetization“¹ of art by aesthetics. This problem will be explicated and contextualized within the current discourse on „aesthetization“²(1). As an example of the problem Hegel’s aesthetics and its concept of art’s sublation in philosophy will be introduced (2). As a counterexample *The Aesthetics Of Resistance* by Peter Weiss is then presented (3). The novel develops a materialist approach to art that *resists* the anaesthetization in aesthetics by inverting the movement pursued by Hegel’s idealist aesthetics. Finally, the paper will discuss what aesthetics can learn from the confrontation of these two examples (4). The preliminary answer: aesthetics leads to an anaesthetization of art if it follows a purely idealistic approach, instead of pursuing a dialectical materialist avenue.

1. THE PROBLEM OF ANESTHETIZATION

„Aesthetization“ refers to the aesthetic transgression and transformation of normative orders of fields exterior to art, e.g. the political or epistemic field. According to its critics, Aesthetization causes crises within such normative orders.¹ Such criticism has been opposed by positions which regard the aesthetic as constitutive for these orders.² This critique of the critique of aesthetization shows that the immanence of the aesthetic within the epistemic or political field is involved in both, the successful constitution of their normative orders as well as their destabilization. Because it resists those orders from within, enabling their disruption, transgression and transformation.³ Applying this line of thought to aesthetics reveals a contradiction between aesthetics and its subject matter. It arises when the epistemic order through which aesthetics operates denies the immanence of the aesthetic within it.⁴ In such an epistemic order aesthetics must anaesthetize the aesthetic, but at the same time also depends on it. When aesthetics turns „the aesthetic“ into a concept, coercing it into the epistemic order, it discards what makes it aesthetic and, hence, deprives itself paradoxically of its own precondition. This is precisely what happens in Hegel's aesthetics, when art becomes sublated within philosophy, as the following section will demonstrate.

2. HEGEL'S AESTHETICS

„The following text is dedicated to art,“ could be the first sentence of an aesthetic theory. Yet, the first sentence of Hegel's lectures on aesthetics states: „These lectures are dedicated to aesthetics.“⁵ Thus, the aesthetic theory outlined by his lectures is not dedicated to art, but to aesthetics. Accordingly, they pursue a movement through which the „sensuous element“⁶ of art is becoming increasingly „idealized“—i.e. internalized by spirit through the negation of its independent existence—until it finally turns into thought and becomes sublated within its own philosophy: aesthetics. This movement is not only described but also realized by the lectures, i.e. the lectures perform the very movement of the sublation of art within philosophy that it describes.⁷

The movement can be characterized in three distinct ways: Firstly, as movement from the aesthetic form of art to the anaesthetic form of aesthetics, which is the result of a „transmutation“⁸ of art's sensuous element into philosophy's element of thought. Secondly, as a movement from the symbol to the sign, where the symbol is explicated as the specific form of sensuous existence takes in art; an existence which becomes entirely transparent towards its meaning in the form of the sign when art steps into „the realm of philosophy.“⁹ Finally, it is a movement from poetry to prose, where poetry emerges from symbolizing imagination, while prose belongs to a form of thought, that has liberated itself from the sensuous materiality of the symbol and operates with signs. Throughout these different renderings of the movement, art and aesthetics are increasingly brought closer to each other, so that the tension between them increases.

2.1 FROM ART TO AESTHETICS

In Hegel's aesthetics the aesthetic form of art¹⁰ mediates its intelligible content through its sensuous element. In this aesthetic form the ideal—i.e. the idea of beauty in its sensuous appearance—emerges.¹¹ It is, hence, different from mere sensuous existence.¹² The aesthetic form of art is an idealization of the sensuous in which its independence is negated and its objectivity turned into a mere appearance of its intelligible content, the idea of beauty.¹³ Through this idealization of the sensuous, spirit begins to liberate itself from the bondage of mere sensuous existence and starts to grasp its inner truth. Thereby, ideality and reality do not appear as oppositions

any more, because the sensuous reality has become the appearance of the ideal.¹⁴ However, the appearance of the ideal in art is not its final realization for Hegel,¹⁵ because despite its negation of mere sensuous existence, art is also a self-negation, or materialization of spirit—in Hegel's own words a „self-alienation of spirit toward the sensuous.“¹⁶ Art is both: an idealization of matter, and a materialization of the idea. From Hegel's idealistic point of view, this is precisely its deficiency,¹⁷ because within this self-alienated form, spirit cannot realize its highest liberation and deepest truth.¹⁸ In spite of this deficiency, Hegel sees art as a worthy subject matter for philosophy, because spirit can recognize¹⁹ itself within this „other;“ by „transmuting“²⁰ the sensuous into thought and returning it thereby to spirit.²¹ In other words, when the idealization of the sensuous element of the aesthetic form is finally realized, its materialization recedes back into spirit through its transmutation into thought—spirit's „innermost nature.“²²

This movement has a historical index by which the aesthetic form of art is directed towards its own philosophy. This is what Hegel means when he writes that for us moderns „art, in its highest vocation, is a thing of the past.“²³ As opposed to a time in which the aesthetic contemplation of art provided the highest truth and liberation of spirit; modern consciousness strives to scientifically realize its aesthetic object through thinking.²⁴—This realization is carried out by aesthetics. Aesthetics, hence, realizes the ideal, that appears in the aesthetic form of art, by overcoming its „deficit;“ through the transmutation of its sensuous element into thought. From this point of view aesthetics appears as the historical fulfillment of the aesthetic form of art,²⁵ and in this realization Hegel sees art's „highest recognition.“ Thus, for Hegel art is worthy of becoming philosophy's subject matter, and aesthetics is the recognition of this worthiness.

The problem with this view is, however, that the „highest recognition“²⁶ of art in aesthetics coincides with its anaesthetization of its aesthetic form. When spirit transmutes the sensuous into thought, it anesthetizes art, because art only exists in the very form of alienation of spirit toward the sensuous; that is precisely what makes it an aesthetic form; if its form ceases to be aesthetic when the sensuous is transmuted into thought, it becomes identical to the anaesthetic form of aesthetics. So, it turns out that the „highest recognition“ of art in philosophy is actually art's anesthetization.—This is not only a „misrecognition“ of art's aesthetic form, but also hinders spirit from recognizing²⁷ itself within this aesthetic form, because that form is effaced in the very moment of its anaesthetization. Hence, the act by which spirit is meant to recognize itself within the aesthetic form paradoxically erases that very form and replaces it by another, namely the anaesthetic form of aesthetics. Within this idealist conception, spirit has to anesthetize the aesthetic form to recognize both, itself and art, but in doing so, it undermines this very purpose. This reflects exactly the predicament of aesthetics revealed in the first section of this paper.

2.2 FROM THE SYMBOL TO THE SIGN

In art the sensuous has the form of the symbol. „The symbol is a sign,“²⁸ as Hegel states, albeit not its most elaborated form. Accordingly, he describes the development of art as a movement from the symbol to the sign.²⁹ The difference between the symbol and the sign is, that the latter is a sensuous image³⁰ which has received an independent generalized imagery³¹ as its „soul“ or meaning.³² This image has no content other than the meaning it represents; it has been made entirely transparent towards, or even identical with that meaning. As a symbol, conversely, the image retains an independent content from the meaning it denotes and obscures. That means the symbol isn't a free product of spirit, but bound to the externality of the given image. Therefore, Hegel

regards it as deficient.

The shift from the symbol to the sign corresponds with a shift from symbolizing imagination to productive memory. In the former activity spirit remains unfree, because it respects³³ the immanent content of the image given to it from outside through sensual perception for depicting a generalized imagery. When the symbol turns into a sign, the exterior image is voluntarily chosen and the generalized imagery liberated from the content of the image. This, liberation is achieved by productive memory,³⁴ the „exterior side“ of thinking. The shift from symbolizing imagination to productive memory, hence, leads from the sensuous element to the element of thought. And the anesthetization of art in aesthetics through the transmutation of the sensuous into thinking, can be described in terms of this shift.

2.3 FROM POETRY TO PROSE

Symbolizing imagination is poetic.³⁵ When it is superseded by thought its poetry turns into prose. Historically this leads to the emergence of a prosaic form of consciousness which relies solely on thought, as opposed to the pre-modern poetic form of consciousness that is based on symbolic imagination.³⁶ The historic shift from poetic to prosaic consciousness, reflects the historic development that leads to the anaesthetization of art in aesthetic (see 2.1).

For poetic consciousness sensuous reality matters. It relies on symbolic imagination and grasps meaning in form of sensuous images.³⁷ For prosaic consciousness, in contrast, only the meaning matters.³⁸ It turns the image into a mere means for the realization of meaning,³⁹ whereby the sensuous becomes entirely transparent. In that sense prosaic consciousness is anesthetized, because it turns the aesthetic form of poetic consciousness into the aniconic generality of thought. Hence, the shift from poetry to prose corresponds with the transmutation of the sensuous into thought, which is tantamount to the anesthetization of art in aesthetics (see. 2.1) The anesthetization of art by aesthetics can be described in terms of a shift from poetry to prose.

In the course of this description Hegel seems to realize, that the mediation of meaning through the sensuous— characteristic not only for poetry but for art in general —is not just a „deficit,“ but also an advantage in comparison to philosophy and aesthetics. Because thought can only mediate truth and reality within thinking, while symbolic imagination can realize it within its sensuous element.⁴⁰ Therefore, he insists that in a time, in which prosaic thinking has become predominant, poetry must „remelt“ prose and transform „speculative thought“ into imagination as a form of embodiment within spirit.⁴¹ This doesn't mean poetry should turn back into pre-modern poetry⁴², as if it had never gone through prose; rather it needs to reemerge from the prosaic as a new kind of poetry, prosaic poetry.

3. THE AESTHETICS OF RESISTANCE

As demonstrated the „prose“ of thought is the result of an anaesthetization of poetry. The „remelting“ of prose into a new form of poetry must then, conversely, aesthetize that anaesthetization—not by reproducing a bygone form of poetry, rather by finding a new prosaic one. This is precisely what The Aesthetics of Resistance does: it resists the anaesthetization of art by aesthetics through aesthetizing the anaesthetization. Two ways in which the novel realizes this will be discussed in the following: 1. anaesthetization as a stylistic principle, 2. allegorization of silence.

3.1 ANAESTHETIZATION AS A STYLISTIC PRINCIPLE

„Around us bodies lifted themselves out of the stone, huddled to groups, intertwined

or scattered to fragments, with a torso, a resting arm, a cracked hip, a scabbed chunk suggesting its shape, always in a gesture of combat, evasive, rebounding, attacking, shielding, stretched up, bent, here and there obliterated, but still pegged, with a freestanding foot slammed up, a twisted back, the contour of a wade, into one single joint movement.“ Through the protuberance of shapes and body parts, darting into different directions, the first sentence of *The Aesthetics of Resistance*, like the entire text passage, evokes —despite the suggested unison of the movement —an experience of defragmentation and multiplicity of divergent movements. This experience of defragmentation relies on a stylistic characteristic of the text: the prosaic listing of details —e.g. „a torso, a resting arm, a cracked hip (...)“—observed and registered almost scientifically. Although this style has been described as a form of „anesthesia,“⁴³ it possesses a surprisingly aesthetic quality which makes it different from an actual list.⁴⁴ The following passage tries to understand how this aesthetization of the anaesthetized form comes about.

„Anesthesia belongs to highly engaged, position taking art, because without its help we would be overwhelmed, either by compassion for the suffering of others or by the suffering from the disasters experienced by ourselves, and couldn’t transform our silence, our paralysis of terror, into the aggression necessary to eliminate the causes of the nightmare.“⁴⁵ According to this conception, articulated by one of the protagonists of the novel, „anesthesia“ as opposed to „paralysis,“ is the defining feature of „political art.“ While „paralysis“ is described as a state of suffering and compassion, of intense affective and sensuous experience, it is also marked by an absence or inability for affective, sensuous expression: by silence. „Anesthesia,“ conversely, is marked by the absence of affective and sensuous experience, but enables the transformation of suffering into an aggressive expression of the will to abolish its causes.

However, actual literature is not just anesthesia, but the transition between paralysis and anesthesia, as expressed by the following simile: „The agony of dream and poetry⁴⁶ (...) was the extradition to a situation from which no escape was possible, (...) but as in dreaming the insufferable would lead to awakening, so in poetry it⁴⁷ would be liberated by its transfer into the word.“⁴⁸ In this rendering of *The Aesthetics of Resistance* literature is compared to both, dreaming and awakening. It is the sufferance of the nightmare (paralysis) and the liberation from it (anaesthesia) in the form of the word; it is poetic imagination and prose of thinking. If it is both, it cannot remain just one, rather it must be a recurrent transition between poetry and prose, i.e. it cannot remain anaesthetized, but has to shift back into an aesthetic form.

So, if anesthesia is the defining feature of „political art,“ *The Aesthetics Of Resistance* differs from this, insofar as it transforms anaesthetization into a stylistic principle, and thereby restitutes its aesthetic quality. This is exemplified by the quoted passage of the Pergamon frieze and becomes evident also in the following description of the „dreams“⁴⁹ of Piero della Francesca: „Shadowless, in a room without depth, were the figures, with their weapons, warhorses and flags, telescoped, the most distant the same size as the anterior, and every detail, may it be the chain of a sling, a buckle, a hinge, a panache, the eye of a soldier or a horse, was equal, subjected to no other laws, then those enacted by the composition ground.“⁵⁰

Like the description of the Pergamon frieze, this passage employs the anaesthetized prosaic language of registry, which actually corresponds to the narrator’s experience of the painting described: „everything was of a vision, that eschewed any emotion (...) every sentiment was cut off to the benefit of a wattlework of visual relationships.“⁵¹ According to this description, the detachment of the painting from sensuous experience (anesthesia) enables the emergence of its own alienated aesthetic materiality⁵²—similar

to the emergence of the aesthetic form of art, through the idealization of the sensuous element in Hegel's aesthetics (see 2.1). The painting is not actually anaesthetized, then, rather it achieves its specific aesthetic form through the negation of immediate sensuousness, through anesthesia.⁵³ While the painting acquires its aesthetic form through the negation or anesthesia of immediate sensuousness, the description of the painting negates or anaesthetizes this aesthetic form. If it was not for The Aesthetics of Resistance, this negation or idealization would result in an anaesthetized form (e.g. philosophical aesthetics). In the novel the anaesthetization is, however, turned into a stylistic principle and therefore becomes „aesthetic“ again —albeit differently than its previous aesthetic, anesthetized form.

In the passage describing della Francesca's painting for example, each minor detail turns into a fragment, separated from the whole by a comma, each an independent entity of equal importance. This is achieved by the paratactical concatenation of the listing of details of the painting, which is not just a description, but a textual embodiment of defragmentation. The sensuous materiality of the text, its flow and diction, thus, acquires an expressive quality of its own.⁵⁴ This is further highlighted by the iconic aspect of the text, its rectangular layout, which seems to turn the text into a screen or composition ground. The text does not only talk about the equality provided by the laws of the composition ground of the painting, but embodies them within its own sensuous materiality, the written word.

In the description of the Pergamon frieze, too, the defragmentation of the text —just like the fragments of the artwork it describes —are „pegged“ into a single movement, hewn into solid blocks of written words. They loom heavy on the page, like the marble cubicles of the frieze, tugged and carved by the wretched —slaves and workers — of antique Pergamon. The frieze's representation of the struggle of the giants being crushed by the olympian gods is an embodiment of these wretched and their resistance. However, in the frieze they remain paralyzed by the terror of the gods. Through the anaesthetization in the written word they seem to awake from this nightmare and become liberated from their petrification. As this anesthetization acquires an aesthetic quality again, the stone figures seem to become alive.

3.2 ALLEGORIZATION OF SILENCE

„Absolute silence prevailed.“⁵⁵ In a nightmare-like flashback of the narrator's mother, with which the third book of *The Aesthetics of Resistance* begins, a disturbing silence looms over everything. After having escaped from Silesia to Sweden the mother of the narrator is internally caught up in haunting memories of the war and paralyzed by feelings of fear and despair, yet on the outside she remains entirely inexpressive: „The face of my mother was empty and toneless, her mouth was half open, her eyes stared dead ahead and didn't recognize me.“⁵⁶

The condition of the mother corresponds with the state of „paralysis,“ in which the suffering of the nightmare has not been anesthetized through turning it into words. Accordingly, the mother has lost her mother tongue. She doesn't articulate her suffering and compassion but remains silent throughout the entire novel.⁵⁷ However, in the novel this silence is paradoxically described with words. The seemingly impossible task of including the „other“ of language into language is hence resolved in the figure of the mother. She is present in the text as the absence of words, as silence. Because of this poetic allegorization of silence *The Aesthetics of Resistance* includes not only the expressiveness of anaesthesia, but also the inexpressiveness of paralysis as a stylistic principle. It becomes an important part of the text, by which it objects to simplified understandings of an aesthetic resistance within art.

4. AESTHETICS VS. ANAESTHETICS

The aesthetization of the anesthetization performed by *The Aesthetics Of Resistance*, can be considered as a materialist approach to art that invests the movement pursued by Hegel's idealist aesthetics and resists the absolute „idealization“ of the aesthetic form within the anaesthetic form of thought. The fact that it does this is, however, precisely what turns it into a work of art, rather than an actual aesthetic theory. So the question remains, what aesthetics as a philosophical endeavor can learn from the confrontation between the two „aesthetics“ presented by this paper.

The paper has shown that an idealist approach, as pursued by Hegel, ultimately leads to an anesthetization of art in aesthetics and, hence, to a self-contradiction of aesthetics, because it effaces its own foundation. To eschew this predicament, one could conclude, aesthetics should take a materialist approach instead. However, Weiss' aesthetics has conversely shown that aesthetics shouldn't rid itself from anaesthetization or „idealization“ entirely, rather it seems to be a necessary moment for a materialist approach to aesthetics—as such, it cannot remain anaesthetized, however, but must be aesthetized, which Weiss novel achieves in the ways delineated.

As a philosophical endeavor, however, aesthetics cannot perform this aesthetization while remaining within its form of thought; aesthetization would force it to transcend its form and its underlying epistemic order. Aesthetics cannot aesthetize its own thinking and turn it back into a „sensuous material.“ Compared to the aesthetic form of art it necessarily remains „idealistic,“ because of its form —this is the „deficiency“ of aesthetics, and even more so of philosophy in general. Hence, philosophy must think against its own form of thinking. It thinks best against its own form of thinking, when it becomes aesthetics, because the aesthetic object can resist the anaesthetic form of thinking by turning it into its aesthetic principle. By choosing an aesthetic object like *The Aesthetics Of Resistance* that resists its anesthetization, aesthetics can work against the deficit of its own form. Therefore, aesthetics must be dedicated to art.

ENDNOTES

- 2 cf. Jacques Rancière, Christoph Menke, Juliane Rebentisch or Wolfgang Iser
- 3 cf. Brombach, Ilka, Setton, Dirk, Temsvári, Cornelia (Eds.): „Ästhetisierung“—Der Streit um das Ästhetische in Politik, Religion und Erkenntnis, Zürich 2010.
- 4 The problematic relationship of art and aesthetics can be considered with regard to its „political“ dimension, too. In that sense, the reasoning developed here may also lead to insights relevant for the normative order of the political field. However, the main concern of the paper is the relationship between art and aesthetics within a certain epistemic order and not within a certain political order.

- 6 Ib. Hegel, *Ästhetik I*, p.47; Hegel speaks here about the „sensuous element.“ However, he also often refers to this simply as „the sensuous,“ (das Sinnliche), Since Hegel uses these terms interchangeably, so does this paper.
- 7 That means, Hegel's lectures do not only describe the movement that leads from art to aesthetics, but also represent the very movement they describe.
- 8 Ib. G.W.F., *Ästhetik I*, p. 52.
- 9 Ib. G.W.F., *Ästhetik I*, p. 45.
- 10 „Art“ as the aesthetic object of aesthetics is tantamount to „beautiful art,“ for Hegel. The „aesthetic form of art,“ hence, refers to the beauty of art. However, „beautiful art“ is further

determined as „truthful“and „free“art. So art is beautiful when it is truthful and free, not when it is „pretty“or „harmonious.“

11 Ib. Hegel, G.W.F., *Ästhetik I*, p.130 f.

12 As Valéry has noted, theories that miss out on this distinction between the mere sensuous material and the aesthetic, reify art (cf. Valéry, P., *Zur Theorie der Dichtkunst*, p. 214). However, an identification or reduction of the sensuous material to its meaning him is an equal reification for Valéry (cf.Ib.). And this is precisely the problem of Hegel’s aesthetics, as the next paragraphs will show.

13 Ib. Hegel, G.W.F., *Ästhetik I*, p.179.

14 Ib. Hegel, G.W.F., *Ästhetik I*, p.179.

15 „Realization“ in this context means „making real.“ This realization, however, also coincides with „realizing“ it in an epistemic sense.

16 Ib. Hegel, G.W.F., *Ästhetik I*, p.52.

17 Ib. Hegel, G.W.F., *Ästhetik I*, p.48.

18 This claim is controvertible, however, because as Hegel writes himself „truth wouldn’t be, if it wouldn’t appear (...)“(Hegel, G.W.F., *Ästhetik I*, p.46.), even if only in the idealized form of imagination. In an entirely anaesthetized form in which nothing appears truth couldn’t be. Hence, with regard to truthfulness and liberation, such a form would be „deficient,“as week

19 „recognition“ in this context can be understood like „realization“ in an epistemic, but also in a practical sense.

20 Hegel actually uses the term „transmutation“ not „sublation“ in this context (ibid. Hegel, G.W.F.,*Ästhetik I*, p.52.)

21 Ib., Hegel, G.W.F.,*Ästhetik I*, p.52.

22 Ib., Hegel, G.W.F.,*Ästhetik I*, p.52.

23 Ib., Hegel, G.W.F.,*Ästhetik I*, p.50.

24 Ib., Hegel, G.W.F.,*Ästhetik I*, p.48.

25 It is a fulfillment though which has to be understood as a continuous movement, i.e. aesthetics keeps realizing the aesthetic form of art by transmuting the sensuous element into thought.

26 „Recognition“ acquires here the complex meaning of 1.identifying someone or something and thereby 2. realizing it; but also 3. valorizing and respecting someone or something. It appears that spirit cannot realize itself by identifying itself as its other, if it does not respect the other in its difference to it self.

27 „Recognition“in this context must be understood in an epistemic but also in practical sense, that is as the „self-realization“of spirit.

28 Hegel, G.W.F. *Ästhetik II: Entwicklung des Ideals zu den besonderen Formen des Kunstschönen*, ed. Rüdiger Bubner,Stuttgart 1971, p.423.

29 The development starts with the symbolic art form (cf. Hegel, G.W.F. *Ästhetik II*, p. 440), in which the natural immediacy of sensuous existence still obscures the meaning. Then the classical art form emerges by turning thenatural immediacy of the sensuous material into a mere sign of the idea, that is by rendering it transparent toward its meaning by idealizing its materiality (cf.Hegel, G.W.F, *Enzyklopädie der Philosophischen Wissenschaften III: Philosophie des Geistes*, eds. Moldenhauer E., Michel, M., Frankfurt am Main 1970, p.367). In the romantic art form the meaning withdraws from the immediate sensuous materiality all together and realizes its form now in the realm of imagination.

30 The German term Hegel uses here is „Anschauung.“ „Anschauung“ in German can refer to both, the capacity of „perception“ (die Anschauung) and to its content, to „percepts“ (die Anschauungen, oder eine Anschauung). When Hegel talks about „percepts“ he often refers them as „images“ (Bilder). Percepts or Images are received from the „outside,“ hence they remain about that external sensual existence.

31 „Generalized imagery“ is often translated as „representation,“ however, representation also means „Darstellung“ in German, which is problematic in this context. The German term Hegel uses is „Vorstellung.“ „Vorstellung“ in this context refers to a form in which the „images“ („Anschauungen“) are „elevated“ and „generalized“— therefore it is here translated as „generalized imagery.“ This generalized form is produced by imagination (Einbildungskraft). Imagination is also the force which connects these „generalized imageries“ (Vorstellung) with concrete images, whereby symbols and sign are produced; it then becomes „symbolizing imagination“.

