MULTIFAMILY HOUSING IN THE VILLAGES OF SERBIA: FROM INAPPROPRIATE SPATIAL APPEARANCES TO POSSIBLE ELEMENTS OF URBANITY

Abstract:

Rural housing is directly linked to agricultural work, so the organization of space in the yard is fundamentally different from the functional characteristics of urban housing. In the villages of Serbia, over the years and after the Second World War, multi-storey residential buildings were erected for service to non-agricultural population. By their basic manifestations and visual manifestations, as well as functional characteristics, these objects never fit into the image of the village, and their users do not enter into the habits and customs of life in the environments in which they are built. Semi-agricultural and non-agricultural population in rural areas is predominant today, so the question arises as to the relation of the profession to multi-family housing in villages.

Keywords: multi-family housing, rural context, non-farmers, relationships, adaptation

ВИШЕПОРОДИЧНО СТАНОВАЊЕ У СЕЛИМА СРБИЈЕ: ОД НЕПРИМЕРЕНИХ ПРОСТОРНИХ ПОЈАВА ДО МОГУЋИХ ЕЛЕМЕНАТА УРБАНИТЕТА

Сажетак:

Становање у селима је непосредно повезано са радом у пољопривреди, па је организација простора на дворишту суштински различита од карактеристика урбаног становања. У селима Србије су током времена, а након Другог светског рата, грађени вишеспратни стамбени објекти, намењени услужном непољопривредном становништву. Како основним појавним и визуелним манифестацијама, тако и функционалним карактеристикама, ови се објекти нису никада уклопили у слику села, а њихови корисници у навике и обичаје живота у срединама у којима су грађени. Полуаграрно и неаграрно становништво у селима данас преовлађује, па се поставља питање односа струке према вишепородичном становању у селима.

Кључне ријечи: вишепородично становање, рурални контекст, непољопривредници, релације