32 Ib. Hegel, G.W.F., 1970, p.270.

33 Ib. Hegel, G.W.F., 1970, p.269.

34 Ib. Hegel, G.W.F., 1970, p.271.

35 More specifically he calls it „symbolizing, allegorizing or versifying imagination.“ (cf., Hegel, G.W.F., 1970, p. 266) where the German term for „versifying“ is „dichtend,“ which refers to that which produces „Dichtung,“ i.e. poetry.

36 The German terms used by Hegel are „bildlich“(iconic) and „bildlos“(aniconic) which highlights the connection to the shift from symbol to sign in the antecedent section. (cf. Hegel, G.W.F., *Ästhetik III: Die Poesie*, ed. Rüdiger Bubner, Stuttgart 1971, p.1. 61).

37 Ib. Hegel, G.W.F., *Ästhetik III*, p.58-59.

38 Ib. Hegel, G.W.F., *Ästhetik III*, 64.

39 Ib. Hegel, G.W.F., *Ästhetik III*, 65.

40 Ib. Hegel, G.W.F., *Ästhetik III*, p.28.

41 Ib. Hegel, G.W.F., *Ästhetik III*, p.29.

42 Ib. Hegel, G.W.F., *Ästhetik III*, p.66.

43 cf. Schulz, Genia, *Die Ästhetik des Widerstands“ : Versionen des Indirekten in Peter Weiss’ Roman*, Stuttgart 1986.

44 The „stylistic principle“is introduced by the narrator. He comments on his father, listing names: „Maybe a stylistic principle imposed itself ...he [the father] called out the names, which had gotten their teeth into him, and which sounded so jarring and false, as they were meant to sound.“Lists are a prosaic, abstract and anaesthetized form of text. They seem to reduce the actual person or object on the list to a mere signifier, bereft of its concrete embodied individuality, not different from any other name on the list, even if the names differ, they are all the same. Yet when the narrator’s father calls out his list of names, this anaesthetized form acquires an expressivity, that can hardly be called „anaesthetic.“The list shows in a condensed way how an anaesthetized form becomes aesthetized when it is turned into a stylistic principle.

45 Ib. Weiss, Peter, *Die Ästhetik des Widerstands*, p.104.

46 The German term used here is „Dichtung,“ which can refer to „poetry“ and „literature“ alike.

47 It would be more precise to say, „it“would be „lifted“from us, or „we“would be liberated from „it“. The imprecision makes sense though, because the suffering is identical with the subject before the subject is liberated from it when it (the suffering) becomes objectified in the word. The perspective expressed here is, hence, one that speaks from the point of view before that liberation, where the subject still suffers.

48 cf. Ib. Weiss, Peter, *Die Ästhetik des Widerstands*, p.104.

49 „Dreams“refers here to della Francesca’s paintings.

50 cf.Ib. Weiss, Peter, *Die Ästhetik des Widerstands*, p.104.

This description actually extends much further and recounts meticulously the details of the painting: „ (...) The accordance of the grey-white, grey-black and umber of the horses, the rubicund, violett, grey, green and blue shades of the garments, the red of the bloodstains, the glow of the swords and the armory, the copper mounts on the toneless leather, the perspective

on the coil of a glassy river, with swans, the gras dappled into the lime plaster (...)"

51 Ib. Weiss, Peter, *Die Ästhetik des Widerstands*, p.105.

52 In Hegels words: „The extraneousness, the strangeness of the painting, derived from the fact that despite its figurative content, it wanted to imitate nothing of nature. It had its own light, and the event in it was an accord of colors.“ (Ib. Weiss, Peter, *Die Ästhetik des Widerstands*, p.104).

53 It is through this anesthesia that the painting acquires its aesthetic expressiveness, i.e. insentience and expressiveness are not a contradiction. Accordingly, the narrator describes the faces depicted in della Francesca's painting as „insentient, yet full of expressiveness (...).“ (cf. Weiss, Peter, *Die Ästhetik des Widerstands*, p.106.)

54 It is, as it were, released from its meaning and acquires an independence and reality of its own.

55 Weiss, Peter, *Die Ästhetik des Widerstands*, p.861.

56 Ib. Weiss, Peter, *Die Ästhetik des Widerstands*, p.861.

57 She also seems unwilling to recognize a language which refuses to recognize all of its speakers. So, she refuses to declare herself a „German“when she is incarcerated with a group of Jewish people. Her resistance in this case is not based on language, but rather on a refusal of language, more precisely a refusal of the differences produced by it, which can separate people into „Germans“and „Jews.“

Franziska Wildt is a philosopher and visual artist, currently pursuing her Phd in aesthetics, and working as a research assistant (wissenschaftliche Hilfskraft) at Goethe University Frankfurt. She studied art, philosophy, psychology and literature at the University of Arts Berlin, Staedelschule Frankfurt, Goethe University Frankfurt, and Columbia University New York. She has participated in international conferences for Aesthetics and Critical Theory, and has frequently taught classes at the University of Arts Berlin. Her art works have been exhibited i.a. at KW (Museum for Contemporary Art, Berlin), Künstlerhaus Bethanien (Projectspace, Berlin), the Museum of Photography (Berlin), LeRoy Neiman Gallery (New York), MMK (Museum for Modern Art, Frankfurt), Frankfurter Kunstverein (Museum for Contemporary Art, Frankfurt), and Filmmuseum Frankfurt. She has received numerous scholarships and stipends for her artprojects and her studies abroad.

ON THE PROBLEM OF THE «UNHUMAN» IN CONTEMPORARY AESTHETICS AND ONTOLOGIES

Abstract | The starting point of this textual analysis is the Benjamin's concept of aura. Two points that constitute this concept represent the inclusiveness of the aura as an aesthetic concept in the field of unhuman:

1) the aura in Benjamin's philosophy is not assigned to some privileged object: it takes place not only in the contemplation of objects of culture and art, but also of nature, i.e. not only human is responsible for the production of aura, but also pre-human, un-human is responsible for it too.

2) the fact of aura establishes a situation, in which a thing raises its eyes, i.e. this circumstance can be identified as a sketch of a map of aesthetic interaction, where the autonomy of the human subject is challenged by the quasi-subjectivity of the perceived object.

The disclosure of these two points is proposed by analyzing the interweaving of two ontological attitudes of modern philosophy: the "ontology of the flesh" by M. Merleau-Ponty and the "flat ontology" by G. Deleuze.

In general, the "ontology of the flesh" is an explication of the archaeological register of perception. The basis of perception is the pre-personal body, the pure experience of the flesh, which is preceding the rational experience of the world. The subject of Merleau-Ponty becomes a place of another agency and is constituted in the perspective of the geological time of antiquity. Benjamin's aura is thought here as an unhuman source of perception.

Deleuze's views on the ontological plan of immanence and the problems of the subject also make it possible to comprehend the presence of the unhuman in the concept of aura. Deleuze rejects the autonomous notion of subject in favor of pre-individual singularities. The ontological plan, within which there is no hierarchical division into natural and artificial, allows thinking of the interaction of human and other objects as a play of forces and intensities. Quasi-subjectivity acquires here its aesthetic meaning. Thus, the concept "unhuman" expands the field of aesthetics and draws attention to the complex ontological intersections, which are underlying it. These intersections provide new tools for turning aesthetic reflection to the flesh and its anonymous experience, which becomes inaccessible in the era of software and digital networks.

Index terms | *Unhuman; aura; quasi-subjectivity; ontology of the flesh; flat ontology; plan of immanence.*

It can be judged that the concept of aura introduced in the works of W. Benjamin remains relevant for research in the field of aesthetics. The relevance is primarily connected to the fact that the meaning of this concept turns out to be ambiguous; to this ambivalence many authors of various commentary literature often pay attention. For our research, the positive meaning of this ambiguity lies in the depth of the aura concept's problematic content, which involves a lot of solutions that go far beyond the W. Benjamin's philosophical views. This paper proposes the following way to thematize the problems that aura poses: the main movement of the thematization covers the interaction of the aesthetic and ontological poles of the problem. In other words, the thematization of the key problem points of the aura concept is guided by the following task: to discover the correlation between ontological and aesthetic aspects, that are immanently contained in the idea of aura.

BENJAMIN: THE «UNHUMAN» AND THE AURA CONCEPT

We should point at these problems and the specifics of the proposed thematization, as well as the methodological background that shapes our problem. First of all, as we know from Benjamin's texts aura is associated with objects of worship, manifested in the contemplation of a work of art and «expresses their cult significance in the categories of spatial and temporal perception»¹. However, in reading Benjamin, it turns out that the aura is not attached to a homogeneous field of objects (which may be the field of cultural artifacts). So the aura can belong to objects of nature². Expanding our remark, we give the following quote from Benjamin «First, genuine aura appears in all things, not just in certain things, as people imagine»³. Hence the most general dimension of the aura meaning is the dimension that pays attention not to the properties of objects possessing aura (man-made objects of genuine art), but, on the contrary, to the very fact of relations and empiric contact. Thus, we stress the perceptual dimension, i.e. dimension of aesthetics as a theory of empiric experience as the priority for this work. Here it is important that, referring to the deformation of perception under the influence of technical means (and, as a result, the collapse of aura), Benjamin does not speak about the forces contributing to the emergence of the aura. The disappearance of the aura is primarily connected with the intervention into the perception constitution of *non-human* effects. However, the fact that the aura also belongs to the objects of nature suggests the *prehuman* nature of the forces producing the aura. Thematization of this problem on the ontological level concerns the following aspect: since Benjamin's work clearly presents only the temporal area of aura, where the moment of aura's disappearance is fixed, it is necessary to pay attention to the conceptually more complicated and undeveloped area of deep temporality, rooted in the world of emerging perceptual relations and prehuman agencies. So, the aesthetic component of the aura concept contains and genetically suggests an ontological horizon of deep time, prehuman temporality.

Secondly, Benjamin identifies one of the key meanings of aura, which can be designated by the quasi-subjectivity of an auratic object. Benjamin writes: «To experience the aura of a phenomenon we look at means to invest it with the ability to look back at us»⁴. In other words, «Benjamin attributes the agency of the auratic gaze to the object being looked at»⁵. If we accept that «the aura is not an inherent property of persons or objects but pertains to the medium of perception, naming a particular structure of vision»⁶, «aura implies a phenomenal structure that enables the manifestation of the gaze»⁷, following conclusions can be made. Analysis of aura as an aesthetic concept, aimed to describe structures that are constitutive for empiric experience, should not originate

from the object or subject of experience, but from the auratic process, the aura as a «strange event»⁸. This process, or, more precisely, its «strangeness», is established qualitatively and thematically in the ontological shift of the space-time structures⁹, revealed in the auratic object. By this shift, a quasi-subjectivity of the perceived object is produced¹⁰. The emerging quasi-object cannot be compared to the human view¹¹ due to fact that the «unhuman» ontologically precedes the human. Summarizing the above, we make an intermediate conclusion: *the aesthetic relation is initially available in the archaeological register, in which the priority instance, reflecting the essential structures of auratic perception, is the «unhuman».*

So, the further task of this article is the actualization and articulation of the «unhuman» as a constitutive element of aesthetic interaction through the explication of two ontological trajectories corresponding to each of the two meanings of the «unhuman». The first trajectory concerns the analysis of temporal structures, the second - the quasi-subjectivity of the perceived object. Solving this problem involves going beyond Benjamin's texts and searching for a discursive field which is genetically related to our problem. This analysis is methodologically driven by the following observations. The first methodological component is formulated according to the principles of J. Derrida's deconstruction: our analysis focuses on identifying those structures within the concept that plays a constitutive role in its development and functioning, but, however, remains in the area of the unstructured, discursively unexpressed¹². Such an approach endows the concept with unconscious («subterranean») elements, the problematization of which is possible only in the context that goes beyond the use of the concept under consideration. The second methodological component is based on the Deleuzian idea of the concept as a plurality, the immanent structure of which is in constant correspondence with alien elements of other concepts, unexpected connections and countless variations deviating from the «general meaning»¹³.

A productive solution to our problem implies attracting a number of concepts that simultaneously explicate both ontological trajectories (that, it is true, correlate on the contextual level in a different, or even the opposite way). These concepts shed light on the «unhuman» nature of the aesthetic relations, that are defined, however, by the means of essentially different ontological schemes. So we suggest considering the problem of temporality on the basis of the Merleau-Ponty's ontology, and to connect the trajectory of explication of the meaning of quasi-subjectivity to the philosophy of Deleuze and Guattari.

MERLEAU-PONTY: FLESH

Some aspect of Merleau-Ponty's phenomenology are an integral part of the Didi-Huberman's project to revise the concept of aura and analysis of contemporary art. We will try to complement this with the basic principles of the late ontology of Merleau-Ponty, which determine the aesthetic level of relations and the nature of the perceiving subject. On this level «we must return to experiences that have not yet been worked over-before the separation into "object" or "subject", "essence" or "existence"»¹⁴. In other words, we fixate the «ontological shift» in relation to the problem of perception¹⁵; the structure of the perception itself is endowed with the «transpersonal and indeed trans-human dimension»¹⁶. The conceptual core of this shift is the elaboration of the flesh concept, which constructs a new ontology. Since the flesh, which is important to note for our perspective, makes it possible for one body to perceive another¹⁷ and turns out to be the place to retain affective relations¹⁸, the task of disclosing the structures of

the flesh becomes the starting point of aesthetic analysis. These structures, which are the underlying basis of each subject, articulate the demanded role of the «unhuman». Merleau-Ponty writes that the perceived world is «a more ancient world than the universe of thought»¹⁹. Than the world of subject. This statement allows us to reveal the meaning of the previously declared trajectory of temporality. So, referring to the Trigg's study, we note that the issue of temporality is key to solving the problem of opacity, uncertainty of the structures of subjectivity: it is necessary to talk about the subject's background, «where the deep past and the distant future coexist»²⁰. Trigg shows that, for Merleau-Ponty, human life, enriched by the feeling of «deep time», is «one of the configurations of the body, which has always been immersed in a "strange relations" with the unhuman»²¹. The flesh turns out to be this inhuman or transhuman principle, which at the ontological level «manifests itself in all things as their primordial depth»²². One of the empirical confirmations of the existence of this principle in the field of the world of art are the paintings of Cezanne, in which the ontological pole of aesthetic perception is manifested. In his paintings is found the effect of a «fund of inhuman nature»: «The world is frozen, inanimate... The movement, the meaning, is not thematized. All lies in waiting, as at the beginning of the earth. Nature is at the first day»²³. Thus, the Merleau-Ponty's concept of flesh turns out to be a shadow zone of aura, actualizing on the ontological level the determining role of the «unhuman» in the prehistory of the aesthetic relations structure.

DELEUZE AND GUATTARI: FLAT

From the principle of the depth, which characterizes the ontological level of flesh, we turn to the Deleuzian flat. At this level, as will be shown, the disclosure of the problem of quasi- subjectivity as a matter of principle for aesthetic analysis of empiric experience is possible. Quasi-subjectivity is a consequence of auratic perception, the «strange event». The ontological scheme of Deleuze and Guattari allows in this case to pay attention to the structure thematically revealing this «strangeness». In other words, we proceed from the «unhuman» background of the aura to the analysis of the very process of perception (its immanent composition), again conditioned by the «unhuman»; from the complex of deep conditions - to the flat ontological layout of real experience. So, the basis for this ontological scheme is the plan of immanence. The plan does not distinguish between «things that might be called natural and things that might be called artificial»²⁴. If an aura is not attached to a specific field of objects, then concrete conceptual grounds come to replace the archaeological connotations of this fact. Aura - the strangeness of perception - retains its quality without reference to temporal and causal contexts. That is, in Deleuze and Guattari, we find a sort of «conceptual unhuman», mediating perception as follows.

Firstly, for Guattari «the inhuman is an integral part of subjectivity»²⁵. Human subjectivity itself must be built and developed by external agency: subjectivity is shaped «when it "becomes attached" to what it is looking at»²⁶. That is, perception itself is an invisible inhuman machine for the production of subjectivity. Secondly, the perception now correlates rather not with the experience of the subject, but with the actualization of the block of sensations, «which are important in their own right, beyond any experience. They can be see as existing in the absence of a human»²⁷. The plan of immanence, in this case, as a plan of sensations, keeps on its flat «percepts» («landscapes in the absence of man»²⁸) and «affects» («a human's becoming inhuman»²⁹), the composition of which bears the name of aesthetics³⁰. In this sense, Cezanne's statement «there is no man, but he is all in the landscape» allows us to suggest: *(quasi)subjectivity is*

produced by a cut of sensations, by the «unhuman» itself, which is a condition of the auratic perception reality.

CONCLUSIONS

Thus, the thematization of the ontological level of problem points of the aura concept allows us to consider the «unhuman» as a conceptual sphere underlying the speculative ways of analyzing aesthetic relations. Further conceptual analysis suggests that the «unhuman» becomes a mode of thought that functions at the intersection of the aesthetic and ontological poles. In our case, we can speak of an ontological map (or a plan) of aesthetics, which is created by the unity of zones of temporality (a depth) and quasi-subjectivity (a flat), which explicates the meaning of «unhuman».

THE RECEPTION AND REFLECTION TO SCHOPENHAUR'S AESTHETICS IN WANG KUO-WEI'S CONCEPT OF "JING-JIE"

Abstract | In his essay *Ren Jian Ci Hua* (《人间词话》, 1908) Wang Kuo-wei (王国维, 1877-1927) proposed the concept of "Jing-jie (境界)" for comparing Chinese classic aesthetics with Western aesthetics—especially Arthur Schopenhaur's—at the beginning of the 20th century, which marked a starting point for Chinese modern aesthetics. As for "Jing-jie," previous research found its origin in Chinese classical aesthetic theory. For example, James Liu (1962), Adele Rickett (1977), and Joey Bonner (1986) insisted that the concept of "Jing-jie" stems from Wang Fu-zhi's concept of "emotion and scene." Hermann Kogelschatz (1986) argued instead that the concept of "Jing-jie" originated in Schopenhaur's "Idea (Idee)." Kogelschatz is right in saying that the influences by Western aesthetics upon Wang Kuo-wei should also be taken into account, but his interpretation is not well-founded. In this paper I compare Wang Kuo-wei's essay on Schopenhauer included in his *Jing an Wen ji* (《静庵文集》, 1905) with the English version of Schopenhauer's *The World as Will and Idea* (translated by R.B. Haldane and J. Kemp, 1883-1886) which Wang Kuo-wei actually consulted, clarifying thus the background of the concept of "Jing-jie" in his *Ren Jian Ci Hua* (1908). Wang Kuo-wei uses the word "Jing-jie" in two ways, namely as an ordinary term and as an aesthetic term. As an ordinary term "Jing-jie" means a "boundary line," a "kingdom," a "situation," and a "stage,"—while as an aesthetic term it means a "state (状态)" and an "emotion and scene (情景)." On the one hand, the "Jing-jie" as a "state" is based on Schopenhauer's aesthetics. That is, the "Jing-jie" corresponds to the "state" in the "knowledge of the Idea" by the "aesthetical mode of contemplation" in Schopenhauer's sense, or the "state" of Buddhist Nirvâna which exerted influence upon Schopenhauer's aesthetics. Wang Kuo-wei called the former the "Jing-jie of contemplation," and the latter the "Jing-jie of Nirvâna." On the other hand, the "Jing-jie" as an "emotion and scene" unmistakably echos Wang Fu-zhi's theory, modifying it by Schopenhauer's aesthetics, as is seen in his distinction between the "Jing-jie by an individual subject" and the "Jing-jie by a pure will-less subject." In short, Wang Kuo-wei's concept of the "Jing-jie" reveals how interactions between Chinese classical aesthetics and German modern aesthetics contributed to the formation of Chinese modern aesthetics.

Index terms | *Aesthetics's interaction; Schopenhauer; Idea; contemplation; Wang Kuo-wei; "Jing-jie"; state; emotion and scene.*

INTRODUCTION

In his essay *Ren Jian Ci Hua* (人间词话, 1908) Wang Kuo-wei (王国维, 1877-1927) proposed the concept of “Jing-jie (境界)” for comparing Chinese classic aesthetics with Western aesthetics—especially Arthur Schopenhauer’s—at the beginning of the 20th century, which marked a starting point for Chinese modern aesthetics.

As for “Jing-jie,” previous research found its origin in Chinese classical aesthetic theory. For example, James Liu (1962)¹, Adele Rickett (1977)², and Joey Bonner (1986)³ insisted that the concept of “Jing-jie” stems from Wang Fu-zhi’s concept of “emotion and scene.” Hermann Kogelschatz (1986) argued instead that the concept of “Jing-jie” originated in Schopenhauer’s “Idea (Idee).” Kogelschatz is right in saying that the influences by Western aesthetics upon Wang Kuo-wei should also be taken into account, but his interpretation is not well-founded. In this paper I compare Wang Kuo-wei’s essay on Schopenhauer included in his *Jing an Wen ji* (静庵文集, 1905) with the English version of Schopenhauer’s *The World as Will and Idea* (translated by R.B. Haldane and J. Kemp, 1883-1886) which Wang Kuo-wei actually consulted, clarifying thus the background of the concept of “Jing-jie” in his *Ren Jian Ci Hua* (1908).

1. “JING-JIE” AS AN ORDINARY TERM

The word “Jing-jie” was not coined by Wang; it exists in colloquial Chinese and is used in everyday language. The following is a discussion of the meanings of “Jing-jie” in ordinary usage according to Wang.

When Wang translated *Secondary Geography of Japan* by Goroku Nakamura to the Chinese version, *Japanese Geography*, the Japanese word “kyou-kai (境界)” which means “boundary line” in geography was translated to the Chinese word “Jing-jie.”⁴ And in the combination of the words “kingdom of nature”⁵ or “animal kingdom,”⁶ which were translated by Wang, we can perceive the connotation of “world” or “realm” that “Jing-jie” carries. Besides, in Wang’s *Critic of Dream of the Red Chamber*, he uses “Jing-jie” as the equivalent of Schopenhauer’s “situation.” According to Schopenhauer, “the revelation of the Idea of man, is principally attained by two means, by true and profound representation of significant characters, and by the invention of pregnant situations in which they disclose themselves.” (*WWI*, vol.1, §51, 324) Here, Wang considers “Jing-jie” a synonym of “situation” in contrast to “personen (Charaktere),” and “Jing-jie” means “Situation” (*WWI*, vol.1, §51, 324) or “(Lebens-)Umstände.”⁷

I will also examine the everyday usage of “Jing-jie” in Wang’s *Ren Jian Ci Hua*. In Wang’s different expressions within two similar paragraphs, it can be seen that Wang considers “Jing-jie” equivalent to “stage.” In *Pedagogy*, Wang states that, to be successful in one’s studies, one must experience three “stages,” and Wang names these “stages” “Jing-jie” in *Ren Jian Ci Hua* (SG, §2). “Jing-jie,” or “stage,” means level, and it is used to describe the progression from a low stage to a high one.

As we can see, “Jing-jie” can have multiple meanings. As translated by Wang, “Jing-jie” can mean “boundary line,” “kingdom,” “situation,” or “stage”.

2. “JING-JIE” AS AN AESTHETIC TERM

I will analyze the aesthetic usages of “Jing-jie” and its relationship with Schopenhauer’s epistemology and aesthetics. I propose that “Jing-jie” is equivalent to not only Schopenhauer’s “Idee,” which is proved by Hermann Kogelschatz, but it is also a state

in which to contemplate the “Idee,” or aesthetic “state,” from the mode of aesthetic contemplation.

In *Ren Jian Ci Hua*, Wang proposed the concept of “Jing-jie.” The uses of the word “Jing-jie,” or “Jing,” in this book touches on aspects of aesthetics in relation to the “state” (Zustand) of Schopenhauer’s contemplation of aesthetics and the “emotion and scene” of Wang’s poetics. And in this book, the word “Jing-jie” means “stage” in everyday usage, as I mentioned. Furthermore, as an aesthetic term “Jing-jie [emotion and scene]” is mostly combined with other words, as in the “Jing-jie of an individual subject,” the “Jing-jie of a pure will-less subject,” “to create Jing-jie,” “to emanate Jing-jie,” or the “Jing-jie of poetry.”

2.1 JING-JIE [STATE]

In *Kong Zi’s Aesthetics Education Ideology* (1904), Wang considers Schopenhauer’s “state of knowing beauty” to be “Jing-jie:”

Schopenhauer divides the “state of knowing beauty” (知美状态) into two parts: (1) the knowledge of the object, not as a particular thing, but form of species of a [particular] thing; (2) the self-consciousness of the knowing person, not as particular me, but as pure and will-less me (WWI, Vol.1, 253).....This “Jing-jie (知)” could only be achieved when knowing beauty.⁸

Wang directly quotes part of 38th section of Schopenhauer’s *The World as Will and Idea*:

In the aesthetical mode of contemplation we have found two inseparable constituent parts---the knowledge of the object, not as individual thing but as Platonic Idea, that is, as the enduring form of this whole species of things; and the self-consciousness of the knowing person, not as individual but as pure will-less subject of knowledge. (WWI, vol.1, §38, 253)

According to Schopenhauer, in “aesthetical mode of contemplation”, there are two inseparable constituent parts, that is the knowledge of the object “as Platonic Idea” and “pure will-less subject of knowledge.” Through this mode could achieve to “state of pure knowing”, which as a “painless state”, or a “peaceful, still frame of mind.” (WWI, vol.1, §38, 253)

In English translations of Schopenhauer, “Vorstellung” is presently translated as “representation” or “presentation,”⁹ but in the past it has been translated as “idea.”¹⁰ “Idee” was translated as “Idea” by R.B. Haldane and J. Kemp.

If we compare Schopenhauer’s “state of pure knowing” with “aesthetical mode of contemplation” to Wang’s “Jing-jie” in “a state of knowing beauty,” we will find that the former’s “state of pure knowing” with “aesthetical mode of contemplation” is terminology by Wang, as “Jing-jie [state]” in knowing beauty.

Firstly, according to Wang, there are both subjective and objective parts in Schopenhauer’s aesthetical contemplation. Wang translates Schopenhauer’s “individual thing” to “particular thing,” “the enduring form of this whole species of things” to “form of species of a [particular] thing,” “individual [subject]” to “particular me,” “reinen” to “pure will-less subject,” and “willenlosen subjekts” to “pure will-less

me.”

Secondly, regarding how subjects correspond to objects, Wang translated “contemplation” as “knowledge,” and we can see that Wang follows Schopenhauer’s concept of perception.¹¹ According to Schopenhauer, there are three kinds of perception: “perception of the senses,” and “pure intuition or perception” or “intelligent perception” in epistemology; “aesthetic perception” or “aesthetical contemplation” (*WWI*, vol.1, 253), “quiet contemplation” (*WWI*, vol.1, §34, 231) or “peaceful contemplation” (*WWI*, vol.1, §51, 323) with imagination in aesthetics.

And thirdly, in contrast to the “method of knowing,” Schopenhauer proposes “the aesthetical mode of contemplation (die ästhetische Betrachtungsweise¹².” Accordingly, Wang translated Schopenhauer’s “aesthetical mode of contemplation” to “state of knowing beauty” and translated Schopenhauer’s state of “knowledge of the Idea” (*WWI*, vol.1, §38, 25) to “Jing-jie of “knowing the beauty”¹³. Therefore, Wang’s concept of “Jing-jie” is Schopenhauer’s “state” of knowledge of the Idea via the aesthetical mode of contemplation.

On the other hand, regarding Schopenhauer’s “quiet contemplation” relates to the idea of “one will” which is derived from Buddhism, we need admit that Wang’s “Jing-jie” also carries the connotation of “one will” and Buddhism. For example, Wang’s concept of “Jing-jie [state]” corresponds to the “Jing of Nirvâna”¹⁴ or “realm of emancipation.”¹⁵ Wang relates the “Jing of Nirvâna” to Schopenhauer’s concept of one will. Schopenhauer’s “idea” corresponds to “Mâyâ,”¹⁶ and the one will corresponds to the origin of the cosmos – “Brahma”¹⁷ in Buddhism. And Schopenhauer’s rejection of the “will to live” corresponds to the Buddhist state of Nirvâna. According to Schopenhauer, Nirvâna is “a state in which four things no longer exist – birth, age, sickness, and death.” (*WWI*, vol.1, §63, 460) For these reasons, Wang’s Jing-jie [state] is at the same time as the translation of Schopenhauer’s Buddhism state, which means state of Nirvâna in Buddhism as state of intuition to one will.

Above, I analyzed the influences of Schopenhauer on Wang’s aesthetic concept of “Jing-jie.” Wang’s usages of “Jing-jie [state]” can correspond to Schopenhauer’s “state” of knowledge of the Idea through the aesthetical mode of contemplation; on the other hand, it can also mean the state of Nirvânain Buddhism as state of intuition to one will.

2.2 JING-JIE [EMOTION AND SCENE]”

After the argument to aesthetic usage of “Jing-jie [state],” I will analyze the formation of Wang’s own poetics of “Jing-jie [emotion and scene]” in light of Schopenhauer’s aesthetics. Regarding “emotion and scene,” as has been discussed in previous researches, it is thought to be derived from Wang Fu-zhi’s theory of “emotion and scene.” Such as Joey Bonner quoted Wang Fu-zhi’s words, emotion and scene “are nominally two entities but are inseparable in reality. Those who work miracles in poetry can subtly unite them, leaving no boundary line, while those who are ingenious can reveal an emotion in a scene and a scene in an emotion.” And Joey Bonner explained “from the idea that poetry fuses scenes and emotions it appears to have been, for Wang, but a short step to the idea that, in fusing scenes and emotions, poetry creates ‘worlds’.”¹⁸

However, I argue that Wang’s “emotion and scene” relates more to Schopenhauer’s aesthetics. That is, Wang explains the relationship between subjective and

objective parts of Schopenhauer's aesthetics to "emotion and scene." Wang takes Schopenhauer's "subject of knowledge" to mean "emotion" and objective part to mean "scene." Otherwise, this is different from the contemplation of "Idea" by "pure will-less subject of knowledge" in Schopenhauer's aesthetics. The reason is Wang's "emotion and scene" not only includes Schopenhauer's contemplation of aesthetics, but also absorbs the perception of the "individual thing" by the "individual [subject]," which is rejected by Schopenhauer in his aesthetical contemplation. Such as, regarding the "Jing-jie by an individual subject" and the "Jing-jie by a pure will-less subject," Wang said "in the Jing-jie by an individual subject, because I perceive the individual things, things are all covered with my colors; in the "Jing-jie by a pure will-less subject, because the things perceived by an object, it cannot be known which one is me, and which one is the thing." (GC, §3) Wang's statement, "I perceive the individual things" could be considered equivalent to Schopenhauer's perception of individual things by the individual [subject], and Wang's "the things perceived by an object" could be perceived as a reconstruction in Chinese terms of Schopenhauer's contemplation of the Idea by the pure will-less subject of knowledge. From this, we can speculate that Wang's concept of "emotion" means both the "Jing-jie by the poet," which depart from everyday life, and the "Jing-jie by a person," which stands for the joys and sorrows that people face in daily life.¹⁹ Besides, Wang's emotion is also as the materials of literature-like scene, just as Wang said, "Jing does not only means scenes, joys and sorrows are also a kind of Jing-jie inside the person." (GC, §6)

As above, in Wang's own aesthetics, "Jing-jie [emotion and scene]" can be intellectually perceived, quietly contemplated. Or again, we could call it "scenes that stir up one's feelings," "emotion ignited by a scene" (SG, §51), and "all the descriptions of scenes are expressions of emotions" (SG, §50).

CONCLUSION

Wang Kuo-wei uses the word "Jing-jie" in two ways, namely as an ordinary term and as an aesthetic term. As an ordinary term "Jing-jie" means a "boundary line," a "kingdom," a "situation," and a "stage," while as an aesthetic term it means a "state" and an "emotion and scene." On the one hand, the "Jing-jie" as a "state" is based on Schopenhauer's aesthetics. That is, the "Jing-jie" corresponds to the "state" in the "knowledge of the Idea" by the "aesthetical mode of contemplation" in Schopenhauer's sense, or the "state" of Buddhist Nirvâna which exerted influence upon Schopenhauer's aesthetics. Wang Kuo-wei called the former the "Jing-jie of contemplation," and the latter the "Jing-jie of Nirvâna." On the other hand, the "Jing-jie" as an "emotion and scene" unmistakably echoes Wang Fu-zhi's theory, modifying it by Schopenhauer's aesthetics, as is seen in his distinction between the "Jing-jie by an individual subject" and the "Jing-jie by a pure will-less subject."

In short, Wang Kuo-wei's concept of the "Jing-jie" reveals how interactions between Chinese classical aesthetics and German modern aesthetics contributed to the formation of Chinese modern aesthetics.

INTUITION ACT AS A SCIENTIFIC METHODOLOGY IN AESTHETICS

Abstract | The article is devoted to the problem of intuition act as a special methodology in aesthetic research. It is postulated that intuition act, as a philosophical methodology, has spontaneity and integrity, and also acts as an impulse in human creative activity. The problems of intuition occupied a certain place in the philosophical legacy of T. Leibniz, I. Kant, N. O. Lossky and others. But the prominent Italian thinker Benedetto Croce has a special role in the philosophical understanding of intuition. The doctrine of B. Croce reveals the logical connection of intuition with intelligence; he puts into the concept of intuition a philosophical interpretation of “historical time”, as well as the ability at the sensual level to holistically embrace the subject, and then in the thought process to reveal distinctions, and bring everything to a logical unity. Art, according to B. Croce, as a sphere of pre-philosophical, pre-logical cognition, can only be intuitive. These ideas B. Croce remain valid in the twenty-first century.

Index terms | *aesthetics, Benedetto Croce, distinction, intuition act, methodology, philosophy of Spirit*

Some researchers describe B.Croce's philosophical and aesthetic doctrine as "absolute idealism", where reality is presented as successive steps to the spirit perfection. Proceeding from this "circular character of spiritual life", which excludes both the "absolutely initial" and "absolute end", Croce, in his conviction, finds the inner rhythm of historical being as a process of the Spirit's development.

This vision of the scientific knowledge process, and, especially, the notion of "pseudo-concepts" put forward by the philosopher that underlie traditional science, was called "anti-scientific" and severely criticized in the post-war Italy. However, at present, according to the statement of the modern researcher "...the myth about the unscientific nature of the Croce's philosophy ... has finally been dismissed. Today it is recognized that it is necessary to include the distinction of philosophy (Spirit) and traditional science proposed by Croce into the heritage of European culture". The B. Croce's position approaches the perspectives proposed by K. Popper's epistemology, with an attempt to combine pure historical knowledge with "non-classical" knowledge, unconscious, hypothetical and unconfirmed.

Detecting the logical connection of intuition with intellect ("the concept is not applied to intuition simply because it does not exist for a minute without of intuition") B. Croce believes that he achieves the necessary integrity of philosophizing, postulating the conceptual seizure of the individual, gradually turning into a holistic knowledge of the universality of the concrete.

Croce saw a different methodology of philosophy and science. If the first thinks of the concept, the second constructs them. The conceivable concept snatches out the real phenomenon in its organic fullness, while the latter builds it up, separating gradually its constituent elements. A conceivable concept becomes such when it combines universality, uniqueness and exclusivity: "... universality means nothing other than that the distinct concept is together the unique concept, of which it is a distinction and which is made up of its distinctions; particularity, that the distinct concept is in a certain relation to another distinct concept; and singularity, that it, in this particularity and in that universality, is together itself"[1, 61].

B. Croce has a deep inner, uninterrupted connection of the past and the present, the "embeddedness" of the past in the present; inclusion of the past in the development of life by a single, integral act of seizing and understanding. And this moment of philosophically understood history as "the action currently being completed, bordering on the awareness of this action" is, we believe, the initial position in the intuition process according to B. Croce, which is fundamentally different from the one according to A. Bergson. "When the prerequisites of historical thinking appeared," Croce himself notes in an article about Marcel Proust, "like Bergson's usual understanding of spatial and falsified time, in criticism of Bergson, they did not develop in the theory and logic of history, because Bergson, having settled on his so-called "intuition" did not rise to the level of a speculative concept and its dialectic, because its culture had, the origin and basis of the naturalistic and anti-historical or a-historical, and remained so" [2, 145].

B.Croce linked his own principles of intuition act with the work of reason, intelligence, with the help of logic, understood as a necessary foothold for the concept formation.

Detecting the logical connection of intuition with the intellect ("the concept does not apply to intuition, because it does not exist even for a moment outside of intuition")

B.Croce believes that he achieves the necessary integrity of philosophizing, which posits the conceptual grasp of the individual, gradually turning into a holistic knowledge of the universality of the concrete.

Since, unlike G.W.F. Hegel, B.Croce considers the decisive impulse of self-movement of concepts not their contradiction, but distinction, then Croce's intuition means, first of all, the ability, at the sensual level, to embrace the whole subject or phenomenon, then (adding the thinking process) to identify the distinctions, put the formed concepts in relation to each other and bring them to the total in the judgment, i.e. reduce all to logical unity a priori.

Arguments about the relationship of intuition and thinking occupied the minds of a number of classical European philosophers of modern times.

Completing the philosophy of the XVII century, the predecessor of German classical philosophy, G.W. Leibniz, in the critical processing of the ideas of Descartes, Hobbes, Spinoza, builds his vision of the essence of being and his knowledge. Leibniz differentiates the possibilities of knowledge of the world: derives the concept of the truth of reason and the truth of fact. However, it is fundamentally important that the first ones are opened with the help of intuition, and the second ones with the help of induction.

The essence of the contemplative presentation and its special role in intuitive knowledge was succeeded in introducing Immanuel Kant at a fundamentally new level of philosophy. The German thinker not only summarized the search for European philosophy of the XVII-XVIII centuries, but also greatly advanced the philosophical understanding of the concepts of sensual and rational, their interrelationship, which in turn led to the development of a deeper understanding of intuition as a specific cognitive process capable of producing new knowledge.

Intuition act as a philosophical methodology has an undoubted advantage in two aspects: a) it has spontaneity and integrity; b) it is associated with a creative impulse. Of course, this is largely determined by the sensual bases of intuition. Meanwhile, the sensual world is the very essence of human existence, and it is quite possible, following G. Burckhard, to ask the question, "is the anthropology of sensuality - should it not first touch the hidden core of our essence and our desires?" [3, 125].

It is in the creative transformative process that the most powerfully and vividly manifested intuition. Here also differ so much the humanities, claiming to justify the concept of "intuition" - philosophy and psychology.

On the other hand, considered in the sphere of the theory of being, intuition is a well-known tool for transforming reality, an instrument that gives creative acceleration to the spiritual intentions of a person, which helps to reveal the life-determining values of his being.

Intuition is fundamentally based primarily on emotional experience and through this experience. Thus, N.O. Losskij argued that knowledge is an experience comparable to other experiences. In the book "Justification of Intuitivism" (1906), he revealed the essence of his approach: experience reflects the essence of the objects of the surrounding world directly and directly. The objects of knowledge, experiences, from his point of view, are primarily aesthetic, religious, moral and legal norms, i.e.

something that is directly related to emotions.

The idea of intuition-anticipation greatly broadens the view of the intuitive process. From here, there is only one step until the next breakthrough in looking at intuition - to recognizing it as one of the main tools of not only knowledge, but also creativity, and in general, the being of a person.

Art is a sphere of pre-philosophical, pre-logical cognition and it can be, according to B. Croce, only intuitive. The original nature of intuition (taken in a somewhat sovereign sense in relation to intelligence), the presentation of intuition as the predominant form of knowledge and creation here come to the fore. "Being non-reflective," B. Croce asserts, "art does not discriminate, does not reason, but spontaneously and directly creates images reflecting life in action, that very life with the face of a sphinx. His charm of innocent touching naivety lies in the unaware miracle." Here B. Croce will distinguish the other side of intuition, the side connected with its ontological nature, the side that largely determines the creative principle, especially expressively represented in art, in the process of artistic creativity - and as a result of it - in a work of art [4, 27].

The work of art itself, according to B. Croce, is individual and unique, in each concrete act of creativity it is created in a new way by those who intuit it and do not exist outside these new intuitions. Claiming the artistic process as a process of creation, Benedetto Croce does not see it beyond intuition. the figurative structure of art is built on fantasy, and sensual-figurative specifics are created using intuition.

Everything begins with sensory perception, the key element is perception associated with the experience, and ends, saturated with rational elements, creative imagination. The most clearly revealed in the field of aesthetic, an integral part of the creative process.

Can intuition act be considered a philosophical methodology? There is still no clear answer to this question. However, a modern researcher, considering the place of intuition in modern experimental philosophical methodology, as applied to art, gives a number of modern thinkers (among them Alessandro Pignocchi), who are trying to answer this question [6, 172].

Is the Croce's methodology of intuition act proposed is relevant for modern science? In the opinion of modern researchers (as Paolo D'Angelo, Michele Maggi, Marcello Musté, Claudio Tuozzolo and others) outlined in the work "Benedetto Croce. Riflessioni a 150 anni dalla nascita" (Aracne edizioni, 2016) his global focus on liberalism and the humanistic component of philosophical knowledge, where logic and intuition combine organically can still serve as a guide for modern scientific research.

HEIDEGGER'S AESTHETICS.

THE PHILOSOPHY OF FINITE HUMAN FREEDOM AND BASIC MOODS AND EMOTIONS

Abstract | The first part of the text raises the question: is it for Heidegger's aesthetically relevant thought better to use older terms such as "Heidegger's Doctrine of Art" or "Heidegger's Philosophy of Art" or, more recent term "Heidegger aesthetics"? Does the term "Heidegger's aesthetics" represent an "oxymoron" contrary to the intentions of Heidegger's own philosophy, or signifies a relevant aesthetic conception that has its own place in the contemporary philosophical aesthetics? In order to answer these questions, we considered Heidegger's understanding of aesthetics as a philosophical discipline and also the problems arising in connection with this designation. We argue that Heidegger's concept of "overcoming aesthetics" represents the (self) interpretation of his own philosophy of art developed in the essay "The Origin of the Work of Art". The second part of the text follows the thesis that the Heidegger's aesthetics contains the definitions of art and work of art, based on Heidegger's analyzes of freedom, basic moods and emotions. In this part of text, we follow a broader thesis in which Heidegger's philosophy as a whole can be understood as the phenomenology of freedom. Also, we discuss a special thesis that the concept of strife (Streit) of earth and world in "The Origin of the Work of Art" should be understood only on the background of the primordial struggle between concealment and unconcealment in the truth as the unconcealedness of beings. Further, the concept of strife is on deeper level linked with the determination of finite human freedom and basic human moods. In light of that, Heidegger's aesthetics is not only the heteronomous aesthetics of the work of art, but also the (relatively) autonomous aesthetics of aesthetic experience articulated with respect of finite human freedom. The result of the research is the insight that Heidegger's aesthetics of truth understood as the philosophy of freedom, basic moods and emotions, according to their inner intentions is closer to the tradition of the aesthetics of sublime than the aesthetics of the beautiful.

Index terms | *Aesthetics, art, freedom, Heidegger, mood, strife, truth.*

I. Heidegger's Aesthetics – Overcoming as Foundation of Aesthetics

Heidegger's aesthetically relevant thought permeates the entire corpus of his writings (*Gesamtausgabe*). Heidegger's texts on aesthetics could be divided into three basic groups: writings dedicated to poetry¹, texts concerning visual arts² and finally, debates in which aesthetic issues are more or less considered in principle³. Heidegger's main essay dedicated to art "The Origin of the Work of Art"⁴ together with the First Draft of the same paper⁵ and comments from his written legacy⁶ belongs to the third group of writings.

A series of questions were raised in connection with Heidegger's aesthetically relevant thought and his main aesthetic discussion "The Origin of the Work of Art". Does Heidegger's essay "The Origin of the Work of Art" contain⁷ or does it not contain⁸ the outlines of the philosophy of art? Should Heidegger's aesthetically relevant thought be understood as Heidegger's doctrine of art⁹, Heidegger's philosophy of art¹⁰, or Heidegger's aesthetics¹¹? How should it one understand that Heidegger's aesthetics is an attempt to articulate an alternative to the aesthetic approach to art, or that Heidegger's aesthetics is against aesthetics, and for art?¹² Finally, is it justifiable to understand Heidegger's aesthetics only and exclusively as the heteronomous aesthetics of the artwork as a place of exceptional and privileged appearance of truth?¹³ The answers to these questions should be sought in an understanding of the "The Origin of the Work of Art", starting from Heidegger's own self-interpretation in the *Contribution to Philosophy*¹⁴ and, in general, in Heidegger's understanding of aesthetics as a philosophical discipline¹⁵. It is the main thesis of this text that Heidegger's aesthetics consists in the conceptualization and systematization of art and other aesthetic problems based on the theory of basic human moods and emotions and finite human freedom and that Heidegger's aesthetics is, in this sense, the one that overcomes aesthetics in the modern, narrow sense, founding at the same time aesthetics in a wider sense.

The traditional division of philosophical disciplines represents for Heidegger the horizon for the understanding of aesthetics. The division of philosophy into logic, physics and ethics corresponds to the nature of philosophy, but it lacks the right principle¹⁶. Instead of a traditional distinction between the formal and the material aspects of philosophical disciplines or, Kant's distinction between a priori and a posteriori, the principle of the division of philosophical disciplines should be the explication of human existence as a *Dasein*¹⁷. In analogy with logic, physics and ethics, Heidegger determines aesthetics as *episteme aisthetike*, that is, as knowledge of human behavior with respect to *aisthesis*, sensations and feelings, which is in its lawfulness determined by natural or artistic beauty¹⁸. This neutral determination of aesthetics has no negative connotation for Heidegger. Only if aesthetics is understood in this wider, trans-epochal sense, can we say that it is as old as logic¹⁹ and that the philosophical meditation on the essence of art and the beautiful already begins as aesthetics²⁰. As long as art directly addresses us and presents the one essential way in which the truth happens for our historical human existence, we do not need aesthetics, art theory, and the literature of art. On the other hand, it was only when the great era of Greek poetry and fine arts approached its end that Aristotle was able to say something about Greek Art²¹. When does aesthetics start? Aesthetics as art theory arises at a moment when art stops speaking for itself. Aesthetics as well as ethics, physics, logic, and philosophy itself, arises at the moment when our own human self-understanding, which essentially determines our existence, has been put into question and lost its binding character. The problems of aesthetics as well as philosophical problems are the symptoms of the questionable inherent

self-understanding of the finitude human existence²². If Heidegger is dealing with philosophy at all, or contributes to philosophy, then his discussion of “The Origin of the Work of Art” should be understood as a contribution to aesthetics or as the foundation of aesthetics understood in a neutral sense with the corresponding principle of the discipline explicated in the analysis of *Dasein* and on the basis of the thinking of Event (*Ereignis*). However, the foundation of aesthetics in a wider, neutral and trans-epochal sense is based on overcoming the aesthetics in a narrow, modern sense.

Heidegger takes a negative, critical attitude towards aesthetics as a modern philosophical discipline. Modern aesthetics established in the 18th century rests on the foundations of modern philosophy. Although philosophy as a whole had a latent tendency to place human existence at the centre of philosophical enterprises, which is seen in terms such as *nous*, *psyche*, *logos*, modern philosophy has explicitly set up the beings that we ourselves are in the centre of philosophy²³. The motive of placing subjectivity in the centre of philosophy consists in the conviction that it is beings, which we ourselves are, to ourselves, that are privileged and remarkable in a cognitive sense. Heidegger, however, thinks that *Dasein*, a being that we ourselves, as beings (ontic) are, are not only close, but closest to us, but that in terms of conceptualization and systematization of the way how we are and what we are (ontological) are not only far, but the furthest from us²⁴. The *Dasein* is ontically closest to us, ontologically the furthest, but it is not foreign to us. On the other hand, although modern philosophy puts human existence at the centre of philosophical endeavours it fails to raise the question of the specific mode of existence of human beings²⁵. Modern philosophy should be freed from two misunderstandings²⁶ of the relationship between the human subject placed in the centre of philosophy and the object presented by the subject. The first misunderstanding of the subject-object relationship is the wrong objectification regarding the conviction that independently of each other there is a subject and an object, and the philosophical problem is an explanation of the way in which the relation between the subject and the object is subsequently established. Another misunderstanding of the subject-object relationship is the false subjectivation related to the belief that the subject is closed and encapsulated in the inner sphere of experience, and that the philosophical problem lies in the question how the subject leaves the sphere of immanence and accesses the object. The overcoming of modern aesthetics should be understood as abandoning the misunderstandings that are at the base of modern philosophy and, accordingly, abandoning the conception of aesthetic experience as a subjective experience. The overcoming of modern aesthetics in a narrow sense, whose elements we find in the “The Origin of the Work of Art” represents at the same time the foundation of aesthetics in a wider, neutral and trans-epochal sense. “The Origin of the Work of Art” goes beyond the misunderstanding of the subject-object dichotomy and in accordance with the human basic moods and emotions, and also in accordance with finite human freedom, provides definitions of art, the work of art, receptive and productive aesthetic experience and the category of the beauty.

II. Heidegger’s Aesthetics – Philosophy of Freedom, Moods and Emotions

Heidegger defines art as: the setting-itself-to-work of the truth of beings²⁷. This definition of art is essentially ambiguous because the truth also appears as a subject and as an object of the setting²⁸. However, this ambiguity arises from the inadequacy of the terms “subject” and “object”. Therefore, the true meaning of this definition rests on the overcoming of the subject-object dichotomy and is based on the structure of

events as a whole²⁹.

In order to understand the real meaning of Heidegger's definition of art as the setting-itself-to-work of the truth of beings, it is necessary to properly understand the term "beings". The first possibility is that the beings from the definition of art are understood as beings represented in the work of art. Such possibility is plausible for the representational arts.

Beings, for example, a pair of peasant shoes are represented in Van Gogh's painting. The reliability of the pair of peasant shoes enters into the work of art, i.e. Van Gogh's painting. The task of art does not consist in a more or less faithful reproduction of the beings or the reproduction of the general essence of those beings. Heidegger in the First Draft of the "The Origin of the Work of Art" quite clearly rejects the understanding of art as imitation either in Plato's or in Aristotle's variant³⁰.

Another possibility is that the beings from the definition of art are understood as an artwork itself.

This feature is relevant for both representational and non-representational arts. A being whose truth is placed in the work of art is exactly the work of art itself. This understanding seems at first glance self-referential and circular: the art is the setting-itself-to work (of art) the truth of the work of art. However, Heidegger's central aesthetic thought does not exclude this possibility³¹. On the example of Van Gogh's painting, this would mean that the produced work of art first clears the openness of the open into which it comes forth and through which we can understand what the paint is and in what way the painting itself. The Greek temple presents being which clears the openness of the open in which it appears and together with that reverence allows us to understand what and in what way the temple is itself.

The beings represented in the work of art and the work of art that represents the beings in their mutual relationship and their concreteness can be understood only if we were given to us the beings as a whole. Conversely, only if the being as a whole is essentially given to us, we can specifically understand both the work of art and the beings represented. For this reason, the third possibility is to perceive the beings from the definition of art as beings as a whole.

We have been given beings as a whole in the form of basic moods and emotions. Heidegger's inaugural lecture, "What is Metaphysics?"³², speaks of two moods – moods of boredom and anxiety, and about two emotions – emotions of joy (of love) and fear³³. The founding mode of mood reveals beings as a whole. We are given nothing through the anxiety and through boredom and joy we are given beings as a whole. Formally observed basic moods and emotions represent the medium in which we aesthetically produce and receive.

Heidegger's definitions of productive and receptive aesthetic experience as creating and preserving the work of art should also be understood in the light of the overcoming of the subject-object relation³⁴. The quest in this context points to a receptive aesthetic act of preserving the work of art. The receptive aesthetic experience understood as preserving the work of art is not only knowledge of beings, but at the same time knowledge of what is one wants to do with beings. It is the knowing that is willing, and the willing that is knowing, both as ecstatic entrance into the unconcealment of beings, and at the same time it is resoluteness³⁵. And the resoluteness of perceiving is not "the decisive action of the subject"³⁶. However, human existence does not imply leaving the enclosed and encapsulated inner sphere in the direction of the pre-existing outer whole, but on the contrary, the essence of human existence consists in the constant standing out amid being as a whole. Both the preservation and creation of the work of art rest on the overcoming of the false subjectivation characteristic of modern

philosophy.

On the other hand, Heidegger's thinking of events that represents the thoughtful background of the "The Origin of the Work of Art" relies on several fundamental attunements of thinking: awe (*das Erschrecken*), restraint (*das Verhaltenheit*) as a sort of the presentiment (*die Ahnung*) and, deep awe/diffidence (*die Scheu*)³⁷. The basic moods/attunements have no common name, but their mutual relations are best understood in a particular case of truth³⁸. One such case of truth is the creation and preservation of the work of art. Creation and preservation are the carrying out of the restraint as the fundamental disposition³⁹.

Beauty is for Heidegger one way in which truth occurs as unconcealedness of beings in their being. The essential ground for the beauty is the primordial attunement which consists in joy and awe⁴⁰. The primordial mood in which the experience of beauty is founded represents the unity of joy and fear and can be understood as an aesthetic awe that is characteristic of a sublime, and not a beautiful one⁴¹.

The work of art is the setting up of a world and setting forth of the earth. The world and the earth are in dispute. With those two essential determinations of the work of art, a series of moods and emotions are associated, such as uncomplaining anxiety, trembling before giving birth, wordless joy, fear of death⁴². All these moods and emotions are experienced on the basis of Van Gogh's picture of a pair of peasant shoes. In other words, the work of art allows us to experience such moods and emotions and, on the basis of them, enables us to see the beings (a pair of shoes) in its being (reliability). These moods and emotions are not arbitrary subjective projections, but contrary to the product of a subjective projection, they point to the dimension of *Dasein* and event that bear the experience of art⁴³.

The relationship of world and earth in the work of art is characterized as battle between world and earth. This battle is not the destruction of these structural moments. The battle between world and earth signifies their inner dynamics and mutual elevation. This battle is founded in strife between (double) concealment and unconcealment in essence of truth as unconcealedness of beings in their being. To understand beings in their being in one way means, at the same time, that they are not understood in a different way.

The decision how to understand beings in their being is based on human freedom. The finality of human freedom implies that beings can be understood in their being in the final number of epoch-given ways of understanding the being. The leading idea of Heidegger's philosophy is to realize that being in its essence is finite, just as human freedom is finite⁴⁴. The terms "strife" and "battle" are expressions of the trouble in which there is a being itself that is in its essence finite. The insight into the inner ambivalence of the being as such enables us to understand the nature of the battle between the world and the earth and the strife between concealment and unconcealment in the essence of truth. The concept of the battle of earth and world in "The Origin of the Work of Art" should be understood only against the background of the primordial struggle/strife between concealment and unconcealment in the truth as the unconcealedness of beings. Furthermore, the concept of strife (*Streit*) is linked at a deeper level with the determination of finite human freedom and basic human moods. Only on the basis of finite human freedom can we understand beings in their being and beings as a whole as the background of this understanding.

The finite human freedom is the *ratio essendi* of truth as unconcealedness of beings and at the same time *ratio essendi* of the five ways in which the truth is happening. The first way in which truth establishes itself in the middle of beings is art, "a second way

is the act that founds a political state; a third is religious experience; a fourth essential sacrifice; a fifth thinking that confronts being and what renders it so profoundly questionable⁴⁵. These five essential ways in which the truth is happening are relatively autonomous and independent and tell us that for Heidegger art is not the unique and exclusive way in which the truth happens as unconcealedness of the beings in their being.

III. CONCLUSION

Heidegger's aesthetics contains a systematized and conceptualized essential definition of art, the work of art, receptive and productive aesthetic experience and category of beauty. These definitions are, on the one hand, a result of the overcoming of modern aesthetics and the subject-object relation, and on the other hand they are reached with a view of the thinking of the events and based on the theory of basic moods and emotions and finite human freedom. Beings as a whole from the definition of art are given to us as basic human moods. The earth as determination of the work of art refers to different moods and emotions. The essential ground for the beauty is the primordial attunement which consists in joy and awe. And finally, the essential strife into truth as unconcealedness of beings is linked at a deeper level with the determination of finite human freedom. These definitions are not contradictory with the foundation of aesthetics as a neutrally perceived philosophical discipline. Heidegger's aesthetic definitions based on the theory of basic moods/attunements and emotions and the theory of the finite human freedom can be invoked as a contribution to the foundations of aesthetics as knowledge of human behavior with respect to sensations and feelings, which is in its lawfulness determined by natural or artistic beauty.

Heidegger's aesthetics from the "The Origin of the Work of Art" is not merely the overcoming of aesthetics but also the founding of aesthetics; "The Origin of the Work of Art" is not (only) an attempt to articulate an alternative to the aesthetic approach to art, but at the same time an attempt to articulate the *Dasein* and *Ereignis* based aesthetics; it is not simply against aesthetics, and for art, for aesthetics capable to systematizing and conceptualizing art which determines our historical existence. Heidegger's aesthetics cannot be considered merely as a heteronomous aesthetics of the work of art and truth, but rather as a relatively autonomous aesthetics, which equally conceptually articulates not only the work of art, but also the productive and receptive experience of art founded in the finite human freedom. Finally, Heidegger, in accordance with the main aesthetic tradition, speaks of the basic moods, attunements and emotions that permeate the experience of the beautiful, but his intentions are close to the theory of mixed emotions in which experience of the sublime is described as a combination of pleasure and fear. This research leads us to the insight that Heidegger's aesthetics of truth understood as the philosophy of freedom, basic moods and emotions, according to their inner intentions is closer to the tradition of the aesthetics of sublime than the aesthetics of the beautiful.

PAESAGGIO AND ECOLOGICAL AESTHETICS IN CHINA AND ITALY

Abstract | China and Italy have different views on the relationship between *paesaggio* (landscape) and ecological aesthetics since the 1960s. Many scholars in China believe that *paesaggio* and ecological aesthetics are antithetic and need some basis for integration and communication; while Italian scholars believe that they are naturally consistent, and the former is the key to latter. How is this theoretical contrast generated and how does it perform? This paper attempts to compare and analyze from four aspects, in order to provide mutual understanding and complement each other.

First, the similarities and differences of the theoretical status quo. What is common is that both countries place great importance to the protection of ecology and the theoretical support in aesthetics, and the *paesaggio* is included in aesthetic concern. However, landscape theory is in a different situation. In Italy, it is developing better. The emphasis of landscape in the *European Landscape Convention* adopted in 2000, for example, is a strong support for ecological aesthetics; in China, scholars pay insufficient attention to landscape, and the relationship between landscape and ecological aesthetics lacks theoretical connection.

Second, a different theoretical guiding ideology. In China, the most important idea of this anti-thesis is the aesthetics guided by Marxism. The aesthetics of Kant and Hegel and others have a significant influence in Italy.

Third, differences in terms of understanding of the beauty of nature, a key to landscape and ecological aesthetics. In China, despite various dimensions, the concept of it is not clear enough. The understanding of landscape aesthetics is mostly from the concept of “humanized nature” in classical hermeneutics of Marxism and the representatives include Zhu Guangqian, Li Zehou, Cai Yi and others. In Italy, landscape has always been an important part of ecological aesthetics. It follows the theories of Kant and Hegel etc.; the difference lies in how the relationship between landscape and nature is viewed. The representatives include Paolo D’Angelo, Rosario Assunto, Raffaello Milani, Luisa Bonesio, etc.

Fourth, the possible reasons for these differences will be explored in Italian and Chinese context since the 1960s. The particular environment since the founding of the People’s Republic of China revolves around the classical hermeneutics of Marxism while Italy follows European, especially the German roads and its own humanities traditions.

Index terms | *Paesaggio; ecological aesthetics; Italy; China.*

PAESAGGIO AND ECOLOGICAL AESTHETICS IN CHINA AND ITALY

Landscape has been discussed within several disciplines, such as geography, ecology, and aesthetics, but do not seem to fit into any of these. Rather, it is in the intersection. And it is often expressed as a point of contact between the natural and humanities disciplines, thereby increasing the difficulty of dialogue between objective methods and inevitable subjective assessments.

Regardless of the relationship between landscape and ecological aesthetics, discussion of the landscape is a key part of Italian ecological aesthetics. In Italy, it is in the 16th century that the word *paesaggio* refers to *pittore di paesi*—as evident from Pietro Aretino's *il modo di pensare il paesaggio*, and the “neologismo paesaggio” appeared in the middle of the 16th century. And in the 18th century the *paesaggio* it is defined as prospect of a country. In the 1970s, Allen Carlson regards landscape as environment, claiming that it is necessary to use a way to look at nature different from the landscape approach, ensuring that nature is experienced as an environment and the natural environment, which is possible by following the environmental paradigm. In other words, Carlson excludes the concept of landscape, because it is not beyond the environment, which is not only natural, but human made. Carlson's idea was very influential in Italy at that time. There were few works about *paesaggio*. And those on the aesthetic experience in Nature were mostly entitled with *estetica ecologica*. *Paesaggio* is a part of nature, rather than artifacts that are opposite to nature. And it is one subject of ecological aesthetics. In 1979 it was published a book *Paesaggio, La lunga guerra per l'ambiente* by Elena Croce, to defend the *paesaggio*. Today We are convinced that the landscape is something different from the environment, and that confusing or overlapping the two concepts can only generate confusion. The landscape has always to do with the perception of a subject, it cannot be constituted that in the relationship between a subject which perceives, hears and imagines and an object; The environment is a physical-biological concept.

In the opinion of Rosario Assunto, the concept of *paesaggio* in Italy interweaves nature and history, which is a compelling theoretical focus. In his *Paesaggio e l'estetica*, he seeks to demonstrate “all the landscape we know as natural is a landscape shaped by man: it is nature to which culture has impressed its own forms, without destroying it as nature.” (tutto il paesaggio da noi conosciuto come naturale è un paesaggio plasmato dall'uomo: è natura a cui la cultura ha impresso le proprie forme, senza però distruggerla in quanto natura.) The space of *paesaggio* is a living space, not just a geometric space, and it has its temporality. That is, in the landscape, two distinct temporal sequences are combined and merged, namely the natural world and the human historical world. The historical dimension of the hypothesis not only combines it with the past, but the accumulation of traces and testimony makes each landscape the most important, and also turns it into the future, linking it to the utopian dimension.

Paolo D'Angelo believes that if modernity was marked by the predominance of the artificial over the natural, by temporality understood as progress, by the rejection of the landscape dimension, it is the era that came later - call it, if you wish, postmodern - to rehabilitate the landscape, developing a new vision of space and rejecting the opposition between artificial and nature as simplistic.

Luisa Bonesio's various works, such as *Paesaggio, identità e comunità tra locale e globale* and *La terra invisibile*, contain her understanding of *paesaggio*. She rethought the traditional, aesthetic-pictorial concept of the landscape, namely the reduction of the landscape itself to an image, its flattening on the work of art, and the consequent

severing of the links between the landscape and real life, and the conditions of the populations that live in it. Landscape as a natural art form, as a projection of object emotions, as a process of emotions, geographical philosophy perspectives and landscapes as cultural expressions, historical products, cross-zone and residential community perspectives. The principles elaborated by Bonesio are very similar to those of *Convenzione Europea del Paesaggio*, established in Florence in 2000. The concept of landscape extends to all the land, and is considered an important part of mass life. *Aver cura del paesaggio* does not mean to make it immortal or unchanged, but to establish a social connection between the public and the land, in which people can find a sense of identity in the place, which is also the real guarantee of harmonious landscape being able to survive.

In China, landscape theory and natural humanization have been inseparable for a long time. In contemporary aesthetics, ecological aesthetics emerged as the antithesis of this theory. The ecological nature of anti-natural humanization is ontological. It builds a natural life entity above human nature and objects' nature, and then integrates human and nature into the system of life.

The traditional theory of natural humanization ends in landscape aesthetics, which also means that ecological aesthetics reactivates its own tradition and opens up new theoretical paths. Ecological aesthetics emphasizes the nature of natural life and its organic integrity and opposes anthropocentrism and natural humanization. However, in terms of its ultimate goal of human aesthetic survival, its containment of the subject is actually the salvation of the subject. That is to say, on the one hand, ecological aesthetics is anti-natural humanization on the conceptual level. On the other hand, it does not mean returning people to barbarism and ignorance, but to the ultimate goal of human aesthetic survival. The anti-natural humanization on the ontological level and the naturalization of the teleological level still need to be unified by theory.

The underlying logic is that the humanization of nature is the foundation of landscape aesthetics, anthropocentrism is based on nature, but ecological aesthetics is anti-anthropocentrism, so it is the opposite of landscape aesthetics.

In Italy, the landscape may be part of nature, and the aesthetics of the landscape is an important theoretical object of ecological aesthetics. Moreover, the problem of man-made wilderness mentioned in the theoretical circle is also part of the landscape, but the theoretical circles of China have not yet touched.

What the common to both the Chinese and Italian theoretical circles is that, both countries give importance to the protection of ecology and the theoretical support of aesthetics, so the landscape is included in the scope of theoretical speculation. But landscape theory has different treatments in China and Italy, resulting in somewhat weaker result in the former. The theoretical community pays insufficient attention to landscape aesthetics and believes that the relationship between landscape aesthetics and ecological aesthetics lacks theoretical support.

In Italy, the first intervention on the land part was protected by the pine forest of Ravenna in 1905. Since then, various laws have been in place to protect the beauty of nature, and then there have been rapid protection measures linked to history, literature and art. In 1922, a law commissioned by Benedetto Croce, who initiated the Parliamentary process, explicitly protected immovable property of considerable public interest not only because of their "natural beauty", but also because of their "particular relationship with civil and literary history. This direction of extension of

the concept of landscape to the territorial whole, which overcomes the vedutista and highly visible connotation of a certain aesthetic reductionism towards a concept of landscape as a place and irrepressible expression of cultural identity, is clearly expressed in the European Landscape Convention (2000) of the *Convenzione Europea del Paesaggio* (2000) del Consiglio d'Europa, which, by distinguishing three categories of landscape, implements the landscape from a purely binding conception, normally adopted for protection of "exceptional" landscapes, but barely applicable to others, to a design, improvement or management of all places, including those of everyday life or production. The *Codice dei beni culturali del paesaggio*, launched by Minister Urbani in 2004, was amended in 2006 and 2008. In this text, which collects and harmonizes the previous provisions, which equates, from the cultural and legal point of view, defense of the cultural patrimony and defense of the landscape, giving in this implementation to the constitutional dictate, the landscape is explicitly defined "the expressive territory of identity."

In China, the development of landscape aesthetics theory is relatively slow, and the theoretical circles do not pay enough attention to landscape aesthetics. They also believe that there is no theoretical support between landscape aesthetics and ecological aesthetics. This creates an interesting phenomenon. On the one hand, the standards of landscape aesthetics have been repeatedly mentioned from the perspective of pragmatism. When talking about ecological protection, natural landscapes and artificial landscapes are repeatedly emphasized. The anthropocentrism of ecological aesthetics is far from practical. Correspondingly, the theory similar to the garden has not been discussed from the aesthetic theory, and there is still only a practical standard of aesthetics.

But the undeniable fact is that China's emphasis on ecological and landscape issues is growing. Since the 18th CPC National Congress, through comprehensive deepening of reform, speeding up the construction of top-level design and institutional system of ecological civilization, opinions on accelerating the construction of ecological civilization and the overall plan for the reform of the ecological civilization system have been promulgated. More than 40 reform programs involving the construction of ecological civilization have been formulated, from the overall objectives, basic concepts, key tasks, system guarantee, etc., to carry on the comprehensive system deployment arrangement to building an ecological civilization.

On October 18, 2017, Chairman Xi Jinping pointed out in the 19th CPC National Congress report that, China should adhere to the harmonious symbiosis between man and nature. It is necessary to establish and practice the concept of "lucid waters and lush mountains are invaluable assets".

From May 18 to 19, 2018, the National Conference on Ecological Environment Protection was held in Beijing. Xi Jinping delivered a speech, holding that building an ecological civilization is a fundamental plan related to sustainable development of the Chinese nation. It is emphasized that to learn Marx, we must learn and practice the Marxist thought about the relationship between man and nature. And China should put forward six principles: first, adhere to the harmonious symbiosis between man and nature. Man and nature are the communities of life. Second, lucid waters and lush mountains are invaluable assets. The relationship between economic development and environmental protection is emphasized. Third, a good ecological environment is the most inclusive welfare of people's livelihood. Fourth is that mountains, water, forest, field, lake and grass are the community of life. Ecology is a unified natural

system, an interdependent, closely linked organic chain. The fifth point is to protect the ecological environment with the strictest system and rules of law. Sixth is to seek common construction of a global ecological civilization. The emphasis on ecological issues at the national level has a major role in promoting China's ecological theory, including ecological theory. "Lucid waters and lush mountains are invaluable assets." mentioned therein is closely linked to the landscape theory.

The beauty of nature is a key to landscape and ecological aesthetics. In China, the concept of the beauty of nature is unclear, and various dimensions coexist. The understanding of landscape aesthetics from the concept of "humanized nature" in classical hermeneutics of Marxism. Theorists try to explore the openness of the theory within the framework of Marxist aesthetics and the "humanized nature", such as Zhu Guangqian and Li Zehou. In Italy, landscape aesthetics has always been an important part of ecological aesthetics. It follows the further deepening of the theory of Kant, Hegel and others. The differences exist in how the relationship between landscape and nature is viewed in the development process.

In Italy, the love of nature stems from the love of the beauty of nature (*bellezza della natura*), interweaving of history and nature, the interweaving of culture and nature. Until the protection of natural law, our *paesaggio* is *paesaggio culturale*, a *paesaggio* that interweaves historical memory, literature and art.

Paolo D'Angelo argues that the landscape serves as a place for mediation between life and aesthetics. It is a *natura che sembra* and has a certain connection with *arte che sembra natura*: this is an ideal place, where the judgment of life from the judgment of thought, is also the judgment in life. If our research can continue in the garden and its purpose, it becomes a landscape garden *giardino paesaggio* (*natura che sembra arte*, judging as experience, speculative life) and works of art: like the art of nature, judging as experience, thinking and living. The aesthetic reality of the garden, in which integration and solidarity complements art and nature, vitality and rational life and judgment are therefore paradigms, and people can place themselves anywhere to consider it.

Li Zehou once said, "Where is the root of beauty? This source (or reason) is the natural humanization that I advocate." Specific to natural beauty, although understandings of this concept are various, "the essence of natural beauty lies in the humanization of nature" is common judgment of the aesthetics in the forty years after the founding of New China. Based on the foundation status of "natural humanization" on the contemporary Chinese natural beauty theory, it is necessary to sort out the history of the formation of this concept. It comes from Marx's *1844 Economics and Philosophy Manuscript*. However, it is worth noting that Marx only mentioned "humanization" directly in the manuscript, and it is "humanized nature". "human's feelings and humanity of feeling are only produced because of the existence of its objects, because of the natural world of humanization." In this case, Cai Yi raised the question and said, "as for the so-called humanization in nature and the objectification of human, we have checked, and did not find a clear source at all." In other words, "natural humanization" is not a concept directly used by Marx in the manuscript, but an extension or creation from it.

However, the "natural humanization" is regarded by Li Zehou as the root of beauty and the essence of natural beauty. It was first seen in Cao Jingyuan's article "The Sense of beauty and Beauty--Critique of Zhu Guangqian's Aesthetic Thoughts" published in *Wen Yi Bao* in 1956. He wrote, "because people have adopted a positive attitude

towards the real world, and people have gradually realized that humanization and objectification are caused by people's effects on nature in labor time. The beauty of things develops the aesthetic ability of human beings." And this is not the creation by Cao Jingyuan, indeed, it comes from the Soviet Union. As a representative of the social practice school of the Soviet aesthetics at that time, Viktor Vanslov directly used the term "humanization theory" in Marx's *Manuscript* in the article "Is there an objective beauty?" Then the aesthetic term "humanization of nature" came into being.

At that time, the importance attached by Chinese aesthetics to the practical aesthetics in Marx's *Manuscript* was largely the transplantation or borrowing of relevant research of the Soviet aesthetics. In "How does Marx talk about beauty?" wrote by Cai Yi in December 1976, it goes directly to the Soviet aesthetics in the early 1950s, especially Vanslov. He said: "The humanization of nature and the objectification of human beings are the basis for Vanslov to make his aesthetic theory a good Marxist-Leninist aesthetics. but no complete sentence about it was found in Marx's *Manuscript*."

It can be seen from the above a process of the term transforming from a description of natural existence to a description of natural beauty.

Later, Hong Yiran and Li Zehou published respectively "Rediscussion: what is beauty and where is beauty?" and "The beauty of landscapes, flowers and birds" in the *New Construction* and *People's Daily* in July 1959. Both of them used the term "natural humanization". In the following three years, "natural humanization" has gradually become a public concept widely used in the domestic aesthetics. As Li Zehou said, in the recent articles about natural beauty and about landscape poetry and painting, the concept of "natural humanization" can be almost everywhere.

Taking the natural humanization as the basic principle, Li Zehou's judgment on natural beauty is closed to the original intention of the *Manuscript*. Zhu Guangqian has used his Marxist ideology theory to reconstruct his traditional aesthetics based on intuition. His understanding of natural beauty also has its reasons for the fit of the *Manuscript*. The only exception to this is Cai Yi. Because he has been adhering to the theory of mechanical materialism since the 1940s, his aesthetic thought is not compatible with the practical viewpoint and the social nature of the beauty in the *Manuscript*.

Li Zehou believes that the essence of natural beauty lies in "natural humanization", and "humanization" is the re-construction of human beings to nature. However, the nature that has been transformed by human practice, that is, the landscape, will no longer be nature, but become a social being. The so-called natural beauty is also incorporated into the scope of social beauty in a superimposed manner. In order to solve this contradiction, in the 1980s, Li Zehou made a narrow and broad distinction of the humanization of nature: a narrow natural humanization is reconstructing natural things through labor and technology. The humanization of nature is a philosophical concept. As for the broad natural humanization, the sky, the sea, the desert, the wild mountain and forest, though not been constructed by human, there are still the natural humanization. Because the humanization of nature refers to the historical scale of human conquest of nature, in which the relationship between man and nature has undergone a fundamental change. This generalized natural humanization theory, in addition to the specific labor reform of nature, adds human's feelings, perceptions, emotions, etc. But the problem is, he implants a historical dimension for the creation of natural beauty and tells how nature becomes an aesthetic object with the long process of human practice, rather than the aesthetic experience that people have on natural objects. In this way, the broader is Li Zehou's natural humanization theory, the farther away from the aesthetic experience.

Zhu Guangqian and Li Zehou are consistent in the premise of natural humanization as the natural generation of beauty. However, there is fundamental disagreement between the two on the issue of what makes out the natural humanization and make the objects beauty. Li Zehou believes that the essence of man is practice. The so-called humanization means that nature becomes a social existence through human construction, and thus becomes beauty. Zhu Guangqian also acknowledged the decisive role of labor practice in promoting the construction of natural objects into social objects, but emphasized that beauty as the uniqueness of ideology is about to be regarded as a product of spiritual practice or spiritual production.

Zhu Guangqian believes that, like Marx said, the vision, hearing, smell, taste, touch, thinking, observation, emotion, will, activity, love, in short, all the organs of his individual, in addition to love and some social organs, is the overall essence of the whole person. Therefore, the so-called objectification of human essential power or natural humanization completely breaks away from the narrow definition of labor practice.

The sensory, emotional, ethical, practical, and linguistic activities on nature in a nutshell, is the humanization of nature. It generates therefore the humanized nature. From the aesthetic point of view, humanized nature as the object of human consciousness, emotion, will, practice, language reconstruction, is not the nature itself, but a natural landscape for human. Therefore, the humanization of nature is the landscape of nature. The emergence of landscape aesthetics in the contemporary era is a logical progression of the traditional theory of natural humanization.

First of all, the premise of the establishment of landscape aesthetics is the separation of the appearance of the object and the object itself. The so-called landscape aesthetics is the natural form aesthetics. Second, natural humanization is the motivation for the separation of the form of matter from itself. Third, the world of phenomena in which human subject experience is reconstructed is the humanized natural world. Since this humanized nature is alienated from the object itself, the presentation of nature is superficial. In terms of the fact that the landscape is also focused on the form of nature and the characteristics of pleasure, the so-called humanized nature must be the nature of landscape, and the natural humanization must be the natural landscape. This natural humanization can be said to be the root of landscape theory in China. It is on the basis of natural humanization that the so-called natural beauty has become the natural beauty of humanization, and the landscape with strong humanized color has become a part of nature.

The difference between Chinese and Italian landscape theory and ecological aesthetics has a great relationship with the theoretical environment since the 1950s. The theoretical environment since the founding of the People's Republic of China revolves around the classical hermeneutics of Marxism. Italy seems follow Europe, especially the German way and its long history and humanities traditions.

Landscape aesthetics is a direct derivative of Western aesthetics since Kant. After Kant, the aesthetics of the landscape basically dominated the tradition of Western natural beauty appreciation. For example, Hegel's positioning of aesthetics as an art philosophy, which means that nature is largely excluded from aesthetics because of its lack of spirituality. On the other hand, it means that nature is only qualified to be an aesthetic object when it is presented by art. As an artistic reflection of nature, the natural aesthetic value must be its picturesqueness, and natural appreciation must

also be a kind of picturesque appreciation.

When it comes to Marx, the perceptual reconstruction of nature and the reflection of art give way to the transformation of social labor practice. Generally speaking, people's transformation of nature is utilitarian, but according to Marx's view that people are also built according to the laws of the beauty, its form is still a re-sculpt of society by the laws of aesthetics and arts. This aesthetic style makes life an art, and society becomes an artistic landscape.

The same problem is present in two different directions in China and Italy. In terms of landscape and ecological aesthetics, China has been conducting active and effective explorations. It is hoped that the theoretical comparison between China and Italy will provide useful mutual understanding and complement each other.

ARTWORK: A MONAD OR A POSSIBLE WORLD? THE DISMANTLED LEIBNIZIANISM OF CONTEMPORARY AESTHETICS

Abstract | Taking cue from the main topic of the conference, the paper traces the concept of possible worlds back to Leibniz and explores how the concept got radically transformed by contemporary philosophers such as Deleuze, Agamben and Badiou. While in Leibniz, the multiplicity of worlds exists only in the mind of the creator and remains an unrealised possibility, these philosophers in their different ways claim that the multiplicity of worlds invades our contemporary reality, thereby making it radically „impossible“ with itself. Contemporary conceptualisations of the notion of world, I argue, are marked by a strong aesthetic or even fictional element, as is most clearly visible in Rancière’s recent claim that fiction is not an invention of an imaginary world but a construction that captures sensible experiences, subjects and events into the framework of a common world. While many aestheticians have explained artworks or works of literature as Leibnizian possible worlds (starting with Leibniz himself, who uses novels to illustrate his idea of other possible worlds), some currents of contemporary philosophy make a more radical claim that the coexistence of incompatible fictional frameworks („worlds“) is actually what constitutes our reality itself. On the other hand, a tradition that stems from Benjamin via Adorno to Lyotard, identifies artworks with another Leibnizian concept – that of the monad. Adorno describes the modern artwork as a windowless monad, an alienated object no longer representing the world, but nevertheless reflecting the antagonisms that tear through it. In Leibniz, windowless monads are building blocks of the world, which – devoid of any relation to one another – reflect the theological pre-established harmony of the whole. In Adorno, however, the artwork as monad stands at a distance from the world, reflecting its socially determined disharmony. Yet, a trace of harmony nevertheless remains in the promise of reconciliation, which the artwork-monad can keep safe due to its radical separation from the world. The Leibnizian philosophical framework of worlds as possible compositions of monads thus gets dismantled: worlds multiply and rearrange monads in „impossible“ ways while alienated monadic objects appear as „out of this world“, promising the possibility of different worlds. In my paper, I propose the concept of the „monadless window“ that attempts to re-compose the Leibnizian framework in an inverted way: as „monadless windows“, artworks can be seen as seemingly worldless objects that nevertheless have the capacity of reframing the coordinates of sensible experience – of what is called „a world“.

INTRODUCTION

How come a notion originating in 17th century metaphysics can find its place in the title of a major aesthetics congress deep into the 21st century? The notion of “possible worlds”, most famously elaborated by Leibniz, has indeed had its place in contemporary aesthetics, mostly due to it being used – via its modern-day reconceptualisation within modal logic and analytic philosophy – as a conceptual tool for explaining the construction of fictional worlds in literature and other forms of narrative art. Yet it seems that the fictionality and multiplicity of possible worlds has now affected even the way we think about the real world in its actuality. In what follows, I will discuss this development through the transformation in conceptualising the notion of world that occurred in contemporary continental philosophy as both a return to and a reversal of Leibniz. If in Leibniz, the multiplicity of worlds was confined to the sphere of potentiality, some contemporary philosophers – especially Deleuze and Badiou – have claimed that the multiplicity of worlds has indeed become actual. It thus seems that what we call “the world” is no longer a reference to the ultimate totality and/or objectivity of what exists, but a reference to the multiple singular ways our reality is framed, which indeed makes “the world” more of an aesthetic than an ontological category or, better still, inscribes an aesthetic element in ontology itself.

Possible worlds are not, however, the only Leibnizian concept that reappeared in late 20th-century aesthetics. In *Aesthetic Theory*, Adorno used Leibniz’s monad as the preferred conceptual metaphor to describe the modern artwork. For Leibniz, monads are simple substances that constitute the world in a peculiar way: being “windowless”, they have no relation to each other, but are nevertheless in tune due to the divine harmony that runs through them all. In a similar way, the modern artwork is freed from any obligation to represent or communicate with the world, yet within it, a truth about the world is inscribed – windowless isolation from the world being the very condition of the artwork’s capacity to convey the truth. Nevertheless, Adorno’s use transforms the concept of monad: the artwork as monad is not simply a part of the world, but an object alienated from it; an object that no longer reflects the world’s divine harmony, but rather its socially determined disharmony. Although without any reference to Leibniz, both, the fictional character of the world and the fragmentary nature of the artistic object that can nevertheless be identified with a whole, can also be found in Rancière’s theorisation of what he calls the distribution of the sensible.

With proliferating worlds on the one hand and alienated monadic objects on the other we are presented with a fragmented, dismantled Leibnizianism. By exploring its ontological and aesthetical intricacies and implications, this paper aims to present it as the unsteady, disharmonic metaphysics of our time.

FROM FICTION AS WORLD TO WORLD AS FICTION

Leibniz himself discusses his conception of possibility in relation to works of fiction on at least two occasions, citing d’Urfé’s *L’Astrée* and Barclay’s *Argenis*.¹ The novels’ characters and plots are neither actual nor “compossible” with the real world, but they are clearly and distinctly imaginable and imply no contradiction in themselves, which characterises them as possible – within another possible world. The idea that imaginary persons, objects or events can be considered as elements of a fictional world, constructed according to principles that can be reconstructed and analysed, was taken up in 1970s literary theory with authors such as Eco, Pavel and Doležel. The concept helped explain the narrative structure of fiction, the autonomy of the world

it constructs but also to rethink its referential relation to reality.² The question I want to address in the following goes in another direction: what does the Leibnizian idea of the multiplicity of worlds tell us about “the world” as a philosophical notion? How do the multiple ways of world-making affect the way we understand and experience the actual world?

From totality to singularity

A reversal of Leibniz is implied here: the multiplicity of worlds no longer being merely possible but becoming actual. Yet the very emphasis on the multiplicity of worlds is indebted to Leibniz and the often overlooked revolution in conceptualising the notion of world he brought forward. The destiny of the notion of world in modern thought is most often linked with the problematisation of totality associated with the scientific revolution and critical philosophy. As Koyré points out, modern science made invalid any reference to the world as a closed and ordered whole.³ For Kant, the world as “the sum total of all appearances” is an illusion of pure reason.⁴ With a return to Leibniz, an alternative genealogy of the modern notion of world can be reconstructed, one that avoids the pitfalls of totality by rethinking the notion of world in terms of singularity. *Monadology* discusses an infinity of possible worlds existing in God’s mind, each one a unique composition of the infinite multiplicity of simple substances, i.e. monads. In *Theodicy*, possible worlds are presented as an infinite bifurcation of alternative courses of events. The focus thus shifts from *the* world to *a* world: from totality to the singular ways in which a world can be constructed.

The singularity of worlds also provides an alternative to another prominent line of discussion on the notion of world that equates it with an authentic frame of experience. The radical transcendentalism of the multiple singular worlds seems incompatible with conceptualising the world as a general ontological or phenomenological structure of experience, as can be found from Husserl’s lifeworld and Heidegger’s being-in-the-world onwards. Such accounts tend to diagnose modernity not with a proliferation of worlds but with the crisis of experience or even the loss of the world itself.⁵ Even Deleuze claims that the link between humanity and the world has been broken and reflects on how the belief in the world we live in can be restored.⁶ But if there is a multiplicity of worlds, which world exactly should we reconnect to?

The proliferation of worlds

This problem once again leads us back to Leibniz and the ultimate goal of his philosophical apparatus of possible worlds: God’s choice of the best possible one. In modernity, however, God’s choice is no longer exclusive. For Deleuze, Leibniz’s baroque system was “the ultimate attempt to reconstitute a classical reason by dividing divergences into as many worlds as possible, and by making from impossibilities as many possible borders between worlds.”⁷ If there is a belief in the world to be restored, it has to take into account the post-Leibnizian, neo-baroque proliferation of worlds: “For nothing prevents us from affirming that impossibles belong to the same world, that impossible worlds belong to the same universe”.⁸ The divergences and bifurcations are no longer separated into different possible worlds but erupt as actualities that intersect as a multiplicity of impossible worlds coexisting within the same reality. Yet, actuality aside, the references Deleuze uses to describe this chaotic universe are to a large extent derived from art and especially literature: “It is a ‘chaosmos’ of the type found in Joyce, but also in Maurice Leblanc, Borges, or Gombrowicz.”⁹ The fictional element of “the chaosmos” does not, however, entail a reduction of the multiplicity of

worlds to the imaginary. This time, it is the structure of fiction that is projected back on the notion of world as such, not the other way around.

Mathematics, especially Riemann and differential geometry, serves Deleuze as the other major field of reference for discussing the divergence of worlds. This brings us close to Badiou – the other major proponent of the actual multiplicity of worlds in contemporary French philosophy – who follows up on his set-theoretical ontology from *Being and Event* with an “objective phenomenology” in which being appears according to the principles of logic presented through a more geometrical and topological type of mathematics that reveals an order “beneath the qualitative disorder of worlds”.¹⁰ Yet, as I will claim, the formal rigour Badiou constructs in his disdain for any kind of linguistic turn does not absolve his theory of worlds from the fictional element.

Like Deleuze before him, Badiou returns to the Leibnizian “orientation” in thinking the notion of world while expressing regret that Leibniz surrendered “actual infinity” to “the power of the One”.¹¹ For Badiou, human beings are capable of inhabiting a “virtually unlimited number of worlds”, intensifying the general principle according to which anything can appear simultaneously in several worlds: “Not only is there a plurality of worlds, but the same multiple—the ‘same’ ontologically—in general co-belongs to different worlds.”¹² Badiou set up the project of *Logics of Worlds* to show how the chaotic multiplicity found on the ontological level comes to form the stability of worlds;¹³ yet despite the exact logical framework, the multiplicity of worlds seems just as chaotic.¹⁴ The examples Badiou gives of “worlds” range from the battle of Gaugamela to a country house in the autumn evening. Even if the mathematics of constructing a world is rigid and clear, the framing of a certain piece of reality as a world seems completely arbitrary, dependent on the parameters of description: just like the worlds of fiction.¹⁵

MONADIC OBJECTS

Aesthetic theory as monadology

Adorno uses the concept of the windowless monad in *Aesthetic Theory* to describe a dialectics of art’s autonomy and heteronomy, making the heteronomy an immanent moment of art’s autonomy: “The monadological constitution of artworks in themselves points beyond itself.”¹⁶ On the one hand, Adorno argues that the merely immanent analysis of artworks is not sufficient, as even its autonomous structure is a result of oppressive social domination. On the other hand, tearing down the ivory tower of art, reducing it to *fait social*, would do no service either to the interpretation of art or to the political struggle against domination. What the concept of monad helps aesthetics to understand is that the social does not enter art as content or commitment, but rather as form itself: “The unsolved antagonisms of reality return in artworks as immanent problems of form.”¹⁷ As for the political struggle, the appearance of autonomy should be welcomed, since without such appearances, “there would be nothing external to reality’s spell.”¹⁸ Aesthetic distance thus provides a model for political refusal. The concept of monad allows Adorno to understand art in its immanence and autonomy, but at the same time to doubly politicise its “windowless” separation from reality, first as immanently reproducing the antagonisms that constitute social reality and, second, as the promise that another, reconciled society is possible.

From monads to windows

Adorno draws on the specific structure Leibniz gives to the monad: its windowless isolation from other parts and its ability to reflect the harmonic principle that arranges the self-contained parts into a whole.¹⁹ Yet at the same time, he radicalises the isolation of the monad to the point where it is no longer simply a part of the whole but an alien object that reflects the world's disharmony, displacing the harmony to the status of a messianic promise.

Just like the proliferation of worlds, the monadic object confuses the harmonic Leibnizian relation between parts and the whole. It is in Rancière that we can find a conceptualisation of the modern aesthetic revolution that makes this confusion of the relation between parts and the whole one of its crucial traits. In *Aisthesis*, Rancière opens his portrayal of the aesthetic regime of art by discussing Winckelmann's appreciation of the Belvedere *Torso* precisely as a mutilated statue. While the statue can no longer be judged according to the traditional criteria of the organic, harmonic whole, its fragmentary character establishes new aesthetic principles of indeterminacy and indifference.²⁰ Precisely because it is mutilated, the torso is forced to "proliferate into a multiplicity of unknown bodies".²¹ Winckelmann's thoughts find their echo in Rilke's description of how Rodin's sculptures of hands accomplish the artistic task of creating "a world from the smallest part of a thing."²² These reflections on sculpture are characteristic of the aesthetic regime's "great displacement through which any part becomes a totality and any totality plays the role of a part."²³

The idea that the whole is present in any part taken in its fragmentary indeterminacy is also crucial for Rancière's political thought. On the one hand, the logic of inequality relies on the positioning of parts within the social whole, distributing proper roles and capacities, while the emancipatory logic stems from loose parts, directly identified with the whole.²⁴ Even though, for Rancière, there is no direct link between the aesthetics of politics and the politics of aesthetics, both "map a common world by determining forms of visibility of phenomena, forms of intelligibility of situations, modes of identification of events and of connection between events".²⁵ For Rancière, a world is thus defined by the distribution of the sensible, which essentially operates with fictions: "A fiction is not the invention of an imaginary world. Instead it is the construction of a framework within which subjects, things, situations can be perceived as coexisting in a common world."²⁶ The loose parts that "proliferate" into unknown wholes thus introduce a redistribution of the sensible, an alternative way of linkage that makes up a world.

To return to the fragmentary object of the aesthetic regime, it could be said that it is no longer – compared to Adorno's monad – a monument to the world's disharmony, but rather a detached part out of which a different construction of the whole can be extracted. Reframing the sensible fabric that constitutes the world, the monad indeed becomes a window.

CONCLUSION

From the exoticism of multiple words and alienated monads, we have thus arrived at the seemingly more traditional, Albertian metaphor of the artwork as a window on the world. But we have also come full circle, since the window now provides a frame for another singular world. Our exploration of the antinomies that arise from the decomposition of the Leibnizian system to monadic objects without a world and worlds without proper objectivity has led us to an opportunity for a recomposition. If we define monadic objects as parts that break away from their wholes only to imply a new way of constructing the whole on the basis of their indeterminacy, we can

proclaim them as the proper objects of the multiplicity of worlds, the points of their diversification and reframing: windows on the worlds.

¹³ “[H]ow can the essential unbinding of multiple-being give itself as a local binding and, in the end, as the stability of worlds? Why and how are there worlds rather than chaos?” *Ibid.*, 101.

¹⁴ The problem of pursuing the Deleuzian line of argument would be how to articulate the restoring of the link between man and world with the radical differentiation of worlds. Yet, while Deleuze’s demonstration of the differentiation of worlds already expresses a major point of his philosophical thinking, the problem is somewhat different in Badiou. For him, the point is not in the differentiation as such, but rather in demonstrating how a truth procedure can occur

following from an event as a radical perturbation of the transcendental order of the world. But if a world is so arbitrarily framed, how can a universal truth be defined by the crack in such a frame?

¹⁵ It would be an interesting thought experiment to see if Badiou's mathematical framework for world-construction could actually be reconstructed in narratological terms.

KANDINSKY'S AND DELEUZE'S IDEAS IN RETHINKING THE CONCEPTS OF ART

Abstract | In the end of his book “Point and Line to Plane” Wassily Kandinsky points to a concern of further philosophical reflection on his theory of art. Considering his proposition the inquiry raises the question, if Gilles Deleuze’s philosophy of art could be considered as a kind of such reflection. Deleuze continues Friedrich Nietzsche’s, Martin Heidegger’s, Maurice Merleau-Ponty’s tradition concerning an interpretation of a purpose of art as he ascribes to the creation of art a power of unfolding new possibilities of life and conceives the activity of the artist as a touch with the chaotic play of forces that constitute the basis of Being and an insertion of its reflection that is of a structural nature. Obviously Kandinsky’s ideas of the perceptible expression of an inner spiritual life have a different foundation, his theoretic thinking springs of his visual experience and pictorial practice. Their ontological points of view are even more dissimilar. On the other hand, analogies between the concepts used in Deleuzian and Kandinsky’s thought on the synesthetic nature of art might be noticed and juxtaposed. The sources of such comparative analysis are their works “Concerning the Spiritual in Art”, “Steps the Text by Artist”, “Point and Line to Plane” and “Difference and Repetition”, “The Fold Leibniz and the Baroque”, “Essays Critical and Clinical”, “What is Philosophy?” (written with Felix Guattari). The concepts of sensation, becoming, line and vector, house, structural composition, pulsation and vibration, rhythm, and expression of the play of forces in an artwork which is expanding into universe are interpreted as an attempt to explain our art-experiences and emotional effects of artworks that are perceived but are beyond the reach of words. An interpretation of such enigmatic character of the serious artworks is one of the main goals of the philosophy of art as a whole, therefore an analysis of Kandinsky’s and Deleuze’s theories, that are particularly influential in contemporary European tradition, is of importance.

Index terms | *Becoming; composition; forces; sensation; synesthetic experience; the spiritual vibration.*

In the end of his book "Point and Line to Plane" Wassily Kandinsky points to a concern of further philosophical reflection on his theory of art. Considering his proposition the inquiry raises the question, if Gilles Deleuze's philosophy of art could be considered as a kind of such reflection.

Obviously, their attitudes to art, knowledge and experiences differ. Gilles Deleuze (1925-1995) lived in Paris for most of his life, studied the history of philosophy and lectured on it, wrote about previous philosophical theories (by David Hume, Immanuel Kant, Friedrich Nietzsche, Henry Bergson) for a long time. His researches of various types of art started afterwards, the first book on literature was published in 1964, on painting in 1981, and on cinema in 1983. Wassily Kandinsky (1866-1944) graduated from Art school in his youth, but then studied law and economic and began his career as a professor of these subjects. His studies of art were continued after a long pause at 1896, and he began to emerge as a painter a few years later. At the same time he addressed himself to the theory of art. In 1934 he moved to Paris and created a lot of significant paintings which made up a prolific final period of his creativity. Kandinsky's major book "Concerning the Spiritual in Art" (*Über das Geistige in der Kunst: Insbesondere in der Malerei*, written in 1911) was translated to French and published in 1949, thus it is a high probability that Deleuze has got acquainted with it before he started his own research on artistic creation. On the other hand, we have noticed only one direct Deleuze's reference to Kandinsky's theoretical writings on art¹, though he touches upon his painting on several occasions. It is well known that Deleuze starts his philosophy of art from above, mostly continues Friedrich Nietzsche's, Martin Heidegger's, Maurice Merleau-Ponty's tradition concerning an interpretation of a purpose of art, and ascribes to the creation of art a power of unfolding new possibilities of human life.

Deleuze's and Kandinsky's ontological points of view are even more dissimilar. Kandinsky criticizes "still harsh tyranny of the materialistic philosophy"² and positivism which recognizes only "those things that can be weighed and measured"³. At the same time he notices learned man doubting usual answers, testing matter again and again, and looking for such matter which is not accessible to our minds. He acknowledges Nietzsche as an important figure who shook basic beliefs and contributed to the search of new ones. According to Kandinsky, "when religion, science and morality are shaken, the two last by the strong hand of Nietzsche, and when the outer supports threaten to fall, man turns his gaze from externals in on to himself. Literature, music and art are the first and most sensitive spheres in which this spiritual revolution makes itself felt"⁴. Our artist recognises his own intent on discovery and revealing the spiritual strivings of the soul.

Deleuze calls his own philosophy "transcendental empiricism", confesses that he "could not stand Descartes, the dualisms and the Cogito, or Hegel, the triad and the operation of the negation"⁵, argues for the notion of one substance, thinks everything that exists as existing on a horizontal plane of immanence, and highly recognizes theories "of becomings of all kinds, of coexistent multiplicities"⁶.

Characterizing Baroque curves, Deleuze treats Kandinsky as "a Cartesian for whom angles are fin, for whom the point is fin, set in motion by an exterior force"⁷. As we have already seen from the first quote, Deleuze is confident, that Kandinsky's concept of movement comes short of multiplicity. Moreover he notices a prevalence of binary

oppositions, such as “vertical-white-activity, horizontal-black-inertia”⁸ in Kandinsky’s art and admits Francis Bacon’s claim, that contrary to Kandinsky’s own definition of abstract painting by “tension”, “tension is what abstract painting lacks the most. By internalizing tension in the optical form, abstract painting neutralized it”⁹. So the question arises why Deleuze’s opinion of Kandinsky is so one-sided.

Actually, the two periods in Kandinsky’s creation are distinguished. According to art critic Loredana Parmesani, when in the beginning of twenties Kandinsky started working at Bauhaus, he “organised the emerging elements according to a more rational, codified language, one that was geometric and in harmony with the principles of the school; that is, a totally rational rigor was applied to a methodology of design that combined practicality and aesthetics”¹⁰. But earlier plenty of his abstract works were intense dynamic colourful compositions or improvisations, inspired by unconscious emotional states. And finally his compositions created during Paris period returned to more organic, free and even fabulous paintings evoking sensation of a nascence of a living universe.

On the other hand, Kandinsky’s theoretical effort is to create a “positive” science of abstract forms, to isolate their basic elements and then to organize the elements into groups and to unveil their meanings. He starts with a precise investigation of individual elements and proceeds with study of “the reciprocal effect of phenomena upon each other — in combinations”¹¹, and only then he thinks of general conclusions to be drawn from previous analysis. Kandinsky’s ideal of exploration is exactness, linear continuity and strict order. Surely such mode of scientific research is quite opposite to Deleuze’s strategies. However we may look into Kandinsky’s final end of this research, and we shall notice, that he conceives the analysis of the art elements as a formation of “a bridge to the inner pulsation of a work of art”¹². He maintains that elementary physical impression is of importance only as a road towards spiritual vibration and the formal elements are imperatively decided by the inner desires and even the forces that are unknown to the artist. According to Kandinsky, things that belong to the spirit of the future can only be realized in feeling, as a “theory is the lamp which sheds light on the petrified ideas of yesterday and of the more distant past”¹³.

Both of our authors consider art as a remedy for the common world outlook and everyday ways of life. Kandinsky notices the dullness of the masses, lower needs and material aims of public and crowds of artists who rate picture-making as a very profitable business. In “Concerning the Spiritual in Art” he points to the request for art as “an unconscious protest against materialism, against the demand that everything should have a use and practical value”¹⁴. Our author takes the view that real artist turns away from the soulless life of the present towards the non-material strivings of the soul.

In “Difference and Repetition” Deleuze states that “there is no other aesthetic problem than that of the insertion of art into everyday life. The more our daily life appears standardised, stereotyped and subject to an accelerated reproduction of objects of consumption, the more art must be injected into it in order to extract from it that little difference which plays simultaneously between other levels of repetition”¹⁵. Somewhat further he explains why and how it occurs: art “aesthetically reproduces the illusions and mystifications which make up the real essence of this civilisation, in order that Difference may at last be expressed with a force of anger which is itself repetitive and capable of introducing the strangest selection, even if this is only a contraction here

and there"¹⁶. According to Deleuze, the purpose of art is to resist to the present condition, domination of the commonplace, the banal, and the opinions that are accepted without being questioned. He notes that art must call for a future form, for a new earth and people that do not exist. In the book "What is Philosophy", which was written with Félix Guattary, Deleuze writes that the artist is always adding new varieties to the world, he makes visible, or audible, or conceivable the primary cosmic forces that populate the world, but are otherwise unperceivable. The work of art might re-describe the world, change our engagement with it, and see ourselves differently.

The authors of "What is Philosophy" propose an extensive explanation of the artist's aim. The explanation is inspired by David Herbert Lawrence's poetic text and Lucio Fontana's series of works depicting surfaces with the slits; and it truthfully describes the nature and mission of high modernism:

"people are constantly putting up an umbrella that shelters them and on the underside of which they draw a firmament and write their conventions and opinions. But poets, artists, make a slit in the umbrella; they tear open the firmament itself, to let in a bit of free and windy chaos and to frame in a sudden light a vision that appears through the rent – Wordsworth's spring or Cézannes's apple, the silhouettes of Macbeth or Ahab. Then come the crowd of imitators who repair the umbrella with something vaguely resembling the vision, and the crowd of commentators who patch over the rent with opinions: communication. Other artists are always needed to make other slits, to carry out necessary and perhaps ever-greater destructions, thereby restoring to their predecessors the incommunicable novelty that we could no longer see. This is to say that artists struggle less against chaos (that, in a certain manner, all their wishes summon forth) than against the "clichés" of opinion. The painter does not paint on an empty canvas, and neither does the writer write on a blank page; but the page or canvas is already so covered with preexisting, preestablished clichés that it is first necessary to erase, to clean, to flatten, even to shred, so as to let in a breath of air from the chaos that brings us the vision"¹⁷.

How can the artist do that? May be he enters some realm beyond daily life and perceives the primordial reality that is permanent becoming without the fixed beings of material, mental and emotional worlds. Hereby he directly experiences the dynamic play of forces that then constitute the usual order of things. Interestingly those ideas are analogous to Kandinsky's opinion of artistic creation, expressed in his retrospect: "painting is a thundering collision of different worlds intended to create the new world within and out of their strifes. This new world is the painting. Technically every masterpiece is created as the cosmos was — through catastrophies which in the end create a symphony, a symphony of spheres from the chaotic noise of the instruments. The creation of masterpieces is the creation of worlds"¹⁸.

Kandinsky's thought on the synaesthetic nature of art is already examined by a large group of scholars¹⁹, thus this study is not necessary and we will focus on Deleuze's ideas about the relationship of different sensations in the perception of some types of artworks. According to him, artist creates complex webs of perceptions and sensations, thus things, colors and sounds may produce "a kind of circulation of these dimensions into each other"²⁰. Some novelists write like painters creating sensation of immersive atmospheres, some composers make us see different objects, shapes or shadings. Art is always in the process of becoming, its task is to find unusual harmonies, melodic, verbal or plastic rhythms and styles. According to Deleuze, the writer decomposes the

syntax of his maternal language, searches for some new exclamations on the limit of it and so creates new visions and sonorous compounds. In "Essays Critical and Clinical" he remarks: "it may perhaps be necessary for the maternal language to be odious, but only so that a syntactic creation can open up a kind of foreign language in it, and language as a whole can reveal its outside, beyond all syntax"²¹. So the writer uses standard language but creates such expressions that turn reader's thought to unnoticed experiences. In Deleuze's and Guattary's words, he "twists language, makes it vibrate, seizes hold of it, and rends it in order to wrest the percept from perceptions, the affect from affections, the sensation from opinion-in view"²². Here we may notice the notion of segmentation of artistic material and of an exploration of its structural properties. Similarly to Kandinsky, Deleuze and Guattary explain the task of all kinds of art as setting up and upholding the blocs of sensations that are separated from the direct human experience and to constitute paradoxical monuments to the movements of atmosphere, light, sound, and colour. They regard those monuments as some fields of forces, as embodiment of ceaseless pulsation of chaotic and sophisticated composition. The most intricate task for an artist, according to them, is to create a "framework" or composition of autonomous parts, sections and planes. Such elaborate and vivid composition of joined, opposed or split frames should be expanding and revealing a vision of otherwise invisible infinity.

Overall it may be said, that despite the differences in foundations of Kandinsky's and Deleuze's theories, there are some analogies between their ideas. The concepts of sensation, structural composition, atmosphere, pulsation and vibration, rhythm, and expression of the play of forces in an artwork which is expanding into universe are their attempts to explain our art-experiences and emotional effects of artworks that are perceived but are beyond the reach of ordinary words.

MARTIN SEEL'S "AESTHETICS OF APPEARING" AND THE PROBLEM OF THE CONTENT OF AESTHETIC EXPERIENCE

Abstract | The paper analyses M. Seel's aesthetic theory in connection with the problem of the content of aesthetic experience and the tendencies for its reexamination in contemporary aesthetics. We demonstrate that Seel's „aesthetics of appearing“, being an important aesthetic study of the recent years, makes a substantial contribution to aesthetic theory as it expands the content of aesthetic experience and reveals its independence from the domain of art. The comprehension of aesthetic perception as a special attitude of perception, potentially applicable to any content accessible for sensual perception, is understood as the pivotal moment of Seel's aesthetics. However, we conclude that the formula that Seel puts in practice to outline the mode of aesthetic experience – that it is the perception of anything in the process of its appearing for the sake of this appearing – proves to be seriously narrowing the content of aesthetic experience. As the mode of a radical focus on the perceived phenomena and initiation of the potentially infinite play of appearances, aesthetic experience, as described by Seel, proves to be closed on itself and self-sufficient. In this regard, analysing Seel's aesthetic conception, we address the cultural and historical context, where aesthetic experience has emerged as a special register of experience. It is demonstrated that aesthetic experience as such has become possible in the Modern Age due to the formation of the truth of subjective perception and the shaping of the problem of the Other. It is this problematic state of the possible encounter with the Other that should be reckoned a principal trait of the Modern ages' outlook, implicitly provoking the response of aesthetic experience. In this regard, we conclude that the essential characteristic of an aesthetic experience should presuppose both the immersion in the liberated and potentially infinite interplay of appearances and multifarious – potentially infinite – acts of search for the Other, so that both of these aspects appear to be inextricably linked.

Index terms | *Aesthetic experience; aesthetic perception; aesthetics of appearing; aesthetization; art; the Other.*

Introduction

In contemporary aesthetics, starting from the end of the XX century, there is a clear trend related to the distinction between aesthetic experience and art experience, and therefore the problem of the content of aesthetic experience and the validity of this concept arose with a new force. An illustration and expression of this tendency can be found in T.J. Diffey's words that "we should not assume that aesthetic experience and the experience of a work of art are identical,"¹ and in trying to determine the content of aesthetic experience "not only should we refuse to identify aesthetic experience with art but also we might hesitate before identifying it with beauty."²

As a result, over the past few decades a sufficient number of interesting aesthetic projects have appeared where aesthetic experience is rethought and its content is expanded beyond the boundaries of art experience. These projects include R. Shusterman's somaesthetics project, H.U. Humbrecht's philosophy of presence, the aesthetics of everyday life of Y. Saito, etc. In this article we would like to focus on one of the most conspicuous aesthetic projects expressing this tendency, namely, the "aesthetics of appearing" elaborated by M. Seel. Our interest in the concept of this German philosopher is due to the fact that it represents an attempt to delineate the borders of aesthetic perception and aesthetic experience, while simultaneously explaining the variability of the latter and the plurality of aesthetic theories corresponding to this variability. At the same time, in this paper we will try to demonstrate that the formula employed by Seel to determine aesthetic experience significantly narrows its content, which will lead us to propose a version of its transformation.

Martin Seel's "Aesthetics of Appearing": Principal Statements

In his work "Aesthetics of Appearing," analyzing the possibility of aesthetic experience, Seel focuses his attention on the concept and phenomenon of aesthetic perception. The proposed concept advocates understanding of aesthetic perception as a special setting (and performance) of perception: "aesthetic consciousness is to be understood not as one class alongside others, but as a different execution of perception."³ Seel's intuition evokes associations with the Kantian line of thought: it should be assumed that it is not perception which conforms to aesthetic objects and becomes in this connection aesthetic, but, on the contrary, that aesthetic objects are formed by and comply with aesthetic perception as a special mode of perception and experience.

Such understanding of aesthetic perception, at first glance, radically enlarges the composition of aesthetic experience: as Seel postulates, "in principle, anything that can be perceived sensuously can also be perceived aesthetically."⁴ This, in particular, means that works of art are only one class of objects among many other classes of objects and phenomena that may be subject to aesthetic perception: they can be represented by any material objects, as well as intangible phenomena – events, states, atmospheres, etc. – somehow affecting our feelings.

What is the specificity of the aesthetic mode of perception, distinguishing it from other modes of sensing? From the very first pages of his book, Seel starts to reiterate that "to apprehend something in the process of its appearing for the sake of its appearing is a focal point of all aesthetic perception."⁵ In the formula which Seel puts into practice the pivotal concept of appearing comes to the fore. According to Seel, "appearing is a constitutive element of all forms of aesthetic production and perception,"⁶ so that the aesthetic attitude of perception is conceived as not only allowing to perceive any

phenomenon and its qualities, but concentrating on their appearance. In other words, aesthetic perception focuses on the complexity of appearance as a special process of disclosing something, which implies both duration and simultaneity. In this, aesthetic perception proves to be realized not for any external purpose, but for its own sake, that is, it appears as a self-valuable and, in this sense, self-contained process.

The detailed characteristics of aesthetic perception given by Seel, in general, seek to demonstrate its breadth, freedom and openness. As an example of an aesthetic object, Seel does not use a work of art, but a golf ball lying on a lawn. Aesthetic attention in Seel's reflection is opposed to that of a criminalist who strives to scrutinize the object's characteristics as comprehensively as possible. Aesthetic attention is considered to combine both concentration and emancipation, and it is this paradoxical combination of attentiveness and openness which, according to Seel, discriminates the aesthetic mode of perception. It does not have a utilitarian purpose, allowing the details of the perceived object to freely appear and disappear in the scope of perception, playing and interacting unpredictably with each other. The result of aesthetic perception is also unknown: what will happen and what must happen as an outcome of aesthetic experience is not given in advance. Thus, aesthetic experience appears as a radical form of affirmation: without having an image of what should be, it throws itself open to what is happening.

Nevertheless, the conception of aesthetic perception proposed by Seel, in our opinion, is not without flaws and leads to a significant narrowing of the content of aesthetic experience. Seel admits that aesthetic concentration on any object opens up a virtually endless game of appearances of this object, thereby constituting an inexhaustible wealth of aesthetic experience. However, this game, according to Seel, does not refer to anything else, being closed on itself and self-sufficient. In this sense, one can speak of the immanence of the aesthetic experience described by Seel.

Such description overlooks the possibility of aesthetic perception to overgrow and rush beyond its own boundaries. Among the variety of appearances interplaying in the game, Seel does not envisage the emergence of something that would be outside the aesthetic object and pertained to a completely different layer of being. Meanwhile, I. Kant claimed that "the beautiful is a symbol of morally good,"⁷ due to which, in aesthetic experience, "the soul becomes aware of a certain ennobling and elevation above the mere perceptiveness of the pleasure of sensual impressions."⁸ Meditating on the relationship between aesthetics and morality, Kant thereby grasped the essential and puzzling property of aesthetic experience to outgrow itself and overflow its own boundaries.

In this regard, the paradoxical disclosures of indeterminate in finite and simultaneity in duration, which are truly described by Seel, are to be considered as still not sufficient to capture the whole specificity of aesthetic experience. We would like to posit that aesthetic experience, starting from the contemplation of a certain aesthetic object, through this contemplation strives to find and reveal something Other, the image of which, however, is not given in advance.

Aesthetic Experience as the Modern Age Phenomenon

To better understand the assertion we have put forward, it is expedient to refer to the cultural context of the emergence of aesthetic experience as a special register of experience. The rise of aesthetics as a discrete discipline in the XVIII century should

be thought of as one of the consequences of the transformations that assured the formation of the Modern Age. Despite of the existence of works of art, as well as the concept of the beautiful in previous epochs, only in the Modern Age the grounds are laid down for the possibility of talking about a special aesthetic register of experience. This apparently testifies that aesthetic experience in its very essence does not boil down to the experience of the beautiful or the experience of art

What exactly in the features of the Modern Age should we hold to be decisive for the genesis of aesthetic experience as a special register of experience? Many researchers associate its generation with what is commonly believed to be one of the crucial accomplishments of the Modern Age – that, as M. Heidegger puts it, “the whole being of a person changes and a man becomes a subject.”⁹ A man starts to regard himself as a universal subject, to which other elements of the world are being assembled, requiring his certifying view from the outside. This means that the outlook of the Modern Age legitimizes the particular truth of the subjective view and perception, which was impossible neither in antiquity nor in the Middle Ages. As a result, as G. Agamben notes, “approximately in the middle of the XVII century a figure of the man of taste arose in European society,”¹⁰ whose subjective judgments prove to be no less significant than the existence of objective truth and its cognition. Agamben’s position is supported by S. Nikonova, who also believes that the main difference between aesthetic judgment and the pre-aesthetic one is that “aesthetic judgment is subjective.”¹¹

However, the specificity and complexity of the Modern Age worldview is characterized not only by the subjectivization of human self-perception and perception of the world, but also by the desire to overcome this subjectivity. This reverse aspect of the Modern Age did not escape from Heidegger, who fairly emphasizes that in the course of time “it begins to seem to a man that only he himself is now everywhere.”¹² The development of human subjectivity closes a man on himself, as a result of which the hidden and partly unconscious desire of the outlook of the Modern Age should be reckoned a yearning to overcome the insularity of humanism, to face the Other, the objective. In this regard, the gradual increase of the problem of the Other should be estimated as the same fundamental attribute of the Modern Age worldview as the emergence of the truth of the subjective view.

And if it is true that “aesthetics reflects the structure of the Modern Age thought,”¹³ then this should infer that aesthetics reflects the complexity of the Modern Age culture as a whole, and not just one of its aspects, appearing as a response to the challenge posed by this complexity and at the same time expressing it. Aesthetic experience becomes possible not only where the value of the subjective judgment of taste is revealed, but also where the value of the Other appears, that is, where the Other is recognized as a problem and where the encounter with the Other is deemed worthy of searches and aspirations.

Thus, aesthetic experience proves to be a special synthetic experience, the meaning of which is to hold the acts of subjective interaction with the world and the disclosure of the Other beyond subjective perception. At the same time – in full accordance with the increasing strictness of thought (accompanied by its liberalization and secularization) – the Modern Age worldview abandons the possibility to have the given and the only true image of the Other. The Other is vague and, in this sense, image-less; it is open wide subjectively, and, nevertheless, being open, it turns out to be something trans-subjective. It may be God, morality, cosmic energies, world harmony, or, on the contrary,

radical immanence, the eternal recurrence of the same, chaos and nonsense of being.

Conclusion

Returning to Seel's formula and his comprehension of the content of aesthetic perception as "appearing of appearances,"¹⁴ now we understand better what content is laid bare and synthesized in aesthetic perception. It synthesizes not only the multiplicity of appearances of the aesthetic object as a free play of its qualities, but also the appearance of something other than the aesthetic object and all possible appearances associated with it. Seel approaches very close to this paradox of aesthetic experience when he emphasizes the revelation of non-determinism in the finite, brought about in aesthetic perception: "in this finiteness aesthetic intuition discovers the opportunity to make present infinite possibilities <...>. The aesthetic object is an object experienced in its indeterminacy."¹⁵ Nonetheless, it should be clarified that indeterminacy, or freedom, is only one of the images of the Other, the discovery of which is awaited by aesthetic experience. Being a practice of liberated concentration on here-and-now and its appearances, aesthetic experience – in case it manages to develop its capacities and come true – by means of immersion and attention takes us somewhere else.

This "something else", to which aesthetic experience intends to leap, does not necessarily have to be a classically understood transcendental – it may equally be God or a nearby material object. In contrast to mathematics, which does not reveal the possibility of "adding or multiplying stars and plums,"¹⁶ not only aesthetic experience allows this kind of operations, but also specializes in them. Aesthetic experience does not preset what exactly will be "rhymed", synthesized and manifested in it, since the breadth of its combinations and appearances is not limited by anything, but, on the contrary, due to the striving for the Other, is wide open.

He studied philosophy at the State University of Saint Petersburg where defended the thesis "Social Ontology of Sense" and obtained the degree of candidate of science in philosophy (PhD). Since 2012 he has been working at ITMO University, Saint Petersburg, where delivered various courses, such as "Philosophy", "Philosophical Anthropology and Social Philosophy", "Philosophical Problems of Information Society", etc. In 2015-2016 V. Rybakov carried out the research "Modes of Transsemiotic Experience in Communication", supported by Russian Fund for the Humanities. In this project the notion of communicative transsemiotic experience was elaborated, as well as its connections with the experience of presence and aesthetic experience. Now V. Rybakov is mostly interested in the investigation of the essence of aesthetic experience as a special mode of experience and its link with the sphere of interpersonal communication.

FROM THE SUBLIME TO THE BEAUTIFUL: ON RANCIÈRE'S CRITIQUE OF LYOTARD

Abstract | When studying Jacques Rancière's aesthetics, careful attention must be paid to his sharp criticism of earlier philosophers. Among the philosophers he criticized, the principal recipient was Jean-François Lyotard, an ex-colleague of Rancière at the University of Paris VIII. In *The Future of the Image (Le Destin des images, 2003)* and *Aesthetics and Its Discontents (Malaise dans l'esthétique, 2004)*, Rancière addresses the controversy over the so-named representation of the unrepresentable (e.g., Auschwitz) and denounces Lyotard as an example of the ethical turn in aesthetics. In his view, Lyotard's thesis on the sublime reduces aesthetics to ethics and ends up nullifying the significance of artwork.

Consequently, it is true that Rancière demonstrates a clear attitude toward refuting Lyotard's arguments. However, when Rancière's own works on aesthetics are read without taking the context of their confrontation into consideration, there are obvious resemblances between these two thinkers. For example, both see the essential purpose of the aesthetic experience in suspending the spectators' mental faculties. What's more, both regard this experience as having the potential to radically reconstruct communities. If it is true, what significance or novelty do Rancière's arguments have in the context of contemporary continental-European (especially French) aesthetics?

In order to answer this question, my presentation starts by clarifying Rancière's arguments in comparison with Lyotard's. First, my presentation articulates Lyotard's account of the aesthetics of the sublime in his works, including *The Postmodern Explained to Children (Le Postmoderne expliqué aux enfants, 1986)* and *The Inhuman (L'Inhumain, 1988)*. Second, it examines Rancière's critique of Lyotard's representation, mainly through the reading of "Lyotard and the Aesthetics of the Sublime: A Counter-reading of Kant" in *Aesthetics and Its Discontents*. Through these two investigations, it is discovered that Rancière reinterprets Kant's analytic of the beautiful (not of the sublime) by means of *Letters on the Aesthetic Education of Man (Über die ästhetische Erziehung des Menschen, 1795)* by Friedrich Schiller. Through this reinterpretation, Rancière affirms the potential of the aesthetics of the beautiful, which have been underestimated in the formation of the idea of a fashion of the sublime among recent continental philosophers. Effectively, he establishes a notion that it is beauty that enables the fundamental freedom and emancipation of humans.

Index terms | Kant; Lyotard; Rancière; Schiller; sublime.

INTRODUCTION

When studying Jacques Rancière's aesthetics, careful attention must be paid to his sharp criticism of earlier philosophers. A principal recipient of this criticism was Jean-François Lyotard, whom Rancière denounced as an example of the ethical turn in aesthetics. However, when Rancière's own works on aesthetics are read without taking account of this critique, there are obvious resemblances between these two thinkers. For example, both see the essential purpose of aesthetic experience in suspending the spectators' mental faculties. What's more, both regard this experience of the suspension of faculties as having the potential to radically reconstruct communities. If this is true, what significance or novelty do Rancière's arguments have? To answer this question, this paper develops the following argument: First, it articulates Lyotard's account of the aesthetics of the sublime. Second, it examines Rancière's critique of Lyotard before, third, going on to explain the resemblance between the two. Fourth, it articulates the novelty of Rancière's argument through an exposition of his remarkable reading of Friedrich Schiller. Finally, this paper suggests that Rancière's original definition of beauty distinguishes him from contemporary French aesthetics.

1. THE CONCEPT OF SUBLIME IN LYOTARD

Lyotard began to emphasize the importance of the sublime in the 1980s. In *The Postmodern Explained*, he criticized certain contemporary movements in painting at the time, such as Transavanguardia or Neo-Expressionism. According to Lyotard, by providing the public with easily understandable works and giving them facile pleasures, these movements "avoi[d] the question of reality implied in the question of art" (Lyotard 1992, 17). He argued that the duty of art is rather in "presenting the existence of something unrepresentable." Hence, art should not represent the presentable but rather show "that there is something we can conceive of which we can neither see nor show" (11). According to Lyotard, it is through arousing "the sublime feeling" (10) that modern avant-garde art executes this duty.

Lyotard elaborated his concept of sublime through a reading of Kant's "Analytic of the Sublime" in the *Critique of Judgment*. In this book, Kant states that the sublime surpasses our imagination's ability for presentation (*Darstellung*) and hence it arouses in us "the feeling of the inadequacy of our capacity for the attainment" of the idea of reason, that is, the feeling of "respect" for the moral law (Kant 2000, 140). At the same time, this feeling gives our imagination the "vocation for adequately realizing that Idea" (140). In Lyotard's formulation, the imagination, faced with the sublime, suffers "the disaster," i.e., the faculty of presentation, as "the 'forming' of the matter of the data" (Lyotard 1991, 136) can no longer make the sublime presentable. It is through this very unrepresentable sublime that "an Idea of Reason is revealed" (136). In this way, the sublime is for Lyotard "none other than the sacrificial announcement of the ethical in the aesthetic field" (137).

In view of this, how does modern avant-garde art exhibit the sublime and execute its duty? According to Lyotard, avant-garde artists aim at "approaching matter," that is, they seek through the sublime arts to approach "presence without recourse to the means of presentation" (139). This matter he refers to is not the traditional notion of matter—i.e., that which naturally fits form. Lyotard asserts that the matter he is referring to is rather the "scarcely perceptible differences," such as "nuance" or "timbre," which "the faculties or capacities of the mind" cannot construct (140). In this sense, he paradoxically describes this matter as "immaterial," characterizing its effect

on the human mind as follows:

[Immaterial matters] all designate the event of a passion, a passibility [passibilité] for which the mind will not have been prepared, which will have unsettled it, and of which it conserves only the feeling—anguish and jubilation—of an obscure debt. (141)

Lyotard inherited the framework of Kant's thought but modified it somewhat. While Kant saw the sublime as a generator of the feeling of respect, Lyotard saw it as arousing in the spectator the feeling of "an obscure debt." For him, importantly, "what is at stake in [artistic] modernism" (135) is nothing but this effect of debt.

2. RANCIÈRE'S CRITIQUE OF LYOTARD

In *Aesthetics and its Discontents*, Rancière criticized Lyotard's interpretation of Kant. He first notes that while Lyotard discussed the sublime arts, Kant never suggested that the products of artistic practice could display the sublime: "From Kant's viewpoint, the very idea of an art of the sublime would seem contradictory" (Rancière 2009a, 89). However, Rancière is even more concerned with how Lyotard modified Kant's argument:

With Kant, the imagination's failure brings forth the autonomous law of the legislative mind. With Lyotard, the logic is strictly inverted: subordination to the *aistheton* signifies subordination to the law of alterity. Sensory passion is the experience of a 'debt'. Ethical experience is that of a subordination without appeal to the law of an Other. It manifests thought's servitude with regard to a power internal and anterior to the mind that it strives in vain to master. (93f)

In short, whereas the Kantian sublime leads us to "the autonomous law of the legislative mind," the Lyotardian sublime brings about the "subordination to the law of alterity," i.e. the heteronomous enslavement to "an Other." Hence, Rancière is especially interested in opposing this pessimistic inversion of the Kantian logic of the "Analytic of the Sublime."

This "counter-reading of Kant" (104) by Lyotard, Rancière claims, closes the possibility of freedom and equality that was originally opened by "a first reading of Kant" (97). The reading Rancière is referring to is Schiller's interpretation of the *Critique of Judgment's* "Analytic of the Beautiful" in his *Aesthetic Education*. "The core argument of the *Letters on the Aesthetic Education of Man*," Rancière argues, "resides in the same double negation that characterizes Kantian aesthetic negation. It states that the latter is subject neither to the law of understanding, which requires conceptual determination, nor to the law of sensation, which demands an object of desire" (104). It is well known that the Kantian aesthetic judgment is not dependent on a concept, nor on a mere agreeable sensation. What Rancière is referring to is Schiller's "aesthetic state" (104) or "free play" (99) in the human mind. In the twelfth letter of *Aesthetic Education*, he expresses this state as neutralization of conflict between "the sensuous drive" (*sinnlicher Trieb*), which stems from the human passive sensibility, and "the form drive," (*Formtrieb*) which proceeds out of our active reason (Schiller 1982, 79–81). Schiller regards this state as what artworks should above all bring about for human beings, since "man only plays when he is in the fullest sense of the word a human being, and he is only fully a human being when he plays. This proposition ... will, I promise you, prove capable of bearing the whole edifice of the art of the beautiful, and of the more difficult art of living" (107–109). In other words, Schiller dreamed of the reformation of the whole human community through aesthetic experience, starting

from the changing of individual mental dispositions.

For Schiller, the exemplary artwork of this argument is an ancient statue, the *Juno Ludovisi*, whose beauty he describes in the fifteenth letter.¹ Taking up this description, Rancière explains the aesthetic experience the statue arouses as follows (note his use of the terms “suspend” and “suspension”):

Aesthetic experience suspends both laws at the same time. It therefore suspends the power relations which usually structure the experience of the knowing, acting and desiring subject. (Rancière 2009a, 97)

Or:

The suspension of power, the *neither... nor...* specific to the aesthetic state ... announces a wholly new revolution.... Aesthetic free play—or neutralization—defines a novel mode of experience that bears within it a new form of ‘sensible’ universality and equality. (99)

These passages are crucial for understanding his critique of Lyotard. For Rancière, “What [Lyotard’s reading of Kant] strives to do is efface the original link between aesthetic suspension and the promise of emancipation” (104). In other words, he believes Lyotard denied the possibility of freedom and equality manifested by Schiller and, instead, sought to force human beings to submit to the feeling of debt. Thus, Rancière denounces Lyotard as an example of the ethical turn of aesthetics because he reduces aesthetics to ethics (cf. Rancière 2009a, 109–32; 2009b, 109–38).

3. THE RESEMBLANCE BETWEEN RANCIÈRE AND LYOTARD

However, even admitting Rancière’s critique, there remains a striking resemblance between these two thinkers, primarily in the fact that both see the essential aspect of the aesthetic experience as the suspension of the human mind. Similar to Rancière, Lyotard used the word ‘suspend’ at a similar moment to Rancière when explaining the effect of sublime arts on the human mind: “The matter I’m talking about is ‘immaterial’, an-objectable, because it can only ‘take place’ or find its occasion at the price of suspending these active powers of the mind” (Lyotard 1991, 140). Moreover, both thinkers argue that the aesthetic suspension of the powers of the human mind goes beyond the aesthetic field, impacting humanity as such. In this sense, it is reasonable to say that Rancière “did not only adopt the vocabulary but also part of the ideology of postmodernism” (Rieusset-Lemarié 2017, 465).

In fact, it is probable that Rancière himself is well aware of the postmodern mood of his argument, for he recognizes that Schiller’s discourse anticipates Lyotard’s argument, as will be discussed later. Indeed, it is because Schiller is in a certain sense a postmodernist that Rancière favors him. Therefore, in seeking to discern the originality of Rancière’s thinking, it is not especially helpful to ask whether he is a postmodernist. Instead, it is more important to question how he can be differentiated from Lyotard and to ascertain more closely what exactly distinguishes the two.

4. THE NOVELTY OF RANCIÈRE

There are two ways of answering this question. The first is relatively straightforward: Rancière, in giving priority to the beautiful over the sublime, indicates his fundamental divergence from prior and contemporary french philosophers who particularly privilege

the sublime and disparage the beautiful. In criticizing Lyotard and praising Schiller, he problematizes two contrasting accounts of Kantian aesthetics: the aesthetics of the beautiful and that of the sublime. As we have seen, Lyotard regards the sublime as the *raison d'être* of contemporary arts; yet, at the same time he declares “the end of an aesthetics, that of the beautiful” (Lyotard 1991, 137). Moreover, when the whole of French aesthetics in the late twentieth century is taken into account, it is not beauty but the sublime that has been at issue². From this point of view, we can differentiate Rancière from his contemporary French thinkers, in that he ventures to focus on Kant’s aesthetics of the beautiful, rather than the sublime, through Schiller’s interpretation of Kant.

However, it would be hasty to reduce Rancière’s argument to the traditional dichotomy between beauty and sublime. As already mentioned, he treats Schiller as simultaneously a successor to Kantian aesthetics of the beautiful and a precursor of Lyotard. In fact, regarding the Schillerian aesthetic experience, Rancière says:

The experience of beauty, which is apprehended by Kantian aesthetic judgement in terms of a *neither... nor...*, is already characterized by the double bind of attraction and repulsion. It consists in a tension between two opposed terms, namely a charm that attracts us and a respect that makes us recoil.... There is, then, no rupture between an aesthetics of the beautiful and an aesthetics of the sublime. Dissensus, i.e. the rupture of a certain agreement between thought and the sensible, already lies at the core of aesthetic agreement and repose. (Rancière 2009a, 97f)

The crucial point is that dissensus—the suspension of our faculties of mind—which weighs heavily in the aesthetics of the sublime, is already anticipated by Schiller’s aesthetics as its fundamental element. In other words, Rancière thinks that there is no need to take the trouble of invoking the sublime when attempt to grasp the essence of aesthetic experiences.³

Of course, it would be easy to point out flaws in his reinterpretation of Kantian aesthetics of the beautiful through Schiller, especially in terms of its misreading of Kant or its confusion between beauty and the sublime.⁴ Nevertheless, what is more important in his argument is his embrace of some aspects of the aesthetics of the sublime, especially as it pertains to the political function of dissensus or suspension, while at the same time dismissing other aspects. In making this clear, the second answer can be found. The aspect of the sublime which Rancière omits, is Kant’s implication of absoluteness or transcendence. As already noted, Lyotard argued that the sublime arts should impose a feeling of debt on the spectator, which Rancière has criticized as the ethical turn of aesthetics. The core of this criticism explicitly reveals his stance against the notion of transcendence: in Lyotard, art is “seen as a form of ‘resistance’.... Resistance becomes nothing other than the anamnesis of the ‘Thing,’ the indefinite re-inscription, in written lines, painted brush-strokes or musical timbres, of subjugation to the law of the Other” (Rancière 2009a, 105). ‘Thing’ means here something exterior to the signified and therefore beyond our understanding. While assigning the effect of suspension to the beautiful, Rancière attempts to reject something absolute, transcendent, impossible, etc.⁵ Needless to say, this rejection is accompanied by the admiration of Schiller’s project of aesthetic education.

In conclusion, by rejecting the connotation of transcendence and accepting the element of suspension, Rancière clearly seeks to differentiate himself from the predominant thought of his philosophic milieu. In addition, this attitude is not limited to the

discussion on the aesthetics of the sublime; it is also found in other of Rancière writings. For example, in *Mallarmé*, he clearly opposes traditional readings of Mallarmé and their emphasis on impotence, absoluteness, nothingness, etc., saying that “the time has come to free him from” interpretations that reduce “the difficulty of his writing to the authenticity of an experience of impotence and shadows” (Rancière 2011, xv). Instead, he proposes to read the poet in terms of the relation between his text and the society. Hence, in comparison with his other writings, it is more valid to emphasize the differences of Rancière from Lyotard in terms of their treatments of the beautiful and the sublime than equating them. Thus future scholarship should pursue coming to terms with his attitude in broader contexts than that of confronting Lyotard.

1 Schiller writes as below: “It is not Grace, nor is it yet Dignity, which speaks to us from the superb countenance of a *Juno Ludovisi*; it is neither the one nor the other because it is both at once. While the woman-god demands our veneration, the god-like woman kindles our love; but even as we abandon ourselves in ecstasy to her heavenly grace, her celestial self-sufficiency makes us recoil in terror. The whole figure reposes and dwells in itself, a creation completely self-contained, and, as if existing beyond space, neither yielding nor resisting; here is no force to contend with force, no frailty where temporality might break in. Irresistibly moved and drawn by those former qualities, kept at a distance by these latter, we find ourselves at one and the same time in a state of utter repose and supreme agitation, and there results that wondrous stirring of the heart for which mind has no concept nor speech any name” (Schiller 1982, 109).

2 See Nancy (1988); Lacoue-Labarthe (1988).

3 On dissensus as the key concept in the aesthetics of Rancière, see for example Chanter (2018), 83–100.

4 See for example Tkatch (2015), 522; Rieusset-Lemarié (2017), 468f. However, such an argument by Rancière is defensible through investigating the concept of beauty in Schiller, for it is already the synthesis of beauty and sublime in itself (cf. Suzuki 2018).

5 As Rancière himself points out, the word ‘Thing’ used by Lyotard is derived from Lacan (and therefore indirectly from Freud) (Rancière 2009a, 94).

PANEL SESSION 04 | CONDITION OF CONTEMPORARY ANGLO-AMERICAN AESTHETICS

CAN INTENTIONALISM BE COMPROMISED?: DILEMMA IN MODERATE INTENTIONALISM

Abstract | Intentionalism emphasizes the importance of authorial intention in interpreting an artwork. It has evolved into moderate intentionalism(MI) as a means of circumventing the well-known Humpty-Dumpty problem caused by radical intentionalism. This 'moderation' is accomplished basically by accommodating the public elements of language into the theory of intentionalism. So MI now claims that not just any intention, but only the intentions successfully realized in the work can determine the meaning of the work. I argue against this type of compromised intentionalism as not being able to be a coherent and practical theory.

First, to avoid misleading characterization I establish the real claim of MI. I propose that MI should be understood as a position which allows a case where the authorial intention wholly determines the meaning. MI need not claim this be true in every case. Yet if MI does not allow such cases, that is, if MI admits that all intentions should be constrained by the public elements of language, then there might not be much difference between MI and anti-intentionalism.

Then I examine the actual content of MI as a theory rather than as an intuitively appealing slogan. The situation looks to me dilemmatic. If the public nature of language as well as the context of the utterance is emphasized as the constraining factor for determining the meaning, this seriously weakens the character of the theory as a version of intentionalism. In order to maintain the intentionalism, MI can claim, as it actually does, that in the case where the work's meaning is ambiguous (i.e., where the public elements cannot determine the meaning), the authorial intention can play the role in determining the meaning of the work. However, if ambiguity is what the public elements of the work report about the work, then this ambiguity should not be disregarded so long as MI hopes to retain its original motivation to be moderate. An ambiguous work shows that the authorial intention is not successfully realized. Therefore in MI, a failed realization of authorial intention should not negate the ambiguity, and should not force us to determine the meaning of the work. If it does, it is no longer MI but radical intentionalism. In addition, I also find that the case of irony, which has been an important supporter of intentionalism, would no longer favor MI due to the motivation of MI to be moderate.

1. Introduction: Motivation for Moderation

Concerning whether the meaning of an artwork can be determined by the intention of the artist, there has been a long series of debate between the position called intentionalism (INT) and the opposing position, called anti-intentionalism (AI). The debates still continue in analytic aesthetics with variations and compromises. Since the 1950s, the anti-intentionalistic accusation called the 'intentional fallacy' by Beardsley and Wimsatt has been considered as an intellectual achievement in criticism, yet the opposite view that we need to rely on the actual intention of the author to interpret artwork is gaining popularity nowadays.

It is undeniable that a work of art is a product of some intentions. For some scholars, this is the very basic fact indicating that INT has to be the right choice. However this type of intention, which can be called categorical or ontological intention, can be distinguished from semantic intention which we are interested in here. That is, how a work or text comes to exist as it is, should be a separate issue from what that text means. Thus, even though we all accept the existence of categorical intention, this should not be considered as favoring INT. The INT that we are dealing with begins with the following claim:

RI: When the meaning of a work (or utterance) is interpreted, it is always the case that the author's (or utterer's) actual intention determines the meaning of the work (or utterance).

This is Radical Intentionalism (RI) because it claims that (1) the author's actual intention is 'the determining factor' of the meaning of a work, and that (2) this is 'always' the case. Naturally, RI is problematic because we don't think that, for example, the utterance 'just go' means 'please stay' simply because the utterer has the intention to mean the latter. (Of course, it would be a different story if, not the intention alone, but the objectively identifiable context and circumstances also support this interpretation.) The Humpty-Dumpty problem, that is, the arbitrary decision of the meaning simply relying on the utterer's intention, is not acceptable, and even intentionalists have all the intentions to avoid this.

In order to circumvent this problem, Moderate Intentionalism (MI) has been proposed. Many scholars, including Noël Carroll and Robert Stecker, support MI. They seem to think that it is possible to avoid the above mentioned arbitrariness, yet still to allow the intention to play the essential role in determining the meaning of the work. How is this possible? What exactly does the claim of MI amount to?

2. How to Moderate Intentionalism 1: Relevancy Claim

According to my diagnosis, there are two ways to 'moderate' RI. One is weakening part (1) ('determining factor') of the claim and the other is denying part (2) ('always'). Even though supporters of MI are not very explicit about the first way, I find that confusion concerning part (1) may well be a source of unjust intuitive appeal that MI enjoys over AI. My point is that sometimes INT does not clearly distinguish the 'relevancy' of intention to the meaning and the 'determination' of meaning by intention. For example, in a 1997 article, Carroll makes two different claims for INT in one paragraph.

INT-C1: "[I]nterpretations of artworks should be constrained by our knowledge of the biography of the historical artist and our best hypotheses about the artist's actual

intentions concerning the artworks in question.”

INT-C2: “[A]uthorial intentions and biographies are relevant to the interpretation of artworks.”¹

These surely are not just two different wordings expressing the same idea. Especially, the latter is a very weak claim compared to the former. What worries me is that, for some, a claim similar to INT-C2 is considered as a way of ‘moderating’ INT. However, this is too weak to deserve the title of INT. The only reason to think that it qualifies as INT is when the opposite party, the AI view, denies this. Indeed, Carroll views AI as to “hold that reference to artistic intentions and the biography of the artist are never relevant to the interpretation of the meaning of artworks.” However, this is not correct. The denial of INT-C2 is not the actual claim of AI. It might be Beardsley’s version of AI, but, as we can see in Wilson,² a sophisticated version of AI is not required to deny the relevancy of intention in interpretation. What AI really wants to question against INT is the truth of the claim that the meaning can be determined solely by intention, a claim similar to INT-C1. Then, here again, just like the existence of categorical intention, the intuitive appeal and the undeniable force of INT-C2 cannot be the evidence for INT because the truth of INT-C2 bears nothing about the truth of INT-C1. The real position of AI is that the interpretation of a work does not need to be ‘constrained’ by the actual intention of the author, which is to deny INT-C1.

3. How to Moderate Intentionalism 2: Introducing Public Elements

Then, on what ground can INT claim INT-C1 to be true? In order to make a claim like INT-C1 a version of MI, Carroll’s and Stecker’s version of MI eventually accommodates the public elements of language into their theory. This move is fine but if MI wants to be a coherent theory rather than just an intuitively appealing slogan, we should question whether MI has a principle for accommodating the public elements without undermining the basic intentionalistic idea of what the interpretation should be.

Here, what should be considered as public elements are not confined to matters of language such as grammar, dictionary meaning of the vocabulary and many other established linguistic customs. Objectively identifiable contexts in each particular case are also public so the public elements which AI relies on in order to determine the meaning should include them. In short, public elements include what we can gather from text and context. Narrow understanding of how to decide meaning in AI might lead to another misunderstanding that draws intuitive appeal for INT. We all know that language is incomplete somewhat, but instead of quickly introducing utterer’s intention to fill the gap of communication, AI considers that the context might be helpful to interpret the meaning of the text as well as to avoid the Humpty-Dumpty problem and secure the objectivity of the meaning. In cases where the text and context are not enough to fix the meaning, AI would think that the meaning of the given text is ambiguous or undeterminable. With this in mind, Carroll’s case of film maker Ed Wood³ cannot tip the scale in favoring INT. Most of us think, just like Carroll, that interpreting Wood’s B-rated cheesy SF movie as a critical remark to Hollywood moviemaking is absurd, but we would not have to introduce Wood’s actual intention in order to correct this outrageous interpretation. Historical facts and public contexts would be able to do the same job.

Now, let’s go back to MI. MI, which accommodates public elements, claims that not just any intention, but only the intentions successfully realized in the work can determine

the meaning of the work, or constrain the interpretation.⁴This is the second type of moderation (denying ‘always’) that I mentioned above. So now, even for INT, despite the existence of clear authorial intention to express that you stay, uttering ‘go’ cannot mean this as long as ‘go’ is not a successful realization of that intention. In this way, MI is supposed to be able to avoid the Humpty-Dumpty problem and claimed to be a reasonable explanation for the connection between intention and the meaning.

4. Criticism on Moderate Intentionalism: A Dilemma

However, I challenge this type of MI. As we just saw, MI has to say that intention cannot determine the meaning if it is the case that the intention is not successfully realized. In such cases, MI cannot help but letting the public elements such as linguistic rules, custom, context, etc., determine the meaning. What if the intention is successfully realized? In this case, the result of the interpretation solely based on intention would be the same as the one utilizing the public elements only because the intention is successfully realized. This means that MI cannot use these cases to show that applying MI generates different results from AI. That is, for any given case where MI wants to say that the interpretation is constrained solely by intention, if AI generates the exact same interpretation relying on public elements only, then there seems to be no chance to prove that MI is the right theory. What MI uses as the evidence is exactly the same as what AI could use to prove that the case is for AI.

Therefore, what MI needs is a case where the meaning is solely determined by author’s actual intention, and that meaning should be considered correct despite the interpretation relying on public elements that indicate differently. At this point, ambiguous works or utterances seem to provide what MI wants. Thus, in order to maintain the idea of INT, MI can claim, as it actually does, that in cases where the work’s meaning is ambiguous (i.e., where the consideration on public elements produces more than one equally plausible interpretation, thus the meaning is undeterminable), the authorial intention plays the role and determines the meaning of the work. This is indeed a modest version of INT because it retreats from ‘always’ to ‘ambiguous cases only.’ Indeed, isn’t it the very moment when we would like to ask the meaning of the work to the author? It sounds even commonsensical that actual intentions have the casting vote when the meaning is ambiguous.

However, here comes the dilemma of MI. The motivation for MI is to avoid RI, and MI did this by utilizing the idea of successfully realized intention, which in turn relies on the public elements. If MI tries to cherish its original motivation, and if the ambiguity is what the public elements of the work report about the work, then what would be the justification for disregarding this fact? An ambiguous work shows that the authorial intention is not successfully realized. Therefore in MI, a failed realization of authorial intention should not override the ambiguity and force us to determine the meaning of the work. If it does, it is no longer MI but RI. Suppose that a given remark is ambiguous as to whether it is sarcasm or sincere praise. This in itself is an unsuccessful realization of the intention because, if it were successful, we could decide its meaning, one way or the other, using public elements such as context, tone, gesture, etc., and ambiguity wouldn’t be the final outcome. If it is unsuccessful realization of the intention, it is OK to ignore the author’s intention. That’s the idea of MI. So the resolving the issue of ambiguity utilizing intention violates MI’s own principle. We can do this only when we presuppose the truth of INT. The dilemma is this: MI cannot decide the meaning of the ambiguous text utilizing the actual intention because this contradicts the principle

they introduce in order to avoid RI. However, MI cannot leave this case ambiguous because this means that MI would not be different from AI in terms of supporting evidence.

5. The Case of Irony

What this also means is that the case of irony, which has long been thought of as an important supporter of INT, might have to be re-evaluated. The reason why irony favors INT is that we believe it provides a case where a text can mean exactly the opposite of what the public elements of the text indicate, due to the author's intention. However, can irony be irony just because of the intention? I do not think this is plausible. Irony, just like sarcasm, wouldn't be considered as successful irony unless the careful understanding of the context supports such interpretation. When uttering "great," if all contexts indicate that it is praise, it cannot mean blame just because the utterer's intention is to blame. Especially for MI, dealing with irony is tricky because, under this kind of circumstance, MI should allow disregarding the intention because it is more like a case of unsuccessfully realized intention. If so, irony unsupported by context, which might still work for RI, cannot work for MI. The motivation and the principle to move toward MI make irony no longer a prominent example for INT. If MI should acknowledge that irony can be successful only when context supports such interpretation, then AI too can explain the case of irony.

6. Conclusion

Let me conclude. Despite the crucial difficulty of arbitrariness, if one thinks that the right theory of interpretation should keep the authorial intention, there must be a strong motivation to do so. However, as I said at the beginning, the fact that the work is a product of intentions cannot be that strong reason. The fact that a work is similar to our ordinary conversation, which I didn't mention at all in this paper, is often cited as the other foundation for taking INT. However, this view is also debatable since there seem to be reasons to think that our interest in interpreting artwork is not like conversation. If these two prominent motivations turn out to be not necessarily relevant to taking INT, it is hard to know why we still have to maintain INT in the form of MI. I have argued that the compromise called 'moderating' is a self-contradictory attempt because it undermines either its being a version of INT or its being a moderate version. Stecker wants his version of MI to be treated as a "unified view."⁵ The problem is that the 'unified view' would not be a version of INT.

Haewan Lee is a professor in the Department of Aesthetics, College of Humanities at Seoul National University. He received his Master's degree in Aesthetics at SNU and later studied Philosophy in the US. After completing his Ph.D in Epistemology at Ohio State University, he has been teaching and studying Analytic Aesthetics in SNU since 2003. His published articles in Korean academic journals cover many contemporary issues in Analytic Aesthetics including interpretation and intention, cognitive and moral value of art, aesthetic experience, pornography, and humor. He has published a book on Noel Carroll in Korean, and translated Carroll's *On Criticism*, Benedetto Croce's *Aesthetics*, and Matthew Kieran's *Revealing Art* into Korean.

**AESTHETICS AFTER THE 'END OF ART'.
THE STATE OF DANTO MARGOLIS DEBATE IN XXI CENTURY.**

Abstract | Arthur C. Danto was responsible for perhaps the most important philosophy of art in the second half of the XX century. Whereas Ernst Gombrich and Clement Greenberg ended their narrations of art history with modernism, Danto commences his own with Andy Warhol's *Brillo Box* (1964). He starts his aesthetic theory with the publication of *The Artworld* (1964) that is a reflection of a philosophical encounter with the new type of art. In the way, he also concludes with Brillo Box as it is used for the cover of his last book *What Art Is* (2017). Danto's vision of art history and aesthetic has been challenged by many, but it is Joseph Margolis who offered the most concise critique. Not only he started his aesthetics right after Danto but did it also in the same analytical style in *The Language of Art and Art Criticism: Analytic Questions in Aesthetics* (1965). His disagreement with Danto peaked after the latter made his 'End of Art' claim (especially in his „Mellon Lectures“ of 1995 published as *After the End of Art* in 1997). Margolis critique in *What, After All, Is a Work of Art?* (1999) and *Selves and Other Texts* (2001) involves the accusation that Danto's theory actually did not stick even to Andy Warhol's work. If one is to accept Margolis critique than we are in a desperate need to find a new aesthetic theory that would include postmodern art. Margolis tried to accomplish that in *The Arts and the Definition of the Human* (2008) but just like Danto in his last book he was not able to produce a definition compelling to all of art. After the historical presentation of the crucial arguments used by both philosophers of art, I would produce my own by trying to find a suiting example for Danto's theory within the field of architecture. To the surprise of many, the reconstructed Royal Castle in Warsaw will be taken into account as the 'Brillo Box of architecture'. It is partially due to Danto that Brillo Box received an iconic status and is now used as an example for lectures concerned with the question 'what art is?'. Therefore it makes sense to ask if one can expand this example by the reference to other artistic spheres and if that may shed new light on Danto-Margolis debate or even transcend it.

Index terms | architectural mimicry; Arthur C. Danto; Brillo Box; contemporary aesthetics; end of art; Joseph Margolis; representational art; Royal Castle in Warsaw

1. Historical introduction:

What is art? Who actually ask this question anymore? On one hand, it was an important point of the philosophical curriculum since Plato, on the other, it seems only urgent since the artistic revolution in XX century when people do sometimes state it in a negative way, is this still art? That is to say that through ages most people were perfectly satisfied without asking such questions, and they became more relevant only quite recently. As Harald Osborne stated in the beginning of his article titled *What is a Work of Art* in 1981:

The question What is a work of art? Is not one which we are often brought up against in daily life or in our ordinary commerce with art. On rare occasion – when, for example, we come upon a strange and novel denizen such as lump of lard in an art exhibition or when we are concerned with the artifacts of primitive peoples who lack our concept of fine art – we may be called upon to face it and to examine criteria for deciding whether something is or is not a work of art. But except on such occasions, we are ordinarily content to accept as work of art the objects to which we are exposed in museums and galleries and artists' studios and we ask ourselves rather how good they are of their kind¹.

Just one year later James D. Carney has published in Illinois a paper that starts as follow:

Art teachers are ordinarily content to accept as work of art the objects to which we are exposed in art classes, museums, galleries, and artists' studios. However, on occasion when they come upon a strange and novel denizen – such as a lump of lard in an art exhibition, Robert Barry's Thoughts, or Sam Hirsch's year-long clock punching performance - art teachers are called upon to face the question What is a work of Art²

Can you notice a fair amount of similarity? That is probably because most people, in our western culture at least, shared quite a common notion of art for centuries. This notion, at least in visual arts, was all about representation. The concept of mimesis understood historically as a development of methods allowing a man to 'mirror' nature. This was ultimately achieved with the development of photography. Artists responded by trying to paint quite differently, and that led to a revolution famous *Salon des Refusés* in 1863. Shortly after technology used that idea of „painting inside the eye“ and entered XX century with cinematography that could imitate moving objects, and therefore life itself.

Artists were well aware of this fact and XX century modernism produced one revolution after another. Each one with a dead-serious manifesto declaring monopoly in grasping the 'true' meaning of art. In America, where the success of „motion pictures“ was soon challenged with an enormous wave of artistic immigrants after Nazi regime declared modernism to be degenerate art. What happened shortly after infamous Munich *entartete Kunst* exhibition in 1937 killed not only many artists, but also the artistic will to mirror the reality.

This situation led to artistic and philosophical reflection about the aims and methods of art. The one who grasped the spirit of the new art capital of the world was Clement Greenberg, who diagnosed New York's action painting as the first original 'American type' art. The aim of this 'after the war art' was to formally deconstruct all previous forms of painting. He writes in 1955:

Perhaps it is another symptom of this same state of affairs that Paris should be losing its monopoly on the fate of painting. By no one, in recent years, have that art's expendable conventions been attacked more directly or more sustainedly than by a group of artists who came to notice in New York during and shortly after the war. Labeled variously as "abstract expressionism," "action painting" and even "abstract impressionism," their works constitute the first manifestation of American art to draw a standing protest at home as well as serious attention from Europe, where, though deplored more often than praised, they have already influenced an important part of the avant-garde³.

Unfortunately the artist who was the symbol of this revolution in art, Jackson Pollock who was declared in 1949 by Life magazine the greatest living artist in America, died in a car crash just a few years after this words were published. Soon the art scene was dominated by pop artists, from who the most important was Andy Warhol, who even called his own autobiographical book *Popism: The Warhol Sixties*⁴. He was proven to be luckier than Pollock at least in this sense, that in the very same year when he opened The Factory in Midtown Manhattan a renown analytical philosopher name Arthur C. Danto has offered in-depth analysis of the new art represented at fullest by Warhol.

In 1964 Danto, who was an artist himself, entered Stable Gallery and had his personal encounter with 'a strange and novel denizen'. This object was a stack of oversized Brillo Boxes and the paper described this encounter was called *The Artworld*. Later development of this 'eureka moment', as Daniel Herwitz calls it⁵, led Danto to the conclusion that the whole linear development of the work of art understood in mimetic terms came to an end. The brief and handicapped linear development of art in the United States cannot be further continued in a linear way, and Danto was among the first ones to notice that.

In 1968 not only a prominent analytic philosopher Nelson Goodman has published a first analytic book on the topic of art, but more importantly, American spiritual, political and artistic leaders were all shot⁶. Only the former one survived, he did however lose his creativity and the most famous work produced by him after the assault is called 'oxidation paintings'. Better known simply as 'piss paintings' are in a way a sad parody of the work of Pollock. Just when critics thought that an American identity in art has emerged from this strange 'artistic melting pot' of after war New York the pop-modern/post-modern artists pissed on everything that was before them. The deconstruction phase of visual arts in America was over and no one, even Andy Warhol, dared to look in the future.

Nevertheless, we do live in this future now and it is in our conceivability to look at the last 50 years of art production and criticism making use of our historical perspective. In this time many things may be stated and contradicted about contemporary artworld, but very few would deny that the most important philosophical claims about it were presented by Arthur Danto. The other widely agreed thesis is one that suggests that aesthetical problems have become everyday problems through a process that has been called 'the aestheticization of everyday life' (Featherstone 1992: 280)⁷.

What that means is that artworld has expanded beyond the walls of classrooms, museums and art galleries. Without proper aesthetic theory we may be unprepared to deal with our new condition. That is why I decided to have a new look at the aesthetic tradition in the dominant culture who is responsible for the big part of this aestheticisation experience. For the sake of clarity, I will refer to Arthur Danto and Joseph Margolis. Not only because they shaped our understanding of art at the end of

XX century and beyond, but mostly because they do represent two different traditions that are crucial to understanding US philosophy and aesthetics: pragmatism and analytic philosophy.

The aesthetic tradition in the US took a different path than one in a continental tradition that became evident in the XX century. The two most distinguished traditions there were and still probably are pragmatism and analytical tradition. John Dewey has published his *Art as Experience* in 1934, and however this book never really 'took off' and therefore Richard Schusterman wrote in the preface to his *Pragmatist Aesthetics* in 1992:

*Pragmatist aesthetics began with John Dewey – and almost ended there[...] the philosophical influence of his aesthetic theory was very short-lived. Pragmatist aesthetics was soon eclipsed and rejected by analytic aesthetics*⁸.

Arthur C. Danto represents exactly the new breed of philosophers trained in analytic tradition and moving from language to the new areas, that were left aside by this tradition in the first XX century as it was occupied with science and epistemology. These new areas were mainly history, human actions, the human mind, and arts: something we would name culture.

Interestingly enough Danto was not a trained philosopher, he has studied art and got his minor in history at Wayne University in Detroit. He himself claims that he was accepted for a postgraduate study in philosophy at Columbia, just because of the 'experience-focused spirit of Dewey' still present there. The different stance between this was grasped by Schusterman in his essay *The End of Aesthetic Experience*. He writes: „*While Dewey celebrated aesthetic experience, making in the very center of his philosophy of art, Danto virtually shuns the concept*”⁹.

Schusterman not only opted for experience, but he also based some of his assumptions, especially on the understanding of the notion of interpretation, on the work of Joseph Margolis. Interpretation does not occur in Dewey's *Art and Experience*, but is crucial to the concept of Danto, as Noel Carroll points out. Danto claims that every artwork embodies a meaning, and sometimes the meaning is evident, but nowadays it is hidden and requires an art critic who is well versed. He doesn't need to be educated in the history of art, but he does need to understand the artistic theoretical framework that makes this work of art an art.

Danto still claims that a critic discovers this meaning, but pragmatists like Margolis or Schusterman would say he 'gives' a meaning. I would like to stress this fact, that Margolis's strong criticism of Danto and Goodman is based on the evaluation that they weren't radical enough. To understand this quarrel one has to dive deep into these two very different holistic systems developed by Danto and Margolis in the last half of the century. In order to understand the main dispute points, I would try to provide a short narration of their view on the subject. Before I commence I would like to point out, that for most commentators Margolis does present a more coherent structure of argumentation and wins in many regards this debate. However his influence was inferior, and therefore he plays a rebel in this story. Much of it is because Danto has successfully combined his theory with large numbers of important examples and some very short, strong claims that have caught much publicity.

But where does it all start? Nelson Goodman, who ran an art gallery at this time,

was concerned with the question of forgery. He decided to use some of the analytic apparatus to this problem, resulting in making 'perfect fake' problems somehow influential, but only among philosophers of the analytic tradition¹⁰. They looked at his text as a piece on the very old platonic problem of the relation of a copy to a original. For Goodman, the different value of these two objects was justified by a presumed, even if very marginal, the physical difference between these two pieces. There was, therefore, no real aesthetic difference in the eye, the difference is actually created by the knowledge that only one of Rembrandt's *Lucretia* is authentic. Because of this knowledge, we decided to test two paintings with an expert scanning device to make sure which one is actually Rembrandt's.

Science saved the day for paintings, but the question for non-visual art, like music, remained unresolved. Danto, instead of focusing on them, went back to visual arts to say that there are some artistic objects that cannot be distinguished at all. He offers an abstract example of Red Square paintings, that have different titles, authors and meaning, although they all do look exactly the same. This is the method of indescribable developed into a system in his book *Transfiguration of the Commonplace*.

This is, of course, an extreme case of an already special case of Warhol's Brillo Box that forced Danto to write in *The Artworld*:

To see something as art requires something the eye cannot decry-an atmosphere of artistic theory, a knowledge of the history of art: an artworld.

[...]

Mr. Andy Warhol, the Pop artist, displays facsimiles of Brillo cartons, piled high, in neat stacks, as in the stockroom of the supermarket. They happen to be of wood, painted to look like cardboard, and why not? To paraphrase the critic of the Times, if one may make the facsimile of a human being out of bronze, why not the facsimile of a Brillo carton out of plywood? The cost of these boxes happens to be 2 x 10³ that of their homely counterparts in real life-a differential hardly ascribable to their advantage in durability. In fact, the Brillo people might, at some slight increase in cost, make their boxes out of plywood without these becoming artworks, and Warhol might make him out of cardboard without their ceasing to be art. So we may forget questions of intrinsic value, and ask why the Brillo people cannot.

[...]

An artistic breakthrough consists, I suppose, in adding the possibility of a column to the matrix. Artists then, with greater or less alacrity, occupy the positions thus opened up: this is a remarkable feature of contemporary art, and for those unfamiliar with the matrix, it is hard, and perhaps impossible, to recognize certain positions as occupied by artworks. Nor would these things be artworks without the theories and the histories of the Artworld.¹¹

Danto noticed: the real question arrives when you are presented with a simple dilemma. Object 1 and object 2 that are identical but one of them has a feature that is not present in the another. The feature is artistic quality.

1. The Brillo Box cannot qualify as a work of art inside any existing theory
2. But Brillo Box was undeniably a work of art exhibited in established art gallery

(Staple Gallery, April 1964)

3. Therefore something is wrong. We need to reconceive the history and philosophy of art in order to 'catch up with the praxis'

The power of this piece presented by Danto, at Symposium: Work of Art at American Philosophical Association Eastern Division Sixty-First Annual Meeting (Oct. 15, 1964), is that it makes an effort to close the obvious gap between new art and old art theory. He combines an important contemporary example with a new and intriguing theory. This theory was coined around 'institutional definition of art'. This was, of course, an misunderstanding because Danto did not advocate this theory developed by Georg Dickie in the sixties, but he began to be associated with it in the time when it was getting momentum¹². It is fair to say that because of this popularity and controversy Danto felt obliged to elaborate on this topic some more, and he did in the Transfiguration of the Commonplace.

It was first published as an article ten years after *The Artworld*, and it produced cases even more controversial than Brillo Box.

Consider, then, The Polish Rider, where a solitary horseman rides invisible silence past a mysterious architecture toward some profound destiny: a work of vision, depth, and meaning. Now I throw a lot of paint, varnish, standoil into a centrifuge, give it a spin, and allow it to splat against a canvas: and that splat, by one of those freaks of statistical mechanics, is indiscernible from The Polish Rider. Nelson Goodman has argued that no two works can be so alike that protracted educated peering will not in time discriminate between them, but I am supposing indiscernibility as a logical possibility or, if I must give Goodman his point [...] More deeply, I am asking whether anything with this sort of causal history can have the same meaning as The Polish Rider with its assumed history, or meaning of the relevant sort at all¹³.

The importance of this article is not just in showing that the method used to philosophically analyze Brillo Box may be used to countless other examples, and maybe even to the art in general. Danto does not give a definition of art but gives some crucial features that will be used when he will produce such a definition. This is the point where Danto abandoned the overwhelming Wittgenstein suggestions that a definition of art is probably not possible. The only possible answer for the philosophical world was to offer a sociological definition of art presented by Georg Dickie¹⁴. Danto cuts the ties with the institutional definition of art and starts a long journey to search for some substantial definition. He had, however, some important suggestions to start:

It seems to me that the importance of art must be bound up with the logical fact that it puts reality at a distance, though I have no good theory to offer as to why this is important[...]Any artwork shows what it denotes, but in non-imitational painting what is shown lacks an original, and so stands in no causal connection with an original. Possibly early tragedy was at once mysterious and protective, in that it showed a reality it also put its audience at a distance from by denotation, where the latter elevates the vehicle to the status of a vehicle of meaning. An imaginary painting shows something which, however, it may resemble a putative original, stands in no interesting relationship to an original, or has none. Once we relax the causal side of representation, we are left only with vehicle, denotation, and whatever is shown: and it is then up to the artist

*what sort of thing he wishes to show. But even the most abstract painting stands at a semantical distance from its content. Needless to say, this complex structure does not meet the eye*¹⁵.

In 1981 based on the assumption that the difference between artworld and philosophy vanished Danto extended his essay into a full book elaborating the sacred 'transfiguration' of a mere real thing into an artwork. This work was meant to have the title *Analytical Philosophy of Art*, but for different reasons, Danto decided otherwise. Five years later he applied this framework to the development of the artworld and ended with the famous 'end of art' thesis suggested in *The Philosophical Disenfranchisement of Art*. Danto's reputation in the artworld became so important that he was offered a job as an art critic at *The Nation* magazine shortly before, in 1984. In this 1984 he did write his famous article *The End of Art* where he offered a historical evaluation of previously analyzed philosophically Brillo Box. For Danto this work was not only a radical attack on traditional understanding of the works of art; it brought the history of Western art to a close.

The 'end of art' claim shortly became very influential and produced many discussions, most of them based on the misunderstanding of Danto's position. That is why he tried to clarify this issue in four (!) different books: (1986), *Encounters and Reflections: Art in the Historical Present* (1990), *Beyond the Brillo Box: The Visual Arts in Post-Historical Perspective* (1992), *Embodied Meanings: Critical Essays and Aesthetic Meditations* (1994) and *After the End of Art* (1997). Just by the sheer volume of his work one can deduce, that Danto has become a leading theoretic of art in America in the last decades of XX century.

In XXI first century he did also published books on two pop-art symbols Red Grooms and Andy Warhol, distanced himself from aesthetic relation to the art in *The Abuse of Beauty*, and got rid of the question mark in the title of his last book *What Art Is*. This shows that Danto was developing and updating his philosophical system through his life, and has put more and more emphasis on the artistic topics, especially from the time when he was an active art critic. The main conclusion to be made here is that he never subdue to a criticism and has not abandoned his earlier philosophical positions.

To sum up the most important contributions of Arthur Danto to the 'artworld' without getting into a very detailed discussion we may say that his system was based on two main basic concepts:

1. Indescribability claim¹⁶.
2. End of Art claim¹⁷.

In retrospect he wrote in *Embodied Meanings*:

*The thesis which emerged from my book *The Transfiguration of the Commonplace* is that work of art is symbolic expressions in that they embody their meanings. The task of criticism is to identify the meaning and explain the mode of their embodiment [...] to see something as art is to be ready to interpret it in terms of what and how it means.*¹⁸

Especially the addition of 'how it means' is something new¹⁹, but this cannot hide the crude fact that Danto does believe that there are not only better and worse interpretations, but also that we should decide on which is which based on some fixed

criteria. In other words, Danto thinks we have to discover the meanings of works of art meanwhile Margolis think we give the meaning to the work of art in the process of interpretation. That may be due to a tradition of Dewey, who was interested in interaction rather than interpretation and experience rather than meaning²⁰. Meaning is something fix, experience is very relative, and here lies the ground for the biggest difference between analytic and pragmatic tradition.

Schusterman, who is responsible for the revival of the pragmatic aesthetics says that he has taken his notion of interpretation from Margolis, who he met in Temple University. However one cannot forget, that Margolis was not only studying philosophy together with Danto at Columbia, but he actually was the first one who made the strong analogy between language and art central to his aesthetic theory in *The Language of Art and Art Criticism: Analytic Questions in Aesthetics* (1965), published at Wayne University that was a home university to Danto as he was studying art and history there after the WWII. To make things even more complicated Richard Schusterman calls his book of 1987 *Analytic Aesthetics* and Georg Dickie also ads *An Analytic Approach to his Introduction to Aesthetics* (1997).

Also, Margolis claimed in his first book that, “My own orientation is analytic and responsive [...] to that [...] range of methods that [...] has come to be called linguistic analysis”²¹ just to start his first chapter with the notion of experience. He did offer a definition of art that goes: [work of art is] “an artifact considered with respect to its design”²² and of aesthetic, which is “loosely collected system of issues bearing on our interest in the arts”²³. The main issue with these definitions is that they both can be used to describe Margolis book, as it is not very clear and consists mostly of critique of other theories of art. The only crucial and interesting idea of Margolis is that we should look at art similar to how we look at our language: both are a part of the historical culture that we live in and interpret on the go.

This theme becomes a trademark, along with ruthless critic of any other philosopher of art, of Margolis body of work through his career. The other complication of this book is that it considers mostly literature, but does not exclude other arts, that serves for a guarantee that the definitions used here cannot be much precise and the discussions engaged Margolis into the vast field of literary interpretation. This is to show that in spite of the title and declaration this work has certainly not much to do with what we typically attribute with analytic philosophy. This cannot however surprise us, for one Margolis was always a kind of a philosophical renegade, and the revival of neo-pragmatism really took off only since the 1970s.

Margolis was a part of this movement, but he always remained in a strange relation to analytic philosophy nevertheless. He advocated constantly against all forms of scientism and for cultural relativism that he combined with pragmatism and philosophy of language²⁴. As I try to suggest Margolis reinvention of pragmatism was made by contrasting himself with analytic philosophy. In aesthetic this meant *Farewell to Danto and Goodman* as he called one of his most famous articles²⁵. It is partially famous because of its brutal language, somehow unprecedented inside academic discussions about works of art. This is yet another proof for ‘aestheticisation of everyday’.

Margolis calls the aesthetic claims of Danto and Goodman a ‘closet scandal’ in the philosophy of art and aims to show that their theories ‘fail irremediably’. For him, Goodman’s distinction between real work of art and forgery is perceptual, but

completely arbitrary. Danto, on the other hand, does not require sensorily discernible difference between artwork and 'mere real thing', as the difference is, or at least may be, external to the objects. For Danto:

there are (always) non-discernible differences between such paired items, differences that bear on history (particularly, the history of production)²⁶ and artists' intentions. I say that Danto's claim is either incoherent or profoundly paradoxical, and that, in any case, it cannot be viably recovered in a way reasonably adjusted to the usual habits and practices of the artworld he invokes (or even of other parts of the world of human culture)²⁷
